GP

EXTERNAL GEAR PUMPS

SERIES 20

OPERATING PRINCIPLE

- The GP pumps are fixed displacement external gear pumps with axial clearance compensation.
- They give high volumetric efficiency even with high operating pressures, a low noise level, and they have a high endurance thanks to the balancing system of the loads on the guide bushings.
- They are divided into three size groups, with displacements of up to 9.1 - 27.9 and 87.6 cm³/rev respectively, and with operating pressures of up to 250 bar (standard) and up to 310 bar (H version for high pressure).
- They are available with clockwise, anticlockwise and reversible rotation, with tapered shaft (standard). Other kind of shaft are available upon request.
- They are available in multiple versions, and can be combined in multi-flow groups, with a splined connection motion system that guarantees high power performances.

TECHNICAL SPECIFICATIONS

GP PUMP SIZE		GP1	GP2	GP3
Displacement range	cm ³ /rev	1.3 ÷ 9.1	7 ÷ 27.9	20.7 ÷ 87.6
Flow rate and operating pressures		see table 3 - Performances		
Rotation speed		see table 3 - Performances		
Rotation direction		clockwise, anticlockwise or reversible (seen from the shaft side)		
Loads on the shaft		radial and axial load are not allowed		
Max torque applicable to the shaft		see paragraph 14.1		
Hydraulic connection		flanged fittings (see paragraph 16)		
Type of mounting		4-holes flange - rectangular type		
Mass: standard version H version	kg	1.2 ÷ 1.6 1.9 ÷ 2.3	2.6 ÷ 3.5 3.8 ÷ 4.7	6 ÷ 8.5 8.7 ÷ 11.2

Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-15 / +80
Fluid viscosity range	see paragraph 2.2	
Fluid contamination degree	see paragraph 2.3	
Recommended viscosity	cSt	25 ÷ 100

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

1.1 - Identification code for single and front pumps

G	P			-						/	20	N	
----------	----------	--	--	----------	--	--	--	--	--	----------	-----------	----------	--

External gear pump _____

Pump size: _____
1 = from 1.3 to 9.1 cm³/rev
2 = from 7.0 to 27.9 cm³/rev
3 = from 20.7 to 87.6 cm³/rev

Omit for single pumps (**standard**) _____
F = only for front pump to be coupled

Nominal size _____
 (see table 3 - Performances)

Direction of rotation (seen from the shaft side) _____
R = clockwise (**standard**)
L = anticlockwise
D = reversible (option available for single pumps only)

Mounting flange _____
9 = 4-holes - rectangular type (**standard**)
0 = SAE J744 - 2 holes

NOTE 1: See at table 1.4 compatibility among mounting flange, type of shaft and type of hydraulic connection.

H = version for high pressure.
 Omit for standard pressure.

NBR seals for mineral oils

Series No.
 (from 20 to 29 sizes and mounting dimensions remain unchanged)

Hydraulic connection
F = flanged ports (**standard**)
B = BSP threaded ports
U = UNF threaded ports

Shaft end type - see **NOTE 1**
7 = tapered keyed with thread (**standard**)
5 = cylindrical keyed
 (available for single pumps only)
0 = cylindrical keyed SAE-J744
1 = splined SAE-J744

1.2 - Identification code for intermediate and rear pumps

G	P			-						/	20	N	
----------	----------	--	--	----------	--	--	--	--	--	----------	-----------	----------	--

External gear pump _____

Pump size: _____
1 = from 1.3 to 9.1 cm³/rev
2 = from 7.0 to 27.9 cm³/rev
3 = from 20.7 to 87.6 cm³/rev

Pump position: _____
M = intermediate
R = rear

Nominal size _____
 (see table 3 - Performances)

Direction of rotation (seen from the shaft side) _____
R = clockwise (**standard**)
L = anticlockwise

NOTE 2: Front, intermediate and rear pumps for multiple groups are supplied without mating joint, which must be ordered separately (see paragraph 1.5). To order a group of one or more pumps completely assembled see paragraph 1.3.

H = version for high pressure.
 Omit for standard pressure.

NBR seals for mineral oils

Series No.
 (from 20 to 29 sizes and mounting dimensions remain unchanged)

Hydraulic connection
F = flanged ports (**standard**)
B = BSP threaded ports
U = UNF threaded ports

1.3 - Identification code for multiple pumps

identification code front pump + identification code intermediate pump (omit for double pumps) + identification code rear pump

1.4 - Compatibility among mounting flange, type of shaft and type of hydraulic connection

FLANGE CODE	SHAFT CODE				HYDRAULIC CONNECTION CODE		
	7	5	0	1	F	B	U
9	yes	yes	no	no	yes	yes	no
0	no	no	yes	yes	yes	no	yes

1.5 - Identification code for mating joints

FIRST PUMP	SECOND PUMP		
	GP1	GP2	GP3
GP1	3101100003	-	-
GP2	3101100004	3101100005	-
GP3	3101100006	3101100007	3101100008

1.6 - Examples

a) single pump size 1 - 1.3 cm³/rev - anticlockwise rotation - standard flange and shaft

GP1-0013L97F/20N

b) single pump size 2 - 14 cm³/rev - clockwise rotation - standard flange and shaft

GP2-0140R97F/20N

c) single pump size 3 - 22.5 cm³/rev - clockwise rotation - SAE flange and shaft

GP3-0225R01F/20N

d) double pump made of:

- pump size 2 - 7 cm³/rev - clockwise rotation
- pump size 1 - 2 cm³/rev - high pressure

GP2F-0070R97F/20N + GP1R-0020RF/20NH

e) triple pump made of:

- pump size 3 - 22.5 cm³/rev
- pump size 2 - 14 cm³/rev
- pump size 1 - 2 cm³/rev

GP3F-0225R97F/20N + GP2M-0140RF/20N + GP1R-0020RF/20N

2 - HYDRAULIC FLUID

2.1 Type of fluid

Use mineral oil based hydraulic fluids with anti-foam and antioxidant additives, in conformity with the requisites of the following standards:

- FZG test - 11th stage
- DIN 51525
- VDMA 24317

For use with other types of fluid (water glycol, phosphate esters and others), consult our technical dept. Operation with fluid at a temperature greater than 80°C causes a premature deterioration of the fluid quality and of the seals. The physical and chemical properties of the fluid must be maintained.

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	12 cSt	referred to the maximum fluid temperature of 80 °C
optimum viscosity	25 + 100 cSt	referred to the operating temperature of the fluid in the tank
maximum viscosity	1600 cSt	limited to only the start-up phase of the pump

2.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore, use of a filter with $\beta_{20} \geq 75$ is recommended. A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, use of a filter with $\beta_{10} \geq 100$ is recommended.

If there is a filter installed on the suction line, be sure that the pressure at the pump inlet is not lower than the values specified in paragraph 13.

The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator.

3 - PERFORMANCE RATINGS

(values obtained with mineral oil with viscosity of 36 cSt at 50°C)

Values in brackets refer to the version **H**, for high pressure. The max pressure values for reversible high pressure pumps (rotation type **D**) must be reduced by 15%.

PUMP SIZE	NOMINAL SIZE	DISPLACEMENT [cm³/rev]	MAX FLOW RATE at 1500 rpm [l/min]	MAX PRESSURE at 1500 rpm [bar]		SPEED [rpm]

4 - CURVES AND CHARACTERISTIC DATA OF GROUP GP1 PUMPS

(values obtained with mineral oil with viscosity of 36 cSt at 50°C)

4.1 - Flow rate curves $Q = f(n)$ obtained with operating pressure 0 bar

4.2 - Efficiencies

PUMP NOMINAL SIZE	VOLUMETRIC EFFICIENCY [%]	TOTAL EFFICIENCY [%]
0013	0.90	0.82
0020	0.90	0.85
0027	0.95	0.90
0034	0.91	0.87
0041	0.94	0.90
0051	0.96	0.92
0061	0.96	0.92
0074	0.96	0.90
0091	0.96	0.88

The volumetric and total efficiencies for the various nominal dimensions of the Group GP1 pumps, measured at 1500 rpm and with 150 bar operating pressure, are shown in the table.

The total efficiency considers the volumetric efficiency and the mechanical efficiency of the pump in the specified operating conditions.

4.3 - Noise level

PUMP NOMINAL SIZE	NOISE LEVEL [dB (A)]
0013	65
0020	66
0027	68
0034	68
0041	70
0051	73
0061	73
0074	73
0091	77

The noise levels for the various nominal dimensions of the Group GP1 pumps, measured at 1500 rpm, with 150 bar operating pressure and measured at a distance of 1 metre from the pump, are shown in the table.

4.4 - Absorbed power curves $N = f(n)$, obtained with operating pressures from 50 to 250 bar

5 - CURVES AND CHARACTERISTIC DATA OF GROUP GP2 PUMPS

(values obtained with mineral oil with viscosity of 36 cSt at 50°C)

5.1 - Flow rate curves $Q = f(n)$ obtained with operating pressure 0 bar

5.2 - Efficiencies

PUMP NOMINAL SIZE	VOLUMETRIC EFFICIENCY [%]	TOTAL EFFICIENCY [%]
0070	0.92	0.87
0095	0.95	0.88
0113	0.95	0.87
0140	0.93	0.87
0158	0.95	0.86
0178	0.93	0.85
0208	0.93	0.88
0234	0.97	0.89
0279	0.94	0.85

The volumetric and total efficiencies for the various nominal dimensions of the Group GP2 pumps, measured at 1500 rpm and with 150 bar operating pressure, are shown in the table.

The total efficiency considers the volumetric efficiency and the mechanical efficiency of the pump in the specified operating conditions.

5.3 - Noise level

PUMP NOMINAL SIZE	NOISE LEVEL [dB (A)]
0070	75
0095	77
0113	77
0140	72
0158	72
0178	73
0208	74
0234	76
0279	76

The noise levels for the various nominal dimensions of the Group GP2 pumps, measured at 1500 rpm, with 150 bar operating pressure and measured at a distance of 1 metre from the pump, are shown in the table.

5.4 - Absorbed power curves $N = f(n)$, measured with operating pressures from 50 to 250 bar

6 - CURVES AND CHARACTERISTIC DATA OF GROUP GP3 PUMPS

(values obtained with mineral oil with viscosity of 36 cSt at 50°C)

6.1 - Flow rate curves $Q = f(n)$ obtained with operating pressure 0 bar

6.2 - Efficiencies

PUMP NOMINAL SIZE	VOLUMETRIC EFFICIENCY [%]	TOTAL EFFICIENCY [%]
0207	0.88	0.83
0225	0.97	0.92
0264	0.90	0.84
0337	0.92	0.87
0394	0.91	0.86
0427	0.92	0.82
0514	0.93	0.83
0600	0.85	0.82
0696	0.95	0.90
0776	0.93	0.87
0876	0.89	0.84

The volumetric and total efficiencies for the various nominal dimensions of the Group GP3 pumps, measured at 1500 rpm and with 150 bar operating pressure, are shown in the table.

The total efficiency considers the volumetric efficiency and the mechanical efficiency of the pump in the specified operating conditions.

6.3 - Noise level

PUMP NOMINAL SIZE	NOISE LEVEL [dB (A)]
0207	75
0225	75
0264	76
0337	72
0394	72
0427	73
0514	75
0600	77
0696	77
0776	76
0876	78

The noise levels for the various nominal dimensions of the Group GP3 pumps, measured at 1500 rpm, with 150 bar operating pressure and measured at a distance of 1 metre from the pump, are shown in the table.

6.4 - Absorbed power curves $N = f(n)$, obtained with operating pressures from 50 to 250 bar

7 - GP1 PUMPS WITH STANDARD FLANGE - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

tapered shaft end with thread
(**standard**, id. code 7)

cylindrical keyed shaft end with thread
(id. code **5**)

NOTE:

1. Ports (1) and (2) are reversed on pumps with anticlockwise rotation
2. On reversible pumps the delivery port has the same size of the suction

Pump nominal dimension	L	M	1 suction port (clockwise rotation)		2 delivery port (clockwise rotation)	
			flange	BSP	flange	BSP
0013	40	80.5	Ø13	1/2"	Ø13	3/8"
0020	41	82.5				
0027	42	84.5				
0034	43	86.5				
0041	44	88.5				1/2"
0051	45.5	91.5				
0061	47	94.5				
0074	49	98.5				
0091	51.5	103.5				

8 - GP1 PUMPS WITH SAE FLANGE - OVERALL AND MOUNTING DIMENSIONS

splined SAE A-A
20/40 d.p. - 9T
(**standard**, id. code 1)

cylindrical keyed SAE A-A
(id. code **0**)

NOTE:

1. Ports (1) and (2) are reversed on pumps with anticlockwise rotation
2. On reversible pumps the delivery port has the same size of the suction

SAE A-A
2-holes flange
(id. code **0**)

drain port 1/4" BSP on
reversible pump only

Pump nominal dimension	L	M	1 suction port (clockwise rotation)		2 delivery port (clockwise rotation)	
			flange	UNF	flange	UNF
0013	42	82.5	Ø13	3/4-16	Ø13	9/16-18
0020	43	84.5				
0027	44	86.5				
0034	45	88.5				
0041	46	90.5				
0051	47.5	93.5				
0061	49	69.5				
0074	51	100.5		7/8-14		
0091	53.5	105.5				

9 - GP2 PUMPS WITH STANDARD FLANGE - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

tapered shaft end with thread
(**standard**, id. code 7)

cylindrical keyed shaft end
(id code: **5**)

NOTE:

1. Ports (1) and (2) are reversed on pumps with anticlockwise rotation
2. On reversible pumps the delivery port has the same size of the suction port

Pump nominal dimension	L	M	1 suction port (clockwise rotation)		2 delivery port (clockwise rotation)	
			flange	BSP	flange	BSP
0070	47.5	97.5	Ø13	1/2"	Ø13	1/2"

0279	64	130.5				

11 - GP3 PUMPS WITH STANDARD FLANGE - OVERALL AND MOUNTING DIMENSIONS

12 - GP3 PUMPS WITH SAE FLANGE - OVERALL AND MOUNTING DIMENSIONS

13 - INSTALLATION

- The GP gear pumps can be installed with shaft oriented in any position.
- Check that the rotation direction of the motor corresponds to the direction of the arrow marked on the pump before commissioning.
- Before the first start up vent the air from the delivery port.
- The pump start up, especially at a cold temperature, should occur with the pump unloading.
- The suction pipe must be suitably sized to facilitate the passage of the fluid. Bends and restrictions or an excessive length of the pipeline can affect the correct operation of the pump. It is advisable not to exceed the speed of 1 ÷ 2 m/sec in suction hose.
- The minimum permissible suction pressure is -0.3 bar relative. Standard pumps cannot work with pressure at suction port, except reversible pumps, which are able to withstand pressurized inlet
- Gear pumps must not operate with a rotation speed lower than the minimum rotation speed indicated in table 3 - performance. **The pumps must be filled with the same operating fluid as the circuit before being installed.** Filling can be done through the ports connections. Rotate the pump manually if needed.
- The motor-pump connection must be carried out directly with a flexible coupling able to compensate any offsets. Couplings that generate axial or radial loads on the pump shaft are not allowed.
- The drain port of the reversible pumps must always be connected to the tank. Maximum permitted pressure rise is 6 bar

14 - MULTIPLE PUMPS

It's possible to create multi-flow groups with independent hydraulic circuits coupling several pumps together. While sizing multiple pumps the following conditions must be taken into account:

- Assembly can take place between pumps of the same group, or in decreasing order of size.
- The max. rotation speed is determined by the pump with the lowest speed.
- The values of the max. applicable torque can not be exceeded.

14.1 - Maximum applicable torque

The input torque (M) is given for each pump by the following ratio:

$$M = \frac{9550 \cdot N}{n} = [\text{Nm}] \quad n = \text{rotation speed [rpm]}$$

where the absorbed power (N) is given by:

$$N = \frac{Q \cdot \Delta p}{600 \cdot \eta_{\text{tot}}} = [\text{kW}] \quad \begin{aligned} Q &= \text{flow rate [l/min]} \\ \Delta p &= \text{differential pressure between the pump suction and delivery [bar]} \\ \eta_{\text{tot}} &= \text{total efficiency (see diagrams in par. 4.2 - 5.2 - 6.2).} \end{aligned}$$

or it can be obtained from the diagrams ABSORBED POWER (see paragraphs 4.4 - 5.4 - 6.4).

If several pumps are coupled, the torque of each single pump has to be added to the torque of subsequent pumps when they are loaded simultaneously.

The obtained torque value for each pump has to be lower than the value specified in the table below.

If the obtained torque values are higher than those stated in the table, reduce the working pressure value or replace the overloaded pump with a pump suitable to bear the required torque.

	MAX APPLICABLE TORQUE [Nm]					
	Front pump shaft type			Intermediate / rear pump		
front pump size	tapered, keyed code 7	SAE J744 splined code 1	SAE J744 cylindrical keyed code 0	GP1	GP2	GP3
GP1	90	55	55	50	-	-
GP2	145	110	105		110	-
GP3	280	405	295			230

15 - MULTIPLE PUMPS OVERALL DIMENSIONS

Dimensions below are concerning to standard pumps (clockwise rotation, rectangular flange, tapered keyed with thread shaft end and flanged ports). Please consult our Technical Dept. for different configurations and for overall dimensions of groups composed by three or more pumps.

dimensions in mm

PUMP SIZE	NOMINAL SIZE	FRONT PUMP		REAR PUMP	
		H	K	A	B

Recommended viscosity	cSt	25 ÷ 100
Degree of fluid contamination	see par. 2.3	

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - HYDRAULIC FLUID

2.1 - Type of fluid

Use mineral oil based hydraulic fluids with anti-foam and antioxidant additives, in conformity with the requisites of the following standards:
- FZG test - 11th stage - DIN 51525 - VDMA 24317

For use with other types of fluid (water glycol, phosphate esters and others), consult our technical dept.

Operation with fluid at a temperature greater than 80°C causes a premature deterioration of the fluid quality and of the seals. The physical and chemical properties of the fluid must be maintained.

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	12 cSt	referred to the maximum fluid temperature of 80 °C
optimum viscosity	25 ÷ 100 cSt	referred to the operating temperature of the fluid in the tank
maximum viscosity	1600 cSt	limited to only the start-up phase of the pump

2.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore, use of a filter with $\beta_{20} \geq 75$ is recommended. A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, the use of a filter with $\beta_{10} \geq 100$ is recommended.

If there is a filter installed on the suction line, be sure that the pressure at the pump inlet is not lower than the values specified in paragraph 6.

The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator.

0710851	1P-9,2	43	93		
0710852	1P-11,5	47	101		

6 - INSTALLATION

- The 1P gear pumps can be installed with the shaft oriented in any position.
- Be sure the control rotation direction corresponds to the direction of the arrow marked on the pump before putting the pump into operation.
- It is necessary to vent the air from the delivery connection before operating it the first time.
- The pump start up, especially at a cold temperature, should occur with the pump unloading.
- The suction line must be suitably sized to facility the flow of the oil. Bends and restrictions or an excessive line length can impede correct operation of the pump. It is advisable that the speed of $1 \div 2$ m/sec is not exceeded in the suction line.
- The minimum suction pressure allowed is -0,3 bar relative. The pumps can not function with suction pressure.
- The gear pumps must not operate with a rotation rating of less than the minimum rotation speed (see table 3 - performances). They must be filled with the same plant operation oil before installation. Filling is done through the connection lines. If necessary, rotate the pump manually.
- The motor-pump connection must be carried out directly with a flexible coupling able to compensate any offsets. Couplings that generate axial or radial loads on the pump shaft are not allowed.

IGP7	125	125,8	188,7	300	330	2200	400
	160	160,8	241,2	280	315	2000	
	200	202,7	304,0	250	300	1800	
	250	251,7	377,5	210	250		

NOTE 1: Under continuous operating conditions, the allowed suction pressure range is 0.8 ± 3 bar abs. For shorter time, a minimum suction pressure of 0,6 bar abs is allowed.

NOTE 2: Production tolerances can reduce the displacement by 1,5% max. The flow rate at 1500 rpm shown in the table, considers operation with pressure of 10 bar.

NOTE 3: The continuous and peak pressures are valid for rotation speeds between 400 and 1500 rpm. For speeds of more than 1500 rpm the peak pressure must be reduced. The peak pressure is applicable for 15% of the operating time, with a maximum cycle time of 1 minute.

NOTE 4: Variable speeds require pressure limitations if they are out of 400 ± 1500 rpm range. Contact our technical department for applications of this kind.

3 - HYDRAULIC FLUID

3.1 - Fluid type

Use mineral oil based hydraulic fluids with anti-foam and antioxidant additives. Limitations apply with other fluid types. See the table below or consult our Technical Department for authorization of use.

FLUID TYPE	NOTES
HFC (water glycol solutions with proportion of water $\leq 40\%$)	<ul style="list-style-type: none"> - The pumps are tested with mineral oil. An appropriate cleaning cycle is required. - The values shown in the performance table must be reduced by at least 20% - The maximum speed of the fluid in the suction line must not exceed 1 m/s. - The suction pressure must not be less than 0,8 bar absolute. - The maximum fluid temperature must be at less than 50°C
HFD (phosphate esters)	NOT ALLOWED

3.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity 10 cSt referred to the maximum fluid temperature of 80 °C

optimum viscosity 25 ÷ 100 cSt referred to the fluid working temperature in the tank

maximum viscosity 2000 cSt limited to the start-up phase of the pump only

When selecting the fluid type, be sure that the true viscosity is within the range specified above at the operating temperature.

3.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore, use of a filter with $\beta_{20} \geq 75$ is recommended.

A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, we recommend the use of a filter with $\beta_{10} \geq 100$.

If there is a filter installed on the suction line, be sure that the pressure at the pump inlet is not lower than the values specified in **NOTE 1** of the table in paragraph 2.

The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator.

4 - CHARACTERISTIC CURVES

(values obtained with mineral oil with viscosity of 46 cSt at 40°C)

The data shown in the diagrams were noted with pump rotation speed = 1500 rpm.

Noise pressure levels were measured in a semi-anechoic room, at an axial distance of 1 m from the pump. The shown values must be reduced by 5 dB(A) if they are to be considered in a completely anechoic room.

7 - INSTALLATION

- The IGP pumps can be installed in any position.
- Before putting the pump into operation, check that the rotation direction of the motor is according to the direction of the arrow marked on the pump body.
- The suction line must be sized so that the speed of the fluid does not exceed 1 m/s (1,5 m/s with positive pressure at the pump inlet) and must be placed in the tank at least at 50 mm below the minium oil level.
Any bends and restrictions or an excessive line length can impair correct working of the pump.
The height of suction from the bottom of the tank must not be less than 50 mm.
- The IGP pumps are self-priming in the entire operating speed range specified. At the first start-up of the pump, it is necessary to vent the air from the delivery line. The pump starting operation, especially at low temperatures, must be undertaken at the minimum pressure inside the system.
- There is a plug M10 (SW5) on the pump, for the filling or the breathing of the pump casing, according to the installation position.
Be sure that the plug is closed (couple 10Nm) when the pump is operating. If a check valve with cracking pressure of >1 bar is installed on the delivery line, it is necessary to vent the air from the circuit branch between the check valve and the pump at the time of start-up.
- The motor-pump connection must be carried out directly with a flexible coupling.
Consult our technical dept. for installations that generate axial or radial loads on the pump shaft.
The coupling must be mounted without axially forcing the pump shaft. Be sure that the joint coupling diameter be made with a K7 tolerance.
- Refer to paragraph 3.3 for the characteristics and installation of the filtering elements.

8 - MAXIMUM APPLICABLE TORQUE

PUMP SIZE	MAX. TORQUE APPLIED TO THE SHAFT [Nm]	
	primary shaft A	secondary shaft B
IGP3	160	80
IGP4	335	190
IGP5	605	400
IGP6	1050	780
IGP7	1960	1200

NOTE: The pumps must be connected in decreasing order of displacement and size.

8.1 - Maximum applicable torque for double pumps

In case of double pumps, even of the same displacement, each pump can operate at the maximum PERFORMANCES specified in par. 2.

8.2 - Maximum applicable torque for multiple pumps

The torque (M) at the inlet of each pump is given by the following equation:

$$M = \frac{9549 \cdot N}{n} = [\text{Nm}]$$

where the absorbed power (N) is given by:

$$N = \frac{Q \cdot \Delta p}{600 \cdot \eta_{\text{tot}}} = [\text{kW}]$$

n = rotation speed [rpm]

Q = delivery [l/min]

Δp = differential pressure on the pump [bar]

η_{tot} = total efficiency (noted from the relative diagrams in par. 4)

or can be derived from the ABSORBED POWER diagrams (see par. 4).

In case of multiple pumps, the torque of the single pump must be added to the torque generated by the downstream pumps.

The torque value thus calculated for each pump must be less than the relative value specified in the above table, taking what follows into account:

1st pump = refer to the specified values for primary shaft A

2nd, 3rd, 4th pump = refer to the specified values for secondary shaft B

In the event that the calculated torque values are higher than those shown in the table, it is necessary to reduce the operating pressure or to replace the overloaded pump with one that can support the required torque.

NOTE: Flange code 0610725 is a special flange which differs from SAEJ518 standards.

DFP

FIXED DISPLACEMENT VANE PUMPS

SERIES 20

OPERATING PRINCIPLE

- The DFP pumps are fixed displacement vane pumps made in four different sizes, each size having five different nominal displacement. They are available with one pumping element (single pump) or with double pumping element (double pump). See par. 16 + 21 for the combinations of double pumps.
- The pumping group is composed of a cartridge type compact element that contains the rotor, the vanes, the cam ring and the head disks. The cartridge is easily removable without the need to disconnect the pump from the hydraulic circuit, thus simplifying the maintenance operations.
- The special elliptical profile of the cam ring, with double suction and delivery chambers one against the other, eliminates the radial thrusts on the rotor, decisively reducing wear of the pump. In addition, the use of a 12-vane rotor reduces the delivery pressure pulsations, suppressing the vibrations and noise level of the pump.

TECHNICAL SPECIFICATIONS

DFP PUMP SIZE		1	2	3	4
Displacement range	cm ³ /rev	18 ÷ 45,9	40,1 ÷ 67,5	69 ÷ 121,6	138,6 ÷ 193,4

Fixed displacement vane pump

Pump type
P = single pump
DP = double pump
C = shaft side cartridge or for single pump
CC = cover side cartridge

Pump size:
 - single pump
 - shaft side pump
 (only for double pumps):
1 = from 18 to 45,9 cm³/rev
2 = from 40,1 to 67,5 cm³/rev
3 = from 69 to 121,6 cm³/rev
4 = from 138,6 to 193,4 cm³/rev

Added pump size
 (only for double pumps):
1 = from 18 to 45,9 cm³/rev
2 = from 40,1 to 67,5 cm³/rev
3 = from 69 to 121,6 cm³/rev

NOTE: the cover side pump must be at least one size smaller than the shaft side pump

Size:
 - single pump
 - shaft side pump
 - shaft side cartridge
 (see performances table, par. 3)

Seals: omit for mineral oils
V = viton for special fluids

Series No.
 (the overall and mounting dimensions remain unchanged from 20 to 29)

Type of shaft end
1 = with key
 other shaft types are available upon request

Cover side delivery port orientation compared with the shaft side delivery - for double pumps (omit for single pumps or cartridges)
A = aligned on the same side
B = at 90°
C = opposed to each other
D = at 270°
 } see par. 2

Suction opening orientation compared with the delivery (omit for cartridges)
A = aligned on the same side
B = at 90°
C = opposed to each other
D = at 270°
 } see par. 2

Rotation direction (seen from the shaft side)
R = clockwise **L** = anticlockwise

Size (only for double pumps)
 - cover side pump
 - cover side cartridge
 (see performances table, par. 3)

	38	121,6	177,3			
DFP4	42	138,6	203,4	175	2200	600
	47	153,5	222,7			
	50	162,2	234			
	57	183,4	267			
	60	193,4	285			

4 - HYDRAULIC FLUID
4.1 - Fluid type

TYPE OF FLUID	MAXIMUM PRESSURE (bar)				MAXIMUM SPEED (rpm)				MAXIMUM FLUID TEMPERATURE [°C]
	DFP1	DFP2	DFP3	DFP4	DFP1	DFP2	DFP3	DFP4	
HFD PHOSPHATE ESTERS	175	175	175	175	1200	1200	1200	1200	≤ 70
HFC WATER GLYCOL	140	140	140	140	1500	1500	1500	1500	≤ 50

NOTE 1: The maximum suction pressure allowed, with all fluid types, is 1,4 bar. The minimum suction pressure varies from -0,2 bar with mineral oil to -0,1 bar with the other fluid types (the pressure values are to be considered relative).

The pressures, the maximum allowed speeds and the recommended temperatures according to the different types of hydraulic fluids used are shown in the table.

4.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	16 cSt	referred to the maximum temperature of 80 °C of the fluid
optimum viscosity	25 ÷ 50 cSt	referred to the operating temperature of the fluid in the tank
maximum viscosity	800 cSt	limited to only the pump start-up phase

When choosing the fluid type, verify that the true viscosity at the operating temperature is within the above range.

4.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore, use of a filter with $\beta_{20} \geq 75$ is recommended. A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, use of a filter with $\beta_{10} \geq 100$ is recommended.

If there is a filter installed on the suction line, be sure that the pressure at the pump inlet is not lower than the values specified in the note 1, at paragraph 3. The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator.

5 - MAXIMUM SPEED CORRECTION FACTOR

If the pressure in the suction line is different than zero, the maximum rotation speed shown in table 3 must be multiplied by the correction factor obtained from the diagram seen on the left.

6 - PRESSURE PEAK (values obtained with mineral oil with viscosity of 32 cSt at 40°C, delivery pressure 140 bar and suction pressure 0 bar)

The maximum allowed over pressure on the pump delivery according to the pressure peak residency time is shown in the diagrams. The curves are valid for both single pumps and double pumps.

7 - NOISE LEVEL (values obtained with mineral oil with viscosity of 32 cSt at 40°C, delivery pressure 140 bar and suction pressure 0 bar)

The diagram curves were measured in a semi-anechoic room according to ISO 4412/1 at a distance of 1 m from the pump. The values refer to the intermediate size pump.

8 - DFP1 PUMP CHARACTERISTIC CURVES (obtained with mineral oil with viscosity of 32 cSt at 40°C)

FLOW RATE/PRESSURE CURVES
(measured at 1500 rpm)

ABSORBED POWER/PRESSURE CURVES
(measured at 1500 rpm)

9 - DFP2 PUMP CHARACTERISTIC CURVES (obtained with mineral oil with viscosity of 32 cSt at 40°C)

FLOW RATE/PRESSURE CURVES
(measured at 1500 rpm)

ABSORBED POWER/PRESSURE CURVES
(measured at 1500 rpm)

10 - DFP3 PUMP CHARACTERISTIC CURVES (values obtained with mineral oil with viscosity of 32 cSt at 40°C)

FLOW RATE/PRESSURE CURVES (measured at 1500 rpm)

ABSORBED POWER/PRESSURE CURVES (measured at 1500 rpm)

11 - DFP4 PUMP CHARACTERISTIC CURVES (values obtained with mineral oil with viscosity of 32 cSt at 40°C)

FLOW RATE/PRESSURE CURVES (measured at 1500 rpm)

ABSORBED POWER/PRESSURE CURVES (measured at 1500 rpm)

12 - DFP1 PUMP OVERALL AND MOUNTING DIMENSIONS

13 - DFP2 PUMP OVERALL AND MOUNTING DIMENSIONS

14 - DFP3 PUMP OVERALL AND MOUNTING DIMENSIONS

15 - DFP4 PUMP OVERALL AND MOUNTING DIMENSIONS

16 - DFDP21 DOUBLE PUMP OVERALL AND MOUNTING DIMENSIONS

17 - DFDP31 DOUBLE PUMP OVERALL AND MOUNTING DIMENSIONS

18 - DFDP32 DOUBLE PUMP OVERALL AND MOUNTING DIMENSIONS

19 - DFDP41 DOUBLE PUMP OVERALL AND MOUNTING DIMENSIONS

20 - DFDP42 DOUBLE PUMP OVERALL AND MOUNTING DIMENSIONS

21 - DFDP43 DOUBLE PUMP OVERALL AND MOUNTING DIMENSIONS

22 - INSTALLATION

- The DFP pumps can be installed with the shaft oriented in any position.
- Check that the rotation direction of the motor is according to the rotation direction of the pump before start up.
- The pump start up, especially at a cold temperature, should occur with the pump unloading.
- The suction line must be suitably sized to facilitate the flow of oil.
Bends and restrictions or an excessive line length can impair correct functioning of the pump.
- The pumps are normally positioned directly above the oil tank.
Flooded suction port installation of the pumps is advisable in the case of circuits with high flow rates and pressures.
- The motor-pump coupling must be made directly with a flexible coupling.
Couplings that generate axial or radial loads on the pump shaft are not allowed.
- Refer to paragraph 4.3 for the characteristics and installation of the filtering elements.

FV6

FIXED DISPLACEMENT VANE PUMPS SERIES 10

OPERATING PRINCIPLE

- The FV6 pumps are fixed displacement vane pumps, with several nominal displacement each. Single, double and triple pumps are available.
- The pumping group is composed of a cartridge element that contains rotor, vanes, cam ring and support plates. Cartridges are easily removable without disconnecting the pump from the hydraulic circuit, thus simplify the maintenance operations.
- The special elliptical profile of the cam ring, with double suction and delivery chambers one against the other, eliminates the radial thrusts on the rotor, reducing wear of the pump. The use of a 10 vane rotor reduces the delivery pressure pulsations, suppressing the vibrations and noise level of the pump.

max continuous pressure:	175 /160 bar (FV6E-085 is 80 bar)						
max peak pressure:	210 bar (FV6E-085 is 120 bar)						
max rotation speed:	1800 rpm						

4.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	10 cSt	referred to the maximum temperature of 90 °C of the fluid, with antiwear
optimum viscosity	30 cSt	referred to the operating temperature of the fluid in the tank
maximum viscosity	840 cSt	limited to only the pump start-up phase at cold start.

When choosing the fluid type, verify that the true viscosity at the operating temperature is within the above range.

4.3 - Degree of fluid contamination

The degree of fluid contamination must be according to ISO 4406:1999 class 19/17/14 or better. Strainers on inlet port are not recommended. However, if requested, do not exceed 149 micron (100 mesh).

5 - CHARACTERISTIC CURVES OF SINGLE PUMPS

5.1 - FV6C

INTERNAL LEAKAGE (typical)

Do not operate the pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 800$ N

NOISE LEVEL (typical)

Value obtained with a FV6C-22 pump, according to ISO 4412
1 mt distance

POWER LOSS HYDROMECHANICAL (typical)

ABSORBED POWER at 1500 rpm

5.2 - FV6D

INTERNAL LEAKAGE (typical)

Do not operate the pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 1200$ N

NOISE LEVEL (typical)

Value obtained with a FV6D-38 pump, according to ISO 4412
1 mt distance

POWER LOSS HYDROMECHANICAL (typical)

ABSORBED POWER at 1500 rpm

5.3 - FV6E

INTERNAL LEAKAGE (typical)

Do not operate the pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 2000$ N

NOISE LEVEL (typical)

Value obtained with a FV6E-50 pump, according to ISO 4412
1 mt distance

POWER LOSS HYDROMECHANICAL (typical)

ABSORBED POWER at 1500 rpm

6 - CHARACTERISTIC CURVES OF DOUBLE PUMPS

6.1 - FV6CC

Do not operate pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow

Total leakage is the sum of each section loss at its operating conditions.

Maximum permitted axial load $F_a = 800$ N

FV6CC-22/22 pump, according to ISO 4412, 1 mt distance.

Values obtained with $p_e = 0.9$ bar abs and both stages discharging at the same pressure.

POWER LOSS HYDROMECHANICAL

Refer to diagram of FV6C pump.

Total hydromechanics power loss is the sum of each section at its operating conditions.

6.2 - FV6DC

INTERNAL LEAKAGE (typical)

Do not operate pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow
Total leakage is the sum of each section loss at its operating conditions.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 1200$ N

NOISE LEVEL (typical)

FV6DC-38/22 pump, according to ISO 4412, 1 mt distance
— 1000 rpm
- - 1500 rpm

Values obtained with $p_e = 0.9$ bar abs and both stages discharging at the same pressure.

POWER LOSS HYDROMECHANICAL

Refer to diagram of FV6D pump for P1 and to that of FV6C for P2.
Total hydromechanics power loss is the sum of each section at its operating conditions.

6.3 - FV6EC

Do not operate pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow
Total leakage is the sum of each section loss at its operating conditions.

Maximum permitted axial load $F_a = 2000$ N

FV6EC-50/22 pump, according to ISO 4412, 1 mt distance.

Values obtained with $p_e = 0.9$ bar abs and both stages discharging at the same pressure.

POWER LOSS HYDROMECHANICAL

Refer to diagram of FV6E pump for P1 and to that of FV6C for P2.
Total hydromechanics power loss is the sum of each section at its operating conditions.

6.4 - FV6ED

Do not operate pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow
Total leakage is the sum of each section loss at its operating conditions.

Maximum permitted axial load $F_a = 2000$ N

FV6ED-50/38 pump, according to ISO 4412, 1 m distance

— 1000 rpm
- - 1500 rpm

Values obtained with $p_e = 0.9$ bar abs and both stages discharging at the same pressure.

POWER LOSS HYDROMECHANICAL

Refer to diagram of FV6E pump for P1 and to that of FV6D for P2.
Total hydromechanics power loss is the sum of each section at its operating conditions.

9 - INSTALLATION AND START-UP

- FV6 pumps can be installed in any position. They are normally positioned directly above the oil tank. The installation below the oil level is suggested for circuits with high flow rates and pressures.
 - The suction line must be sized to facilitate the oil flow. Bends and restrictions or an excessive line length could impair the operation of the pump. A bevel on both suction and return lines is recommended to increase the surface and so lower the velocity. We suggest a 45° minimum angle.
 - Check the rotation direction of the motor is according to the rotation direction shown on the pump label before start up.
 - The pump start-up should occur with the pump unloaded, especially at cold temperatures. Set the pressure relief valve of the circuit to its minimum setting value so the pump is unloaded when started. Circuit priming and air bleed off have to be performed before resetting the pressure relief valve.
 - A minimum pump shaft speed of 600 rpm is recommended for priming. To prevent possible damage to the internal parts, the pump should never be started dry or without internal lubrication. The pump should prime quite instantly (few seconds). If not, shut down and check conditions.
- Pump with positive head: allow the fluid to flow to the pump inlet, loosen the discharge port(s) fitting(s) until the fluid comes out and re-tighten the discharge line(s). Then start the pump which should prime quite instantly. Purge the air off the circuit, preferably using air bleed off valves or pressure test points. Let the pump discharge several minutes unloaded.
- Pump mounted above fluid level: fill the pump through outlet port(s) with suitable and clean fluid and start rotation in jog mode. Purge the air off the circuit, preferably using air bleed off valves or pressure test points. Let the pump discharge several minutes unloaded.
- The motor-pump coupling must be made directly with a flexible coupling. Couplings that generate axial or radial loads on the pump shaft are not allowed.
 - Refer to paragraph 4.3 for the characteristics and installation of the filtering elements.

FV7*S

FIXED DISPLACEMENT VANE PUMPS

SERIES 10

OPERATING PRINCIPLE

- The FV7*S pumps are fixed displacement vane pumps, with several nominal displacement each. Single, double and triple pumps are available.
- The pumping group is composed of a cartridge element that contains rotor, vanes, cam ring and support plates. Cartridges are easily removable without disconnecting the pump from the hydraulic circuit, thus simplify the maintenance operations.
- The special elliptical profile of the cam ring, with double suction and delivery chambers one against the other, eliminates the radial thrusts on the rotor, reducing wear of the pump. The use of a 12 vane rotor reduces the delivery pressure pulsations, suppressing the vibrations and noise level of the pump.

TECHNICAL SPECIFICATIONS

PUMP SIZE (SINGLE)		FV7BS	FV7DS
Displacement range	cm ³ /rev	5.8 ÷ 50	44 ÷ 137.5
Flow rate range (at 1500 rpm - 0 bar)	l/min	8.7 ÷ 75	66 ÷ 206

4 - HYDRAULIC FLUID

Data in this catalogue are obtained with antiwear fluid petroleum base. Minimum allowable inlet pressure 0,8 absolute bar (-0,2 relative bars). Differential pressure between inlet and outlet pressure should be at least 1.5 bar.

Pressures, maximum allowed speeds and recommended temperatures are shown in the table below, according to the types of hydraulic fluid used.

FLUID TYPE	NOTES
HFC (water glycol solutions with proportion of water ≤ 40%)	<p>The performance ratings shown in the table 'PERFORMANCES' must be reduced as follows:</p> <p>max continuous pressure: 140 bar max peak pressure: 175 bar max rotation speed: 1800 rpm</p> <p>- Minimum allowable inlet pressure 1 absolute bar - The fluid maximum temperature must be between 10°C and 50°C. - Use NBR seals only. - Minimum viscosity 18 cSt</p>
HFD (phosphate esters)	<p>The performance ratings shown in the table 'PERFORMANCES' must be reduced as follows:</p> <p>max continuous pressure: 210 bar max peak pressure: 240 bar max rotation speed: 1800 rpm</p> <p>- Minimum allowable inlet pressure 1,08 absolute bar - The fluid temperature must be between -18°C and 70°C. - Use VITON seals - Minimum viscosity 18 cSt</p>

4.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	10 cSt	referred to the maximum temperature of 90 °C of the fluid, with antiwear
optimum viscosity	30 cSt	referred to the operating temperature of the fluid in the tank
maximum viscosity	840 cSt	limited to only the pump start-up phase at cold start.

When choosing the fluid type, verify that the true viscosity at the operating temperature is within the above range.

4.3 - Degree of fluid contamination

The degree of fluid contamination must be according to ISO 4406:1999 class 19/17/14 or better. Strainers on inlet port are not recommended. However, if requested, do not exceed 149 micron (100 mesh).

5 - CHARACTERISTIC CURVES OF SINGLE PUMPS

5.1 - FV7B

INTERNAL LEAKAGE (typical)

Do not operate the pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 800$ N

NOISE LEVEL (typical)

Value obtained with a FV7BS-10 pump, according to ISO 4412
1 mt distance

POWER LOSS HYDROMECHANICAL (typical)

ABSORBED POWER at 1500 rpm

5.2 - FV7D

INTERNAL LEAKAGE (typical)

Do not operate the pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 1200$ N

NOISE LEVEL (typical)

Value obtained with a FV7DS-31 pump, according to ISO 4412
1 mt distance

POWER LOSS HYDROMECHANICAL (typical)

ABSORBED POWER at 1500 rpm

6 - CHARACTERISTIC CURVES OF DOUBLE PUMPS

6.1 - FV7BB

INTERNAL LEAKAGE (typical)

Do not operate pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow
Total leakage is the sum of each section loss at its operating conditions.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 800 N$

NOISE LEVEL (typical)

FV7BBS-10-04 pump, according to ISO 4412, 1 mt distance.

Values obtained with $p_e = 0.9 bar$ abs and both stages discharging at the same pressure.

POWER LOSS HYDROMECHANICAL (typical)

Total hydromechanics power loss is the sum of each section at its operating conditions.

— $n = 1000 RPM$
- - - $n = 1500 RPM$ [24 cSt]
- . - $n = 2800 RPM$

6.2 - FV7DB

INTERNAL LEAKAGE (typical)

Do not operate pump more than 5 seconds at any speed or viscosity if the internal leakage is more than 50% of theoretical flow
Total leakage is the sum of each section loss at its operating conditions.

PERMISSIBLE RADIAL LOAD

Maximum permitted axial load $F_a = 1200$ N

NOISE LEVEL (typical)

FV7DBS-31-10 pump, according to ISO 4412, 1 mt distance.

Values obtained with $p_e = 0.9$ bar abs and both stages discharging at the same pressure.

POWER LOSS HYDROMECHANICAL (typical)

Total hydromechanics power loss is the sum of each section at its operating conditions.

9 - INSTALLATION AND START-UP

- FV7S pumps can be installed in any position. They are normally positioned directly above the oil tank. The installation below the oil level is suggested for circuits with high flow rates and pressures.
 - The suction line must be sized to facilitate the oil flow. Bends and restrictions or an excessive line length could impair the operation of the pump. A bevel on both suction and return lines is recommended to increase the surface and so lower the velocity. We suggest a 45° minimum angle.
 - Check the rotation direction of the motor is according to the rotation direction shown on the pump label before start up.
 - The pump start-up should occur with the pump unloaded, especially at cold temperatures. Set the pressure relief valve of the circuit to its minimum setting value so the pump is unloaded when started. Circuit priming and air bleed off have to be performed before resetting the pressure relief valve.
 - A minimum pump shaft speed of 600 rpm is recommended for priming. To prevent possible damage to the internal parts, the pump should never be started dry or without internal lubrication. The pump should prime quite instantly (few seconds). If not, shut down and check conditions.
- Pump with positive head: allow the fluid to flow to the pump inlet, loosen the discharge port(s) fitting(s) until the fluid comes out and re-tighten the discharge line(s). Then start the pump which should prime quite instantly. Purge the air off the circuit, preferably using air bleed off valves or pressure test points. Let the pump discharge several minutes unloaded.
- Pump mounted above fluid level: fill the pump through outlet port(s) with suitable and clean fluid and start rotation in jog mode. Purge the air off the circuit, preferably using air bleed off valves or pressure test points. Let the pump discharge several minutes unloaded.
- The motor-pump coupling must be made directly with a flexible coupling. Couplings that generate axial or radial loads on the pump shaft are not allowed.
 - Refer to paragraph 4.3 for the characteristics and installation of the filtering elements.

RV1D

VARIABLE DISPLACEMENT VANE PUMPS WITH DIRECT PRESSURE ADJUSTER

SERIES 10

OPERATING PRINCIPLE

- The RV1D pumps are variable displacement vane pumps with mechanical pressure compensator.
- The pressure compensator keeps the cam ring of the pumping group in the eccentric position with use of an adjustable load spring. When the delivery pressure equals the pressure corresponding to the spring setting, the cam ring is moved toward the center instantaneously, adjusting the flow rate to the values required by the plant.
- Energy consumption is reduced and adequate in every phase of the cycle.
- The pump group has hydrostatic axial compensation distribution plates, that improve the volumetric efficiency and reduce wear of the components.
- In zero flow demand conditions, the pump delivers fluid only to compensate any possible leaks and pilot lines, keeping constant the circuit pressure .
- The compensator response times are very low such as to make unnecessary the pressure relief valve.

PERFORMANCE RATINGS (measured with mineral oil with viscosity of 46 cSt at 40°C)

Mounting flange:
5 = four-bolt mounting flange ISO 3019/2
9 = four-holes - rectangular - type GR2 (available for RV1D-016 only)

2 - HYDRAULIC FLUID

2.1 - Fluid type

Use mineral oil based hydraulic fluids with anti-foam and antioxidant additives. For use of other types of fluid, keep in mind the limitations shown in the following table or consult our technical department for approval.

FLUID TYPE	NOTES
HFC (water glycol solutions with proportion of water ≤ 40%)	-The values shown in the performance ratings table must be reduced by at least 50% - The pump rotation speed must be limited to 1000 rpm. - Use NBR seals only
HFD (phosphate esters)	There are no particular limitations with this kinds of fluids. Operation with a fluid viscosity as close as possible to the optimum viscosity range specified in par. 2.2 is recommended. - Use FPM (Viton) seals only

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

optimum viscosity	22 ÷ 68 cSt	referred to the fluid working temperature in the tank
maximum viscosity	400 cSt	limited to only the start-up phase of the pump

When selecting the fluid type, be sure that the true viscosity is within the range specified above at the operating temperature.

2.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore, use of a filter with $\beta_{20} \geq 75$ is recommended. A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, use of a filter with $\beta_{10} \geq 100$ is recommended.

The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator. See installation section for details.

3 - CHARACTERISTIC CURVES RV1D-016 (GR. 05)

(obtained with viscosity of 46 cSt at 40°C)

FLOW RATE - PRESSURE - ABSORBED POWER

- 1) Flow rate - pressure curves, measured at 1500 rpm
- 2) Absorbed power at the maximum flow rate
- 3) Absorbed power at zero flow rate

DRAINAGE FLOW RATE

NOISE LEVEL

Approximate maximum values of noise level to minimum and maximum flow rate measured with the sound-level meter placed at one meter from pump coupling with flexible coupling.

- 1) noise at max flow
- 2) noise with zero flow

4 - CHARACTERISTIC CURVES OF RV1D-020, RV1D-025 AND RV1D-032 (GR. 1)

(obtained with viscosity of 46 cSt at 40°C)

FLOW RATE - PRESSURE - ABSORBED POWER

- 1) Flow rate - pressure curves, measured at 1500 rpm
- 2) Absorbed power at the maximum flow rate
- 3) Absorbed power at zero flow rate

DRAINAGE FLOW RATE

NOISE LEVEL

- 2) noise with zero flow

7 - OVERALL AND MOUNTING DIMENSIONS RV1D-016 (GR. 05)

8 - OVERALL AND MOUNTING DIMENSIONS RV1D-020, RV1D-025 AND RV1D-032 (GR.1)

10 - OVERALL AND MOUNTING DIMENSIONS RV1D-040, RV1D-050 AND RV1D-063 (GR.2)

9 - OVERALL AND MOUNTING DIMENSIONS RV1D-080, RV1D-100, RV1D-120 (GR. 3)

1	Suction port: SAE 3000 2"
2	Delivery port: SAE 3000 1 1/4"
3	Drainage port: 1/2" BSP
4	Pressure adjustment screw. Rotate clockwise to increase pressure. Spanner 22. Locking nut : spanner 22.
5	Flow adjustment screw. Rotate clockwise to decrease flow. Socket hex screw, Hex key 6. Retainer KM1 type.
6	Guide block balancing adjuster. Do not tamper.

11 - INSTALLATION

The instruction manual for pumps installation and commissioning is always included in the packaging with the pump. Observe restrictions in this document and follow the instructions.

- RV1D-016, RV1D-020, RV1D-025 and RV1D-032 pumps can be installed in any position.

All the other pumps need to be installed with the axis in horizontal position and with pressure compensator upward.

- Motor-pump coupling must be made with a self-aligning flexible coupling with convex teeth and a polyamide cam. Couplings that generate axial or radial loads on the pump shaft are not allowed.
- The suction line must be short, with a small number of bends and without internal section changes. The minimum section of the inlet pipe must be equal to the section of the thread of the pump inlet port.

The pipe-end inside the tank should be cut at 45°, should have a minimum distance from the tank bottom of not less than 50 mm, and there should always be a minimum height of suction of 100 mm. **The suction pipe should be completely airtight in order to avoid air intake which could be extremely damaging to the pump.**

Suction pressure should be between 0.8 and 1.5 bar absolute

- The drainage pipe must be connected directly to the tank by a line separate from other discharges, located as far as possible from the suction line and lengthened to below the minimum oil level in order to avoid foaming.
- The fluid tank must be suitably sized in order to exchange the thermal power generated by the various system components and to provide a low recycle rate (approximately: tank capacity = 4 times the pump flow rate per minute).
In systems where the pump runs for a long time under zero-flow

setting conditions, it is advisable to provide a fluid cooling system.

The pressure in the drain line must not exceed 1 bar.

To ensure the maximum pump working life, the inlet fluid temperature must never be above 50°C. **The fluid temperature must never exceed 60 °C**

- **Ensure the pump shaft can be rotated manually without any resistance.**
- The pump must be started-up in full displacement (P→T) with flow to the tank without pressure for several minutes, to purge the air.
The pump should prime within 5 seconds. If it does not, switch it off and investigate the cause. The pump should not run empty.
- If the volume adjuster has been set for values less than 50% of the nominal flow-rate, start-up is allowed only if provided the system and the pump are completely filled with fluid.
- **It's essential that the difference between the fluid temperature and the ambient (pump body) temperature doesn't exceed 20 °C.**
If this is the case, the pump should be switched-on only for intervals of about 1-2 seconds (start/stop mode) without pressure, until the temperatures came balanced.
- The pumps are usually placed directly upon the fluid tank. Flooded suction port installation of the pump is recommended in the event of circuits with high flow rates and pressures.

12 - VOLUME ADJUSTMENT SCREW

The volume adjuster is fitted as standard on all the pumps.

It consists of an adjustment screw and a small balanced piston that limit the maximum eccentricity of the pumping group cam ring, changing the displacement. The maximum flow is reduced by turning the adjustment screw clockwise. Indicative data, sensitive to performance tolerances.

Nominal size		016	020	025	032	040	050	063	080	100	120
Reduction of displacement per turn	cm ³	9,7	10			16			16		
Minimum possible displacement	cm ³ /rev	3,1	9,5	15	19	27,5	35,5	43,5	63	80	100

Tools required for adjustment:

RV1D-016: adjustment screw hexagon socket key 5. Locking nut spanner 17.

Other sizes: adjustment screw hexagon socket key 6. Tooth retainer KM1 type.

13 - MULTIPLE PUMPS

RV1D with through drive shaft are available. These pumps are designed to be connected one to the other in decreasing order of displacement. The RV1D-016 pump suitable for multiple pumps is the R55B version only (ISO 3019-2 four-bolt flange with cylindrical keyed shaft end)

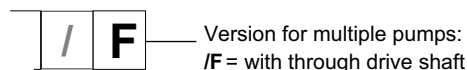

RV1D pumps can be coupled also with RV1P type pumps (see catalogue 14 201) and with GP gear pumps (see catalogue 11 100). The torque on the shaft must be further reduced after the second pump.

Consult our Sales Support department for this kind of applications.

IDENTIFICATION CODE FOR MULTIPLE PUMPS

Both single pumps with through drive shaft (without mating joint) and multiple groups are available.

Fill the ordering code, by following the coupling sequence of the pumps. Insert the /F suffix after each pump with through drive shaft:

identification code + identification code + identification code
front pump intermediate pump rear pump
/F /F

Examples:

Single pump with through drive shaft: RV1D-016PC-R55B/10V/F

Double pump identification: RV1D-016PC-R55B/10V/F + RV1D-016PC-R55B/10V

Triple pump identification: RV1D-025PC-R55B/10N/F + RV1D-025PC-R55B/10N/F + RV1D-025PC-R55B/10N

RV1D pump + gear pump identification: RV1D-050PC-R55B/10N/F + GP2-00208R97F/20N

Dimensions (mm)					
Group size	A	B	C	D with RV1D pump of same size group.	D with gear pump type GP1 / GP2 / GP3

PVE

VARIABLE DISPLACEMENT VANE PUMPS WITH DIRECT PRESSURE ADJUSTMENT

SERIES 30

OPERATING PRINCIPLE

- The PVE pumps are variable displacement vane pumps with direct pressure regulator.
- The pump group is complete with hydrostatic axial compensation distribution plates that improve the volumetric efficiency and reduce wear of the components.
- The pressure regulator adjustable load spring keeps the pump group cam ring in eccentric position.

When the delivery pressure equals the pressure corresponding to the spring setting, the cam ring is moved so to reduce the displacement, adjusting the flow rate to the values required by the plant.

In zero flow demand conditions, the pump delivers oil only to compensate any possible bleedings, keeping the circuit pressure constant.

- The PVE pumps are available in four dimensions with maximum displacement from 6,6 to 22,2 cm³/rev and with pressure regulator max setting values up to 35 bar and 70 bar (standard).

TECHNICAL SPECIFICATIONS

0 = SAE J744 - 2 holes (only for PVE-006 and PVE-011)
9 = rectangular - 4 holes (only for PVE-016 and PVE-023)

Clockwise rotation (seen from the shaft side)

2 - HYDRAULIC FLUID

2.1 - Fluid type

Use only HL and HLP mineral oil based hydraulic fluids according to ISO 6743/4.

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	16 cSt	referred to the maximum drainage fluid temperature of 70 °C.
optimum viscosity	25 ÷ 50 cSt	referred to the fluid working temperature in the tank.
maximum viscosity	800 cSt	limited to only the start-up phase of the pump.

When selecting the fluid type, be sure that the true viscosity is within the range specified above at the operating temperature.

2.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore, use of a filter with $\beta_{20} \geq 75$ is recommended. A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, use of a filter with $\beta_{10} \geq 100$ is recommended.

The filter must be equipped with a by-pass valve and, if possible, with a clogging indicator.

3 - PERFORMANCES (obtained with viscosity of 46 cSt at 40°C)

PUMP	REGULATOR	DISPLACEMENT [cm³/rev]	MAX FLOW RATE [l/min]		PRESSURE ADJUSTMENT RANGE [bar]		ROTATION SPEED [rpm]	
			1500 rev	1800 rev	min	max	min	max
PVE-006	PC2	6,6	10	12	15	35	800	1800
	PC3				50	70		
PVE-011	PC2	11,1	16,7	20	15	35		
	PC3				50	70		
PVE-016	PC2	16,6	25	30	15	35		
	PC3				50	70		
PVE-023	PC2	22,2	33,3	40	15	35		
	PC3				50	70		

NOTE: Flow rate values are obtained with delivery pressure = 3.5 bar

4 - NOISE LEVEL

PUMP	NOISE LEVEL [dB (A)]	
	null displacement	full displacement
PVE-006	61	63
PVE-011	62	65
PVE-016	64	68
PVE-023	64	70

The noise pressure levels were measured in a semi-anechoic room, at an axial distance of 1 m from the pump. The values shown must be reduced by 5 dB(A) if they are to be considered in a completely anechoic room.

5 - CHARACTERISTIC CURVES (values obtained with mineral oil with viscosity of 46 cSt at 40°C)

The diagram curves were measured with a pump rotation speed of 1500 and 1800 rev/min.

7 - OVERALL AND MOUNTING DIMENSIONS PVE-011

8 - OVERALL AND MOUNTING DIMENSIONS PVE-016 AND PVE-023

9 - INSTALLATION

- The PVE pumps can be installed with the axis oriented in any position.
- The suction tube has to be suitably sized so that the suction pressure is never lower than -0.3 bar (relative). Bends or restrictions or an excessive tube length could further decrease the value of the suction pressure with a following increase in the noise emissions and a decrease in the pump lifetime.
- The drainage port must be connected directly to the tank by a line separate from other discharges, located far from the suction line and lengthened to below the minimum oil level so as to avoid formation of foam.
- **Before starting, the pump body has to be filled with the fluid.** The pump start up, especially at a cold temperature, should occur with the pump unloading. Start and stop motor several time in order to purge the air from pump and pipelines.
- The pumps are normally positioned directly above the oil tank. Flooded suction port installation of the pumps is advisable in the case of circuits with high flow rates and pressures.
- The drainage tube has to be sized so that the pressure inside the pump body is always lower than 0.3 bars (relative), even during the dynamic change and flow rate phases. The drainage tube has to unload inside the tank far from the suction area. We suggest to interpose a screen between the two lines.
- The motor-pump connection must be carried out directly with a flexible coupling. Couplings that generate axial or radial loads on the pump shaft are not allowed.

10 - MULTIPLE PUMPS

PVE-016 and PVE-023 pumps can be connected to external gear pumps (see available displacements in the table at par. 10.3). The possibility to couple two pumps makes possible to create multi-flow groups with independent hydraulic circuits.

10.1 - Maximum applicable torque

While sizing coupled pumps, consider that the shaft of the front pump must bear the torque generated by both pumps when they are loaded simultaneously.

NOTE: The maximum applicable torque at the shaft of the front pump is 62 Nm.

The input torque (M) for each pump is given by the following ratio:

$$M = \frac{9550 \cdot N}{n} = [\text{Nm}]$$

n = rotation speed [rpm]

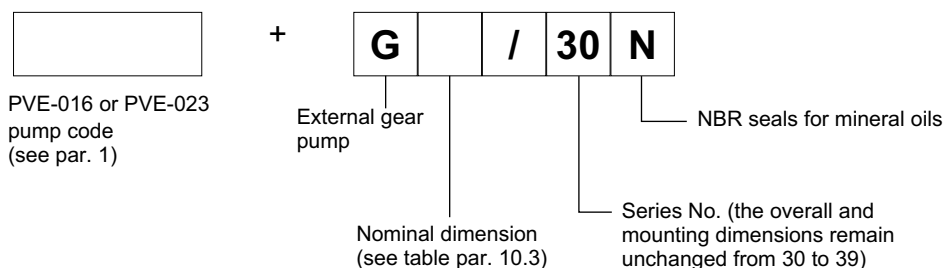

where the absorbed power (N) is given by:

$$N = \frac{Q \cdot \Delta p}{600 \cdot \eta_{\text{tot}}} = [\text{kW}]$$

Q = flow rate [l/min]
 Δp = differential pressure between the pump suction and delivery [bar]
 η_{tot} = total efficiency (coefficient = 0.8)

If the total of the obtained torques is higher than 62 Nm, it is necessary to reduce the working pressure / flow value of one or both the pumps until the total torque becomes lower than the maximum value indicated.

1	Suction port: 3/4" BSPP (parallel)
2	Delivery port: 1/2" BSPP (parallel)
3	Case drainage port: 1/4" BSPP (parallel)
4	Pressure compensator. Clockwise rotation to higher pressure.
5	Volume adjustment. Clockwise rotation to reduce flow.

RV1P

VARIABLE DISPLACEMENT VANE PUMPS

SERIES 10

OPERATING PRINCIPLE

- RV1P are variable displacement vane pumps with hydraulic operated pressure compensator, that permit instantaneous adjustment of the flow rate according to the circuit requirements. Energy consumption is reduced and adequate in every cycle phase.
- The pumping group is provided with double hydrostatic axial compensation, that improves the volumetric efficiency and reduces wear of the components. Both internal paths for inlet and outlet are double.
- The pressure compensator operates keeping the cam ring of the pumping group in the eccentric position by a piston hydraulically controlled by a pressure pilot stage. When the delivery pressure equals the pressure corresponding to the pilot stage setting, the cam ring is moved toward the center, adjusting the flow rate to the plant requirements. In zero flow demand conditions, the pump delivers oil only to compensate any possible bleedings and pilotings, keeping the circuit pressure constant.
- The compensator response times are very restrained such as to allow the removal of the pressure relief valve.

TECHNICAL SPECIFICATIONS

(measured with mineral oil with viscosity of 46 cSt at 40°C)

Control type: _____

PC = pressure control (**standard**)
PCX = dual pressure values control, one of which is fixed

Clockwise rotation direction (seen from the shaft end)

NOTE: No through-drive shaft inside standard single pumps.

Option: Combined pumps.
Omit for single pump
See at par. 15
NOTE

Seals:
N = NBR seals for mineral oils (**standard**)
V = viton for special fluids

Series No.
(from 10 to 19 sizes and mounting dimensions remain unchanged)

Hydraulic connection:
RV1P-016, 020, 025 and 032:
B = BSP threaded ports
RV1P-040, 050, 063, 080, 100 and 120:
S = suction / delivery SAE 3000 flanges with metric bolts; drain port BSP threaded

Shaft end:
5 = cylindrical keyed (not available with flange type 9)
7 = conical keyed (not available for RV1P-016)

Mounting flange:
5 = four-bolt mounting flange ISO 3019/2
9 = four-holes - rectangular - type GR2 (available for RV1P-016 only)

2 - HYDRAULIC FLUID

2.1 - Fluid type

Use mineral oil based hydraulic fluids with anti-foam and antioxidant additives. For use of other types of fluid, keep in mind the limitations shown in the following table or consult our technical department for approval.

FLUID TYPE	NOTES
HFC (water glycol solutions with proportion of water ≤ 40%)	<ul style="list-style-type: none">- The values shown in the performance ratings table must be reduced by at least 50%- The pump rotation speed must be limited to 1000 rpm.- The max fluid temperature must be lower than 50°C- Use NBR seals only
HFD (phosphate esters)	<p>There are no particular limitations with this kinds of fluids. Operation with a fluid viscosity as close as possible to the optimum viscosity range specified in par. 2.2 is recommended.</p> <ul style="list-style-type: none">- Use FPM (Viton) seals only

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

optimum viscosity	22 ÷ 68 cSt	referred to the fluid working temperature in the tank
maximum viscosity	400 cSt	limited to only the start-up phase of the pump

When selecting the fluid type, be sure that the true viscosity is within the range specified above at the operating temperature.

2.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore, use of a filter with $\beta_{20} \geq 75$ is recommended. A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, use of a filter with $\beta_{10} \geq 100$ is recommended.

The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator. See installation section for details.

3 - CHARACTERISTIC CURVES RV1P-016 (GR. 05)

(obtained with viscosity of 46 cSt at 40°C)

FLOW RATE - PRESSURE - ABSORBED POWER

- 1) Flow rate - pressure curves, measured at 1500 rpm
- 2) Absorbed power at the maximum flow rate
- 3) Absorbed power at zero flow rate

DRAINAGE FLOW RATE

NOISE LEVEL

Approximate maximum values of noise level to minimum and maximum flow rate measured with the sound-level meter placed at one meter from pump coupling with flexible coupling.

- 1) noise at max flow
- 2) noise with zero flow

4 - CHARACTERISTIC CURVES OF RV1P-020, RV1P-025 AND RV1P-032 (GR. 1)

(obtained with viscosity of 46 cSt at 40°C)

FLOW RATE - PRESSURE - ABSORBED POWER

- 2) Absorbed power at the maximum flow rate
- 3) Absorbed power at zero flow rate

DRAINAGE FLOW RATE

NOISE LEVEL

Approximate maximum values of noise level to minimum and maximum flow rate measured with the sound-level meter placed at one meter from pump coupling with flexible coupling.

- 1) noise at max flow
- 2) noise with zero flow

6 - CHARACTERISTIC CURVES FOR RV1P-080, RV1P-100, RV1P-120 (GR. 3)

(values obtained with viscosity of 46 cSt at 40°C)

FLOW RATE - PRESSURE - ABSORBED POWER

- 1) Flow rate - pressure curves, measured at 1500 rpm
- 2) Absorbed power at the maximum flow rate
- 3) Absorbed power at zero flow rate

DRAINAGE FLOW RATE

NOISE LEVEL

Approximate maximum values of noise level to minimum and maximum flow rate measured with the sound-level meter placed at one meter from pump coupling with flexible coupling.

- 1) noise at max flow
- 2) noise with zero flow

7 - PC PRESSURE CONTROL

The PC pressure regulator keeps the pressure at a constant set level in the circuit, thus adjusting automatically the pump flow rate according to the real need of the system.

The desired pressure can be set by manually adjusting the screw.

Overall dimensions at sections 9, 10, 11 and 12.

FEATURES OF THE PC CONTROL:

- adjustable pressure range:

RV1P-016, 020, 025, 032, 040, 050 and 063 = 20 ÷ 250 bar

RV1P-080 and 100 = 40 ÷ 250 bar

RV1P-120 = 40 ÷ 210 bar

- default setting = 50 bar

7.1 - Response times and pressure peaks

Dynamic response curves obtained by switching the solenoid operated directional valve for closing the pump outlet.

Pressure peaks exceeding 30% of the maximum operating pressure (10% for pumps gr.3) must be eliminated.

displacement	stabilization time Ts (ms)	
	15 → 210 bar	15 → 250 bar
016	50	40
020, 025, 032	80	60
040, 050, 063	100	80
080, 100, 120	120	100 (NOTE)

NOTE: for RV1P-120 range 15 → 210 bar

8 - PCX - DUAL PRESSURE CONTROL

Dual pressure value pump operating diagram

Valves that must be ordered separately:
solenoid switching valve DS3-SA2 (datasheet 41 150)

The PCX control, mated to a suitable two-position solenoid valve allows to electrically select the pump at null displacement and at a minimum delivery pressure value.

This function is useful for the start-up of a pump without load and allows to operate at minimum pressure in the system during the machine cycle pause, with considerable energy saving.

Pressure adjustment is obtained by a solenoid switching valve to be mounted on the control.

NOTE: The switching valve must be ordered separately.

FEATURES OF THE PCX CONTROL:

solenoid valve OFF = pump at null displacement and delivery pressure by fixed stage (F)

solenoid valve ON = pump at maximum displacement and delivery pressure set on control (R)

- fixed stage value (F):

RV1P-016, 020, 025, 032, 040, 050 e 063 = 20 bar

RV1P-080, 100 e 120 = 40 bar

- adjustable pressure range (R):

RV1P-016, 020, 025, 032, 040, 050 and 063 = 20 ÷ 250 bar

RV1P-080 e 100 = 40 ÷ 250 bar

RV1P-120 = 40 ÷ 210 bar

- default setting (R) = 50 bar

8.1 - Overall dimensions RV1P-*PCX

9 - OVERALL AND MOUNTING DIMENSIONS RV1P-016 (GR. 05)

10 - OVERALL AND MOUNTING DIMENSIONS RV1P-020, RV1P-025 AND RV1P-032 (GR. 1)

11 - OVERALL AND MOUNTING DIMENSIONS RV1P-040, RV1P-050 AND RV1P-063 (GR. 2)

12 - OVERALL AND MOUNTING DIMENSIONS RV1P-080, RV1P-100, RV1P-120 (GR. 3)

12 - INSTALLATION

The instruction manual for pumps installation and commissioning is always included in the packaging with the pump. Observe restrictions in this document and follow the instructions.

— RV1P-016, RV1P-020, RV1P-025 and RV1P-032 pumps can be installed in any position. The other pumps need to be installed with the axis in horizontal position and with pressure compensator upward.

— Motor-pump coupling must be made with a self-aligning flexible coupling with convex teeth and a polyamide cam. **Couplings that generate axial or radial loads on the pump shaft are not allowed.**

— The suction line must be short, with a small number of bends and without internal section changes. The minimum section of the inlet pipe must be equal to the section of the thread of the pump inlet port.

The pipe-end inside the tank should be cut at 45°, should have a minimum distance from the tank bottom of not less than 50 mm, and there should always be a minimum height of suction of 100 mm. **The suction pipe should be completely airtight in order to avoid air intake which could be extremely damaging to the pump.**

Suction pressure should be between 0.8 and 1.5 bar absolute.

— The drainage pipe must be connected directly to the tank by a line separate from other discharges, located as far as possible from the suction line and lengthened to below the minimum oil level in order to avoid foaming.

— The fluid tank must be suitably sized in order to exchange the thermal power generated by the various system components and to provide a low recycle rate (approximately: tank capacity = 4 times the pump flow rate per minute).

In systems where the pump runs for a long time under zero-flow setting conditions, it is advisable to provide a fluid cooling system.

The pressure in the drain line must not exceed 1 bar.

To ensure the maximum pump working life, the inlet fluid temperature must never be above 50°C. **The fluid temperature must never exceed 60 °C**

— **Ensure the pump shaft can be rotated manually without any resistance.**

— Fill the pump with the fluid through the drain port. The pump must be started-up in full displacement (P→T) with flow to the tank without pressure. During this step bleed the air, unscrewing the cap of the air bleed port on the pressure compensator device, (see drawings) and then close the cap.

The pump should prime within 5 seconds. If it does not, switch it off and investigate the cause. The pump should not run empty.

Subsequents start-up under zero flow setting conditions are admissible only with pressure not exceeding 30 bar, and with the system and pump completely filled with fluid.

— If the volume adjuster has been set for values less than 50% of the nominal flow-rate, start-up is allowed only if provided the system and pump are fully filled of fluid.

— **It's essential that the difference between the fluid temperature and the ambient temperature (pump body) doesn't exceed 20 °C.**

If this is the case, the pump should be switched-on only for intervals of about 1-2 seconds (start/stop mode) without pressure, until the temperatures came balanced.

— The pumps are usually placed directly upon the oil tank. Flooded suction port installation of the pump is recommended in the event of circuits with high flow rates and pressures.

14- VOLUME ADJUSTMENT SCREW

The volume adjuster is fitted as standard on all the pumps.

It consists of an adjustment screw and a small balanced piston that limit the maximum eccentricity of the pumping group cam ring, changing the displacement. The maximum flow is reduced by turning the adjustment screw clockwise. Indicative data, sensitive to performance tolerances.

Nominal size		016	020	025	032	040	050	063	080	100	120
Reduction of displacement per turn	cm ³	11	10			16			16		
Minimum possible displacement	cm ³ /rev	3,3	9,5	15	19	27,5	35,5	43,5	63	80	100

Tools required for adjustment:

RV1P-016: adjustment screw hexagon socket key 8. Locking nut spanner 24.

Other sizes: adjustment screw hexagon socket key 6. Tooth retainer KM1 type.

15 - MULTIPLE PUMPS

RV1P with through drive shaft are available. These pump are sdesigned to be connected one to the other in decreasing order of displacement. The RV1P-016 pump suitable for multiple pumps is the R55B version only (ISO 3019-2 four-bolt flange with cylindrical keyed shaft end)

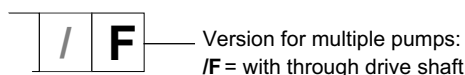

RV1P pumps can be coupled also with RV1D type pumps (see catalogue 14 101) and with gear pumps (see catalogue 11 100). The torque on the shaft must be further reduced after the second pump.

Consult our Sales Support department for this kind of applications.

IDENTIFICATION CODE FOR MULTIPLE PUMPS

Both single pumps with through drive shaft (without mating joint) and multiple groups are available.

Fill the ordering code, by following the coupling sequence of the pumps. Insert the /F suffix after each pump with through drive shaft:

identification code front pump /F + identification code intermediate pump /F + identification code rear pump

Examples:

Single pump with through drive shaft: RV1P-025PC-R55B/10V

Double pump identification: RV1P-025PC-R55B/10V/F + RV1P-025PC-R55B/10V

Triple pump identification: RV1P-040PC-R55S/10N/F + RV1P-040PC-R55S/10N /F + RV1P-040PC-R55S/10N

RV1P pump + gear pump identification: RV1P-050PCX-R55S/10N/F + GP2-00208R97F/20N

Dimensions (mm)					
Group size	A	B	C	D with RV1P pump of same size group	D with gear pump type GP1 / GP2 / GP3

VPPM

VARIABLE DISPLACEMENT AXIAL-PISTON PUMPS

OPERATING PRINCIPLE

- The VPPM pumps are variable displacement axial-piston pumps with variable swash plate, suitable for applications with open circuits.
- They are available in three different frame sizes with maximum displacements up to 29, 46, 73 and 87cm³/rev.
- The pump flow rate is proportional to the rotation speed and to the angle of the swash plate, which can be continuously modulated. The maximum and minimum angle can be limited mechanically via suitable regulating screws.
- The pumps feature medium-high working pressures (up to 280 bar constant and 350 bar peak). Thanks to some particular design features, these pumps are able to bear high axial and radial loads on the shaft.
- They are usually supplied with a ISO 3019/2 mounting flange, with the exception of the rear and intermediate pumps, which are only available with a SAE J744 2-holes flange and a SAE J744 splined shaft (see paragraph 16).
- They are available with seven different types of regulating control, each according to the application needs (see paragraphs 8 ÷ 14).

TECHNICAL SPECIFICATIONS

55	1475	-	-	-	-	-	-	356	231

(#) With this adjustment value the pump is in venting position with a pressure lower than 280 bar.

1.6 - Identification examples

- a) 29 cm³/rev single pump with pressure regulator - ISO mounting flange and shaft (standard)
VPPM-029PC-R55S/10N000
- b) 46 cm³/rev single pump with pressure regulator with remote control - SAE mounting flange and SAE splined shaft
VPPM-046PCR-R01S/10N000
- c) 73 cm³/rev single pump with pressure control devices - ISO mounting flange and shaft (standard)
VPPM-073PCX-R55S/10N000
- d) 46 cm³/rev single pump with integrated proportional flow and pressure control regulator - pressure regulation up to 280 bar
VPPM-046PQCE5-R55S/11N000
- e) 46 cm³/rev single pump with power regulator set at 18,5 kW at 1460 rpm (torque = 122 Nm)
VPPM-046PQNC-R55S/10N000/M122
- f) 73 cm³/rev single pump with power regulator with integrated proportional flow and pressure control - power regulator set at 98 Nm - pressure regulation up to 280 bar
VPPM-073PQNCE5-R55S/11N000/M098
- g) 73 cm³/rev front pump with pressure regulator, ready to mate to a VPPM-029 pump
VPPM-073PC-R55S/10N62S
- h) double pump made of:
 - 46 cm³/rev front pump with pressure and flow rate regulator
 - 29 cm³/rear pump with pressure regulator**VPPM-046PQC-R55S/10N62S + VPPM-029PC-R01S/N000**
- i) triple pump made of:
 - 73 cm³/rev front pump with flow rate and pressure regulator
 - 46 cm³/rev intermediate pump with pressure regulator
 - 14 cm³/rev rear gear pump group 2**VPPM-073PQC-R55S/10N63S + VPPM-046PC-R01S/10N12S + GP2-0140R01F/20N**

2 - HYDRAULIC FLUID

2.1 - Fluid type

Use mineral oil based hydraulic fluids with anti-foam and antioxidant additives according to the DIN 51524 norm.
For use with other types of fluid, keep in mind the limitations shown in the following table or consult our technical department for authorization of use.

FLUID TYPE	NOTES
HFC (water glycol solutions with proportion of water $\leq 40\%$)	<p>The performance ratings shown in the table 'PERFORMANCES' must be reduced as follows:</p> <p>max continuous pressure: 170 bar max peak pressure: 200 bar max rotation speed: VPPM-029 = 2100 rpm VPPM-046 = 2000 rpm VPPM-073 and VPPM-087 = 1700 rpm</p> <ul style="list-style-type: none"> - The suction pressure must be lower than 0,8 absolute bars (-0,2 relative bars) - The fluid maximum temperature must be between 0°C and 50°C. - Use NBR seals only.
HFD (phosphate esters)	<p>Such fluids do not require any particular performance limitation. It is suggested to operate with continuous duty pressures not higher than 200 bar and pressure peaks not higher than 240 bar.</p> <ul style="list-style-type: none"> - The operating temperature must be between -10°C and 90°C. - Use VITON seals

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	10 cSt	referred to a maximum temperature of 90 °C for the drainage fluid
optimum viscosity	15÷ 35 cSt	referred to the operating temperature of the fluid in the tank
maximum viscosity	1000 cSt	limited only to the cold start-up of the pump, which has to be carried out with the plant at minimum pressure.

When selecting the fluid type, be sure that the true viscosity is within the range specified above at the operating temperature.

2.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore the use of a delivery or return filter with $\beta_{10(c)} \geq 75$ is suggested.

A degree of maximum fluid contamination according to ISO 4406:1999 class 18/16/13 is recommended for optimum endurance of the pump. Hence, the use of a filter with $\beta_{10(c)} \geq 100$ is recommended.

In the event that the filter is installed on the suction line, be sure that the pressure at the pump inlet is not lower than the values specified in the table of paragraph 3.

The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator and should be oversized to avoid cavitation problems.

3 - PERFORMANCES (measured with mineral oil with viscosity of 36 cSt at 50°C)

PUMP SIZE		029	046	073	087
Maximum displacement	cm ³ /rev	29	46	73	87
Maximum flow rate: - at 1500 rpm - at max rotation speed	l/min	43,5 87	69 119,6	109,5 160,5	131,9 162,6
Input pressure (absolute): - min - max	bar (abs)	0,8 25			
Max. delivery pressure (absolute): - continuous - intermittent (NOTE 1) - peak		280 315 350			250 280 315
Max pressure on drainage port	bar (abs)	2			
Maximum power ($\Delta p = 280$ bar): - at 1500 rpm - at max rotation speed	kW	20,3 40,6	32,2 55,8	51,1 74,9	54,9 67,8
Max velocity at maximum displacement	rpm	3000	2600	2200	1850
Moment of inertia on the shaft	kgm ²	0,0020	0,0030	0,0080	0,0080
Max absorbed torque: - $\Delta p = 100$ bar - $\Delta p = 280$ bar	Nm	46,2 129,3	73,2 205	116,2 325,3	139,9 349,8
Max operating pressure with NBR seals - minimum - continuous - peak	°C	-25 80 100			
Max operating pressure with Viton seals - minimum - continuous - peak	°C	-10 110 125			
Oil volume in the pump body	lt	0,7	0,9	1,5	1,5

NOTE 1: Allowed intermittent duty pressures with a duration equal to 6 seconds per minute.

Loads on the shaft: - axial load (F_{ax}) - radial load (F_{rad})		N	1000 1500	1500 1500	2000 3000	2000 3000
---------------------------------------------------------------------------------	--	---	--------------	--------------	--------------	--------------

4 - VPPM-029 PUMP CHARACTERISTIC CURVES (values obtained with mineral oil with viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm.

FLOW RATE/PRESSURE CURVES

VOLUMETRIC AND TOTAL EFFICIENCY

ABSORBED POWER

NOISE LEVEL

The noise pressure levels were measured in a semi-anechoic chamber, at a distance of 1 m from the pump and with a tolerance of ± 2 dB(A). The values shown must be reduced by 5 dB(A) if they are to be considered in a completely anechoic room.

5 - VPPM-046 PUMP CHARACTERISTIC CURVES (values obtained with mineral oil with viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm.

FLOW RATE/PRESSURE CURVES

VOLUMETRIC AND TOTAL EFFICIENCY

ABSORBED POWER

NOISE LEVEL

The noise pressure levels were measured in a semi-anechoic chamber, at a distance of 1 m from the pump and with a tolerance of ± 2 dB(A). The values shown must be reduced by 5 dB(A) if they are to be considered in a completely anechoic room.

6 - VPPM-073 PUMP CHARACTERISTIC CURVES (values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm.

FLOW RATE/PRESSURE CURVES

VOLUMETRIC AND TOTAL EFFICIENCY

ABSORBED POWER

NOISE LEVEL

The noise pressure levels were measured in a semi-anechoic chamber, at a distance of 1 m from the pump and with a tolerance of ± 2 dB(A). The values shown must be reduced by 5 dB(A) if they are to be considered in a completely anechoic room.

7 - VPPM-087 PUMP CHARACTERISTIC CURVES (values obtained with mineral oil with viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm.

FLOW RATE/PRESSURE CURVES

VOLUMETRIC AND TOTAL EFFICIENCY

ABSORBED POWER

NOISE LEVEL

The noise pressure levels were measured in a semi-anechoic chamber, at a distance of 1 m from the pump and with a tolerance of ± 2 dB(A). The values shown must be reduced by 5 dB(A) if they are to be considered in a completely anechoic room.

8 - PRESSURE REGULATOR: PC

FUNCTIONAL DIAGRAM

The PC pressure regulator keeps the pressure at a constant set level in the circuit, thus adjusting automatically the pump flow rate according to the real need of the system. The desired pressure can be set by manually adjusting the (P) regulation valve.

FEATURES OF THE PC REGULATOR:

- pressure regulating range (P) = 20 ÷ 350 bars
- default setting (P) = 280 bars

8.1 - Characteristic curves of the PC regulator (values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm and an oil temperature of 50°C.

FLOW RATE/PRESSURE FEATURE

RESPONSE TIMES AND PEAK PRESSURE

t1 = response time for a change from a min. to a max. displacement.
t2 = response time for a change from a max. to a min. displacement.

PC pressure regulator set at 280 bars

pump size	t1 [ms]	t2 [ms]
029	30	20
046	45	25
073	50	30
087	53	28

The values stated in the table are obtained from the opening until the instant the delivery level is achieved, by using a maximum pressure valve set at 350 bars for a load simulation, placed at a distance of 1 m from the pump delivery port.

9 - REMOTE-CONTROLLED PRESSURE REGULATOR: PCR

FUNCTIONAL DIAGRAM

The PCR regulator, apart from limiting the line maximum pressure (P valve), allows a remote-control of the device via a remote control connected to the X port (typical application for submerged pumps). In case a pressure regulating valve is used for the remote-control, it is suggested to use a direct operated valve with a size suitable to 1,5 l/min pilot flow rate.

N.B. The maximum length of the connection between the valve and the pump X port must not be longer than 2 m.

PCR FEATURES:

- pressure regulating range (P) = 20 ÷ 350 bars
- default setting (P) = 280 bars
- remote-regulated pressure range = 14 ÷ 315 bars
- flow rate available on the X port for the remote-control = about 1,5 l/min

9.1- Characteristic curves of the PCR regulator (values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm and an oil temperature of 50°C.

FLOW RATE / PRESSURE FEATURE

10 - REGULATOR WITH PRESSURE CONTROL DEVICES: PCX

10.1 - Electrical unloading

FUNCTIONAL DIAGRAM

The PCX regulator, mated to a suitable two-position solenoid valve, allows the electrical switching of the pump displacement in null condition and with minimum delivery pressure.

This function is useful for the pump unloading at the start-up or to operate at minimum pressure in the system during the machine cycle pause, with considerable energy saving.

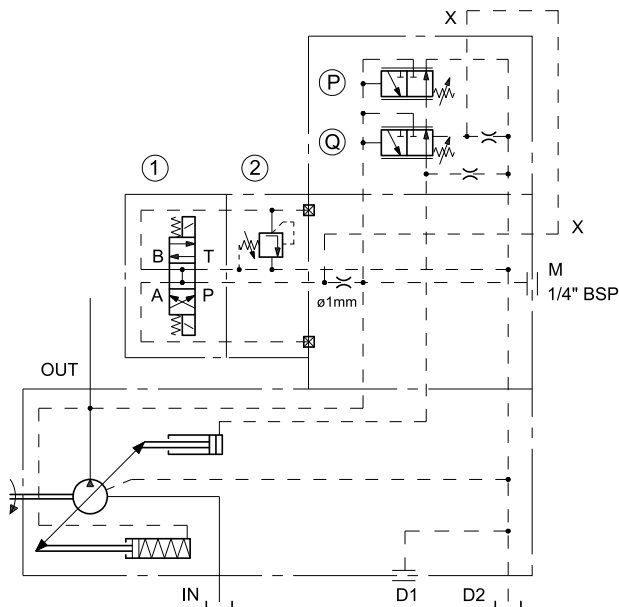

The pressure switching is made by means of a solenoid valve (to be ordered separately) installed on the pump regulator directly.

PCX FEATURES (electrical unloading):

- solenoid switching valve (1) = DS3-SA2 (to be ordered separately see cat. 41 150)
- solenoid valve OFF = pump at null displacement and delivery pressure = 20 bar
- solenoid valve ON = maximum displacement and delivery pressure set on regulator (P).
- pressure regulating range (P) = 20 ÷ 350 bar
- default setting (P) = 280 bar

10.2 - Two pressure settings + unloading

FUNCTIONAL DIAGRAM

This type of regulator allows to select, by means of a three-position solenoid valve, two different working pressures; it allows also the pump unloading.

The solenoid valve (1) and the relief valve (2) for the intermediate pressure setting are directly installed on the pump regulator and they are to be ordered separately.

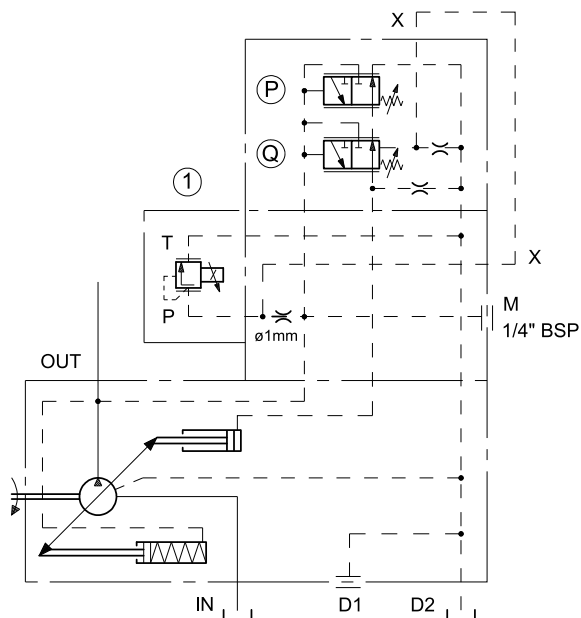

PCX FEATURES (two pressure settings + unloading):

- solenoid switching valve (1) = DS3-S2 (to be ordered separately see catalogue 41 150)
- solenoid valve OFF = pump unloading - delivery pressure = 20 bar
- solenoid side "a" ON = maximum displacement and delivery pressure set on relief valve (2) (intermediate value)
- solenoid side "b" ON = maximum displacement and delivery pressure set on regulator (P) (maximum value)
- pressure relief valve (2) = MCI*-SBT (to be ordered separately - see cat. 61 200)
- pressure regulating range (2) = MCI3-SBT 20 ÷ 100 bar
MCI5-SBT 20 ÷ 250 bar
- pressure regulating range (P) = 20 ÷ 350 bar
- default setting (P) = 280 bar

NOTE: For PCX regulators characteristic curves (with two pressure settings + unloading functions), see PC regulator diagrams at paragraph 8.1.

10.3 - Pressure regulation with electric proportional control

FUNCTIONAL DIAGRAM

The PCX regulator mated with a proportional pressure relief valve, allows a continuous control and modulation of the system pressure.

The proportional pressure relief valve (to be ordered separately) is installed on the pump regulator directly.

PCX FEATURES (proportional pressure regulation):

- pressure regulating range (P) = 20 ÷ 350 bar
- default setting (P) = 280 bar
- proportional pressure relief valve (1) = PRED3 (to be ordered separately with its relative electronic control unit - see catalogue 81 210)
- proportional pressure regulating range:

PRED3-070	20 ÷ 100 bar
PRED3-210	20 ÷ 240 bar

Hysteresis = < 5% of p nom

Repeatability = < ± 1,5% of p nom

10.3.1 - Characteristic curves (values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm and an oil temperature of 50°C.

FLOW RATE / PRESSURE FEATURE

CURRENT / PRESSURE FEATURE

RESPONSE TIME

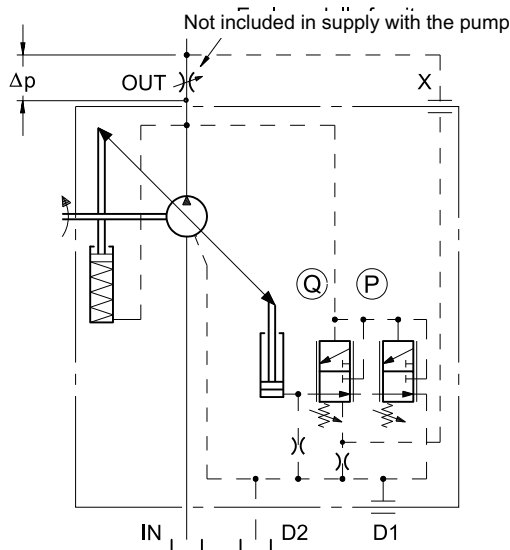

The response times are obtained with a VPPM-046 pump, by changing the reference signal (V Ref) on the proportional valve in order to have a line pressure variation from 50 to 150 bar and vice versa, with an oil volume of 5 lt.

t1 = 80 ms (response time for an increasing pressure change)

t2 = 60 ms (response time for a decreasing pressure change)

11 - FLOW RATE AND PRESSURE REGULATOR: PQC

FUNCTIONAL DIAGRAM

This regulator, apart from regulating the pressure (as for the PC model), allows the pump flow rate to be regulated according to the Δp pressure drop measured on either side of a throttle valve installed on the user line. The connection pipe between the X port and the flow line downstream the restrictor (or valve) must always be made (customer charge).

PQC FEATURES:

- pressure regulating range (P) = 20 ÷ 350
- default setting (P) = 280 bar
- differential pressure regulating range (Q) = 10 ÷ 40 bars
- default setting = 14 bar
- Min. discharge head = 18 ± 2 bar
(with a zero flow rate, X discharge pilot and with a default (Q) setting of the differential regulator)

11.1 - Characteristic curves of the PQC regulator (values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm and an oil temperature of 50°C.

FLOW RATE / PRESSURE FEATURE

Flow variation between minimum and maximum pressure with pump set at max displacement

pump size	ΔQ max [l/min]
029	0.9
046	1.7
073	2.5
087	2.5

FLOW RATE / ROTATION SPEED STATIC FEATURE

12 - INTEGRATED PROPORTIONAL FLOW AND PRESSURE CONTROL REGULATOR: PQCE5

FUNCTIONAL DIAGRAM

This regulator allows an independent regulation of the pump flow and pressure, both with an electric proportional control.

The pump flow is regulated through the proportional valve (1) which operates directly on the pump delivery, while the system pressure is controlled by means of the proportional relief valve (2) working as a pilot stage of the differential regulator (Q).

The maximum system pressure is limited by the regulator (P). The regulator is also equipped of a built-in pressure relief valve (3) with manual adjustment, which limits the pressure peak due to quick flow variations in the system.

PQCE5 FEATURES

- pressure regulating range (P) = 20 ÷ 350 bar
- default setting (P) = 280 bar
- differential pressure regulating range (Q) = 10 ÷ 30 bar
- default setting = 16 bar
- proportional pressure regulating range:
20 ÷ 250 bar (for VPPM-*PQCE5 pump)
- proportional flow regulating range:
0 ÷ 69 l/min (for VPPM-046 PQCE5 pump)
0 ÷ 109,5 l/min (for VPPM-073 PQCE5 pump)
0 ÷ 132 l/min (for VPPM-073 PQCE5 pump)

PERFORMANCES and ELECTRICAL CHARACTERISTICS

	FLOW REGULATION (1) (DSE5 valve)	PRESSURE REGULATION (2) (CRE valve)
HYSTERESIS	< 6% of Q max	< 5% of p nom
REPEATABILITY	< ±1,5% of Q max	< ±1,5% of p nom
NOMINAL VOLTAGE	24 VDC	24 VDC
COIL RESISTANCE (at 20°C)	8,65 Ω	16,6 Ω
MAXIMUM CURRENT	1,6 A	0,85 A
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU	
DEGREE OF PROTECTION : Atmospheric agents (CEI EN 60529)	IP 65	
ELECTRONIC CONTROL UNITS for proportional valves	EDM-M3312 see cat. 89 250	

12.1 - Characteristic curves of the PQCE5 regulator

(values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm and an oil temperature of 50°C.

**Flow variation
between minimum and maximum pressure
with pump set at max displacement**

pump size	ΔQ max [l/min]
046	1.7
073	2.5
087	2.5

CURRENT / FLOW CURVE

CURRENT / PRESSURE CURVE

13 - POWER REGULATOR: PQNC

FUNCTIONAL DIAGRAM

Such regulator keeps the pump torque at a constant level by changing the displacement according to the delivery pressure, so that the ratio $p \times (Q)$ (absorbed power) remains unchanged. The functions limiting the (P) maximum pressure and regulating the (Q) flow rate are always present, if a restrictor has been installed on the user line.

In the 1/8" BSP coupling supplied for the X port, there is a restrictor of $\varnothing 0,8$ orifice.

Note: The connection pipe between the X port and the pump outlet must always be made (customer charge).

PQNC FEATURES:

- pressure regulating range (P) = 20 ÷ 350
- default setting (P) = 280 bar
- differential pressure regulating range (Q) = 10 ÷ 30 bar
- default setting = 16 bar
- min. discharge head = 18 ± 2 bar
(with a zero flow rate, X discharge pilot and with a default Q setting of the differential regulator)
- the power regulator is factory set. The setting value has to be specified with the order, by stating into the identification code the Nm torque value (see paragraph 1).
- Start of the regulation: looking at values table of paragraph 1.5

13.1 - Characteristic curves of the PQNC regulator (values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

The diagram curves were measured with a pump rotation speed of 1500 rpm and an oil temperature of 50°C.

FLOW RATE / PRESSURE CURVE

14 - POWER REGULATOR WITH INTEGRATED PROPORTIONAL FLOW AND PRESSURE CONTROL: PQNCE5

FUNCTIONAL DIAGRAM

This system combines all the functions of the constant power control as a standard PQNC5 regulator, and moreover it allows the independent proportional regulation of the pump flow and pressure at values behind the power curve characteristic set on the regulator (N).

PQNCE5 FEATURES

For technical characteristics and settings of regulator, see paragraph 13.

14.1 - Characteristic curves of the PQNCE5 regulator

(values obtained with mineral oil with viscosity of 36 cSt at 50°C with driver EDM-M3312)

The diagram curves were measured with a pump rotation speed of 1500 rpm and an oil temperature of 50°C.

18 - VPPM-073 AND VPPM-087 OVERALL AND MOUNTING DIMENSIONS

NOTE: The limit control is supplied factory set at zero minimum displacement and is sealed up with red paint.

Any modification of this setting by the user makes the pump unable to reach the null displacement condition.

19 - OVERALL DIMENSIONS FOR FLANGES AND SHAFTS TYPE SAE J744

20 - INSTALLATION

- The VPPM pumps can be installed both in a horizontal and vertical position, with the shaft in an upward position.

N.B.: The drainage port has to be oriented so that the oil level inside the pump body is never lower than 3/4 of its volume (according to the installation use the D1 or D2 drainage ports).

- Installation below the oil reservoir is suggested. As for an installation above the oil level, check that the min. suction pressure is not lower than -0.2 bars (relative). If a low noise emission level is required, the installation inside the tank is suggested.

In case of an installation inside the tank, with an oil level which does not grant complete pump submersion, it is suggested that the drain tube is adjusted so that the pump higher bearing can be always lubricated.

- **Before starting, the pump body has to be filled with the fluid.**

- It is necessary to vent the air from the delivery connection before operating it the first time. The pump start up, especially at a cold temperature, should occur with the plant at minimum pressure.
- The suction tube has to be suitably sized so that the suction pressure is never lower than -0.2 bar (relative). Bends or restrictions or an excessive tube length could further decrease the value of the suction pressure with a following increase in the noise emissions and a decrease in the pump lifetime.
- The drainage tube has to be sized so that the pressure inside the pump body is always lower than 2 bar (absolute), even during the dynamic change and flow rate phases. The drainage tube has to unload inside the tank far from the suction area. We suggest to interpose a screen between the two lines.
- The drain pressure can be max 0.5 bar higher than the suction pressure but it can never exceed the max of 2 bar of absolute pressure.
- No check valves allowed on the suction line.
- The motor-pump connection must be carried out directly with a flexible coupling. Radial and axial loads have to be lower than the values specified in the table at paragraph 3.
- As for details and the installation of filter elements, see par. 2.3.

MOUNTING INSIDE THE TANK

Minimum level of oil in the tank at or above the surface of the pump flange
 $A \geq 200 \text{ mm}$

Minimum level of oil in the tank below the surface of the pump flange
 Minimum inlet pressure = -0,2 bar (relative)
 $B \leq 800 \text{ mm}$ $C = 200 \text{ mm}$

MOUNTING OUTSIDE THE TANK

Minimum inlet pressure = -0,2 bar (relative)
 $B \leq 800 \text{ mm}$ $C = 200 \text{ mm}$

$C = 200 \text{ mm}$

21 - THROUGH OUTPUT SHAFT

The VPPM pumps can be supplied with a through output shaft, which allows coupling with other pump models.

N.B.: The pumps with a through output shaft are supplied with an intermediate 2-hole flange type SAE J744 - and with a mating joint for splined shaft type SAE J744.

The mechanical adjustment for the min and max displacement are not available on these front or intermediate pumps: VPPM-029 with flange 62S, VPPM-073 with flange 64S, VPPM-087 with flange 64S.

As for identification see par. 1 "Identification code". For the pump overall dimensions (intermediate flange included) see paragraph 23 "overall dimensions for multiple pumps".

mating joint for a SAE J744 splined shaft 12/24 D.P. - 14T

22 - MULTIPLE PUMPS

The possibility to couple several pumps makes it possible to create multi-flow groups with independent hydraulic circuits. While sizing coupled pumps, it's necessary to make reference to the following conditions:

- The coupling can be carried out between pumps with the same dimensions or to a size of decreasing order.
- The max. rotation speed is determined by the pump with the lowest speed.
- The values of the max. applicable torque can not be exceeded.

22.1 - Max. applicable torque

The input torque (M) for each pump is given by the following ratio:

$$M = \frac{9550 \cdot N}{n} = [\text{Nm}]$$

n = rotation speed [rpm]

where the absorbed power (N) is given by:

$$N = \frac{Q \cdot \Delta p}{600 \cdot \eta_{\text{tot}}} = [\text{kW}]$$

Q = flow rate [l/min]

Δp = differential pressure between the pump suction and delivery [bar]

η_{tot} = total efficiency (obtainable from the diagrams in par. 4-5-6)

or it can be obtained from the diagrams ABSORBED POWER (see par. 4 - 5 - 6 - 7).

If several pumps are coupled, the torque of each single pump has to be added to the torque of subsequent pumps when they are loaded simultaneously.

The obtained torque value for each pump has to be lower than the value specified in the table below :

pump with a through output shaft	MAXIMUM TORQUE APPLICABLE AT THE FRONT PUMP SHAFT [Nm]			MAXIMUM TORQUE APPLICABLE AT THE PUMP TO BE COUPLED [Nm] (not simultaneously to the front pump)					
	cylindrical ISO 3019/2 (cod. 5)	cylindrical SAE J744 (cod. 0)	splined SAE J744 (cod. 1)	GP2 external gear	GP3 external gear	VPPM-029	VPPM-046	VPPM-073	VPPM-087
VPPM-029	170	200	190	100	135	135	-	-	-
VPPM-046	220	230	330	135	250	250	250	-	-
VPPM-073	450	490	620	135	330	330	400	440	-
VPPM-087	450	490	620	135	330	330	400	440	440

The maximum transmissible torque for those pumps with a through output shaft is determined by the coupling used for the transmission. If the obtained torque values are higher than the ones stated in the table, it is necessary to reduce the working pressure value or to replace the overloaded pump with a pump suitable to bear the required torque.

23 - OVERALL DIMENSIONS FOR MULTIPLE PUMPS

dimensions in mm

	REAR PUMP

VPPL

VARIABLE DISPLACEMENT AXIAL-PISTON PUMPS FOR INTERMEDIATE PRESSURE SERIES 20

OPERATING PRINCIPLE

- The VPPL are variable displacement axial-piston pumps with variable swash plate, suitable for applications with open circuits and intermediate pressures.
- They are available in seven nominal sizes, with displacements of 8, 16, 22, 36, 46, 70 and 100 cm³/rev.
- The pump flow rate is proportional to the rotation speed and to the angle of the swash plate, which can be continuously modulated. The maximum and minimum angle can be limited mechanically via suitable regulating screws.
- They are usually supplied with a SAE J744 2-hole flange and a SAE J744 cylindrical with key shaft.
- They are available with four different types of regulating control, each according to the application needs.

TECHNICAL SPECIFICATIONS

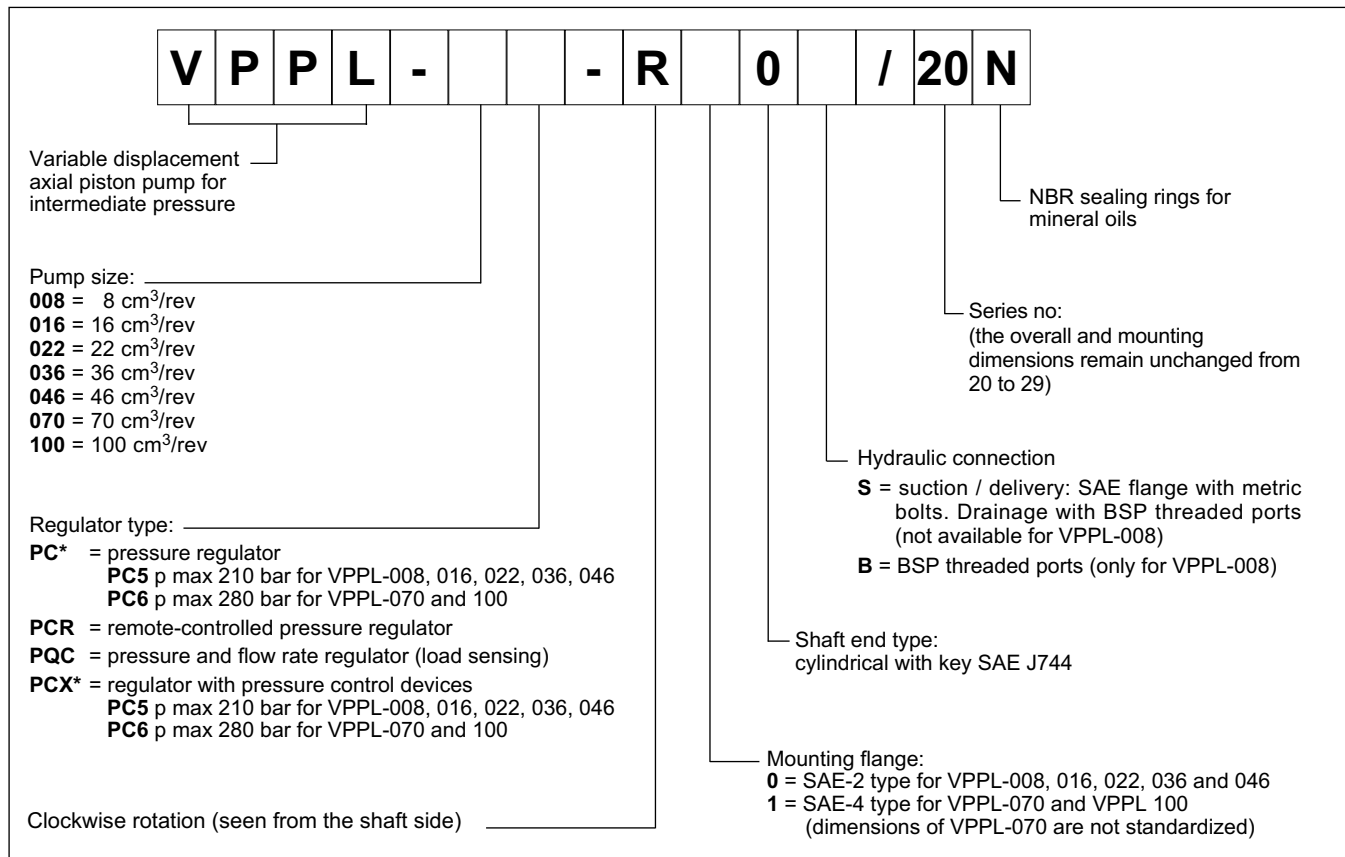

PUMP SIZE		008	016	022	036	046	070	100

HYDRAULIC SYMBOL

Ambient temperature range	°C	-10 / +50
Fluid temperature range	°C	-10 / +70
Fluid contamination degree	see paragraph 2.3	
Recommended viscosity	cSt	20 ÷ 50

1 - IDENTIFICATION CODE

2 - HYDRAULIC FLUID

2.1 - Fluid type

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. With these fluids use NBR seals. Using fluids at temperatures higher than 70 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	10 cSt	referred to a maximum temperature of 90 °C for the drainage fluid
optimum viscosity	20 / 50 cSt	referred to the operating temperature of the fluid in the tank
maximum viscosity	1000 cSt	limited only to the cold start-up of the pump, which has to be carried out with the plant at minimum pressure.

When selecting the fluid type, be sure that the true viscosity is within the range specified above at the operating temperature.

2.3 - Degree of fluid contamination

The maximum degree of fluid contamination must be according to ISO 4406:1999 class 20/18/15; therefore the use of a delivery or return filter with $\beta_{20} \geq 75$ is suggested.

A degree of maximum fluid contamination according to ISO 4406:1999 class 20/16/13 is recommended for optimum endurance of the pump. Hence, the use of a filter with $\beta_{10} \geq 100$ is recommended.

For the installation of filters on the suction line, see paragraph 10. The suction filter must be equipped with a by-pass valve and, if possible, with a clogging indicator and should be oversized to avoid cavitation problems.

3 - CHARACTERISTIC CURVES

4 - REGULATORS

4.1 - Pressure regulator: PC*

The PC* pressure regulator keeps the pressure at a constant set level in the circuit, thus adjusting automatically the pump flow rate according to the real need of the system.

The desired pressure can be set by manually adjusting the P regulation valve. The clockwise rotation of the adjustment bolt makes the pressure increase.

FEATURES OF THE PC REGULATOR:

- pressure adjustment range:
 - PC5** = 30 ÷ 210 bar (for VPPL 008, 016, 022, 036 and 046)
 - pressure increase/adjustment screw round: 69 bar
 - PC6** = 30 ÷ 280 bar (for VPPL 070 and 100)
 - pressure increase/adjustment screw round: 78 bar

4.2 - Remote-controlled pressure regulator: PCR

The PCR regulator allows a remote-control of the device via a remote control connected to the X port (typical application for submerged pumps). If a pressure regulating valve is used for the remote-control, it is suggested to use a direct operated valve with a size suitable to 1,5 l/min pilot flow rate.

NOTE: The maximum length of the connection between the valve and X port of the pump must not be longer than 2 m.

4.2.1 - Remote-controlled pressure regulator: PCR for VPPL 008, 016, 022, 036 e 046

FEATURES OF THE REGULATOR:

- remote-adjustment pressure = 20 ÷ 210 bar
- flow rate available on the X port for the remote-control = about 1,5 l/min (approx.)

4.2.2 - Remote-controlled pressure regulator: PCR for VPPL 070 e 100

FEATURES OF THE REGULATOR:

It also limits the line maximum pressure.

- pressure regulating range 30 ÷ 280 bar
- pressure increase/adjustment screw round: 78 bar
- remote-regulated pressure range = 20 ÷ 280 bar
- flow rate available on the X port for the remote-control = about 1,5 l/min

4.3 - Pressure and flow rate regulator: PQC

This regulator, in addition to the pressure adjustment (as for the PC* model), allows the pump flow rate control, according to the Δp pressure drop measured on either side of a throttle valve installed on the user line.

Note: The connection pipe between the X port and the flow line downstream the restrictor (or valve) must always be made (customer charge).

FEATURES OF THE PQC REGULATOR:

- pressure adjustment range:
 - 11 ÷ 190 bar (for VPPL 008, 016, 022, 036 and 046)
 - 13 ÷ 230 bar (for VPPL 070 and 100)
- pressure increase/adjustment screw round: 78 bar
- differential pressure adjustment range = 15 ÷ 28 bar
- minimum delivery pressure = 15 bar

4.4 - Regulator with pressure control devices: PCX*

4.4.1 - Electrical unloading

The PCX* regulator, mated to a suitable two-position solenoid valve, allows the electrical switching of the pump displacement in null condition and with minimum delivery pressure.

This function is useful for the pump unloading at the start-up or to operate at minimum pressure in the system during the machine cycle pause, with considerable energy saving.

The pressure switching is made by means of a solenoid valve (to be ordered separately) installed on the pump regulator directly.

PCX* FEATURES (electrical unloading):

- solenoid switching valve (1) = DS3-SA2 type
(to be ordered separately - see cat. 41 150)
- solenoid valve OFF = pump at null displacement and delivery pressure = 20 bar
- solenoid valve ON = maximum displacement and delivery pressure set on regulator.
- pressure regulating range:
20 ÷ 210 bar for VPPL-008, 016, 022, 036 and 046
20 ÷ 280 bar for VPPL-070 and 100
- pressure increase/adjustment screw round = 78 bar
- default settings:
210 bar for VPPL-008, 016, 022, 036 and 046
280 bar for VPPL-070 and 100

4.4.2 - Pressure regulation with electric proportional control

The PCX regulator mated with a proportional pressure relief valve, allows a continuous control and modulation of the system pressure.

The proportional pressure relief valve (to be ordered separately) is installed on the pump regulator directly.

PCX* FEATURES (proportional pressure regulation):

- pressure regulating range:
PCX5 = 20 ÷ 210 bar for VPPL-008, 016, 022, 036, 046.
PCX6 = 20 ÷ 280 bar for VPPL-070 and 100
- pressure increase/adjustment screw round = 78 bar
- default setting:
PCX5 = 210 bar for VPPL-008, 016, 022, 036 and 046
PCX6 = 280 bar for VPPL-070 and 100
- proportional pressure relief valve (1) = PRED3 type
(to be ordered with the relative control card separately - see cat. 81 210)
- proportional pressure regulating range :
PRED3-070 20 ÷ 85 bar
PRED3-210 20 ÷ 225 bar

Hysteresis = < 5% of p nom

Repeatability = < ±1,5% of p nom

Regulator side view

10 - INSTALLATION

- The VPPL pumps can be installed both in a horizontal and vertical position, with the shaft in an upward position.

Note: the drain port has to be oriented so that the oil level inside the pump body is never lower than 3/4 of its volume.

- In the case of installation above the oil level, check that the minimal inlet pressure is not lower than -0.2 bars (relative). If a low noise emission level is required, the installation inside the tank is suggested.

In case of an installation inside the tank, with an oil level which does not grant complete pump submersion, it is suggested to adjust the drain tube so that the pump higher bearing can be always lubricated.

- **Before starting, the pump body has to be filled with the fluid.**

- Check the pump direction of rotation.

- It is necessary to vent the air from the delivery connection before operating it the first time. If the air venting should be difficult, the use of a venting valve is recommended.

The pump start up should occur with the plant at minimum pressure, especially with low temperatures.

- The suction tube has to be suitably sized so that the suction pressure is never lower than -0.2 bar (relative). Bends or restrictions or an excessive tube length could further decrease the value of the suction pressure with a following increase in the noise emissions and a decrease in the pump lifetime.

- The drainage tube has to be sized so that the pressure inside the pump body is always lower than 0.5 bars (relative), even during the dynamic change and flow rate phases. The minimum piping size is 3/8" for the pump type 008, 016 and 022, while it should be at least 1/2" for the pumps type 036 and 046, 3/4" for the 070 and 100 pumps type.

The drain tube has to unload inside the tank far from the suction area.

- No check valves allowed on the suction line. As for details and the installation of filter elements, see paragraph 2.3.

- The motor-pump connection must be carried out directly with a flexible coupling, to reduce at the minimum the axial and radial loads on the pump shaft. The alignment tolerance between the two shafts must be within 0.05 mm.

11 - CONNECTION FLANGES

dimensions in mm
Bolts and O-rings must be ordered separately.

	Flange code	Flange description	p _{max} [bar]	ØA	ØB	C	D	E	F	G	H	L	1 SHC bolts ISO 4762	2

HPR

HIGH PRESSURE SELF-REGULATING PUMP FOR OPEN LOOP OPERATION SERIES 10

OPERATING PRINCIPLE

- HPR pumps are variable displacement axial-piston pumps with swash plate design, suitable for applications with open circuits.
- Seven frame sizes are available, from 55 up to 280 cm³/rev.
- The pump flow rate is proportional to the shaft speed and to the swash plate angle, which can be continuously modulated. The maximum angle can be limited mechanically by means of an adjustment screw.
- Due to the special design, these pumps are able to operate at high working pressures (420 bar continuously and 500 bar peak)
- All the pumps are equipped with a noise reduction device.

TECHNICAL SPECIFICATIONS

PUMP SIZE		55	75	105	135	165	210	280
Maximum displacement	cm ³ /rev	55	75,9	105	135,7	165,6	210,1	281,9
Maximum operating pressure	bar	420						
Rotation speed and operating flow rate		see table 3 - Performances						
Rotation direction		clockwise						
Loads on the shaft: axial load radial load	N	2000 on request						
Hydraulic connection		flange fittings - SAE 3000 suction / SAE 6000 pressure						
Type of mounting		SAE J744						
Mass (empty single pump)	kg	39	39	50	65	89	116	165

Ambient temperature range	°C	-15 / +70
Fluid temperature range	°C	-20 / +80
Fluid recommended viscosity	cSt	15 ÷ 30
Fluid contamination degree (ISO 4406:1999)		18/16/13

NOTE: Values referring to 1 bar absolute on suction port.

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODES

1.1 - Identification code for single pumps and pumps with power take-off

H	P	R	-		-	R	/	10	V	-	-	/		
Self-regulating piston pump for high pressure													(Diplomatic reserved field)	
Pump size:													Option: Torque Omit if not required (see par 6.1)	
055 = 55 cm ³ /rev			165 = 165,6 cm ³ /rev										PTO - power take off / through drive shaft	
075 = 75,9 cm ³ /rev			210 = 210,1 cm ³ /rev										A00 = SAE A flange - no shaft coupling (standard) (single pump)	
105 = 105 cm ³ /rev			280 = 281,9 cm ³ /rev										A09 = SAE A flange - coupling 16/32 9t	
135 = 135,7 cm ³ /rev													B13 = SAE B flange - coupling 16/32 13t	
													B15 = SAE B flange - coupling 16/32 15t (not available on HPR 135 and 210)	
													C14 = SAE C flange - coupling 12/24 14t	
													D27 = SAE D flange - coupling 16/32 27t (not available on HPR 135, 165 e 210)	
													E27 = SAE E flange - coupling 27t 16/32 (not available on HPR 210)	
Pump controls:													Options for ET6 control (Omit for other controls)	
LP6 = load sensing with pressure cut-off adj. range 230-350 bar (standard) Other ranges are available upon request. See section 5.													D12K2 = 12V DC supply and AMP Junior connection	
TL2 = load sensing with power control (not available on sizes 055, 075 and 165)													D24K2 = 24V DC supply and AMP Junior connection	
ET6 = electro-proportional displacement control with power limiter and pressure cut-off adj. range 230-350 bar (standard) Other ranges are available upon request. See section 7. (not available on sizes 055, 075 and 165)														
Rotation direction (seen from the shaft end):														
R = clockwise (standard) Anticlockwise rotation direction on request. (NOTE)														
Mounting flange / splined shaft (see section 13)													FPM seals	
HPR 55:													Series No. (from 10 to 19 size and mounting dimensions remain unchanged)	
C14 = SAE C flange - 2 holes - shaft 12/24 14t														
HPR 75:														
C14 = SAE C flange - 2 holes - shaft 12/24 14t (standard)														
C21 = SAE C flange - 2 holes - shaft 16/32 21t														
HPR 105:														
C17 = SAE C flange - 2 holes - shaft 12/24 17t (standard for TL2)														
C23 = SAE C flange - 2 holes - shaft 16/32 23t (standard for LP6)														
HPR 135 and HPR 165 :														
D13 = SAE D flange - 2 holes - shaft 8/16 13t (standard for 135)														
D27 = SAE D flange - 2 holes - shaft 16/32 27t (standard for 165)														
HPR 210 and HPR 280														
E15 = SAE E flange - 4 holes - shaft 15t 8/16														
Keyed shaft available on request, on HPR280 only.														
NOTE: Pumps with anticlockwise rotation are available from HPR55 to HPR210 with limited options, such no noise reduction device. Please contact our technical dept. for availability.														

2 - HYDRAULIC FLUID

2.1 - Fluid type

Use mineral oil based hydraulic fluids HLP with anti-foam and antioxidant additives according to the DIN 51524-2 standard. For use with other types of fluid, keep in mind the limitations shown here below or consult our technical department for authorization of use.

2.2 - Fluid viscosity

The operating fluid viscosity must be within the following range:

minimum viscosity	10 cSt	referred to a maximum temperature of 80°C for the drain line
optimum viscosity	15 + 30 cSt	referred to the fluid operating temperature in the tank.
maximum viscosity	1000 cSt	limited to the cold start-up of the pump only, which has to be carried out with the circuit at minimum pressure.

When selecting the fluid type, check its viscosity is within the range specified above at the operating temperature.

Recommended viscosity values are indicated in the table and diagram.

Operating temperature [°C]	Viscosity class [cSt at 40°C]
from 30 to 40	22
from 40 to 60	32
from 60 to 80	46 or 68

2.3 - Degree of fluid contamination

In order to guarantee long-term proper function and high efficiency of the hydraulic pumps the purity of the operating fluid must comply with the following class according to the ISO 4406:1999. High purity oil can extend the service time of the hydraulic system significantly.

For reliable proper function and long service life 18/16/13

Minimum requirements 20/18/15

Commissioning The minimum purity requirement for the hydraulic oil is based on the most sensitive system component. For commissioning we recommend a filtration in order to achieve the required purity

Filling and operation of hydraulic systems The required purity of the hydraulic oil must be ensured during filling or topping up. When drums, canisters or large-capacity tanks are used the oil generally needs to be filtered.

We recommend the implementation of suitable measures (e.g. filters) to ensure the required minimum purity of the oil is also achieved during these tasks.

3 - PERFORMANCES

(values obtained with mineral oil with a viscosity of 36 cSt at 50°C)

PUMP SIZE		055	075	105	135	165	210	280
Max displacement	cm ³ /rev	55	75.9	105	135.7	165.6	210.1	281.9
Max flow: - at 1500 rpm - at max rotation speed	l/min	82.5 148.5	113.9 189.8	157.5 262.5	203.5 318.9	248.2 364.1	315.5 441.2	422.9 563.8
Minimum operating speed	rpm	500						
Maximum operating speed	rpm	2700	2500	2500	2350	2200	2100	2000
Max delivery pressure: - continuous - intermittent	bar	420 500						
Inlet pressure:	bar abs	from 0.8 up to 20 bar (see par. 12)						
Max housing pressure	bar	1,5						
Max power ($\Delta p = 420$ bar): - at 1500 rpm - at max rotation speed	kW	57.8 104	79.7 132.8	110.3 183.8	142.5 223.2	173.8 254.9	220.6 308.8	296 394.7
Max absorbed torque: $\Delta p = 100$ bar $\Delta p = 420$ bar	Nm	87 368	121 507	167 702	216 907	263 1106	334 1404	446 1884
Moment of inertia on the shaft	kgm ² x 10 ⁻²	0,79	0,79	1,44	2,15	3,41	4,68	8,34

4 - NOISE REDUCTION DEVICE

All the HPR-02 hydraulic pumps are optimized with respect to pulsation characteristics and therefore noise generation. In addition to common primary measures such as exclusive use of noise-optimized port plates, the SPU noise reduction device is available.

Without affecting the functionality and efficiency of the pump, this system reduces pressure noise by up to 70%, irrespective of pressure, speed or temperature.

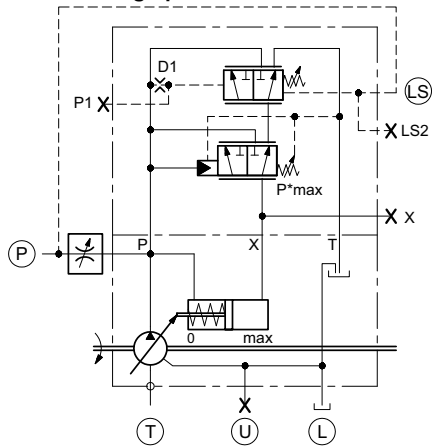

The SPU system is adaptive over the entire operating range. No setting up or maintenance is required.

Comparison of noise pressure levels for a HPR 75 pump with and without SPU

5 - LP6 - LOAD SENSING WITH PRESSURE CUT-OFF CONTROL

Load sensing operation

This load sensing control allows the pump flow rate to be regulated according to the Δp pressure drop measured on both the sides of a throttle valve installed on the working line.

NOTE: The connection pipe between the LS port and the flow line downstream the restrictor (or valve) is always in customer's charge. **The restrictor is not supplied.**

The maximum operating pressure can be set manually adjusting the P*max valve.

LP* FEATURES:

- pressure adjustment range:

LP6 = 230 ÷ 350 (standard)
default setting = 350 bar

LP5 = 125 ÷ 230 (upon request)

LP7 = 350 ÷ 420 (upon request)

- differential pressure regulating range = 16 ÷ 27 bar

- default setting = 20 bar

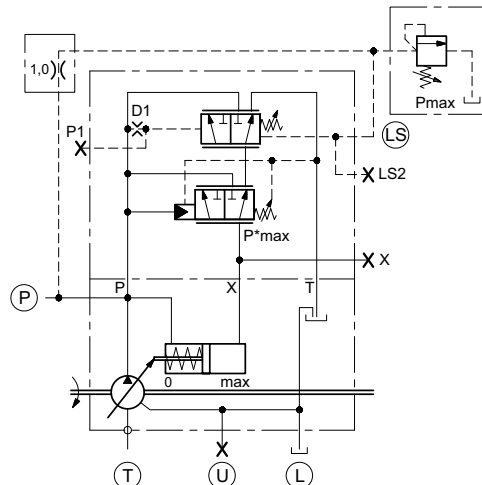

Pressure control operation

Bypassing both P and LS ports with an external connection and an orifice (both in customer's charge) the pump will operate as pressure control that works at maximum displacement up to the set pressure P*max.

Remote pressure operation

It is possible to create a remote pressure control by means of both an external pressure relief valve and an orifice (both in customer's charge) as shown in the schema.

This configuration allows to regulate remotely the maximum pressure up to P*max. When the pressure it's lower than the set value P*max the pump is at its maximum displacement.

6 - TL2 - LOAD SENSING WITH POWER CONTROL

The TL2 control is available for pumps HPR105, HPR135, HPR210 and HPR280.

This control combines the load sensing function typical of LP control with a power limiter with hyperbolic characteristic. Such limiter keeps the pump torque at a constant level by changing the displacement according to the delivery pressure, so that the absorbed power remains unchanged (at constant pump speed).

The Z1 port must always be connected to the tank separately and without back pressure. The Z2 port is plugged.

NOTE: The pipe connection between the LS port and the delivery of the pump, the orifice and the external pressure relief valve are always charged to the customer.

NOTE: The feature of the pressure cut-off is not present on this control, it is necessary to provide suitable external valve, as shown in the diagram at side.

TL2 FEATURES:

- differential pressure adjustment range = 16 ÷ 27 bar
default setting = 20 bar
- pressure adjustment range for torque regulation:
HPR105, HPR135 = 60 ÷ 250 bar
HPR210, HPR280 = 80 ÷ 250 bar
default setting = 250 bar

The power control is factory set. The setting value has to be specified with the order, by stating into the identification code the Nm torque value.

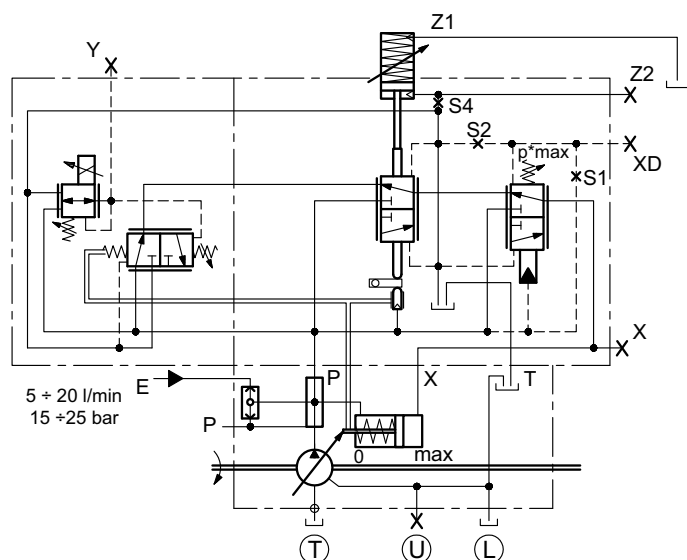

Start of the regulation: looking at values table below.

6.1 - Standardized torque values

PUMPS	ELECTRICAL MOTOR 4 POLES (at 50 Hz)										
	Power [kW]	18.5	22	30	37	45	55	75	90	110	132
	N [rpm]	1500									
	torque [Nm]	118	140	191	236	286	350	477	573	700	840
105	start of pressure regulation [bar]	63	75	103	127	154	189	-	-	-	-
135		-	-	80	98	119	146	199	239	-	-
210		-	-	-	-	-	94	129	154	188	226
280		-	-	-	-	-	-	96	115	140	169

7 - ET6 - ELECTRO-PROPORTIONAL DISPLACEMENT CONTROL WITH POWER LIMITER AND REMOTE PRESSURE CUT-OFF

The ET6 control is available for pumps HPR105, HPR135, HPR210 and HPR280.

It combines a pump displacement regulation proportional to the current supplied to the solenoid with a constant input torque control. The limitation of maximum pressure is also available.

With no current the pump is in null displacement, so it is required a supply pressure on port E (located on the pump body) for the start of the control.

Once the P port is pressurized, then the shuttle valve on the pump excludes the piloting of port E and picks the fluid directly from the pump delivery line.

ET6 FEATURES:

- pressure adjustment range:
ET6 = 230 ÷ 350 (**standard**)
default setting = 350 bar
ET5 = 125 ÷ 230 (on request)
ET7 = 350 ÷ 420 (on request)
- pressure adjustment range for torque regulation:
HPR105, HPR135 = 60 ÷ 250 bar
HPR210, HPR280 = 80 ÷ 250 bar
default setting = 250 bar

		D12K2	D24K2

8	Pressure limiter adjustment: 18.8 bar/turn
9	Power adjustment: 18.8 bar/giro
10	Valve for proportional control of displacement AMP Junior connection
11	Max displacement limit adjustment see par. 11

11 - MAXIMUM DISPLACEMENT LIMITATION

The max angle for the swash plate is adjustable. The adjustment screw is placed on pump back. Values for pumps with rotary clockwise.

	Q max (cm ³ /turn)	displacement range (cm ³)
55	4.9	35 - 55
75	5.2	50 - 75
105	6.2	75 - 105
135	7	105 - 135
165		135 - 165
210	9.4	165 - 210
280		210 - 280

12 - INSTALLATION AND START-UP

It is recommended to install the pump below the oil level and horizontally as shown. For installations above oil level and / or vertically, contact our technical dept. The maximum allowed input speed is also directly dependent on the suction pressure.

The temperature should not exceed 80 °C in any part of the system.

Suction

- Provide suction/inlet line continuously rising towards the tank.
- Avoid cavitation events providing adequate flooded suction or pressurized inlet should be of adequate supply as to guard against cavitation.
- On designing the suction line attention must be paid to a straight, short conduct largely avoiding bends. If bends are required, the bending radius must be as large as possible. The suction inlet in the hydraulic tank must have as largest section as possible.
- The suction line itself must be installed in such a way that it ends more than ≥100 mm above the tank bottom. In order to enlarge the entry diameter of the suction boss in the hydraulic tank, its end must be cut under 45°. The distance between entry and oil surface must be large enough to avoid air suction, recommended ≥ 200 mm.
- Take care of the tightness of the pipe/hose so that air is not drawn in.

Case drain

- Positive venting is vital for the correct operation of the hydraulic system.
- **The pump must be always filled with oil, both at start-up and during stops, also long term stops.**
- All case drain lines must be mounted continuously rising towards the tank. This allows any entrapped air to escape freely from the pump housing.
- **The highest case drain port of the pump housing (ports U, L and R) must be connected separately to the tank.** As a rule drain lines have to be kept separate from the main return line. The drain line has to enter the hydraulic tank below the oil level.
- The dimension must be ample enough that even at low temperatures the return flow pressure of the leak oil will be near zero. The case pressure (build-up) should not rise and stay higher than 2.5 bar(absolute) during operation.

Piping

- Pipe work should be seamless drawn precision steel tube or hoses of suitable pressure rating.
- During installation, attention should be paid to cleanliness. The pipes must be deburred, washed and blown through.
- Scaled or rusted pipes must be scoured and then neutralized - Hoses must be brushed and flushed through when contaminated.

Cleanliness

- Oil tank and installation have to be checked again for cleanliness before the hydraulic medium is added. This procedure has to be performed immediately before pouring takes place. It may even be expedient to flush the entire installation! Make sure that the pressure fluid corresponds to the required grade of cleanliness.

Drive rotation

- **Before starting the engine** make sure that the HPR-02 pump will be driven with the correct direction of rotation. With electric motors, it must be checked that the electrical connections are correct.

Filling pump and circuit:

- The initial filling of the system must be carried out in such a way that all of the air can escape from the high pressure circuit and from the pump housing before the hydraulic units are operated.
- **The suction port and the casing of the HPR-02 are not related to each other.** Before the hydraulic components may be exposed to load, the entire circuit must be filled and vented.

- Manually fill the HPR-02 pump at the most accessible case drain port with filtered oil. Manually fill the high pressure line with filtered oil. Fill the oil tank to the maximum level with filtered oil and fill all motor housings to the maximum level via the most accessible case drain port with filtered oil.

Start-up

- If there is an on/off valve in the suction line, make sure it is completely open before starting the engine.
- Start the electric motor and allow the HPR-02 to rotate for 5 seconds.
- Switch engine off and check fluid level in the tank. Top off if necessary. Before restarting the engine, check the installation for tightness.
- Repeat previous steps at least four more times.
- Start the electric motor, then slowly actuate the pump function to allow the pump to increase to maximum displacement. Leave the function fully actuated for 30 seconds, and then repeat the step three times.

- Warm the system up by steadily increasing the pressure so as to allow any air to be purged from the fluid.
- Check the HPR-02 stand-by pressure, load sense margin pressure, pressure compensator setting (if applicable) and maximum flow setting when the hydraulic oil reaches its normal operating temperature.
- Check the oil level in the tank and refill with filtered oil if necessary before delivery of the machine.

13 - FLANGES AND SHAFTS

13.1 - Mounting flanges and splined shafts available as standard (SAE J774)

PUMP	55	75	105	135	165	210	280
Front mounting flange	SAE C - 2 holes			SAE D - 2 holes (NOTE)		SAE E - 4 holes

for HPR 135

SAE D, 2 + 4 holes
for HPR 165

SAE E - 4 holes
for HPR 210 and 280

PUMP	55	75	105	135	165	210	280
flange thickness near fastening holes (mm)	20				25	26	30

14 - PTO - POWER TAKE OFF

The HPR pumps can be supplied with a power take-off SAE J744 type, which allows coupling with other pumps models. As for identification see par. 1 "Identification code".

SAE A

identification code **A09**

SAE J744 - 2 holes intermediate
flange type "A"

coupling for splined shaft
SAE J744 16/32 D.P. - 9T

SAE B

identification code **B13**

SAE J744 - 2 holes intermediate
flange type "B"

coupling for splined shaft
SAE J744 16/32 D.P. - 13T

SAE BB

identification code **B15**

SAE J744 - 2 holes intermediate
flange type "B"

coupling for splined shaft
SAE J744 16/32 D.P. - 15T

SAE C

identification code **C14**

SAE J744 - 2 holes intermediate flange type "C"

coupling for splined shaft
SAE J744 12/24 D.P. - 14T

SAE D

identification code **D27**

HPR 135

SAE J744 - 2 holes intermediate flange type "D"

coupling for splined shaft
SAE J744 16/32 D.P. - 27T

HPR 165 / 210

SAE J744 - 2 holes intermediate flange type "D"

coupling for splined shaft
SAE J744 16/32 D.P. - 27T

SAE E

identification code **E27**

SAE J744 - 4 holes intermediate flange type "E"

coupling for splined shaft
SAE J744 16/32 D.P. - 27T

CR

DIRECT OPERATED PRESSURE CONTROL VALVE SERIES 22

CARTRIDGE TYPE

p max **350** bar

Q max **50** l/min

SEAT DIMENSIONS: D-10E

OPERATING PRINCIPLE

- The CR valve is a direct operated pressure control valve cartridge type that can be used in blocks or panels with type D-10B seat.
- It is normally used to control the maximum pressure in the hydraulic circuits or as a limiting device for pressure peaks generated during hydraulic actuator movement variation.
- It is available in five different pressure control ranges up to 350 bar.
- The circuit pressure acts on the shutter which is directly loaded by a spring on the opposite side. Once the set pressure is reached, the shutter opens, and discharges the excess flow in port T connected directly to the reservoir.
- The pressure can be adjusted by a screw, usually supplied as the countersunk hex type, equipped with locking nut and maximum adjustment limiter.

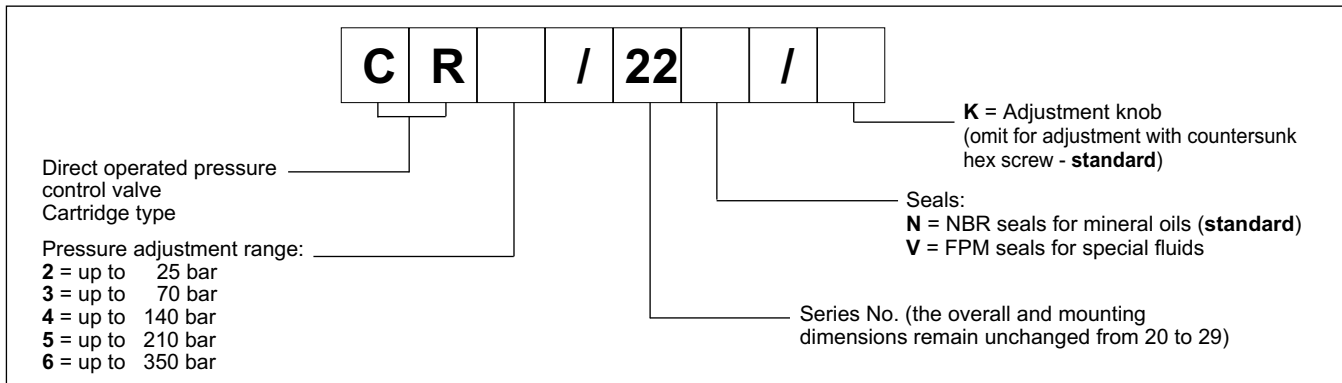

PERFORMANCES (measured with mineral oil of viscosity 36 cSt at 50°C)

Max working pressure	bar	350
Minimum controlled pressure and pressure drop	see diagram	
Maximum flow rate	l/min	50
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	0,16
Surface treatment: electrolytic zinc covering	Fe/Zn8/B ISO 2081	

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES (values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

PRK10

PILOT OPERATED PRESSURE CONTROL VALVE SERIES 12

CARTRIDGE TYPE

seat 7/8-14 UNF-2B (SAE - 10)

p max **350** bar

Q max **120** l/min

SEAT DIMENSIONS: 7/8 - 14 UNF- 2B (SAE - 10)

OPERATING PRINCIPLE

- The PRK10 valve is a pilot operated pressure control valve, cartridge type, that can be used in blocks or panels with 7/8-14 UNF-2B (SAE - 10) type seat.
- It is used to control the hydraulic circuit pressure and allows use of the entire flow of the pump even at pressure values near the set value.
- It consists of a main balanced type spool and a pilot stage. The main spool, normally closed, opens when the circuit pressure exceeds the set value generated by the pilot stage, discharging the excess flow in port T, directly connected to the tank.
- It's available in 4 pressure control ranges from 6 to 350 bar.
- The PRK10 are supplied with a finishing surface treatment (zinc-nickel) suitable to ensure a salt spray resistance up to 600 h (test according to UNI EN ISO 9227 standards and test evaluation according to UNI EN ISO 10289 standards)
- The pressure is adjustable by a socket set screw with locking nut, or by knob.

PERFORMANCES

(measured with mineral oil of viscosity 36 cSt at 50°C)

Max working pressure	bar	350
Minimum controlled pressure and pressure drop	see diagram	
Maximum flow rate	l/min	120
Ambient temperature range	°C	-20 / +60

PCK06

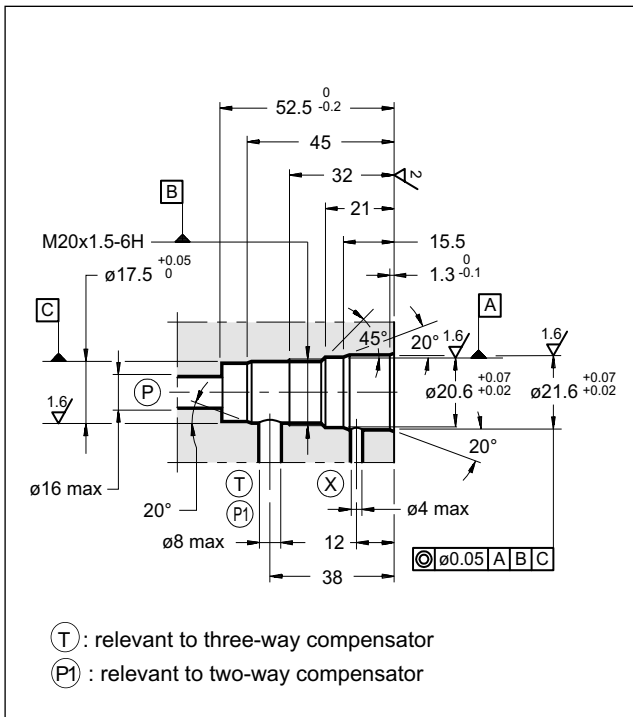

TWO- AND THREE-WAY PRESSURE COMPENSATOR WITH FIXED OR VARIABLE ADJUSTMENT SERIES 10

CARTRIDGE TYPE

p max **350** bar

Q max **40** l/min

SEAT DIMENSIONS D-10D

OPERATING PRINCIPLE

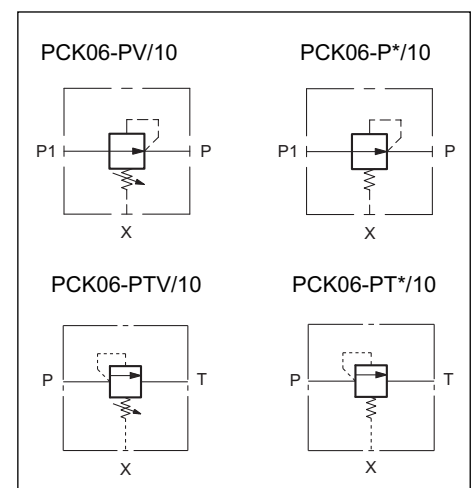

- The PCK06 valve is a two or three-way pressure compensator, cartridge type, for block or manifold application.
- It keeps the pressure drop (characteristic Δp) between the P and the X pilot connections, at a constant level.
- It is normally used together with proportional directional valves, in order to control the flow rate independently of the pressure variations.
- The setting of the variable adjustment compensator can be varied from 7 to 33 bar; adjustment can be operated either via a countersunk hex adjustment screw, or via an adjustment knob.
- The fixed adjustment version can be supplied with a characteristic Δp setting of either 4 or 8 bar.

PERFORMANCES (working with mineral oil of viscosity of 36 cSt at 50°C)

Maximum operating pressure	bar	350
Characteristic Δp : fixed adjustment variable adjustment	bar	4 - 8 7 ÷ 33
Maximum flow rate	l/min	40

THREADED PORTS

p max **350** bar
Q max **3** l/min

HYDRAULIC SYMBOL

OPERATING PRINCIPLE

PERFORMANCE RATINGS (measured with mineral oil of viscosity 36 cSt at 50°C)

Maximum operating pressure	bar	350
Minimum controlled pressure	see diagram	
Maximum flow rate	l/min	3
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Recommended filtration		according to ISO 4406:1999 class 20/18/15
Recommended viscosity	cSt	25
Mass	kg	1,2

1 - IDENTIFICATION CODE

C	D	1	-	W		/		/	10	/	
Direct operated pressure control valve		Nominal dimension			Threaded ports: 1/4" NPT		Series No. (the overall and mounting dimensions remain unchanged from 10 to 19)		Seals: omit for mineral oils V = viton for special fluids		
Pressure adjustment range:					M1 = Adjustment knob (omit for adjustment with countersunk hex screw)						
3 = up to 70 bar		5 = up to 210 bar									
4 = up to 140 bar		6 = up to 350 bar									

2 - CHARACTERISTIC CURVES (values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

RQM*-W

SOLENOID OPERATED PRESSURE RELIEF VALVE WITH UNLOADING AND PRESSURE SELECTION

SERIES 60

THREADED PORTS

p max **350** bar

Q max (see table of performances)

OPERATING PRINCIPLE

- The RQM*-W valves are pilot operated pressure relief valves with BSP threaded ports, available in two nominal sizes for a flow rate up to 400 l/min.
- Available in five versions that allow, by means of a solenoid valve, unloading of the total flow and selection up to three pressure values (see table 2 for different versions).
- The adjustment of the second and third pressure value is obtained by a pressure relief valve placed between the main stage and the solenoid valve.
- They are normally supplied with a hexagonal head adjustment screw. Upon request, they can be equipped with a SICBLOC adjustment knob on the main pressure control.

PERFORMANCES (measured with mineral oil of viscosity 36 cSt at 50°C)

6 - ADJUSTMENT KNOB

The RQ valves can be equipped with a SICBLOC adjustment knob, only on the main pressure regulation. To operate it, push and rotate at the same time.

Add **/M** to request this option (see paragraph 1).

7 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. They must be ordered separately.

For the identification of the connector type to be ordered, please see catalogue 49 000.

8 - MANUAL OVERRIDE, BOOT PROTECTED: CM

Whenever the solenoid valve installation may involve exposure to atmospheric agents or utilization in tropical climates, the use of the boot protected manual override is recommended.

Add the suffix **CM** to request this device (see paragraph 1).

For overall dimensions see catalogue 41 150.

MRQA

UNLOADING VALVE

(FOR CIRCUITS WITH ACCUMULATOR)

SERIES 42

SUBPLATE MOUNTING

ISO 4401-03

p max **350** bar

Q max **40** l/min

OPERATING PRINCIPLE

- MRQA is a pressure relief and safety valve with automatic unloading. Upon reaching the set value, the valve freely unloads the pump and puts it under pressure again when the pressure values descend in the circuit to correspond to 63% or 75% of the set value.

In order to assure this operation, it is necessary to use an accumulator (see hydraulic diagram) that guarantees pressure maintenance in the circuit. A check valve, incorporated in the panel or available as a plate under the valve MRQA/C, prevents the accumulator unloading through the open valve.

This system maintains the pressure in the hydraulic circuit, avoiding heating of the oil and reducing energy consumption.

It is recommended to place the accumulator as close as possible to the MRQA, without reducing the connection size.

- The cycle time depends on the pump flow rate, the accumulator capacity and pre-charge, and the flow requirement of the system.

Unloading valve

Automatic venting for circuits with accumulator
R = for remote piloting
A = with embedded check valve (unavailable on size 3)

Solenoid valve for electrical unloading

Size:
3 = (RQRM3-P) ISO 6264-06-09-*-97 (CETOP R06)
5 = (RQRM5-P) ISO 6264-08-13-*-97 (CETOP R08)
5 = (RQAM5-P)
7 = (RQRM7-P) ISO 6264-10-17-*-97 (CETOP R10)
7 = (RQAM7-P)

Subplate mounting

Pressure adjustment range:
3 = up to 70 bar **6** = up to 280 bar
5 = up to 210 bar

Differential pressure (values $\pm 2.5\%$)
1 = pump switch on at 75% of the set value
2 = pump switch on at 63% of the set value

Unloading with de-energized solenoid

I = internal drainage (not possible when the backpressure on the return line is greater than 2 bar). Omit for external drainage.

CM = manual override, boot protected.
Omit for override integrated in the tube (standard)

Coil electrical connection: plug for connector type DIN 43650 (standard)

DC power supply
D12 = 12 V
D24 = 24 V
D48 = 48 V
D110 = 110 V
D220 = 220 V
D00 = valve without coils (see NOTE)

AC power supply
A24 = 24 V - 50 Hz
A48 = 48 V - 50 Hz
A110 = 110 V - 50 Hz / 120 V - 60 Hz
A230 = 230 V - 50 Hz / 240 V - 60 Hz
A00 = valve without coils (see NOTE)
F110 = 110 V - 60 Hz
F220 = 220 V - 60 Hz

Seals:
N = NBR seals for mineral oil (standard)
V = FPM seals for special fluids

Series No. (the overall and mounting dimensions remain unchanged from 50 to 59)

M = adjustment with SICBLOC knob (omit for adjustment with hexagonal head screw)

NOTE: The locking rings of the coils and the relevant O-Rings are supplied together with valves

2 - CHARACTERISTIC CURVES

(values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - RQRM3-P OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

1	Mounting surface with sealing rings: N. 2 OR type 123 (17.86x2.62) 90 Shore N. 1 OR type 109 (9.13x2.62) 90 Shore

RQM*K*-P

EXPLOSION-PROOF SOLENOID OPERATED PRESSURE RELIEF VALVES WITH UNLOADING AND PRESSURE SELECTION ATEX, IECEx, INMETRO SERIES 10

SUBPLATE MOUNTING

RQM3K*-P ISO 6264-06

RQM5K*-P ISO 6264-08

RQM7K*-P ISO 6264-10

OPERATING PRINCIPLE

- The RQM*K*-P are explosion-proof pressure relief valves for subplate mounting ISO 6264. They are available in three nominal sizes for flows up to 500 l/min.
- They are compliant with ATEX, IECEx and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- A low temperature version (up to -40 °C) is also available.
- They are available in five versions that allow the unloading of the total flow or the selection of up to three pressure values (see paragraph 2 - Versions) by means of a solenoid valve.
- They are supplied with a hexagonal head adjustment screw. Upon request, it can be equipped with a SICBLOC adjustment knob on the main pressure control.
- The adjustment of the second and third pressure values is obtained by a pressure relief valve placed between the main stage and the solenoid valve.
- The valves are supplied with standard surface treatment of phosphating black for the main body and zinc-nickel for the pilot body. Upon request we can supply these valves completely with zinc-nickel surface treatment, suitable to ensure a salt spray resistance up to 600 h.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

C }
D }
G }

M = adjustment with SICBLOC knob _____
available only on the main pressure control
Omit for adjustment with hexagonal head screw

Series No. _____
(the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
For temperature range -20 / +80 °C
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids
For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Option: surface treatment not standard. Omit if not required (see **NOTE**)

Option: **/T5** version in T5 temperature class. Omit if not required.

Manual override:
CM = boot protected **standard for both N and V seals** not available for NL seals
CB = blind ring nut **standard for NL seals** available upon request for both N and V seals see at par. 12

Connection type for cable gland upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Power supply:
Direct current (DC)
D12 = 12 V
D24 = 24 V
D48 = 48 V
D110 = 110 V
Alternate current with built-in rectifier bridge (RAC)
R120 = 120 V
R240 = 240 V

Version with monobloc steel coil
Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.
On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

NOTE: Valves are supplied with standard surface treatment of phosphating black for the main body and zinc-nickel for the pilot body.
Upon request we can supply these valves with full zinc-nickel surface treatment, suitable to ensure a salt spray resistance up to 600 h (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).
For full zinc-nickel surface treatment add the suffix **/W7** at the end of the identification code.

1.1 - Names of valves per certification

	ATEX		IECEX		INMETRO

NOTE: Refer to the technical data sheet 02 500 for marking, operating temperatures and available versions.

2 - VERSIONS

3 - CHARACTERISTIC CURVES

(values obtained with viscosity of 36 cSt at 50°C)

ADJUSTMENT

MINIMUM CONTROLLED PRESSURE

4 - ELECTRICAL CHARACTERISTICS

(values $\pm 5\%$)

Coil type	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt. [W]
D12	12	7,2	1,7	20
D24	24	28,7	0,83	20
D48	48	115	0,42	20
D110	110	549	0,2	22

Coil type (NOTE)	Nominal voltage [V]	Freq. [Hz]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt. [VA]
R120	110V-50Hz 120V-60Hz	50/60	489,6	0,19	21
				0,21	25
R240	230V-50Hz 240V-60Hz	50/60	2067,7	0,098	22,5
				0,1	24

VOLTAGE SUPPLY FLUCTUATION (ripple included)	$\pm 10\% V_{nom}$
MAX SWITCH ON FREQUENCY	6.000 ins/hour
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU
CLASS OF PROTECTION: Atmospheric agents Coil insulation (VDE 0580)	Ip66 / IP68 class H

NOTE: type R* coils are for alternating current supply for both 50 or 60 Hz. For R* coils the resistance can not be measured in the usual way because of the presence of diodes bridge inside the coil.

4.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9 ± 6 Nm.

Electrical wiring must be done following in compliance with standards about protection against explosion hazards.

Characteristics of the cables connectable for wiring are indicated in the table below:

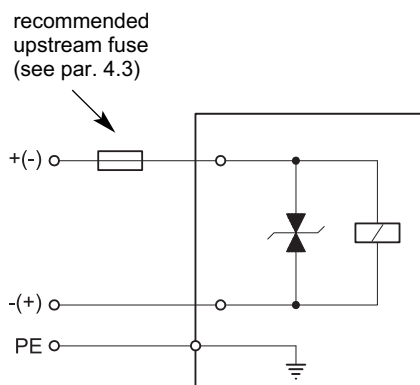

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals) or from - 40 °C to +110 °C (for valves with NL seals).

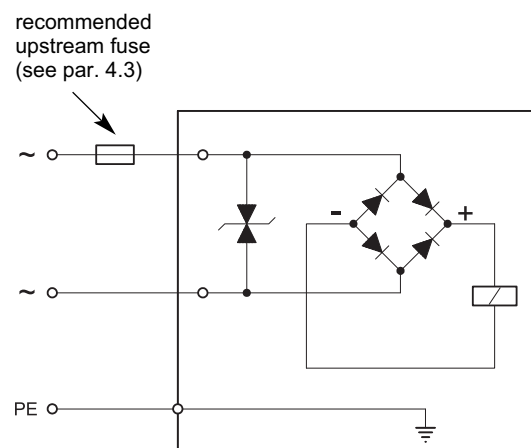

Cable glands (which must be ordered separately, see paragraph 14) allow to use cables with external diameter between 8 and 10 mm.

4.2 - Electrical diagrams

DC coil

RAC coil

4.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max 3 x I_n according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source. The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,7	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,83	1,25	- 49	
D48	48	0,42	0,6	- 81	
D110	110	0,2	0,3	- 309	
R120	120	0,21	0,3	- 3	
R240	240	0,1	0,15	- 3

9 - MOUNTING SURFACES

10 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

11 - INSTALLATION

Installation must adhere to instructions reported in the *Use and Maintenance manual*, always supplied with the valve. Unauthorized interventions can be harmful to people and goods because of the explosion hazards present in potentially explosive atmospheres.

The valves can be installed in any position without impairing correct operation.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

12 - MANUAL OVERRIDE CB

CB - Blind ring nut

The metal ring nut protects the solenoid tube from atmospheric agents and isolates the manual override from accidental operations. The ring nut is tightened on a threaded fastener that keeps the coil in its position even without the ring nut.

To access the manual override loosen the ring nut and remove it; then reassemble hand tightening, until it stops.

Activate the manual override always and only with non-sparking tools suitable for use in potentially explosive atmospheres.

More information on safe use of explosion-proof components are provided in the instruction manual, always supplied with the valve.

13 - ADJUSTMENT KNOB

The valves can be equipped with a SICBLOC adjustment knob, only on the main pressure regulation. To operate it, push and rotate at the same time.

To request this option, add: /M (see paragraph 1).

14 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for Ø 8÷10 mm cables);
- ATEX II 2GD, I M2; IECEX Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: -70 °C ÷ +220 °C
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

15 - SUBPLATES

(see catalogue 51 000)

	RQM3K*-P	RQM5K*-P	RQR7K*-P
Type	PMRQ3-AI4G rear ports	PMRQ5-AI5G rear ports	PMRQ7-AI7G rear ports
P, T ports dimension	P: 1/2" BSP T: 3/4" BSP	1" BSP	1" 1/4 BSP
X port dimension	1/4" BSP	1/4" BSP	1/4" BSP

NOTE: Subplates (to be ordered separately) do not contain neither aluminium nor magnesium at a rate higher than the value allowed by norms according to ATEX directive for category II 2GD and I M2.

The user will bear to do the complete assessment of the ignition risk that can occur from the relative use in potentially explosive environments.

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Dipomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

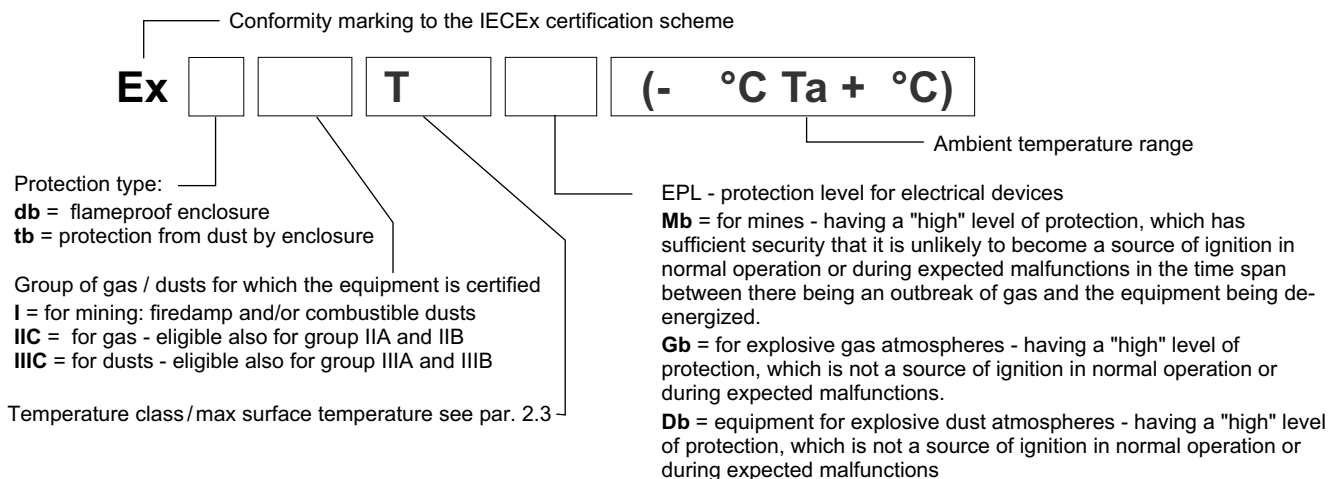

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
IECEx Gb IECEx Db	*KXD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas) T135°C (dusts)	T3, T2, T1 T200°C and higher
		of fluid				
	*KXD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas) T100°C (dusts)	T4, T3, T2, T1 T135°C and higher
		of fluid				
IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
INMETRO Gb INMETRO Db	*KBD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas)	T3, T2, T1 T200°C and higher
		of fluid			T154°C (dusts)	
	*KBD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas)	T4, T3, T2, T1 T135°C and higher
		of fluid			T129°C (dusts)	
INMETRO Mb	*KBDM2	of ambient	-20 / +75 °C	-40 / +75 °C	T150°C	-

Z*-P PRESSURE REDUCING VALVES SERIES 22

SUBPLATE MOUNTING

Z3-P ISO 5781-06

Z5-P ISO 5781-08

OPERATING PRINCIPLE

- The Z*-P type valves are used when a branch with a lower pressure than the main one is desired in the hydraulic circuits.

Being normally open, they allow passage of oil up to the point when the outlet pressure is less than that set on the valve; the valve closes and keeps the outlet pressure constant when it reaches the set value. The intake pressure fluctuation, for values greater than the set values, does not affect the reduced outlet pressure, and furthermore the particular design of the valve prevents exceeding the set value even in transients.

The drainage, to be connected directly to the tank, discharges about 0,8 l/min. The valves are available, upon request, with reduced drainage (0,4 l/min).

- Available even with incorporated check valve upon request, with cracking pressure of 0,5 bar.

PERFORMANCES (measured with mineral oil of viscosity 36 cSt at 50°C)

		Z3-P	Z5-P
Maximum operating pressure	bar	250	
Maximum flow rate	l/min	40	110

C = check valve for free flow from U→E
 Cracking pressure 0,5 bar
 (omit if not required)

2 - CHARACTERISTIC CURVES (values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

BALANCING VALVE

SERIES 20

OPERATING PRINCIPLE

- The S U T X sequence valves are used for pressure control. They are direct-acting and normally closed.
- They are available in two nominal sizes for flows up to 150 l/min and in four pressure adjustment ranges.
- Opening takes place by means of a pilot pressure that, acting on a small piston, resists the force of the adjustment spring.
- The valve can be easily modified to get any one of the four versions **S**, **U**, **T**, **X**, turning the upper and the bottom covers in order to obtain the X and Y internal connections, as indicated in par. 7.

The figure represents the section of a type S valve.

4 - SUTX 3-P OVERALL AND MOUNTING DIMENSIONS

5 - SUTX 5-P OVERALL AND MOUNTING DIMENSIONS

6 - APPLICATIONS

“S” The type “S” sequence valve is normally used to successively command two or more actuators: when the pressure in the primary circuit reaches the set value on the valve, it opens and allows the fluid to feed the second circuit branch, keeping the pressure in the first branch.

The valve remains open until the pressure at the intake falls below the set value; under these conditions, the maximum pressure setting on the first circuit branch will be achieved also at the outlet.

It is also used to keep a circuit under pressure when simultaneous supply of various users, requiring the total delivery of the pump, would make the pressure value decrease.

“U” This is normally used in automatic circuits (high-low pressure) for unloading the low pressure pump; this occurs when the pressure in the circuit reaches the set value of the valve.

In this manner it is possible to utilize the total flow of the two pumps for fast movements at low pressure, with electric power saving, using high pressure only for working movements.

Furthermore, it is used to allow quick discharge of the large

chamber of a high differential cylinder which the directional valve would not be able to drain; in this case the valve piloting is connected to the small chamber of the cylinder.

“T” Normally this is used to create hydraulic resistance (back pressure) to prevent uncontrolled movements, especially in the case of suspended loads.

The valve, normally closed, opens only when the set pressure is reached, and thus the descent of the load occurs in a controlled manner and the descending speed depends on the delivery of the pump.

“X” This is mainly used for load balancing. The piloting pressure can be taken from any point in the plant. The valve stays closed until the pilot pressure reaches the set value.

BALANCING VALVES

SERIES 51

SUBPLATE MOUNTING ISO 4401-03

p max **350** bar
Q max **25** l/min

MOUNTING INTERFACES

OPERATING PRINCIPLE

- The type ZC2 balancing valves act as pressure reducing valves that, besides reducing the pressure from line P to user A, allow the flow to return from user A to discharge T when a pressure greater than the set value is generated in the downstream circuit (user A). (A typical case of hydraulic counterweight or load balancing)
- They have a mounting surface in accordance with ISO 4401 standards. Port B is never used.

PERFORMANCES (measured with mineral oil of viscosity 36 cSt at 50°C)

NOTE: This version is interchangeable with the previous model ZC4 Diplomatic

2 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

2.1 - Characteristic curves DZC5 and DZC5R

2.2 - Characteristic curves DZC7

2.3 - Characteristic curves DZC8

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - PILOTING AND DRAINAGE

The valves are available with piloting and drainage, both internal and external. The version with external drainage allows a higher backpressure on the unloading.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

PRESSURES (bar)

Pressure	MIN	MAX
Pilot pressure on port X	30	210
Pressure on T port with internal drain	-	2
Pressure on T port with external drain	-	250

5 - INSTALLATION

The DZC* valves can be installed in any position without impairing correct operation.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value.

Maximum admissible backpressure in the T line, in operating conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

V = viton for special fluids

Series No. (the overall and mounting dimensions remain unchanged from 30 to 39)

I = In-block cartridge version, available only in dimensions 2-3-4-5-6
 Omit for version with threaded ports

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - OVERALL AND MOUNTING DIMENSIONS RS*

dimensions in mm

The technical drawing shows a side view of a valve assembly. The dimensions are labeled as follows: F is the width of the valve handle; E max is the total height of the assembly; D is the diameter of the valve body; A is the height of the valve body; B is the distance from the center of the valve body to the center of the handle; and C is the distance from the center of the valve body to the center of the handle.

RSN*

SINGLE-ACTING THROTTLE FLOW CONTROL VALVE

SERIES 30

THREADED PORTS CARTRIDGE TYPE

p max (see table of performances)
Q max (see table of performances)

OPERATING PRINCIPLE

- The RSN* and RSN*-I valves are single-acting throttle flow control valves for in-line mounting, directly in the line or as a cartridge complete with threading for in-block mounting.
- Adjustment is obtained with a conical throttle that operates in a cylindrical seat and allows a good linearity of the adjusted flow.
- They are also used as single direction flow shut-off valves since they guarantee good sealing when completely closed. They also allow a free return in the opposite direction.
- The valves are always supplied with an adjustment knob that can be locked in any position with a transverse positioned grub screw, as may be required.

PRESSURE AND TEMPERATURE COMPENSATED FLOW CONTROL VALVE

SERIES 41

SUBPLATE MOUNTING ISO 6263-03

p max **250** bar

Q max (see table of performances)

MOUNTING INTERFACE

ISO 6263-03-03-*97
(CETOP 4.5.2-2-03-250)

NOTE: The RPCED1 mounting interface, with ISO 6263-03 holes, must not have P and T ports or must have the 0113388 subplate (see paragraph 9)

OPERATING PRINCIPLE

- The RPC1 valve is a pressure and temperature compensated flow control valve.
- The flow is adjusted by a calibrated knob that modulates the opening of the control gap and can be locked in any adjustment position. Adjustment is made with three turns, and upon request one-turn adjustment, RPC1*/M, is available.
- It is available in seven different flow rate adjustment ranges from 0,5 l/min up to 30 l/min.

PERFORMANCE RATINGS (obtained with mineral oil with viscosity of 36 cSt at 50°C)

X = with speed anti-jump port P, available only in the check valve version (Omit if not required)

2 - CHARACTERISTIC CURVES

(values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - PRESSURE COMPENSATION

Two throttles in series are in the valve. The first is an opening regulated by the knob; the second, piloted by the pressure upstream and downstream of the first throttle, assures a constant pressure drop across the adjustable throttle. In these conditions, the set flow rate value stays constant within a tolerance range of $\pm 2\%$ of the maximum flow controlled by the valve for maximum pressure variation between the intake and outlet chambers of the valve.

5 - TEMPERATURE COMPENSATION

The valve temperature compensation is obtained with the principle of fluid passage across a thin wall orifice in which the flow rate is not substantially influenced by the oil viscosity fluctuations. For controlled flows of less than 0,5 l/min and with a temperature difference of 50 °C, flow is increased by about 13% of the set flow value. For higher flow rates, and with the same temperature difference, the flow increase is about 4% of the maximum flow controlled by the valve.

6 - REVERSE FREE FLOW

The RPC1 valve, upon request, is supplied with an incorporated check valve to allow free flow in the direction opposite to the controlled flow, B→A.

In this case the valve code becomes RPC1-*/CT.

7 - RPC1-*/CTX

This valve is normally used for intake control and is positioned downstream of the directional valve.

The piloting connection "P" keeps the compensator in the closed position, thus avoiding the initial speed jump that occurs at the time the distributor sends oil to the valve (see the application diagram, paragraph 11).

Q max (see table of performances)

MOUNTING INTERFACE

ISO 6263-03-03-*97
(CETOP 4.5.2-3-03-250)

OPERATING PRINCIPLE

- The pressure and temperature compensated three-way flow control valves serve to control the flow sent to the actuator and to discharge it, which exceeds that required, back to tank at system pressure rather than at relief value pressure.
- The flow rate adjustment range is carried out with three turns of the knob and an indicator shows the number of turns made. A one-turn adjustment on the knob, RPC1*/M, is available upon request.
- The adjustment knob can be locked in any position in the adjustment range by a screw.

1 - IDENTIFICATION CODE

The diagram illustrates how a valve model number is constructed from various options. A sample model number **R P C - T / / / /** is shown at the top, enclosed in a box. Below it, each character or symbol is linked by a line to its corresponding description:

- R**: Pressure compensated flow control valve
- P**: Size: **2** = ISO 6263-06, **3** = ISO 6263-07
- C**: Incorporated check valve (Omit if not required)
- : Temperature compensation
- T**: Controlled flow:
Size 2 Size 3
N = 22 l/min **100** l/min
S = 38 l/min **150** l/min
70 = 70 l/min
- /**: Seals: omit for mineral oils
V = viton for special fluids
- /**: Series No.
31 for RPC*2
44 for RPC*3
(the overall and mounting dimensions remain unchanged from 30 to 39 and from 40 to 49)
- /**: **M** = single-turn adjustment knob (omit for six-turn adjustment)
- /**: **RC** = compensating stroke governor (Omit if not required)

2 - CHARACTERISTIC CURVES

(values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - PRESSURE COMPENSATION

Two throttles in series are in the valve. The first is an opening regulated by the knob; the second, piloted by the pressure upstream and downstream of the first throttle, assures a constant pressure drop across the adjustable throttle.

In these conditions, the set flow rate value stays constant within a tolerance range of $\pm 3\%$ of the maximum flow controlled by the valve for the maximum pressure variation between inlet and outlet chambers of the valve.

5 - TEMPERATURE COMPENSATION

A device located on the first throttle which is sensitive to the temperature fluctuations corrects the position keeping the controlled flow more or less unaltered even should the oil viscosity change.

The fluctuation of the set flow rate stays within $\pm 2,5\%$ of the maximum flow controlled by the valve.

6 - REVERSE FREE FLOW

The RPC* valves, upon request, are supplied with an incorporated check valve to allow free flow in the direction opposite of the controlled flow. In this case the valve code becomes RPC*-CT.

7 - COMPENSATING STROKE GOVERNOR

In order to avoid jumps in the actuator when it is started, the RPC valve can be equipped with a special accessory that controls the compensating stroke, thus preventing it from making uncontrolled movements.

Add the suffix **RC** to the identification code to request this governor.
See paragraph 1.

CP1R*-W

ROLLER OPERATED FAST/SLOW SPEED SELECTION VALVE

SERIES 21

THREADED PORTS

p max 70 bar

Q max 40 l/min

OPERATING PRINCIPLE

- The CP1R*-W valve is used for the selection and control of fast/slow speed of hydraulic axis by mechanical roller operation.
- The slow working speed adjustment is obtained by using a pressure compensated flow control valve.
The special shape of the control openings allows fine adjustment even with very low flow rates.
- Adjustment of the flow rate is carried out with three turns of the knob that can be locked in any position with a screw.
- It is available in two configurations:
normally open CP1RA,
normally closed CP1RC.
- It is supplied with an incorporated check valve that allows free passage of the reverse flow.

CONFIGURATIONS (see hydraulic symbols table)

- CP1RA-W: normally open - fast movement with roller in rest position and controlled slow movement with roller in operation.
- CP1RC-W: normally closed - controlled slow movement with roller in rest position and fast movement with roller in operation.

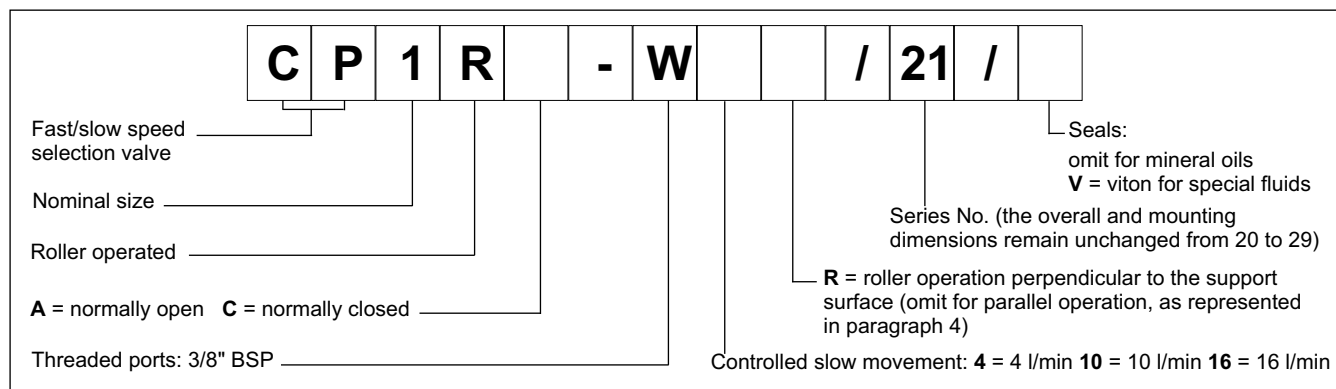

PERFORMANCES (obtained with mineral oil with viscosity of 36 cSt at 50°C)

Maximum operating pressure	bar	70
Fast movement maximum flow rate	l/min	40
Controlled slow movement flow rate	max	l/min 4 - 10 - 16
	min	l/min 0,1
Roller working movement	mm	6
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	3,2

HYDRAULIC SYMBOLS

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES (values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass: single solenoid valve double solenoid valve	kg	0.9 1.3

OPERATING PRINCIPLE

- Direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401 standards.
- Compact design with reduced solenoid dimensions, suitable for mini-power packs and mobile and agricultural applications.
- The valve body is made with high strength cast iron provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see paragraph 7).
- The valve is supplied with 4 way designs, with 2 or 3 positions and with several spools with different porting arrangements.
- The valve is available with direct current solenoids.
- The valve is also available with zinc-nickel coating that ensures a salt spray resistance up to 240 hours.

1 - IDENTIFICATION CODE

5 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

6 - SWITCHING TIMES

The values indicated are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

TIMES (±10%) [ms]	
ENERGIZING	DE-ENERGIZING
25 ÷ 75	15 ÷ 25

7 - ELECTRICAL FEATURES

7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear.

The inner part, in contact with the oil in the return line, ensures heat dissipation. The interchangeability of coils of different voltages is allowed within the same type of supply current, alternating or direct.

The coil is fastened to the tube by a threaded ring, and can be rotated 360°, to suit the available space.

Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

electric connection	electric connection protection	whole valve protection
K1 EN 175301-803 (ex DIN 43650)	IP65	IP65
K2 AMP JUNIOR	IP65/IP67	
K7 DEUTSCH DT04 male	IP65/IP67	

SUPPLY VOLTAGE FLUCTUATION	±10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)(NOTE)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION: Coil insulation (VDE 0580) Impregnation	class H class F

NOTE: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

7.2 - Current and power consumption

In direct current energizing, current consumption stays at fairly constant values, essentially determined by Ohm's law: $V = R \times I$

The table shows current and power consumption values related to coil types.

(values ±10 %)

	Resistance at 20°C [Ω]	Current consumption [A]	Power consumption [W]	Coil code		
				K1	K2	K7
D12	4.98	2.41	28.9	1903560	1903640	1903650
D24	21	1.15	28	1903561	1903641	1903651

8 - ELECTRIC CONNECTORS

The solenoid valves are not supplied with connector. Connectors type EN 175301-803 (ex DIN 43650) for K1 connections can be ordered separately. For the identification of the connector type to be ordered, please see catalogue 49 000.

9 - INSTALLATION

The valves can be mounted in any position.

Valve fitting takes place by means of screws or tie rods, fixing the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

10 - OVERALL MOUNTING AND DIMENSIONS

11 - MANUAL OVERRIDES

11.1 - CM - boot protected manual override

The boot override can be ordered by entering the code **CM** in the identification code at par. 1, or is available as option to be ordered separately.

Code: **3404100043**

11.2 - Knob manual override

The knob override can be ordered by entering the code **CK1** in the identification code at par. 1, or is available as option to be ordered separately.

Code: **3404100041**

OPERATING PRINCIPLE

- Solenoid actuated directional control valve, direct operated with mounting surface according to ISO 4401-03 standards.
- The valve is supplied with 3 or 4 ways design, with 2 or 3 positions with a wide range of spools.
- The valve body is made with high strength iron castings provided with wide internal paths in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see par. 7).
- The valve is available with DC or AC solenoids. DC solenoids can also be fed with AC power supply, by using connectors with a built-in rectifier bridge (see paragraphs 6.4 and 7.2).
- The DC valve is also available in a soft-shifting version (see par. 14).
- The DC valve is also available with zinc-nickel coating that ensures a salt spray resistance up to 600 hours.
- It is available a version with UL certified 24V DC coils for Canada and United States. (see par. 15).
- Alternative to the standard manual override there are lever, push, knob, push and twist, boot and mechanical detent devices.

D00 = valve without coils (see NOTE 1)

AC power supply
A24 = 24 V - 50 Hz
A48 = 48 V - 50 Hz
A100 = 100 V - 50 Hz / 100 V - 60 Hz
A110 = 110 V - 50 Hz / 120 V - 60 Hz
A230 = 230 V - 50 Hz / 240 V - 60 Hz
A00 = valve without coils (see NOTE1)
F110 = 110 V - 60 Hz
F220 = 220 V - 60 Hz

NOTE 1: Coils locking ring and related OR are supplied together with valves.

NOTE 2: The standard valve is supplied with surface treatment of phosphating black.
The zinc-nickel finishing on the valve body makes the valve suitable to ensure a salt spray resistance up to **240** hours.
For a salt spray resistance up to **600** hours refer to **paragraph 17**.
(test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

Option:
/ W7 = Zinc-nickel surface treatment (see **NOTE 2**)
Not available for AC valves.
Omit if not required

Manual override:
omit for override integrated in the tube (standard)
CM = manual override, boot protected
CH = lever manual override (only for DC version). The device is not available for TB, TB* and RSB* spools.
RSA* spools: available only for RSA1 and RSA2.
CP = push manual override (only for DC version)
CK1 = turning knob override (only for DC version)
CK2 = push and twist knob override (only for DC version)
CPK = push manual override with mechanical retention (only for DC version)

Coil electrical connection (see par. 11):
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (standard)
K2 = plug for connector type AMP JUNIOR (available on **D12** and **D24** coils only)
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S (available on **D12** and **D24** coils only)

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

8 - OVERALL AND MOUNTING DIMENSIONS FOR DC SOLENOID VALVES

9 - OVERALL AND MOUNTING DIMENSIONS FOR AC SOLENOID VALVES

10 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fixing takes place by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity and/or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

11 - ELECTRIC CONNECTIONS

connection for EN 175301-803
(ex DIN 43650) connector
code **K1** (standard)
code **WK1** (W7 version only)

connection for AMP JUNIOR
connector
code **K2**

connection for
DEUTSCH DT06-2S male connector
code **K7**

connection for
DEUTSCH DT06-2S male connector
code **WK7** (W7 version only)
code **WK7D** (W7 version only - coil
with diode)

12 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) for K1 connections can be ordered separately. See catalogue 49 000.

13 - MANUAL OVERRIDES

13.1 - Manual override, boot protected

13.2 - CH-DS3/11 Lever manual override (only for DC solenoid valve)

13.3 - CP-DS3/10 Push manual override (only for DC solenoid valve)

13.4 - CK1-DS3/11 knob manual override, turning (only for DC solenoid valve)

13.5 - CPK-DS3/10 Push manual override with mechanical retention (only for DC solenoid valve)

13.6 - CK2-DS3/10 Push and twist manual override (only for DC solenoid valve)

14 - SOFT-SHIFT VERSION FOR DC VALVE

14.1 - Identification code

D	S	3	-		/	13	-		/	F		
----------	----------	----------	----------	--	----------	-----------	----------	--	----------	----------	--	--

Solenoid operated directional control valve

ISO 4401-03 size _____

Spool type _____
The hydraulic symbols of S2F and S4F are identical to those of S2 and S4 spools (p.2)

S1	TA12
S2F	TB12
S4F	TA23
S9	TB23
S12	

Series: _____
(the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Option:
/ W7 = see par. 1

Manual override
(see par.1 and 13)

Soft-shifting

Coil electrical connection
(see par. 11):
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
K2 = plug for connector type AMP JUNIOR (available on **D12** and **D24** coils only)
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S (available on **D12** and **D24** coils only)

DC power supply
D12 = 12 V
D24 = 24 V
D28 = 28 V
D110 = 110 V
D220 = 220 V

This version enables hydraulic actuators to perform a smooth start and stop by reducing the speed of movement of the valve spool.

In this version, the S9 spool must be used instead of the S3 type.

The diagram on the side shows the operating limits of the spools available in the soft-shifting version, while the table shows the switching times.

The values indicated are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

The shifting time and characteristics curves are influenced by the viscosity (and thus by the temperature) of the operating fluid. Moreover, times can vary according to the flow rate and operating pressure values of the valve.

For correct operation of the soft-shifting ensure the solenoid tubes are always filled with oil. At this matter, we recommend to install a backpressure valve set at $1 \div 2$ bar on T line.

SPOOL	CURVE	TIMES [ms]	
		ENERGIZING	DE-ENERGIZING
S1, S12	1	350	200 ÷ 300

17 - HIGH IP AND CORROSION RESISTANCE VERSION

17.1 - Identification code

D	S	3	-		/			-			/		/	W7
Solenoid operated directional control valve			ISO 4401-03 size			Spool type			Series: (See paragraph 1 or 14)			Seals:		
						See paragraph 3 or 14.			(the overall and mounting dimensions remain unchanged from 10 to 19)			N = NBR seals for mineral oil (standard) V = FPM seals for special fluids		
												Manual override: CM = manual override, boot protected (standard) CH = lever manual override CP = push manual override CK1 = turning knob override CK2 = push and twist knob (only for DC version) CPK = push manual override with mechanical retention		
												Coil electrical connection (see par. 11) WK1 = plug for connector type EN 175301-803 (ex DIN 43650) WK7 = plug DEUTSCH DT04-2P, for male connector type DEUTSCH DT06-2S. WK7D = plug DEUTSCH DT04-2P, for male connector type DEUTSCH DT06-2S. Coil with diode. (not available for coil D26)		
												DC power supply D12 = 12 V D24 = 24 V D26 = 26.4 V		

17.2 - Corrosion resistance

This version features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600** hours (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

17.3 - DC coils

The coils feature a zinc-nickel surface treatment.

The WK7D coil includes a suppressor diode of pulses for protection from voltage peaks during switching. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coil and to 58.9 V in the D24 coil.

(values $\pm 10\%$)

	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt [W]	Coil code		
					WK1	WK7	WK7D
D12	12	4,4	2,72	32,7	1903590	1903580	1903600
D24	24	18,6	1,29	31	1903591	1903581	1903601
D26	26,4	21,8	1,21	32	1903599	1903589	-

17.4 - Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

electric connection	electric connection protection	whole valve protection
WK1 EN 175301-803 (ex DIN 43650)	IP66	IP66
WK7 DEUTSCH DT04 male	IP66/IP68/IP69 IP69K*	IP66/IP68/IP69 IP69K*
WK7D DEUTSCH DT04 male	IP66/IP68/IP69 IP69K*	IP66/IP68/IP69 IP69K*

(*) The IP69K protection degree is not taken into account in IEC 60529 but it is included in ISO 20653.

NOTE: As regards the liquid ingress protection (second digit), there are three means of protection.

Codes from 1 to 6 are related to water jets.

Rates 7 and 8 are related to immersion.

Rate 9 is reserved for high pressure and temperature water jets.

This means that IPX6 covers all the lower steps, rate IPX8 covers IPX7 but not IPX6 and lower, instead IPX9 does not cover any of them.

Whether a device meets two types of protection requirements it must be indicated by listing both the tests separated by a slash.

(E.g. a marking of an equipment covered both by temporary immersion and water jets is IP66/IP68).

18 - PORT RESTRICTORS

Port restrictors are recommended if flow variations which exceed the valve performance limit during the switching processes occur, or for circuit dampening.

Port restrictor plugs can be ordered separately with the part numbers shown at left.

Ø (mm)	part number

double solenoid valve		2

OPERATING PRINCIPLE

- Directional valve with digital interface, solenoid actuated, with mounting surface according to ISO 4401-03 standards.
- The valve is supplied with 3 or 4 ways design, with 2 or 3 positions with a wide range of spools.
- The on-board electronics allow the valve to be controlled by a PLC with a low-power digital signal. There are several functions available, including fast switch, energy saving and soft-shift.
- The versions with IO-Link interface effectively integrate the valve in a digital communication system driven by PLC, and allow collecting operational data and environmental information for predictive diagnostics.
- The valve is available with DC solenoids.
- The valve is also available with zinc-nickel coating on the body, that ensures a salt spray resistance up to 240 hours.
- Alternative to the standard manual override there are push, knob, twist and lock, boot and mechanical detent devices.

Series: _____
(the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

NOTE: The standard valve is supplied with surface treatment of phosphating black.

The zinc-nickel finishing on the valve body makes the valve suitable to ensure a salt spray resistance up to **240** hours. (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

Option:
/ W7 = Zinc-nickel surface treatment (see **NOTE**)
Omit if not required

Manual override:
omit for override integrated in the tube (**standard**)
CM = manual override, boot protected
CP = push manual override
CK1 = turning knob override
CK2 = twist and lock knob override
CPK = push manual override with mechanical retention
Please refer to catalogue 41150 for details on manual overrides

Connection: 5 pin M12, male

Electronic function (see paragraph 4)
IOL = IO-Link interface
IOLG = soft-shift with IO-Link interface (reserved spools only)
ECG = soft shift (reserved spools only)
ECL = power save
ECF = fast switch
EC1 = low power switch from PLC for 12V coils
EC2 = low power switch from PLC for 24V coils

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - SPOOL TYPE

Type S*:
2 solenoids - 3 positions
with spring centering

Type SA*:
1 solenoid side A
2 positions (central + external)
with spring centering

Type SB*:
1 solenoid side B
2 positions (central + external)
with spring centering

Type TA:
1 solenoid side A
2 external positions
with return spring

Type TB:
1 solenoid side B
2 external positions
with return spring

Type RK:
2 solenoids - 2 positions
with mechanical retention

**Proportional spools
for ECG function**

NOTE 1: Hydraulic symbols for S2F and S4F are identical to those of S2 and S4 spools.
Besides the diagrams shown, which are the most frequently used, other special versions are available: please refer to catalogue 41150.

4 - ELECTRONICS FUNCTIONS

4.1 - Versions with IO-Link interface: IOL and IOLG

IOL and IOLG versions take advantages from IO-Link communication, providing different methods for feeding the power supply to the solenoid. The IOL version is fed 24V DC only. A data register feature is implemented for on / off time for both the solenoids, and for the up-mentioned functions.

The IO-Link version is able to work like ECL and EC2 because the function behaviour is set via bus. The IOLG version offers the ECG type soft switching function, but with IO-Link interface. It is only available combined with the reserved spools (see par. 1).

4.2 - ECG

This version It is only available combined with the reserved spools. It enables hydraulic actuators to perform a smooth start and stop by setting times values (200 ÷ 600 ms) for ramp up and ramp down.

Performance limits at par. 7.

4.3 - ECL

This version allows to feed the solenoid at the nominal current value for a time sufficient to guarantee the complete valve energizing (200 ms). The current is therefore automatically reduced at holding (approx 60%).

4.4 - ECF

This version allows a fast switching, overboosting the 12 V solenoid just for the time needed to energize it. Then, the voltage will be lowered at the nominal value.

The de-energizing is fast, around 10 ms.

During overboosting, the power-supply unit must be able to provide a 6 A current with 24 V supply voltage.

4.5 - EC1 / EC2

This version allows to control the solenoid with a low power signal coming from the PLC.

5 - PRESSURE DROPS Δp -Q

(obtained with viscosity 36 cSt at 50 °C)

EC*, ECL, ECF	25 ÷ 75	15 ÷ 25
ECG	200	200

7 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

The limits for TA02 and TA spools refer to the 4-way operation. The operating limits of a 4-way valve in 3-way operation or with port A or B plugged or without flow are shown in the related chart.

8 - ELECTRICAL FEATURES

8.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation. The coil is fastened to the tube by a threaded ring, and can be easily replaced.

Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

electric connection	electric connection protection	whole valve protection
K6 - 2 pins for junction box	IP65	IP65

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	18.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation	class H class F

8.2 - Current and absorbed power

The table shows current and power consumption values for each function (values ± 10%).

Function	Power supply [V]	Power consumpt [W]		Current consumpt. [A]		Coil nominal voltage [V]	Resistance at 20°C [Ω]	Coil code
		pulse	continuous	pulse	continuous

2	+12 V DC	Solenoid supply voltage
3	NC	-
4	8 ÷ 12 V DC	Digital command coil A
5	0V GND	Supply voltage reference

8.10 - EC* on-board electronics diagram

8.11 - EC* fuctions: led

The valve has 2 two-color LEDs on the top cover. They work alternatively.

led	colour	on
L1	green	coil A energized
	red	coil A error
L2	green	coil B energized
	red	coil B error

9 - ELECTRIC CONNECTORS

A 5-poles M12 code A female connector is required. It can be ordered separately with code 3491001001. See catalogue 89 000 for details.

10 - OVERALL AND MOUNTING DIMENSIONS

11 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fixing takes place by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity and/or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

12 - SUBPLATES

(see catalogue 51 000)

Type PMMD-AI3G with rear ports 3/8" BSP
Type PMMD-AL3G with side ports 3/8" BSP

DL3

SOLENOID OPERATED DIRECTIONAL CONTROL VALVE COMPACT VERSION

SUBPLATE MOUNTING ISO 4401-03

p max 280 bar

Q max 50 l/min

MOUNTING SURFACE

OPERATING PRINCIPLE

- Direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401-03 standards.
- Compact design with reduced solenoid dimensions, suitable for mini-power packs and mobile and agricultural applications.
- The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see paragraph 7).

— The valve is supplied with 3 or 4 way designs and with several interchangeable spools with different porting arrangements.

— The valve is available with DC or AC current solenoids and with several types of electrical connections to cover various installation requirements (see paragraphs 7 and 11).

— The DC valve comes with boot protected manual override which ensures a protection degree IP69K for connections types WK7 and WK8.

— It is available also with zinc-nickel surface treatment, that ensures a salt spray resistance up to 600 hours.

PERFORMANCES (with mineral oil of viscosity of 36 cSt at 50°C)

Maximum operating pressure: - ports P - A - B - port T	bar	CC	CA
		280 250	160

Seals:													
N = NBR seals for mineral oil (standard) V = FPM seals for special fluids													

NOTE 1: Coils locking ring and related OR are supplied together with valves.

NOTE 2: The standard surface treatment is phosphating black. On request we can supply these valves with zinc-nickel finishing, making the valve suitable to ensure a salt spray resistance up to **600** hours (test operated according to UNI EN ISO 9227 standard and test evaluation operated according to UNI EN ISO 10289 standard)

Add **/W7** at the end of the identification code.

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - SPOOL TYPE

Type S*:
2 solenoids - 3 positions
with spring centering

Type SA*:
1 solenoid side A
2 positions (central + external)
with spring centering

TA	3	3	3	3	-

5 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values indicated in the graphs are relevant to the standard solenoid valve.

The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

6 - SWITCHING TIMES

The values indicated are obtained with spool S1, according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

SUPPLY	TIMES (±10%) [ms]	
	ENERGIZING	DE-ENERGIZING
DC	25 ÷ 75	15 ÷ 25
AC	10 ÷ 25	15 ÷ 30

7 - ELECTRICAL FEATURES

7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated +/- 90°, to suit the available space.

The interchangeability of coils of different voltages is allowed within the same type of supply current, alternating or direct.

Protection from atmospheric agents IEC 60529

The IP protection degree is intended for the whole valve. It is guaranteed only with both valve and connectors of an equivalent IP grade, correctly connected and installed.

Electric connection	IP65	IP66	IP67	IP68	IP69 IP69K (*)
K1 EN 175301-803	x	x			
K2 AMP JUNIOR	x		x		
K4 outgoing cables	x				
WK7 DEUTSCH DT04 male	x		x	x	x
WK8 AMP SUPER SEAL	x	x	x	x	x

(*) The protection degree IP69K is not taken into account in IEC 60529 but it is included in both ISO 20653.

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation	class H class H

NOTE: In order to further reduce the emissions, with DC supply, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

7.2 - DC valve - Current and power consumption

In direct current energizing, current consumption stays at fairly constant values, essentially determined by Ohm's law: $V = R \times I$

"R" coils have to be used when the valve is fed with AC power supply subsequently rectified by means of rectifier bridge, externally or incorporated in the "D" type connector (see cat. 49 000).

The table shows current and power consumption values for DC and RC coil types.

Coils for direct current (values ±5%)

	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumption [A]	Power consumption		Coil code				
				[W]	[VA]	K1	K2	K4	WK7	WK8
D12	12	5,4	2,2	26,5		1902740	1902750	1902770	1903510	1903520
D24	24	20,7	1,16	27,8		1902741	1902751	1902771	1903511	1903521
D28	28	27,5	1,02	28,5		1902744				
D48	48	82	0,58	28		1902745				
R110	110	363	0,25		27,2	1902742				
R230	230	1640	0,11		26,4	1902743				

7.3 - AC valve - Current and power consumption

In alternating current energizing, an initial phase (maximum movement) is seen, during which the solenoid consumes elevated value currents (inrush current); the current values diminish during the plunger stroke until it reaches the minimum values (holding current) when the plunger reaches the stroke end. The table shows the values of absorption at the inrush and at holding.

Coils for alternating current (values $\pm 10\%$)

	Nominal voltage [V]	Freq. [Hz]	Resistance at 20°C [Ω]	Current consumption at inrush [A]	Current consumption at holding [A]	Power consumption at inrush [VA]	Power consumption at holding [VA]	Coil code K1

code **WK8**

12 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) for K1 connections can be ordered separately. See catalogue 49 000. We do not delivery connectors for connections K2, WK7 and WK8.

13 - OPTIONAL MANUAL OVERRIDES

13.1 - Boot protected manual override

On the DC version the boot override is integrated in the coil locking ring, as standard.

On the AC version, however, the boot override can be ordered by entering the code **CM** in the identification code at par. 1, or is available as option to be ordered separately.

code **3401210001**.

13.2 - Knob manual override

Available only for DC version

Max stroke: 4.5 mm

mm per turn: 1

The knob override can be ordered by entering the code **CK1** in the identification code at par. 1, or is available as option to be ordered separately.

code **3404100040**.

PERFORMANCES

(with mineral oil of viscosity of 36 cSt at 50°C)

Maximum operating pressure: - ports P - A - B - port T	bar	280 210
Maximum flow rate	l/min	50
Pressure drop $\Delta p-Q$	see paragraph 4	
Operating limits	see paragraph 5	
Electrical features	see paragraph 7	
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	according to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass: single solenoid valve double solenoid valve	kg	1,5 2

OPERATING PRINCIPLE

-
- 8 watt direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401-03 standards.
 - Compact design with reduced solenoid dimensions, suitable for mini-power packs and mobile and agricultural applications.
 - The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see par. 7).
 - The valve is supplied with 4 way designs and with several interchangeable spools with different porting arrangements.
 - It is available also with zinc-nickel surface treatment, that ensures a salt spray resistance up to 240 hours.
 - The valve is available with DC current solenoids with 24 V power supply.

V = FPM seals for special fluids

Option:
 Surface treatment not standard.
 Omit if not required (see **NOTE**)

Coil electrical connection:
 plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)

DC power supply 24 V

NOTE: Standard surface treatment is phosphating black.
 On request we can supply these valves with zinc-nickel finishing, suitable to ensure a salt spray resistance up to 240 h (test operated according to UNI EN ISO 9227 standard and test evaluation operated according to UNI EN ISO 10289 standard)
 Add **/W7** at the end of the code.

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

8 - ELECTRIC CONNECTORS

Solenoid operated are delivered without connectors. Connectors must be ordered separately. See catalogue 49 000.

9 - DL3B OVERALL AND MOUNTING DIMENSIONS

10 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fitting takes place by means of screws or tie rods, fixing the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

11 - SPARE PARTS FOR SOLENOID VALVE

1	Coil locking ring with seal included cod. 0119412 Tightening torque 5 ±0.5 Nm
2	ORM type 0220-20 (22x2) - 70 Shore
3	Coil C22L3B-DL24K1/11
4	Solenoid tube for standard version: TD22-DL3B/10N (NBR seals) TD22-DL3B/10V (FPM seals) NOTE: OR n°5 included
5	OR type 2062 (15.6x1.78) - 70 Shore
6	N. 4 OR type 2037 (9.25x1.78) - 90 Shore

SEALS KIT

The codes include the O-Ring n° 2, 5 and 6.

Cod. 1985406 NBR seals

Cod. 1985410 FPM (viton) seals

12 - SUBPLATES

(see catalogue 51 000)

SOLENOID OPERATED DIRECTIONAL CONTROL VALVE

**AC
SERIES 10**

SUBPLATE MOUNTING

NFPA D03 (ISO 4401-03)

p max **5000** psi (350 bar)
Q max **20** GPM (76 l/min)

MOUNTING SURFACE

ISO 4401-03-02-0-05
NFPA D03

dimensions in mm [inch]

OPERATING PRINCIPLE

- Direct acting, subplate mounting directional control valve, with mounting surface according to NFPA D03 standards.
- The valve is supplied with 3 or 4 ports designs, with 2 or 3 positions with a wide range of spools.
- The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see par. 7).
- The valve is equipped with junction box to be wired.
- The valve is available with AC solenoids.
- A boot protected manual override is available for applications in tropical climate.

PERFORMANCES

(obtained with mineral oil with viscosity of 170 SUS at 50°C)

Maximum operating pressure: - P - A - B ports - T port	psi	5000 2300
Maximum flowrate	GPM	20
Electrical connection	junction box	
Ambient temperature range	°F	-4 / +122
Fluid temperature range	°F	-24 / +176
Fluid viscosity range	SUS	60 ÷ 1900
Fluid contamination degree	according to ISO 4406:1999 class 20/18/15	
Recommended viscosity	SUS	120
Mass: single solenoid valve dual solenoid valve	lbs	3.15 4.15

1 - IDENTIFICATION CODE

2 - SPOOL TYPE

Other spools are available on request.

Type S*:
2 solenoids - 3 positions
with spring centering

Type RK:
2 solenoids - 2 positions
with mechanical retention

Type SA*:
1 solenoid side A
2 positions (central + external)
with spring centering

Type TA:
1 solenoid side A
2 external positions
with return spring

Type SB*:
1 solenoid side B
2 positions (central + external)
with spring centering

Type TB:
1 solenoid side B
2 external positions
with return spring

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 176 °F causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

4 - PRESSURE DROPS Δp -Q

(obtained with viscosity 170 SUS at 122 °F)

When spool S10 is used for regenerative circuits, pressure drops between A and B lines are described by curve 4 .

PRESSURE DROPS WITH VALVE IN ENERGIZED POSITION

SPOOL TYPE	FLOW DIRECTION			
	P→A	P→B	A→T	B→T
	CURVES ON GRAPH

S3, SA3, SB3			3	3	
S4, SA4, SB4					3
S10	3	3			

5 - SWITCHING TIMES

The values indicated are obtained according to ISO 6403 standard. They refer to an S1 solenoid valve for Q = 10 GPM, p = 2,000 psi working with mineral oil at a temperature of 122 °F, a viscosity of 170 SUS and with PA and BT connections.

The energizing times are obtained at the time the spool switches over. The de-energizing times are measured at the time pressure variation occurs on the line.

	ENERGIZING	DE-ENERGIZING
TIMES (±10%) [ms]	10 ÷ 25	15 ÷ 40

6 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure.

The values have been obtained according to ISO 6403 standard, with mineral oil, viscosity 170 SUS, temperature 122 °F and filtration according to ISO 4406:1999 class 18/16/13, with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

The limits for TA02 and TA spools refer to the 4-port operation. The operating limits can be considerably reduced if a 4-port valve is used as 3-port valve with port A or B plugged or without flow.

Valves fed at 110 V / 60 Hz may have slightly lower performance limits than those showed in the diagram.

SPOOL	CURVE	
	P→A	P→B

S10	1	1
TA, TB	5	5
TA02, TB02	6	6
RK	7	7

7 - ELECTRICAL FEATURES

7.1 Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded nut.

The interchangeability of coils of different voltages is allowed.

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION : Class of protection IEC 60529 Coil insulation (VDE 0580) Impregnation:	IP65 class H class H

7.2 Current and absorbed power

The table shows current and power consumption values at inrush and at holding. In alternating current energizing, an initial phase (maximum movement) is seen, during which the solenoid consumes elevated value currents (inrush current); the current values diminish during the plunger stroke until it reaches the minimum values (holding current) when the plunger reaches the stroke end.

Coils (values ± 10%)

Suffix	Nominal Voltage [V]	Frequency [Hz]	Resistance at 20°C [Ohm]	Current consumption at inrush [A]	Current consumption at holding [A]	Power consumption at inrush [VA]	Power consumption at holding [VA]	Coil Code
C20.6-A120-60K6/10	110	60	27.5	1.8	0.36	198	39.6	1902820
	120			2	0.43	240	51.6	
C20.6-A240-60K6/10	220		110	0.86	0.17	189.2	37.4	1902821
	240			0.98	0.2	235.2	48	

8 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fixing takes place by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity and/or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

For use in tropicat climate, we recommend the use of boot (CM option, see section 11) to protect the manual override.

8 - DC VALVE - OVERALL AND MOUNTING DIMENSIONS

9 - DC VALVE - OVERALL AND MOUNTING DIMENSIONS

10 - INSTALLATION

The valve can be mounted in any position. Valve fixing takes place by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity and/or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

11 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) for K1 connections can be ordered separately. See catalogue 49 000.

12 - MANUAL OVERRIDES

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

Three different manual override versions are available upon request: **CM**: boot protected; **CP**: Push (for DC valves only); **CPK**: Push manual override with mechanical retention (for DC valves only).

For more information about these manual overrides, see the catalogue 41 150.

p max 350 bar

Q max 50 l/min

MOUNTING INTERFACE

PERFORMANCE RATINGS

(working with mineral oil of viscosity of 36 cSt at 50°C)

OPERATING PRINCIPLE

- M*F3 are shut-off valves, solenoid or hydraulically actuated, with or without spool position monitoring, in modular version, with mounting interface according to ISO 4401-03 standard.
- M*F3 valves are placed under directional control servovalves in order to guarantee the safety of circuit when a power failure occurs.
- Spools with float, closed, parallel or cross position in de-energized condition are available.

		MDF3	MCF3
Maximum operating pressure: P - A - B ports T port	bar	350 210	350 25
Pilot pressure: min max	bar	-	15 (NOTE) 210
Maximum flow rate	l/min	50	40
Ambient temperature range	°C	-20 / +50	
Fluid temperature range	°C	-20 / +80	
Fluid viscosity range	cSt	10 ÷ 400	
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15		
Recommended viscosity	cSt	25	
Mass	kg	1,5	1,3

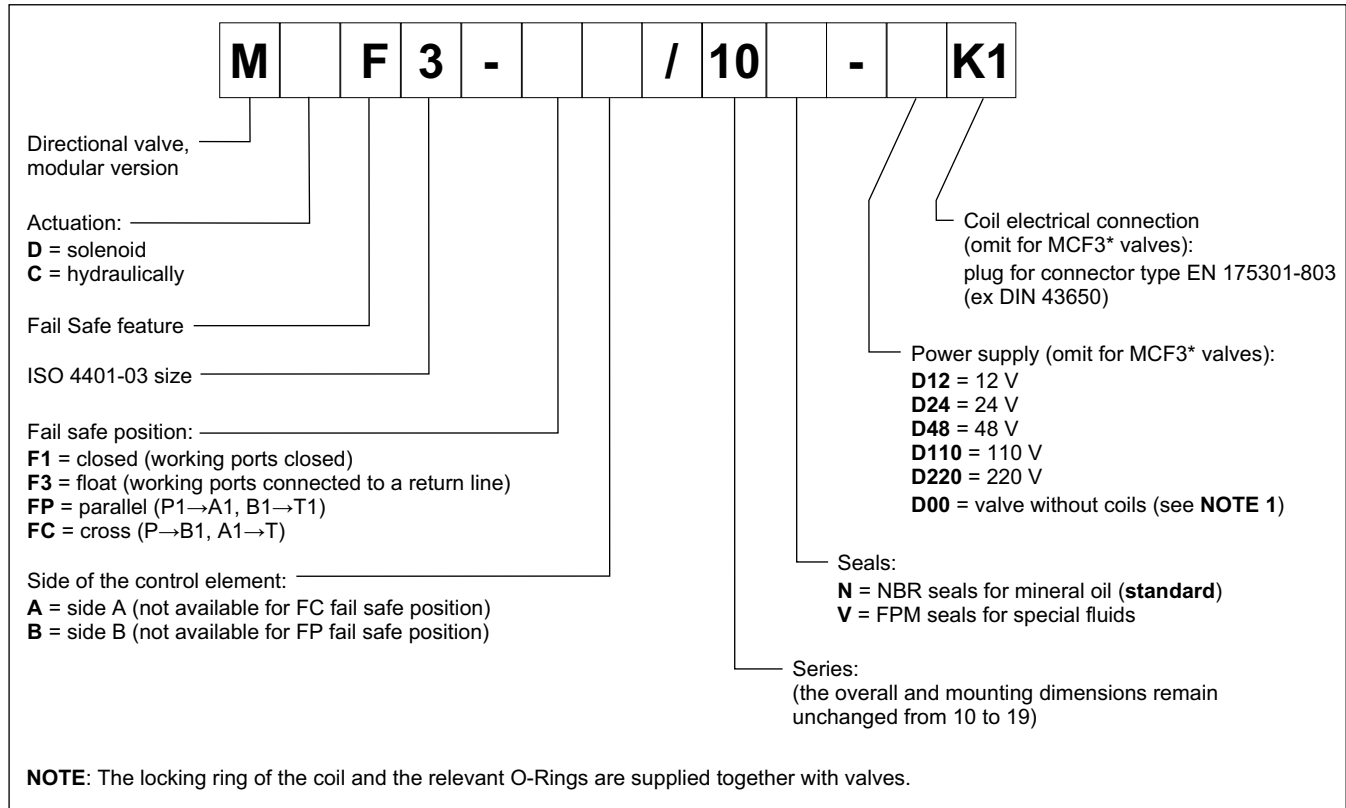

— Versions with spool monitoring do not have manual override and can not be disassembled, because of their characteristics and their possible use on machinery subject to safety requirements.

- The spool position monitoring is available either for initial position or for actuated position.

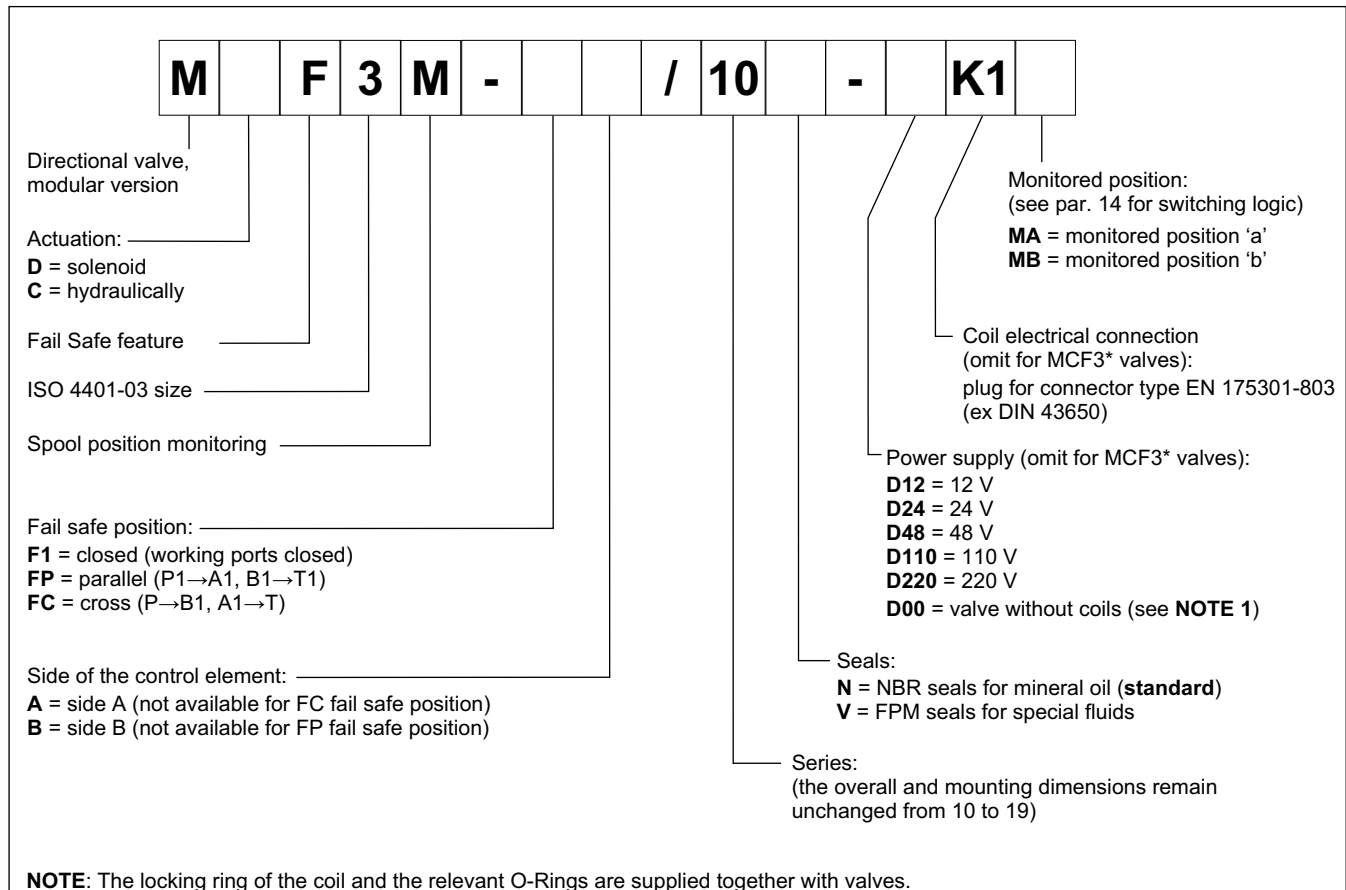

NOTE: The pilot pressure must be 10 to 20 bar higher than the return pressure to allow the fluid discharge from the pressure chamber.

DS5

SOLENOID OPERATED DIRECTIONAL CONTROL VALVE

SUBPLATE MOUNTING ISO 4401-05

p max 320 bar
Q max 150 l/min

MOUNTING INTERFACE

PERFORMANCES

(with mineral oil of viscosity of 36 cSt at 50°C)

		DC	AC
Maximum operating pressure	bar	320	
P - A - B ports		210	140
T port - standard version		320	-
T port - version with Y port (ext.drain)			
Maximum flow rate	l/min	150	120
Pressure drops Δp -Q		see paragraph 4	
Operating limits		see paragraph 6	
Electrical features		see paragraph 7	
Electrical connections		see paragraph 11	
Ambient temperature range	°C	-20 / +50	
Fluid temperature range	°C	-20 / +80	
Fluid viscosity range	cSt	10 ÷ 400	
Fluid contamination degree		according to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25	
Mass:	kg	4.5	3.6
single solenoid valve		6.1	4.3
double solenoid valve			

OPERATING PRINCIPLE

- Direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401.
- The valve is designed for 3 or 4 way and with several interchangeable spools, with different porting arrangements.
- The valve body is made with high strength iron castings provided with wide internal passages, in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (see paragraph 7).
- The valve is available with DC or AC solenoids. DC solenoids can also be fed with AC power supply, by using connectors with a built-in rectifier bridge (see paragraph 7.2).
- The DS5 direct current version is available in the following special versions:
 - with Y external subplate drain port, (see par. 13.1 and 13.2).
 - with soft-shifting (see par. 13.3 and 13.4)
 - with adjustable "soft-shift" device (see paragraph 13.5)

1 - IDENTIFICATION CODE

D	S	5	-		/		-		/	
----------	----------	----------	----------	--	----------	--	----------	--	----------	--

Solenoid _____
operated directional
control valve

ISO 4401-05 size _____

Spool type _____
(see par. 3)

S* **TA**
SA* **TB**
SB* **RK**

Series: _____
(the overall and mounting dimensions remain
unchanged from 10 to 19)

14 = for DC valves type D*K1 and D12K7
DC valves without coils D00

12 = for AC valves
DC valves D24K7

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

DC power supply _____

D12 = 12 V
D24 = 24 V
D26 = 26.4 V
D110 = 110 V
D220 = 220 V
D00 = valve without coils (see **NOTE 1**)

AC power supply

A24 = 24 V - 50 Hz.
Not available for S4, SA4, SB4, S7 and S8 spools

A48 = 48 V - 50 Hz
A110 = 110 V - 50 Hz / 120 V - 60 Hz
A230 = 230 V - 50 Hz / 240 V - 60 Hz
A00 = valve without coils (see **NOTE 1**)

F110 = 110 V - 60 Hz
F220 = 220 V - 60 Hz

NOTE 1: Coils locking ring and related OR are supplied together with valves.

NOTE 2: The standard surface treatment is phosphating black.

On request we can supply these valves with zinc-nickel finishing, making the valve suitable to ensure a salt spray resistance up to 240 hours (test operated according to UNI EN ISO 9227 standard and test evaluation operated according to UNI EN ISO 10289 standard)

Add **/W7** at the end of the identification code.

Option: Surface treatment
not standard.
Not available for AC valves.
Omit if not required.
(see **NOTE 2**)

Manual override:
omit for override integrated in the
tube (**standard**)

CM = manual override, boot
protected (only for DC version)

CK = knob manual override
(only for DC version)

CK2 = push and twist knob override
(only for DC version)

Coil electrical connection (see par. 11):

K1 = plug for connector type
EN 175301-803 (ex DIN 43650) (**standard**)

Only for **D12** and **D24**:

K7 = plug DEUTSCH DT04-2P
for male connector type DEUTSCH DT06-2S

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - SPOOL TYPE

Type S*:
2 solenoids - 3 positions
with spring centering

Type RK:
2 solenoids - 2 positions
with mechanical retention

Type SA*:
1 solenoid side A
2 positions (central + external)
with spring centering

Type TA:
1 solenoid side A
2 external positions
with return spring

Type SB*:
1 solenoid side B
2 positions (central + external)
with spring centering

Type TB:
1 solenoid side B
2 external positions
with return spring

Besides the diagrams shown, which are the most frequently used, other special versions are available: consult our technical department for their identification, feasibility and operating limits.

4 - PRESSURE DROPS Δp -Q

(obtained with viscosity 36 cSt at 50 °C)

ENERGIZED POSITION

5 - SWITCHING TIMES

The values indicated are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50 °C.

COIL TYPE	TIMES [ms]	
	ENERGIZING	-ENERGIZING
DC	100 ÷ 150 ms	20 ÷ 50 ms
AC	15 ÷ 30 ms	20 ÷ 50 ms

6 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

The values have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13 and are relevant to the standard solenoid valve.

The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

For flow and pressure performances of soft-shifting configuration (options F) see par. 13.4.

Flow and pressure performances of adjustable soft-shifting device configurations (options S, par. 13.5) are influenced by the set shifting time.

7 - ELECTRICAL FEATURES

7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated, to suit the available space.

Protection from atmospheric agents IEC 60529

he IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

connection type	electric connection protection	whole valve protection
K1 EN 175301-803	IP65	IP65
K7 DEUTSCH DT04 male	IP65/IP67/IP69 IP69K (*)	

(*) The IP69K protection degree is not taken into account in IEC 60529 but it is included in ISO 20653.

VOLTAGE SUPPLY FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	15.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC) (NOTE 1)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation	class H class F

NOTE 1: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see catalogue 49 000).

7.2 - Current and absorbed power for DC solenoid valve

The table shows current and power consumption values relevant to the coil types for DC.

Using connectors type "D" (see cat. 49 000) with embedded bridge rectifier it is possible to feed DC coils (starting from 110V voltage) with alternating current (50 or 60 Hz).

However, when supplying the valve with rectified current, it is necessary to consider a reduction of the operating limits by 15-20% approx.

Coils for direct current (values ± 5%)

Suffix	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt. [W]	Coil code	
					K1	K7

F220	220		35.2	2.7	0.48	594	105	1902895

8 - OVERALL AND MOUNTING DIMENSIONS FOR DC SOLENOID VALVES

9 - OVERALL AND MOUNTING DIMENSIONS FOR AC SOLENOID VALVES

10 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal. Valve fixing is by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity and/or smoothness are not met, fluid leakage between valve and mounting surface can easily occur.

11 - ELECTRIC CONNECTIONS

connection for EN 175301-803 (ex DIN 43650)
connector type
code **K1 (standard)**

connection for
DEUTSCH DT06-2S male connector type
code **K7**

12 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) for K1 connections can be ordered separately. See catalogue 49 000.

13 - SPECIAL VERSIONS FOR DC SOLENOID VALVE

13.1 - Identification code for external drain version

D	S	5	-		/	14		-		K1	/	Y	/		
----------	----------	----------	----------	--	----------	-----------	--	----------	--	-----------	----------	----------	----------	--	--

Solenoid operated directional control valve

ISO 4401-05 size

Spool type (see par. 3)

Series n.:
(the overall and mounting dimensions remain unchanged from 10 to 19)

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Coil type

D12 = 12 V
D24 = 24 V
D26 = 26.4 V
D110 = 110 V
D220 = 220 V

Option: Surface treatment not standard. Omit if not required (see **NOTE**)

Manual override:
omit for override integrated in the tube (**standard**)
CM = manual override, boot protected
CK = knob manual override
CK2 = push and twist knob override

Port for subplate external drain

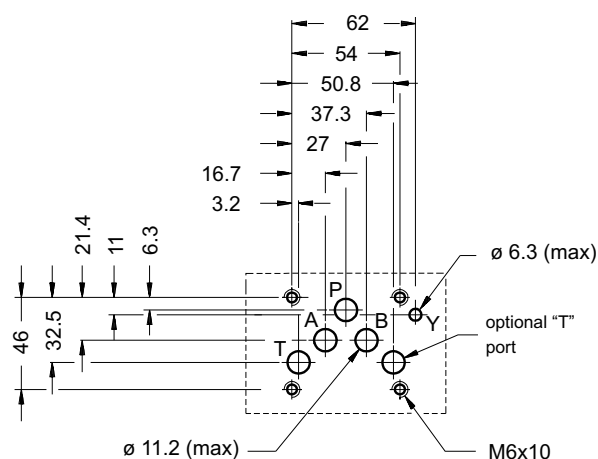

Coil electrical connection (see par. 11):
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
Only for **D12** and **D24**:
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S

NOTE :The standard surface treatment is phosphating black.
On request we can supply these valves with zinc-nickel finishing, making the valve suitable to ensure a salt spray resistance up to 240 hours (test operated according to UNI EN ISO 9227 standard and test evaluation operated according to UNI EN ISO 10289 standard)
Add **/W7** at the end of the identification code.

13.2 - Subplate external drain port (option Y)

This version allows the operation with pressures up to 320 bar on the valve T port.

It is a drain port Y realized on the valve mounting interface in compliance with ISO 4401-05-05-0-05. The Y port is connected with the solenoid chamber: in this way the tubes are not stressed by the pressure operating on the valve T port.

13.3 - Identification code for soft-shifting versions

D	S	5	-	/	14	-	K1	/	/	/
----------	----------	----------	----------	----------	-----------	----------	-----------	----------	----------	----------

Solenoid operated directional control valve

ISO 4401-05 size

V = FPM seals for special fluids

Coil type

D12 = 12 V
D24 = 24 V
D26 = 26.4 V
D110 = 110 V
D220 = 220 V

Manual override:
omit for override integrated in the tube (**standard**)
CM = manual override, boot protected
CK = knob manual override
CK2 = push and twist knob override

Options:
F = soft-shifting (see par. 13.4)
S = adjustable soft-shifting device (see par 13.5)

Coil electrical connection (see par. 11):
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
Only for **D12** and **D24**:
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S

13.4 - Fixed restrictor for soft-shifting (option F)

This version enables hydraulic actuators to perform a smooth start and stop, by reducing the speed of movement of the valve spool.

The diagram below shows the operating limits for available spools in the soft-shifting version (**NOTE**: for this version, the S9 spool must be used instead of the S3 one). The table on the side shows the switching times. Indicated values are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

Both shifting time and characteristics curves are influenced by the viscosity (and thus by the temperature) of the operating fluid. Moreover, times can vary according to the flow rate and operating pressure values of the valve.

SPOOL TYPE	CURVE		TIMES	
	P-A	P-B	ENERGIZING	DE-ENERGIZING
S1, S12	1	1	300 ÷ 500	300 ÷ 500
S2	2	2	450	200 ÷ 300
S4, S7, S8	3	3	400	400 ÷ 200
S9	1	1	300 ÷ 500	300 ÷ 500
TA, TB	2	2	300 ÷ 400	300 ÷ 400
TA02, TB02	2	2	400	200 ÷ 300

13.5 - Directional solenoid valve with adjustable “soft-shifting” device (option S)

This solenoid valve is supplied with a suitable device, adjustable by the user, which enables the control of the valve spool shifting time.

In this way the hydraulic actuators can perform smooth movements, by controlling the valve switching time according to the machine cycle and the inertia of the moving parts.

NOTE: during the first start-up the valve body must be filled with the operating fluid through the tap (1) .

14 - MANUAL OVERRIDES FOR DC SOLENOID VALVES

OPERATING PRINCIPLE

— Direct acting, subplate mounting directional control valve, with mounting surface according to NFPA D05 standard.

- The valve body (1) is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids (2) with easily removable interchangeable coils (3) are used (for further information on solenoids see par. 7). It is supplied with junction box (5) for the electrical connection.
- The valve is supplied with 3 or 4 way designs and with several interchangeable spools (4) with different porting arrangements.
- The valve is available with AC solenoids.

DS5JB

SERIES 10

1 - IDENTIFICATION CODE

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 175 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - CONFIGURATIONS

Type S*:

2 solenoids - 3 positions
with spring centering

Type SA*:

1 solenoid side A
2 positions (central + external)
with spring centering

Type SB*:

1 solenoid side B
2 positions (central + external)
with spring centering

Type TA:

1 solenoid side A
2 external positions
with return spring

Type TB:

1 solenoid side B
2 external positions
with return spring

Type RK:

2 solenoids - 2 positions
with mechanical retention

Type TA23 / TB23

three-way valve - 1 solenoid - 2 external positions, return spring

Note: Type TB23 corresponds to type 23TA of the old valve (D4D)

Besides the diagrams shown, which are the most frequently used, other special versions are available: consult our technical department for their identification, feasibility and operating limits.

RK	1	1

NOTE: The values indicated in the graphs are relevant to the standard solenoid valve. The operating limits can be considerably reduced if a 4-way valve is used as a 3-way valve with port A or B plugged or without flow.

7 - ELECTRICAL FEATURES

7.1 Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation. The coil is fastened to the tube by a threaded ring.

SUPPLY VOLTAGE FLUNCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	15.000 ins/hr
DUTY CYCLE	100%
Class of protection: Atmospheric agents (CEI EN 60529) Coil insulation (VDE 0580) Impregnation	IP 65 (see note 2) class H class F

Note: The IP65 protection degree is guaranteed only with the connector correctly connected and installed.

7.2 Current and absorbed power

The table shows current and power consumption values at inrush and at holding, relevant to the different coil types for AC current.

Coils (values ± 5%)

Type of coil	Frequency [Hz]	Nominal voltage [V]	Resistance at 20°C [Ohm]	Current consumption at inrush [A]	Current consumption at holding [A]	Power consumption at inrush [VA]	Power consumption at holding [VA]	Code
C26-A120-60K6/10	60	120	9,65	4,5	0,88	540	105,6	1902840
C26-A220-60K6/10		220	29,6	2,5	0,46	550	101,2	1902841

8 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal. Valve fixing is by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity and/or smoothness are not met, fluid leakage between valve and mounting surface can easily occur.

9 - OVERALL AND MOUNTING DIMENSIONS

10 - SPARE PARTS FOR AC SOLENOID VALVE

SOLENOID OPERATED DIRECTIONAL CONTROL VALVE COMPACT VERSION SERIES 10

SUBPLATE MOUNTING ISO 4401-05

p max 320 bar
Q max 125 l/min

MOUNTING INTERFACE

PERFORMANCES

(with mineral oil of viscosity of 36 cSt at 50°C)

Maximum operating pressure: - ports P - A - B - port T	bar	CC	CA
		320 210	160
Maximum flow rate	l/min	125	100
Pressure drop Δp-Q	see paragraph 4		
Operating limits	see paragraph 5		
Electrical features	see paragraph 7		
Electrical connections	EN 175301-803 (ex DIN 43650)		
Ambient temperature range	°C	-20 / +50	
Fluid temperature range	°C	-20 / +80	
Fluid viscosity range	cSt	10 ÷ 400	
Fluid contamination degree	according to ISO 4406:1999 class 20/18/15		
Recommended viscosity	cSt	25	
Masse: single solenoid valve double solenoid valve	kg	2,8 3,7	

OPERATING PRINCIPLE

- Direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401 standards.
- The valve is suitable for special applications, guaranteed by the reduced solenoid dimensions.
- The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see paragraph 7).
- The valve is supplied with 3 or 4 way designs and with several interchangeable spools with different porting arrangements.
- The valve is available with DC or AC current solenoids.

1 - IDENTIFICATION CODE

D	L	5	-		/	10		-		K1	/		
----------	----------	----------	----------	--	----------	-----------	--	----------	--	-----------	----------	--	--

Solenoid operated directional control valve

Model in compact execution

ISO 4401-05 size

Spool type (see paragraph 3):

S* **TA***
SA* **TB***
SB* **RK**

Series no.: (the overall and mounting dimensions remain unchanged from 10 to 19)

Seals:

N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Option:
/ W7 = Zinc-nickel surface treatment.
Omit if not required (see **NOTE 2**)

Manual override - see par. 12
Omit for override integrated in the tube (**standard**)
CM = boot protected.
For DC version only.

Coil electrical connection:
plug for connector type
EN 175301-803 (ex DIN 43650) (**standard**)

DC power supply
D12 = 12 V
D24 = 24 V
D00 = valve without coils (see **NOTE 1**)

AC power supply
A24 = 24 V - 50 Hz
A48 = 48 V - 50 Hz
A110 = 110 V - 50 Hz
A230 = 230 V - 50 Hz
A00 = valve without coils (see **NOTE 1**)

NOTE 1: Coils locking ring and related OR are supplied together with valves.

NOTE 2: The standard valve is supplied with surface treatment of phosphating black.

The zinc-nickel finishing makes the valve suitable to ensure a salt spray resistance up to 240 hours (test operated according to EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - SPOOL TYPE

Type S*:
2 solenoids - 3 positions
with spring centreing

Type SA*:
1 solenoid side A
2 positions (central + external)
with spring centreing

Type SB*:
1 solenoid side B
2 positions (central + external)
with spring centreing

Type RK:
2 solenoids - 2 positions
with mechanical retention

Type TA:
1 solenoid side A
2 external positions
with return spring

Type TB:
1 solenoid side B
2 external positions
with return spring

NOTE: Others spools available on request only.

5 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values indicated in the graphs are relevant to the standard solenoid valve. The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

5.1 - Standard operating limits

S3, S9	3
S4	4

5.2 - 4-way valve in 3-way operation

Operating limits of a 4-way valve in 3-way operation or with port A or B plugged or without flow.

SPOOL	CURVE	
	DC	AC
TA backpr. A TB backpr. B	2	1
TA02 backpr. A TB02 backpr. B	1	1
TA backpr. B TB backpr. A	3	3
TA02 backpr. B TB02 backpr. A	2	2

6 - SWITCHING TIMES

The values indicated are obtained with spool S1, according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

SUPPLY	TIMES (±10%) [ms]	
	ENERGIZING	DE-ENERGIZING
DC	40 ÷ 90	20 ÷ 50
AC	15 ÷ 30	20 ÷ 50

7 - ELECTRICAL FEATURES

7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation. The coil is fastened to the tube by a threaded ring, and can be rotated +/- 90°, to suit the available space.

The interchangeability of coils of different voltages is allowed within the same type of supply current, alternating or direct.

SUPPLY VOLTAGE FLUCTUATION	± 10% V _{nom}
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC) - NOTE	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION Atmospheric agents EN 60529 Coil insulation (VDE 0580) Impregnation:	IP65 (*) class H class H

(*) The protection degree is guaranteed only with the connector correctly connected and installed

NOTE: In order to further reduce the emissions, with DC supply, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

7.2 - DC valve - Current and power consumption

In direct current energizing, current consumption stays at fairly constant values, essentially determined by Ohm's law: $V = R \times I$

The table shows current and power consumption values for DC types.

	Resistance at 20°C [Ω] (±5%)	Current consumption [A] (±10%)	Power consumption [W] (±10%)	Coil code K1
C22L5-D12K1	2,9	4,14	50	1903150
C22L5-D24K1	12,3	1,95	47	1903151

7.3 - AC valve - Current and power consumption

In alternating current energizing, an initial phase (maximum movement) is seen, during which the solenoid consumes elevated value currents (inrush current); the current values diminish during the plunger stroke until it reaches the minimum values (holding current) when the plunger reaches the stroke end.

The table shows the values of absorption at the inrush and at holding.

	Freq. [VAC/Hz] (±10%)	Resistance at 20°C [Ω] (±5%)	Current consumption at inrush [A] (±10%)	Current consumption at holding [A] (±5%)	Power consumption at inrush (±10%) [VA]	Power consumption at holding (±10%) [VA]	Coil code K1
C26L5-A24K1	24/50	0,58	15,1	2,84	362,4	68,2	1903160
C26L5-A48K1	48/50	2,34	7,4	1,29	355,2	61,9	1903161
C26L5-A110K1	110/50-120/60	12,3	3,6 - 3,3	0,64 - 0,62	396	70,4 - 74,4	1903162
C26L5-A230K1	230/50-240/60	51,6	1,8 - 1,6	0,31 - 0,28	414 - 384	71,3 - 67,2	1903163

8 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. Connectors can be ordered separately. See catalogue 49 000.

9 - INSTALLATION

The configuration with centreing and return springs can be mounted in any position.

Valve fitting takes place by means of screws or tie rods, fixing the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

10 - DL5 DC OVERALL AND MOUNTING DIMENSIONS

11 - DL5 AC OVERALL AND MOUNTING DIMENSIONS

12 - OPTIONAL MANUAL OVERRIDE

12.1 - Boot protected manual override (only for DC solenoid valve)

It can be ordered by entering the code **CM** in the identification code at par. 1, or is available as option to be ordered separately:
code **3401150006**.

13 - SPARE PARTS FOR DC SOLENOID VALVE

IDENTIFICATION CODE FOR DC AND RC COILS

6 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

The limits for TA02 and TA spools refer to the 4-way operation. The operating limits of a 4-way valve in 3-way operation or with port A or B plugged or without flow are shown in the chart on the next page.

SPOOL	CURVE
S1, S2, RK	1
TA02	2
S3	3
S4	4
TA, TA23	5

6.1 - 4-way valve in 3-way operation

Operating limits of a 4-way valve in 3-way operation or with port A or B plugged or without flow.

SPOOL	CURVE
TA	1
TA02	2

7 - ELECTRICAL FEATURES

7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring. The coils are interchangeable.

Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

electric connection	electric connection protection	whole valve protection
K1 EN 175301-803 (ex DIN 43650)	IP65	IP65
K2 AMP JUNIOR	IP65/67	
K7 DEUTSCH DT04 male	IP65/67	

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	In compliance with 2014/30/EU
LOW VOLTAGE (NOTE)	In compliance with 2014/35/EU
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation	class H class F

NOTE: In order to further reduce the emissions, use of type H connectors is recommended, because of they prevent voltage peaks at the opening of the coil supply electrical circuit (see cat. 49 000).

7.2 - Coils current and power consumption

The table below shows the consumption values relating to the various types of coils for direct current power supply.

(values ±10%)

	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumption [A]	Power consumption [W]	Coil code		
					K1	K2	K7
D12	12	4,4	2,72	32,7	1903080	1903100	1902940
D24	24	18,6	1,29	31	1903081	1903101	1902941
D28	28	26	1,11	31	1903082		-

8 - INSTALLATION

The configuration with centring and return springs can be mounted in any position.

Valve fitting takes place by means of screws or tie rods, fixing the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

9 - ELECTRIC CONNECTIONS

connection for EN 175301-803
(ex DIN 43650) connector
code **K1** (standard)
code **WK1** (W7 version only)

connection for AMP JUNIOR
connector
code **K2**

connection for
DEUTSCH DT06-2S male connector
code **K7**

connection for
DEUTSCH DT06-2S male
connector
code **WK7** (W7 version only)

connection for
DEUTSCH DT06-2S male
connector - coil with diode
code **WK7D** (W7 version only)

10 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) for K1 and WK1 connections can be ordered separately. See catalogue 49 000.

11 - OVERALL AND MOUNTING DIMENSIONS

12 - MANUAL OVERRIDES

12.1 - CM Manual override, boot protected

12.2 - CP Push manual override

12.3 - CPK Push manual override with mechanical retention

12.4 - CK1 Turning knob override

13 - HIGH IP AND CORROSION RESISTANCE VERSION

13.1 - Identification code

D	L	5	B	-	/	10	-	/	/	W7
Directional control valve, solenoid operated, compact version		ISO 4401-05 size		Spool type (see paragraph 3)		Series: (the overall and mounting dimensions remain unchanged from 10 to 19)		Seals: N = NBR seals for mineral oil (standard) V = FPM seals for special fluids		Manual override: CM = manual override, boot protected (standard) CP = push manual override CK1 = turning knob override CPK = push manual override with mechanical retention
								Coil electrical connection WK1 = plug for connector type EN 175301-803 (ex DIN 43650) WK7 = plug DEUTSCH DT04-2P, for male connector type DEUTSCH DT06-2S. WK7D = plug DEUTSCH DT04-2P, for male connector type DEUTSCH DT06-2S. Coil with diode.		DC power supply D12 = 12 V D24 = 24 V D26 = 26.4 V

13.2 - Corrosion resistance

This version features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600** hours (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

13.3 - DC coils

The coils feature a zinc-nickel surface treatment.

The WK7D coil includes a suppressor diode of pulses for protection from voltage peaks during switching. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coil and to 58.9 V in the D24 coil.

(values $\pm 10\%$)

	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt [W]	Coil code		
					WK1	WK7	WK7D
D12	12	4,4	2,72	32,7	1903590	1903580	1903600
D24	24	18,6	1,29	31	1903591	1903581	1903601
D26	26,4	21,8	1,21	32	1903599	1903589	-

13.4 - Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

electric connection	electric connection protection	whole valve protection
WK1 EN 175301-803 (ex DIN 43650)	IP66	IP66
WK7 DEUTSCH DT04 male	IP66/IP68/IP69 IP69K*	IP66/IP68/IP69 IP69K*
WK7D DEUTSCH DT04 male	IP66/IP68/IP69 IP69K*	IP66/IP68/IP69 IP69K*

(*) The IP69K protection degree is not taken into account in IEC 60529 but it is included in ISO 20653.

NOTE: As regards the liquid ingress protection (second digit), there are three means of protection.

Codes from 1 to 6 are related to water jets.

Rates 7 and 8 are related to immersion.

Rate 9 is reserved for high pressure and temperature water jets.

This means that IPX6 covers all the lower steps, rate IPX8 covers IPX7 but not IPX6 and lower, instead IPX9 does not cover any of them.

Whether a device meets two types of protection requirements it must be indicated by listing both the tests separated by a slash.

(E.g. a marking of an equipment covered both by temporary immersion and water jets is IP66/IP68).

Type PMD4-AL4G with side ports - threading: 1/2" BSP

MDS5

SOLENOID OPERATED SWITCHING VALVE

SERIES 10

MODULAR VERSION ISO 4401-05

p max **350** bar
Q max **100** l/min

MOUNTING INTERFACE

ISO 4401-05-04-0-05
(CETOP 4.2-4-05-350)

OPERATING PRINCIPLE

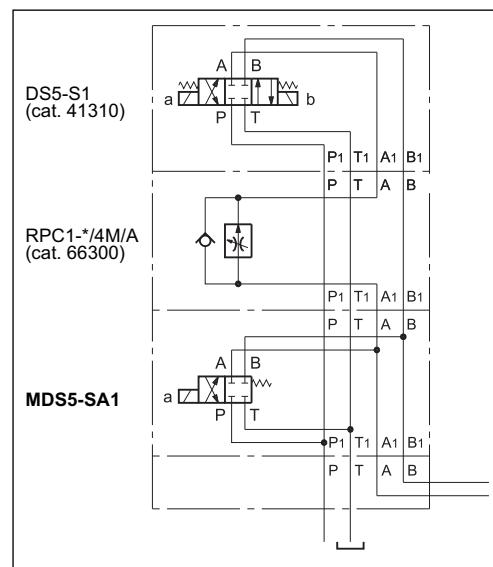

- The MDS5 valve is used to switch multiple flow directions, or to select pressure values. Application example here below.
- The flow paths pass right through the entire valve body and due to this particular design, the MDS5 can be assembled with all ISO 4401-05 modular valves.
- The special connection of the valve in parallel to the P - T A - B lines of the circuit allows easy construction of different hydraulic configurations, reducing the pressure drops to a minimum.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Max operating pressure:		
P - A - B ports	bar	350
T port (DC version)		210
T port (AC version)		160
Maximum flow on P - A - B ports	l/min	100
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass: double solenoid	kg	4,6
single solenoid		3,7

APPLICATION EXAMPLE

Coil electrical connection
 plug for connector type EN 175301-803
 (ex DIN 43650)

Power supply:
Details of electrical features are in catalogue 41 330.

DC power supply
D12 = 12 V
D24 = 24 V

AC power supply
A24 = 24 V - 50 Hz
A48 = 48 V - 50 Hz
A110 = 110 V - 50 Hz / 120 V - 60 Hz
A230 = 230 V - 50 Hz / 240 V - 60 Hz

2 - SPOOLS

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

4 - PRESSURE DROPS $\Delta P-Q$

(obtained with viscosity of 36 cSt at 50 °C)

ENERGIZED VALVE

SPOOL	FLOW DIRECTIONS			
	P→A	P→B	A→T	B→T
	CURVES ON GRAPHS			
S1	3	2	1	1

5 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values indicated in the graphs are relevant to the standard solenoid valve.

The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

DC VALVE

SPOOL	CURVE
S1, TA	1

6 - SWITCHING TIMES

The values indicated are obtained with spool S1, according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

SUPPLY	TIMES ($\pm 10\%$) [ms]	
	ENERGIZING	DE-ENERGIZING
DC	40 ÷ 90	20 ÷ 50
AC	15 ÷ 30	20 ÷ 50

7 - INSTALLATION

The valve can be mounted in any position.

Valve fixing takes place by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity and/or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

D12 = 12 V
D24 = 24 V
D48 = 48 V
D110 = 110 V
D220 = 220 V
D00 = valve without coils (see **NOTE 1**)

alternate current
A24 = 24 V - 50 Hz
A48 = 48 V - 50 Hz
A110 = 110 V - 50 Hz / 120 V - 60 Hz
A230 = 230 V - 50 Hz / 240 V - 60 Hz
A00 = valve without coils (see **NOTE 1**)
F110 = 110 V - 60 Hz
F220 = 220 V - 60 Hz

Seals:
N = NBR seals for mineral oils (**standard**)
V = FPM seals for special fluids

Series No.:
50 - for valve E4
40 - for valve E5
(the overall and mounting dimensions within the same ten remain unchanged)

NOTE 1: Coils locking ring and related OR are supplied together with valves.

NOTE 2: The standard valve is supplied with surface treatment of phosphating black.

The zinc-nickel finishing on the valve body (both main and pilot) makes the valve suitable to ensure a salt spray resistance up to **240** hours (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

For a salt spray resistance up to **600** hours refer to paragraph 1.1.

1.1 - High corrosion resistance version

This version, available for the basic valve (without option of par. 10) features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600 hours** (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

The coil are DC only and specific for this version, featuring a zinc-nickel surface treatment. The coil for DEUTSCH connector has a diode inside. Electrical features at paragraph 9.2. The boot manual override (CM) is installed as standard in order to protect the solenoid tube.

Follow the identification code below to order it

<div style="border: 1px solid black; padding: 5px; display: inline-block;"> E.... </div>	/		/	CM	/	W7
Choices as in standard identification code			Manual override, boot protected			
DC power supply D12 = 12 V D24 = 24 V			Coil electrical connection (see par. 15) WK1 = plug for connector type EN 175301-803 (ex DIN 43650) WK7D = plug DEUTSCH DT04-2P, for male connector type DEUTSCH DT06-2S. Coil with diode.			

2 - SPOOLS TYPES

Symbols are referred to the solenoid valve **E***. For the hydraulic operated version **C*** please verify the connection scheme (see par. 4).

Type S:

3 positions with spring centering

Type *TA:

2 positions (central + external) with spring centering

Type TA:

2 external positions with return spring

Type 23 (TA/TC):

3-way, 2 external positions with return spring

Type *TC:

2 positions (central + external) with spring centering

Type TC:

2 external positions with return spring

Type RK:

2 positions with mechanical detent on pilot valve

Besides the diagrams shown, which are the most frequently used, other special versions are available: consult our technical department for their identification, feasibility and operating limits.

Max pressure in P, A, B ports	320	420	320	420
Max pressure in T line with external drainage	210	350	210	350
Max pressure in T line with internal drainage	210 (DC) 160 (AC)	210 (DC) 160 (AC)	-	-
Max pressure in Y line with external drainage	210 (DC) 160 (AC)	210 (DC) 160 (AC)	-	-
Min piloting pressure NOTE 1	5 ÷ 12			
Max piloting pressure	210	350	210	350

NOTE 1 minimum piloting pressure can be the lower range value at low flows rates, but with higher flow rates the higher value is needed.

MAXIMUM FLOW RATES [l/min]	E4		E5	
Spool type	PRESSURES			
	at 210 bar	at 320 bar	at 210 bar	at 280 bar
S4, S7, S8	120	100	500	450
All other spools	150	120	600	500

8 - PILOTING AND DRAINAGE

The E*P4 valves are available with piloting and drainage, both internal and external. The version with external drainage allows for a higher back pressure on the outlet.

TYPE OF VALVE		Plug assembly	
		X	Y
E*P4-**	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
E*P4-**/I	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
E*P4-**/E	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
E*P4-**/EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

8.1 - Backpressure valve incorporated on line P available for E5 valve only)

Valve E5 is available upon request with backpressure valve incorporated on line P. This is necessary to obtain the piloting pressure when the control valve, in the rest position, has the line P connected to the T outlet (spools S2 - S4 - S7 - S8 - TA002 - TC002 - RK002). The cracking pressure is of 5 bar.

Add **C3** to the identification code for this request (see paragraph 1). In the **C3** version the piloting is always internal.

NOTE: the backpressure valve can't be used as direct check valve because it doesn't assure the seal.

The curve refers to the pressure drop (body part only) with backpressure valve energized to which the pressure drop of the reference spool must be added. (see paragraph 5)

9 - ELECTRICAL FEATURES

9.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated 360°, to suit the available space.

NOTE 1: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see catalogue. 49 000).

Protection from atmospheric agents IEC 60529

Connection	IP 65	IP 67	IP 69 K

CLASS OF PROTECTION: Atmospheric agents (IEC 60529) Coil insulation (VDE 0580) Impregnation: DC valve AC valve	IP 65 (NOTE 2) class H class F class H

9.2 - DC coils

In direct current energizing, current consumption stays at fairly constant values, essentially determined by Ohm's law: $V = R \times I$.

The WK1 and WK7D are coils specific for the high corrosion resistance version of the valve.

The WK7D coil includes a suppressor diode of pulses for protection from voltage peaks during switching. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coil and to 58.9 V in the D24 coil.

Using connectors type "D" (see cat. 49 000) with embedded bridge rectifier it is possible to feed DC coils (starting from 48V voltage) with alternating current (50 or 60 Hz), considering a reduction of the operating limits by approximately 5 ÷ 10%.

The table shows current and power consumption values relevant to DC coils.

(values ±10%)

	Resistance at 20°C [Ω]	Current consumption [A]	Power consumption [W]	Coil code			
				K1	WK1	K7	WK7D
D12	4,4	2,72	32,7	1903080	1903050	1902940	1903400

F220	220		106	0,8	0,2	180	45	1902835

10 - OPTIONS

10.1 - Control of the main spool stroke: C

It is possible to introduce special stroke controls in the heads of the hydraulic pilot operated valve so as to vary the maximum spool clearance opening.

This solution allows control of the flow rate from the pump to the actuator and from the actuator to the outlet, obtaining a double adjustable control on the actuator.

Add the letter **C** to the identification code to request this device (see paragraph 1).

10.2 - Control of the main spool shifting speed: D

By placing a MERS type double flow control valve between the pilot solenoid valve and the hydraulic operated valve, the piloted flow rate can be controlled and therefore the changeover smoothness can be varied.

Add the letter **D** to the identification code to request this device (see paragraph 1).

10.3 - Subplate with throttle on line P

It is possible to introduce a subplate with a restrictor of $\varnothing 0,8$ on line P between the pilot solenoid valve and the main distributor.

Add **PF** to the identification code to request this option (see paragraph 1).

10.4 - Control of the main spool stroke and shifting speed: G

It is possible to have the valve fitted with both the spool stroke device and the piloting flow rate control device.

Add the letter **G** to the identification code to request this solution (see paragraph 1).

dimensions in mm

	E4	E5
A	280	401,5
B	218	254

11 - INSTALLATION

Configurations with centering and recall springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

NOTE: Use of class 10.9 fastening screws is recommended for valves in version H (high pressure).

ISO 4401-07-07-0-05
(CETOP 4.2-4-07-350)

- The DSP7 piloted valve is made up of a 4-way hydro-piloted distributor with mounting surface according to ISO 4401-07 standards, operated by an ISO 4401-03 solenoid directional valve.
- It is available with different spool types (see par. 2), with some options for the opening control.
- It is available with both the solenoid and the hydraulic control from the X and Y ways.
- A version for high pressures (H) is available.
- It is available also with zinc-nickel surface treatments, that ensures a salt spray resistance up to 600 hours.

D48 = 48 V
D110 = 110 V
D220 = 220 V
D00 = valve without coils (see **NOTE 1**)

alternate current
A24 = 24 V - 50 Hz
A48 = 48 V - 50 Hz
A110 = 110 V - 50 Hz / 120 V - 60 Hz
A230 = 230 V - 50 Hz / 240 V - 60 Hz
A00 = valve without coils (see **NOTE 1**)
F110 = 110 V - 60 Hz
F220 = 220 V - 60 Hz

NOTE 1: Coils locking ring and related OR are supplied together with valves.

NOTE 2: The standard valve is supplied with surface treatment of phosphating black.

The zinc-nickel finishing on the valve body (both main and pilot) makes the valve suitable to ensure a salt spray resistance up to **240** hours (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

For a salt spray resistance up to **600** hours refer to paragraph 1.1.

1.1 - High corrosion resistance version

This version, available for the basic valve (without option of par. 13) features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600 hours** (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

The coil are DC only and specific for this version, featuring a zinc-nickel surface treatment. The coil for DEUTSCH connector has a diode inside. Electrical features at paragraph 10.2. The boot manual override (CM) is installed as standard in order to protect the solenoid tube.

External pilot (see par. 9)

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Series: (the overall and mounting dimensions remain unchanged from 10 to 19)

Spool type

The distributor is delivered with short-circuit subplate. The X and Y ports are used for the hydraulic control of the valve.

DSC7-S*

DSC7-TA

DSC7-TB

NOTE : The standard valve is supplied with surface treatment of phosphating black.

The zinc-nickel finishing makes the valve suitable to ensure a salt spray resistance up to **600** hours. (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

5 - PRESSURE DROPS ΔP -Q

(values obtained with viscosity 36 cSt at 50 °C)

6 - SWITCHING TIMES

The values indicated refer to a solenoid valve working with piloting pressure of 100 bar, with mineral oil at a temperature of 50°C, at viscosity of 36 cSt and with PA and BT connections. The energizing and de-energizing times are obtained at the pressure variation which occurs on the lines.

TIMES (± 10%) [ms]	ENERGIZED		DE-ENERGIZED	
	2 Pos.	3 Pos.	2 Pos.	3 Pos.
AC solenoid	45	30	45	30
DC solenoid	75	60	60	45

7 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure for the different spool types.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

The values have been obtained with mineral oil, viscosity 36 cSt at 50 °C, and filtration ISO 4406:1999 class 18/16/13.

8 - PERFORMANCE CHARACTERISTICS

PRESSURES [bar]	DSP7	DSP7H	DSC7	DSC7H
Max pressure in P, A, B ports	350	420	350	420
Max pressure in T line with external drainage	250	350	250	350
Max pressure in T line with internal drainage	210 (DC) 160 (AC)	210 (DC) 160 (AC)	-	-
Max pressure in Y line with external drainage	210 (DC) 160 (AC)	210 (DC) 160 (AC)	-	-
Min piloting pressure NOTE 1	5 ÷ 12			
Max piloting pressure NOTE 2	210	350	210	420

NOTE 1 minimum piloting pressure can be the lower range value at low flows rates, but with higher flow rates the higher value is needed.

NOTE 2 If the valve operates at higher pressures it is necessary to use the version with external pilot and reduced pressure. Otherwise, the valve can be ordered with internal pilot and pressure reducing valve with 30 bar fixed adjustment (pilot type Z, see identification code)

9 - PILOTING AND DRAINAGE

The DSP7 valves are available with piloting and drainage, both internal and external. The version with external drainage allows for a higher back pressure on the outlet.

X: plug M6x8 for external pilot
Y: plug M6x8 for external drain

	TYPE OF VALVE	Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

9.1 - Backpressure valve incorporated on line P

Valves DSP7 are available upon request with backpressure valve incorporated on line P. This is necessary to obtain the piloting pressure when the control valve, in rest position, has the line P connected to the T port (spools S2, S4, S7, S8, S*2, S*4, TA02, TB02, RK02). The cracking pressure is of 5 bar with a minimum flow rate of 15 l/min.

Add **C** to the identification code for this request (see paragraph 1).

In the C version the piloting is always internal.

The backpressure valve can be also delivered separately and it can be easily mounted on line P of the main control valve. Specify the code **0266577** to order the backpressure valve separately.

pilot always internal
Y: plug M6x8 for external drain

NOTE: the backpressure valve can't be used as check valve because it doesn't assure the seal.

The curve refers to the pressure drop (body part only) with backpressure valve energized to which the pressure drop of the reference spool must be added. (see paragraph 5)

10 - ELECTRICAL FEATURES

10.1 Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated 360°, to suit the available space.

NOTE: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see data sheet 49 000).

Protection from atmospheric agents IEC EN 60529

Connection	IP 65	IP 67	IP 69 K

LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation: (DC valve) (AC valve)	class H class F class H

10.2 - DC coils

In direct current energizing, current consumption stays at fairly constant values, essentially determined by Ohm's law: $V = R \times I$.

The WK1 and WK7D are coils specific for the high corrosion resistance version of the valve.

The WK7D coil includes a suppressor diode of pulses for protection from voltage peaks during switching. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coil and to 58.9 V in the D24 coil.

Using connectors type "D" (see cat. 49 000) with embedded bridge rectifier it is possible to feed DC coils (starting from 48V voltage) with alternating current (50 or 60 Hz), considering a reduction of the operating limits by approximately 5 ÷ 10%.

The table shows current and power consumption values for DC coils.

(values ±10%)

	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumption [A]	Power consumption [W]	Coil code			
					K1	WK1	K7	WK7D

11 - OPTIONS

11.1 - Control of the main spool stroke: C

With the help of special side plugs, it is possible to introduce stroke controls in the heads of the piloted valve so as to vary the maximum spool clearance opening.

This solution allows control of the flow rate from the pump to the actuator and from the actuator to the outlet, obtaining a double adjustable control on the actuator.

Add the letter **C** to the identification code to request this device (see paragraph 1).

DSP7-S*/C

11.2 - Control of the main spool shifting speed: D

By placing a MERS type double flow control valve between the pilot solenoid valve and the main distributor, the piloted flow rate can be controlled and therefore the changeover smoothness can be varied.

Add the letter **D** to the identification code to request this device (see paragraph 1).

DSP7-S*/D

11.3 - Subplate with throttle on line P

It is possible to introduce a subplate with a restrictor of $\varnothing 0,8$ on line P between the pilot solenoid valve and the main distributor.

Add **P08** to the identification code to request this option (see paragraph 1).

DSP7-S*/P08

11.4 - Solenoid operated distributor with pilot valve in configuration S2

It is possible to deliver the solenoid operated distributor with pilot valve in configuration S2 (all the ports at outlet). With this option the piloting is necessarily external.

Add **S2** to the identification code to request this option (see paragraph 1).

This configuration is used with external piloting in order to allow the unloading of the piloting line when the solenoid operated valve is in rest position.

12 - DSP7 OVERALL AND MOUNTING DIMENSIONS FOR SOLENOID DISTRIBUTOR

NOTE: Use of fastening screws class A10.9 is recommended for valves in version **H** (high pressure)

Fastening of single valve: 4 SHC screws ISO 4762 M10x60
2 SHC screws ISO 4762 M6x50

Tightening torque: M10x60: 40 Nm (A8.8) - 57 Nm (A10.9)
M6x50: 8 Nm (A8.8) - 12 Nm (A10.9)

Threads of mounting holes: M6x12; M10x18

1	Mounting surface with sealing rings 4 OR type 130 (22.22X2.62) - 90 Shore 2 OR type 2043 (10.82x1.78) - 90 Shore
2	Manual override
3	Coil removal space
4	Connector removal space
5	Electric connector to be ordered separately (see cat. 49 000)
6	Reducing valve with fixed adjustment 30 bar

13 - DSC7 OVERALL AND MOUNTING DIMENSIONS FOR HYDRAULIC DISTRIBUTOR DSC7

NOTE: Use of fastening screws class A10.9 is recommended for valves in version **H** (high pressure)

Fastening of single valve: 4 SHC screws ISO 4762 M10x60
2 SHC screws ISO 4762 M6x50

Tightening torque: M10x60: 40 Nm (A8.8) - 57 Nm (A10.9)
M6x50: 8 Nm (A8.8) - 12 Nm (A10.9)

Threads of mounting holes: M6x12; M10x18

1 Mounting surface with sealing rings:
4 OR type 130 (22.22X2.62) - 90 Shore
2 OR type 2043 (10.82x1.78) - 90 Shore

2 Short-circuit subplate

14 - INSTALLATION

Configurations with centring and recall springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

NOTE: Use of fastening screws class 10.9 is recommended for valves in version **H** (high pressure).

15 - ELECTRIC CONNECTIONS

connection for EN 175301-803
(ex DIN 43650) connector
code **K1 (standard)**
code **WK1** (W7 version only)

connection for
DEUTSCH DT06-2S male
connector type
code **K7**

connection for
DEUTSCH DT06-2S male
connector - coil with diode
code **WK7D** (W7 version only)

16 - ELECTRIC CONNECTORS

Solenoid valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) for K1 and WK1 connections can be ordered separately. See catalogue 49 000.

17 - MANUAL OVERRIDE

Whenever the solenoid valve installation may involve exposure to atmospheric agents or use in tropical climates, the manual override, boot protection is recommended.

Add the suffix **CM** to request this device (see paragraph 1).

18 - SUBPLATES

(see catalogue 51 000)

These plates are not suitable for high pressure valves DSP7H.

Type with rear ports	PME07-AI6G
Type with side ports	PME07-AL6G
P, T, A, B, port dimensions	1" BSP
X, Y; L port dimensions	1/4" BSP

DSP10

NOTE: The locking rings of the coils and the relevant O-Rings are supplied together with valves

2 - SPOOL TYPE

NOTE: Symbols refers to the **DSP10** solenoid valve. For the **DSC10** hydraulic control version, please verify the connection scheme (see par. 3).

Type S*:
2 solenoids - 3 positions
with spring centering

Type SA*:
1 solenoid side A
2 positions (central + external)
with spring centering

Type SB*:
1 solenoid side B
2 positions (central + external)
with spring centering

Type RK:
2 solenoids - 2 positions
with mechanical retention

Type TA:
1 solenoid side A
2 external positions
with return spring

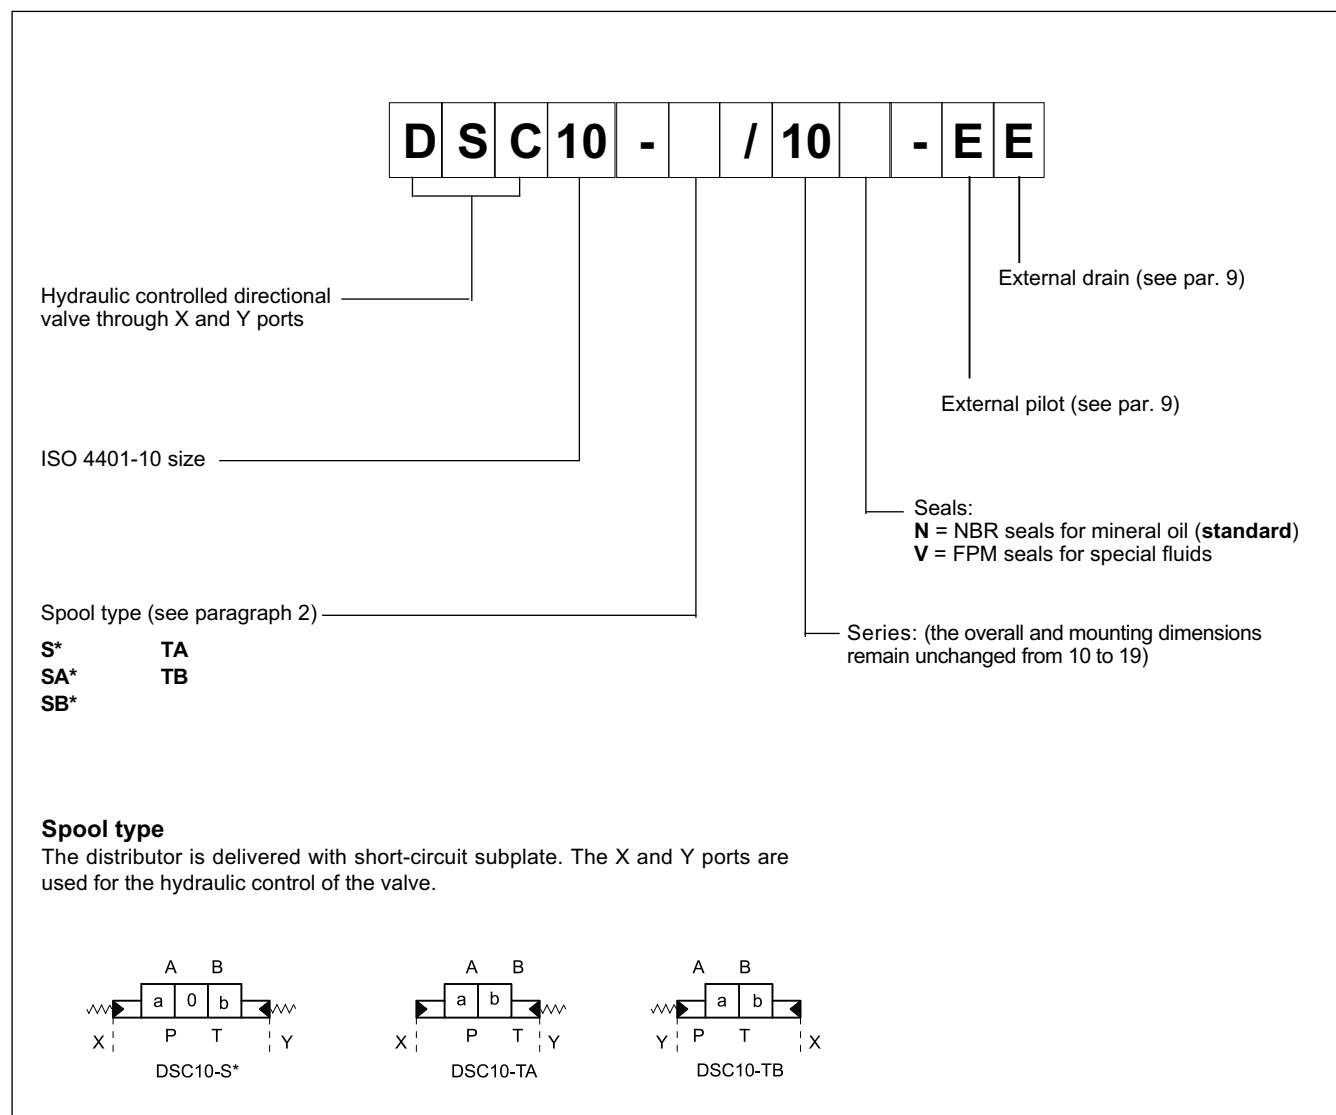

Type TB:
1 solenoid side B
2 external positions
with return spring

If other spool types are necessary please consult our Technical Department

3 - IDENTIFICATION CODE FOR HYDRAULIC DISTRIBUTOR DSC10

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code V). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

5 - PRESSURE DROPS $\Delta P-Q$

(values obtained with viscosity 36 cSt at 50 °C)

PRESSURE DROPS WITH VALVE ENERGIZED

S3, SA3, SB3			4	4	
S4, SA4, SB4					4

6 - SWITCHING TIMES

The values indicated refer to a solenoid valve working with piloting pressure of 100 bar, with mineral oil at a temperature of 50°C, at viscosity of 36 cSt and with PA and BT connections.

The energizing and de-energizing times are obtained at the pressure variation which occurs on the lines.

TIMES (± 10%) [ms]	ENERGIZED		DE-ENERGIZED	
	2 Pos.	3 Pos.	2 Pos.	3 Pos.
AC solenoid	90	60	90	60
DC solenoid	130	100	90	60

7 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406.1999 class 18/16/13.

SPOOL TYPE	CURVE	
	P-A	P-B
S1,SA1,SB1	1	1
S2, SA2, SB2	2	2
S3, SA3, SB3	1	1
S4, SA4, SB4	2	2
TA, TB	1	1
TA02, TB02	1	1
TA23, TB23	1	1
RK	1	1

8 - PERFORMANCE CHARACTERISTICS

PRESSURES [bar]	DSP10
Max pressure in P, A, B ports	350
Max pressure in T line with external drainage	250
Max pressure in T line with internal drainage	210 (DC) / 160 (AC)
Max pressure in Y line with external drainage	210 (DC) / 160 (AC)
Min piloting pressure NOTE 1	6 ÷ 12
Max piloting pressure NOTE 2	280

NOTE 1 minimum piloting pressure can be the lower range value at low flows rates, but with higher flow rates the higher value is needed.

NOTE 2 If the valve operates at higher pressures it is necessary to use the version with external piloting and reduced pressure.

Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered (Piloting type **Z**, see dimensions at par. 11)

9 - PILOTING AND DRAINAGE

These valves are available with piloting and drainage, both internal and external. The version with external drainage allows for a higher back pressure on the outlet.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

10 - ELECTRICAL FEATURES

10.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated 360°, to suit the available space.

NOTE 1: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

NOTE 2: The IP65 protection degree is guaranteed only with the connector correctly connected and installed.

VOLTAGE SUPPLY FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	6.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC) (NOTE 1)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION Atmospheric agents (IEC 60529) Coil insulation (VDE 0580) Impregnation: DC valve AC valve	IP 65 (NOTE 2) class H class F class H

10.2 - Current and absorbed power for DC solenoid valve

The table shows current and power consumption values of the DC coils.

Using connectors type "D" (see cat. 49 000) with embedded bridge rectifier it is possible to feed DC coils (starting from 48V voltage) with alternating current (50 or 60 Hz), considering a reduction of the operating limits by 5 ÷ 10% approx.

(values ± 10%)

11 - OVERALL AND MOUNTING DIMENSIONS FOR DSP10

12 - OVERALL AND MOUNTING DIMENSIONS FOR DSC10

13 - OPTIONS

13.1 - Control of the main spool stroke: C

With the help of special side plugs, it is possible to introduce stroke controls in the heads of the piloted valve so as to vary the maximum spool clearance opening.

This solution allows control of the flow rate from the pump to the actuator and from the actuator to the outlet, obtaining a double adjustable control on the actuator.

Add the letter **C** to the identification code to request this device (see paragraph 1).

13.2 - Control of the main spool shifting speed: D

By placing a MERS type double flow control valve between the pilot solenoid valve and the main distributor, the piloted flow rate can be controlled and therefore the changeover smoothness can be varied.

Add the letter **D** to the identification code to request this device (see paragraph 1).

13.3 - Subplate with throttle on line P

It is possible to introduce a subplate with a restrictor of Ø1,5 on line P between the pilot solenoid valve and the main distributor.

Add **P15** to the identification code to request this option (see paragraph 1).

14 - MANUAL OVERRIDE, BOOT PROTECTED: CM

Whenever the solenoid valve installation may involve exposure to atmospheric agents or use in tropical climates, the manual override, boot protection is recommended. Add **/CM** at the end of the identification code to request this device (see paragraph 1).

15 - ELECTRIC CONNECTORS

Solenoid valves are delivered without connectors. Connectors can be ordered separately. See catalogue 49 000.

16 - INSTALLATION

Configurations with centering and recall springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

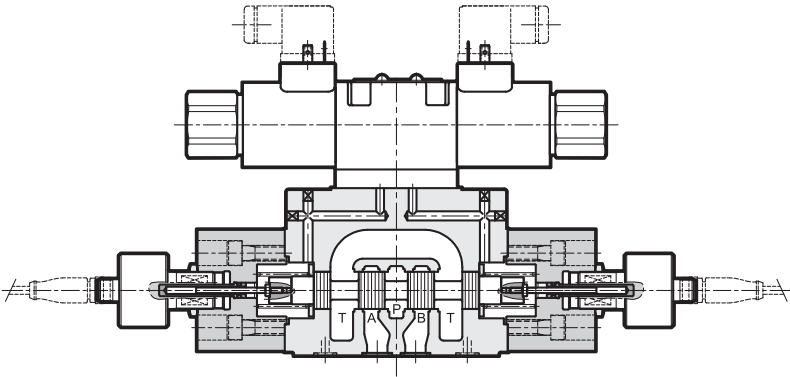

DS(P)*M

DIRECTIONAL VALVES WITH SPOOL POSITION MONITORING

DS3M **ISO 4401-03**

DSP8M **ISO 4401-08**
DSP10M **ISO 4401-10**

OPERATING PRINCIPLE

- These solenoid operated directional valves are equipped with position sensors that monitor the main spool position. The switching position is indicated by a binary signal.
- TÜV certification body certifies the compliance of DS(P)*M valves with the EC safety standards ISO 4413:2012, UNI EN 12622:2014, UNI EN 693:2001 +A2:2001, UNI EN 201:2010 and UNI EN 422:2009 with certificate TÜV IT 14 MAC 0043 .
- The valves are available in direct current versions only (see paragraph 8).
- These valves do not have manual override and can not be disassembled, because of their characteristics and their possible use on machinery subject to safety requirements. Moreover, their components are not interchangeable. Read the *Use and Maintenance manual* for instructions on operation, safe use and repair of the product

	CURVES ON GRAPH				
S1, SA1, SB1	2	2	1	1	
S3	2	1	2	3	
S4, SA4, SB4	1	1	2	2	4
TA, TB, TA02, TB02	3	3	2	2	-
TA100, TB100	2	2	2	2	-

For S3 in central position B→T refer to curve 5.

2.3 - Performance limits for DS3M and DS5M solenoid valves

The curves define the flow rate operating fields according to the valve pressure of the different versions.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The values have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

DS3M

SPOOL	CURVE	
	P→A	P→B
S1,SA1	1	1
S3,	4	4
S4, SA4	2	2
TA, TB	1	1
TA100, TB100	3	3

DS5M

SPOOL	CURVE	
	P→A	P→B
S1	1	1
S3	3	3
S4	2	2
TA02	1	1
TA, TA100	1	1

2.4 - Switching times

The indicated values had obtained according to ISO 6403 standards, using mineral oil with viscosity 36 cSt at 50 °C.

TIMES [ms]	ENERGIZING	DE-ENERGIZING	TIMES [ms]	ENERGIZING	DE-ENERGIZING
DS3M	25 ÷ 75	15 ÷ 25	DS5M	100 ÷ 150	20 ÷ 50

3 - OVERALL AND MOUNTING DIMENSIONS FOR DIRECT OPERATED VALVES

4 - IDENTIFICATION OF PILOT OPERATED SOLENOID VALVES

4.1 - Identification code

D	S	P	M	-	/	-	/	/	K1	/
----------	----------	----------	----------	---	---	---	---	---	-----------	---

Directional valve,
Solenoid controlled
Pilot operated

Size: _____
5 = CETOP P05
5R = ISO 4401-05
7 = ISO 4401-07
8 = ISO 4401-08
10 = ISO 4401-10

Monitoring of the spool position _____

Spool type (see paragraph 4.2) _____
S1 **SA1** **SB1** **TA** **TB**
S3 **TA100** **TB100**
S4
RK

Series: _____
10 = for DSP5M, DSP5RM and DSP8M
20 = for DSP7M
30 = for DSP10M
 (the overall and mounting dimensions within the same ten remain unchanged)

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Piloting (see paragraph 6): _____
I = internal (not available for S4 spool)
E = external
C = internal piloting with backpressure valve
 (available on DSP7 and DSP8 only)
Z = internal piloting with 30 bar fixed adjustment pressure reducing valve
 (see par. 5.5)

Monitored position:
(see par. 16 for switching logic)
1 positioning sensor
R0 = rest position monitored
MA = position 'a' monitored
MB = position 'b' monitored
2 positioning sensor
M0 = rest position monitored
MAB = 'a' and 'b' positions monitored

Coil electrical connection:
plug for connector type
EN 175301-803 (ex DIN 43650)
(**standard**)

DC power supply
D12 = 12 V **D110** = 110 V
D24 = 24 V **D220** = 220 V

P = Subplate with restrictor on port P placed under the pilot valve
 (omit for valves with piloting type Z and for valves with option D - control of the shifting speed of the main spool)
D = shifting speed of the main spool (see par. 7)

Drainage (see paragraph 6):
I = Internal
E = External

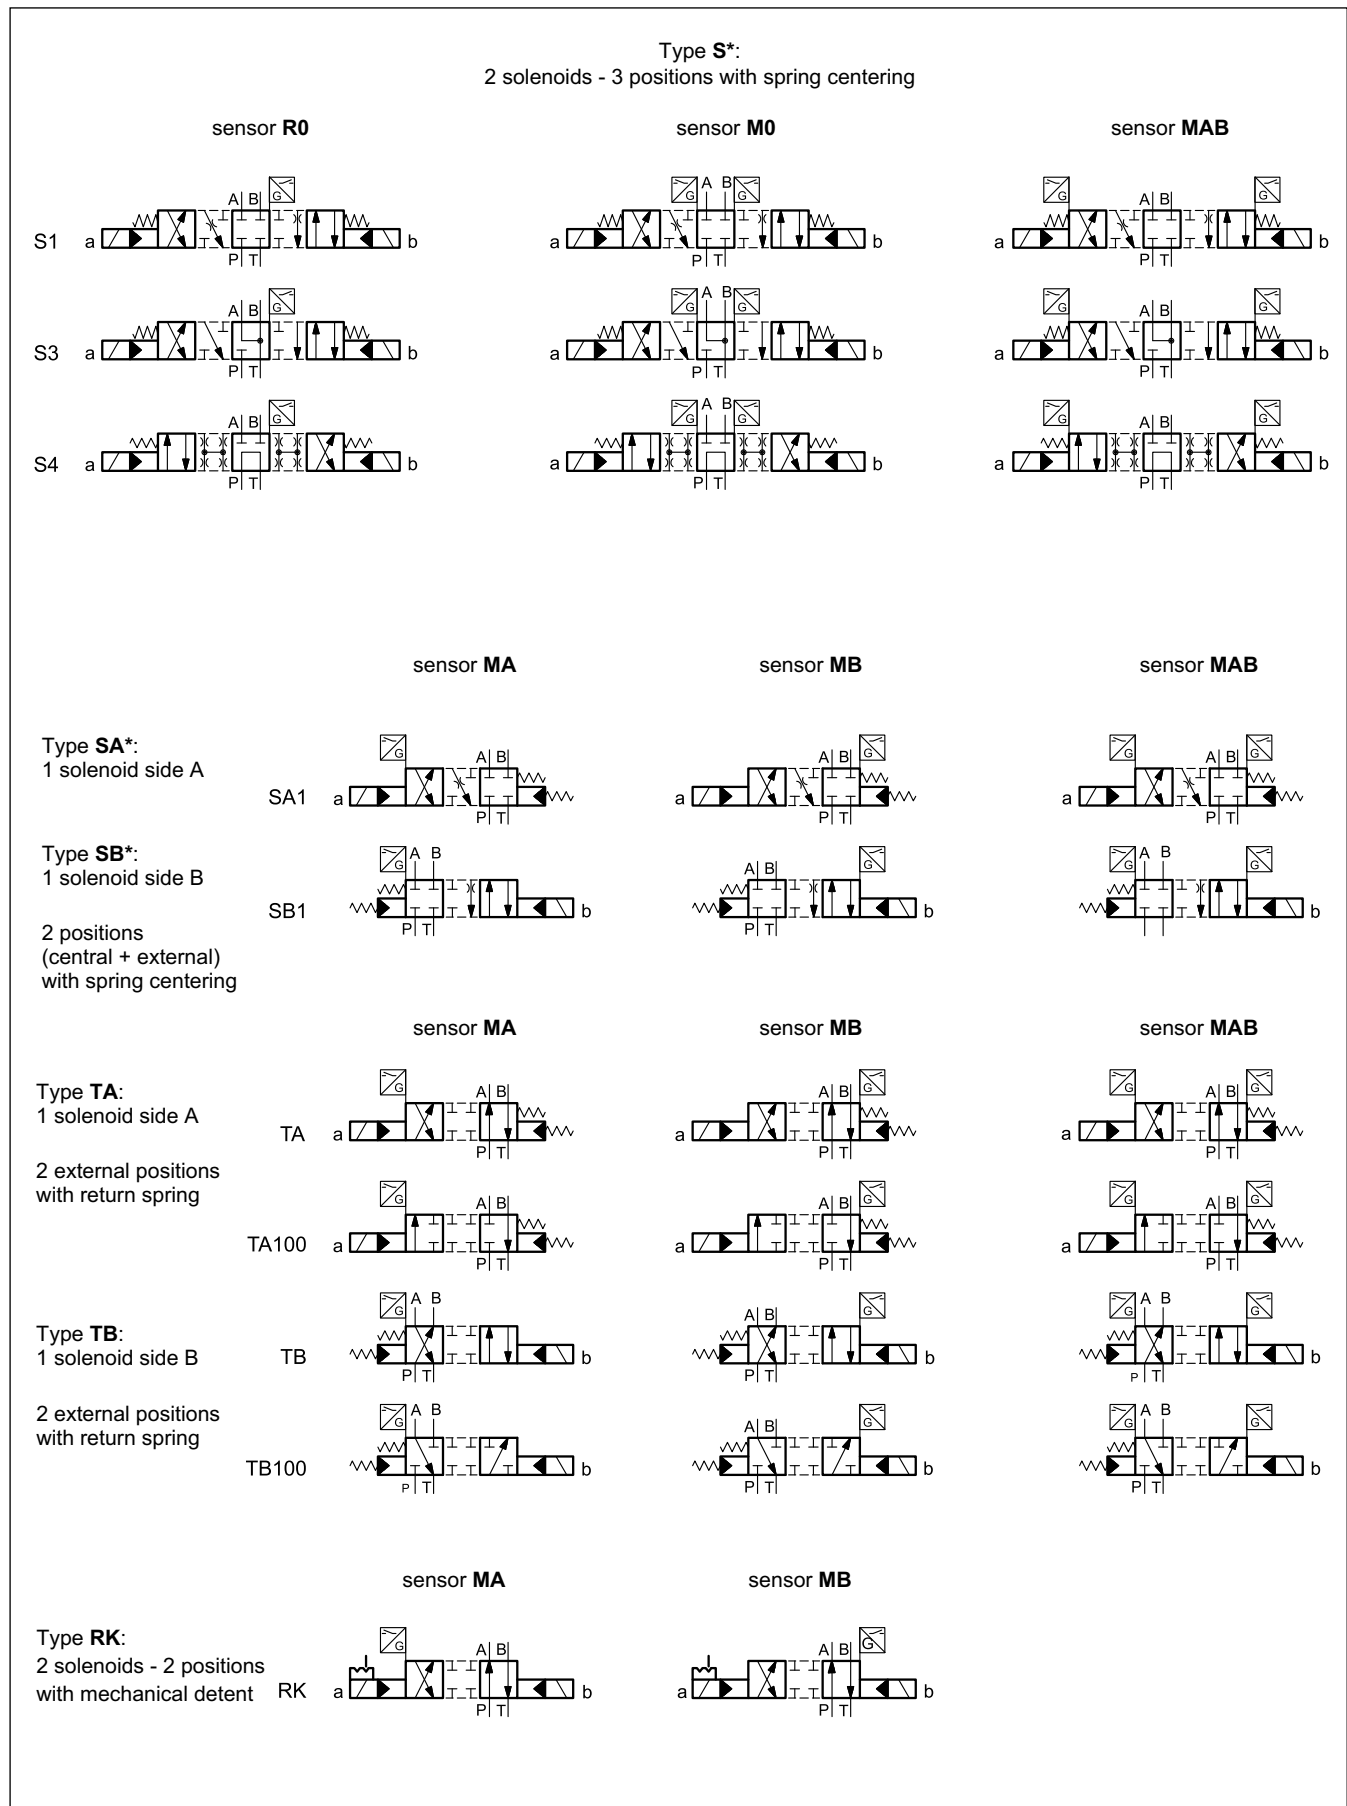

Verify spool and sensor type availability in the table below

		SPOOLS				
		S*	SA* SB*	TA TB	TA100 TB100	RK
SENSOR TYPE	R0	x				
	MA		x	x	x	x
	MB		x	x	x	x
	M0	x				
	MAB	x	x	x	x	

NOTE: DSP10M available with spools S1 or S4, with monitored position R0 or M0 only.

NOTE: To be compliant with the EN 693:2011 standard, the valves have no manual override.

4.2 - Spool types for DSP5M, DSP5RM, DSP7M and DSP8M

5 - CHARACTERISTIC CURVES AND PERFORMANCES

(values obtained with viscosity 36 cSt at 50 °C)

5.1 - DSP5M and DSP5RM - Pressure drops Δp -Q

SPOOL TYPE	FLOW DIRECTION				
	P→A	P→B	A→T	B→T	P→T
	CURVES ON GRAPH				
S1, SA1	4	4	1	1	-
S3	4	4	1	1	-
S4	5	5	2	3	5
TA, TB	4	4	1	1	-
TA100, TB100	3	3	1	1	-
RK	4	4	1	1	-

For pressure drops of the S3 spool in central position refer to the curve 4.

5.2 - DSP7M - Pressure drops Δp -Q

SPOOL TYPE	FLOW DIRECTION				
	P→A	P→B	A→T	B→T	P→T
	CURVES ON GRAPH				
S1, SA1	1	1	4	5	-
S3	1	1	5	5	-
S4	2	2	5	6	5
TA, TB	1	1	4	5	-
TA100, TB100	3	3	3	5	-
RK	1	1	4	5	-

For pressure drops of the S3 spool in central position refer to the curve 5.

5.3 - DSP8M - Pressure drops Δp -Q

SPOOL TYPE	FLOW DIRECTION				
	P→A	P→B	A→T	B→T	P→T
	CURVES ON GRAPH				
S1, SA1	2	2	3	3	-
S3	2	2	2	1	-
S4	4	4	3	5	6
TA, TB	2	2	3	3	-
TA100, TB100	5	5	5	5	-
RK	2	2	3	3	-

For pressure drops of the S3 spool in central position refer to the curve 4.

5.4 - DSP10M - Pressure drops Δp -Q

SPOOL TYPE	FLOW DIRECTION				
	P→A	P→B	A→T	B→T	P→T
	CURVES ON GRAPH				
S1	1	1	1	1	-
S4	2	2	2	2	-

5.5 - Performance limits for pilot operated valves

PRESSURES	DSP5M DSP5RM	DSP7M	DSP8M	DSP10M
Max pressure in P, A, B ports	320	350	350	350
Max pressure in T line	210	210	210	210
Max pressure in Y line	210	210	210	210
Min piloting pressure NOTE 1	5 ÷ 10	5 ÷ 12	7 ÷ 14	6 ÷ 12
Max piloting pressure NOTE 2	210	210	210	280

NOTE 1: minimum piloting pressure can be the lower range value at low flows rates, but with higher flow rates the higher value is needed.

NOTE 2: if the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure. Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered.

Add the letter **Z** to the identification code to order this option (see par. 4.1).

MAXIMUM FLOW RATES		DSP5M DSP5RM		DSP7M		DSP8M		DSP10M	
Spool type		PRESSURES							
		210 bar	320 bar	210 bar	350 bar	210 bar	350 bar	210 bar	350 bar
S4 - TA100	[l/min]	120	100	200	150	500	450	750	600
S1 - S3 - TA - RK		150	120	300	300	600	500	900	700

5.6 - Switching times

The values indicated refer to a solenoid valve working with piloting pressure of 100 bar, with mineral oil at a temperature of 50°C, at viscosity of 36 cSt and with PA and BT connections.

The energizing and de-energizing times are obtained at the pressure variation which occurs on the lines.

TIMES (± 10%) [ms]	ENERGIZING		DE-ENERGIZING	
	2 Pos.	3 Pos.	2 Pos.	3 Pos.
DSP5M - DSP5RM	60	50	50	40
DSP7M	75	60	60	45
DSP8M	100	70	80	50
DSP10M	-	100	-	140

6 - PILOTING AND DRAINAGE

These valves are available with piloting and drainage, both internal and external. The version with external drainage allows for a higher back pressure on the outlet.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	internal pilot and external drain	NO	YES
II	Internal pilot and internal drain	NO	NO
EE	external pilot and external drain	YES	YES
EI	external pilot and internal drain	YES	NO

X: plug M5x6 for external pilot
Y: plug M5x6 for external drain

X: plug M6x8 for external pilot
Y: plug M6x8 for external drain

6.1 - Backpressure valve incorporated on line P (C option)

DSP7M and DSP8M valves are available upon request with backpressure valve incorporated on line P. This is necessary to obtain the piloting pressure when the control valve, in rest position, has the line P connected to the T port (spools S4).

The cracking pressure is of 5 bar with a minimum flow rate of 15 l/min.

In the C version the piloting is always internal.

NOTE: the backpressure valve can't be used as check valve because it doesn't assure the seal.

Add **C** to the identification code for this request (see paragraph 4.1).

For DSP7M only, the backpressure valve can be also delivered separately and it can be easily mounted on line P of the main control valve. Ask for code **0266577** to order the backpressure valve.

pilot always internal
Y: plug M6x8 for external drain

The curve refers to the pressure drop (body part only) with backpressure valve inside, to which the pressure drop of the reference spool must be added. (see par. 5)

7 - OPTIONS

7.1 - Option D : control of the main spool shifting speed

By placing a MERS type double flow control valve between the pilot solenoid valve and the hydropiloted valve, the piloted flow rate can be controlled and therefore the change over smoothness can be varied.

Add the letter **D** to the identification code to request this device (see paragraph 4.1).

dimensions in mm

	DSP5	DSP7	DSP8	DSP10
A	218	225	254	307

8 - ELECTRICAL FEATURES

8.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated and locked to suit the available space.

NOTE 1 : In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see catalogue 49 000).

NOTE 2: The IP65 protection degree is intended for the whole valve. It is guaranteed only with valve and connectors correctly connected and installed.

VOLTAGE SUPPLY FLUCTUATION	± 10% Vnom

16 - SWITCHING LOGICS

Duplomatic offers a wide range of available positions to be monitored, and for the pilot operated valve there are even monitoring with redundant signal.

16.1 - R0 monitoring

Central position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type S*

16.2 - MA monitoring

Energized position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type SA*, TA, TA02, TA100

De-energized position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type SB*, TB, TB02, TB100

Position 'a' monitored with one positioning sensor.

Available on pilot operated valves only;
spool type RK

16.3 - MB monitoring

De-energized position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type SA*, TA, TA02, TA100

Energized position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type SB*, TB, TB02, TB100

Position 'b' monitored with one positioning sensor.

Available on pilot operated valves only;
spool type RK

16.4 - M0 monitoring

Central position monitored by two separate positioning sensors.

Available on pilot operated valves only;
spool type S*

16.5 - MAB monitoring

Both external positions monitored by two separate positioning sensors.

Available on pilot operated valves only;
spool type S*

De-energized position monitored on side A.
Energized position monitored on side B.

Available on pilot operated valves only;
spool type SA1, TA, TA100

Energized position monitored on side A.
De-energized position monitored on side B.

Available on pilot operated valves only;
spool type SB1, TB, TB100

17 - SENSOR CONNECTORS

The female connectors for position switches can be ordered separately, by specifying the descriptions here below, depending on the desired type.

STRAIGHT CONNECTOR, MOLDED CABLE, PRE-WIRED

description: ECM4S/M12L/10

Protection class: IP68
Cable: 4 conductors 0.34 mm²
length 5 mt - Ø 4.7 mm
Cable material: polyurethane resin (oil resistant)
Without LED.

ANGLED CONNECTOR, MOLDED CABLE, PRE-WIRED

description: ECM4S/M12S/10

Protection class: IP68
Cable: 4 conductors 0.34 mm²
length 5 mt - Ø 4.7 mm
Cable material: polyurethane resin (oil resistant)
Without LED.

ANGLED CONNECTOR, UNASSEMBLED

Circular connector with screw locking; strain relief by means of clamping cage.

description: EC4S/M12S/10

Protection class: IP67
IEC 61076-2-101 (Ed. 1)
IEC 60947-5-2
Conductor size: max 0.75 mm²
Cable gland: PG7
suitable cables: 4 ÷ 6 mm²
Case material: polyamide (nylon)
Without LED.

18 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

19 - INSTALLATION

WARNING! These valves must be installed and commissioned by qualified personnel only. Before starting any installation, commissioning or maintenance is mandatory read the manual of use and maintenance, delivered together with the valve.

Configurations with centering and recall springs can be mounted in any position; The RK versions, without springs and with mechanical detent, must be mounted with the longitudinal axis horizontal.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

DSP10K*	ISO 4401-10

OPERATING PRINCIPLE

- The direct operated directional valves are available in ISO 4401-03 and ISO 4401-05 size; available pilot operated sizes are: CETOP P05, ISO 4401-05, ISO 4401-07, ISO 4401-08 and ISO 4401-10.
- They are compliant with ATEX, IECEx and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- A low temperature version (up to -40 °C) is also available.
- DS3K* and DL5BK* valves are supplied with a zinc-nickel finishing surface treatment that ensures a salt spray resistance up to 600 h; for DSP*K* valves, this treatment is available upon request.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

Manual override:
CM = boot protected
standard for both N and V seals
 not available for NL seals
CB = blind ring nut
standard for NL seals
 available upon request for both N and V seals
CK1 = knob manual override
 (DC version only)
CH = lever manual override.
 not available for DL5BK*, DS3K*-TB and DS3K*-TB*
 Dimensions for CB and CH at par. 18

Connection type for cable gland
 upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2
 not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
 side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2
 not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Power supply:
 Direct current (DC)
D12 = 12 V
D24 = 24 V
D48 = 48 V
D110 = 110 V
 Alternate current with built-in rectifier bridge (RAC)
R120 = 120 V
R240 = 240 V

Version with monobloc steel coil

Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.

On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

NOTE: the zinc-nickel standard finishing surface treatment is suitable to ensure a salt spray resistance up to 600 h (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards)

1.1 - Names of valves per certification

	ATEX		IECEX		INMETRO	
for gases for dusts	KD2	II 2GD	KXD2	IECEX Gb IECEX Db	KBD2	INMETRO Gb INMETRO Db

2.2 - Performance limits

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage, with mineral oil with viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

CLASS OF PROTECTION: Atmospheric agents Coil insulation (VDE 0580)	IP66 / IP68 class H

NOTE: type R* coils are for alternating current supply for both 50 or 60 Hz. For R* coils the resistance can not be measured in the usual way because of the presence of diodes bridge inside the coil.

3.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9 ± 6 Nm.

Electrical wiring must be done following in compliance with standards about protection against explosion hazards.

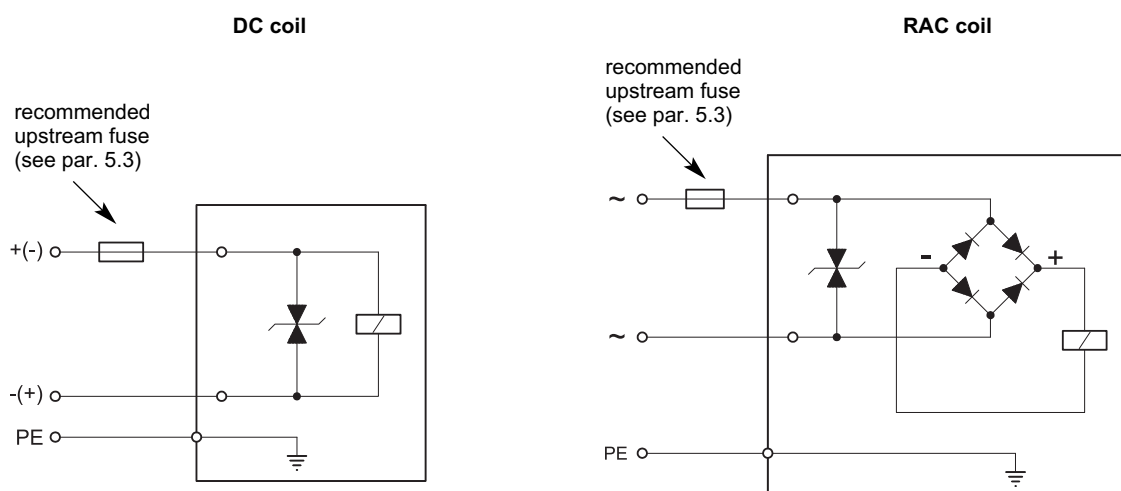

Characteristics of the cables connectable for wiring are indicated in the table below:

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals) or from - 40 °C to +110 °C (for valves with NL seals).

Cable glands (which must be ordered separately, see paragraph 19) allow to use cables with external diameter between 8 and 10 mm.

3.2 - Electrical diagrams

3.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max 3 x I_n according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source. The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,7	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,83	1,25	- 49	
D48	48	0,42	0,6	- 81	
D110	110	0,2	0,3	- 309	
R120	120	0,21	0,3	- 3	
R240	240	0,1	0,15	- 3

Series No.: (the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
For temperature range -20 / +80 °C
N = NBR seals for mineral oil (standard)
V = FPM seals for special fluids
For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Piloting: _____
I = internal (not available for spools S2, S4, TA02, TB02, S*2 and S*4. If internal piloting should be necessary, choose piloting type C)
E = external
C = internal piloting with backpressure valve (available on DSP7 and DSP8)
Z = internal piloting with 30 bar fixed adjustment pressure reducing valve

Drainage: _____
I = Internal
E = External

Options: _____
C = main spool stroke control
D = main spool shifting speed control
P08 = Subplate with restrictor Ø0,8 on port P placed under the solenoid valve - for valves DSP5 - DSP5R - DSP7 - DSP8
P15 = subplate with restrictor Ø1,5 on port P placed under the solenoid valve - only for valves DSP10

Option: surface treatment not standard. Omit if not required (see **NOTE**)

Option: **/T5** version in T5 temperature class. Omit if not required.

Manual override:
CM = boot protected **standard for both N and V seals** not available for NL seals
CB = blind ring nut **standard for NL seals** available upon request for both N and V seals see dimensions at paragraph 16

Connection type for cable gland upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Power supply:
Direct current (DC)
D12 = 12 V
D24 = 24 V
D48 = 48 V
D110 = 110 V
Alternate current with built-in rectifier bridge (RAC)
R120 = 120 V
R240 = 240 V

A version with monobloc coils made of steel is available. Please refer to details in page 2.

A version suitable for an operating pressure value of **420 bar** on ports P - A - B is available upon request, except for DSP5K*-S4 / DSP5RK* and DSP10K* valves. On this version, the maximum pressure value on port T with external drain and the pilot pressure are equal to 350 bar. The maximum pressure on port T with internal drainage is 210 bar.

Add the letter **H** to request this version (ex. DSP7HK*).

NOTE: the valves are supplied with standard surface treatment of phosphating black for the main body and zinc-nickel for the pilot body. Upon request we can supply these valves with full zinc-nickel surface treatment, suitable to ensure a salt spray resistance up to 600 h (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

For full zinc-nickel surface treatment add **/W7** at the end of the identification code.

5.1 - Spool types

Version S*:
2 solenoids - 3 positions

6.2 - Switching times

The values indicated refer to a solenoid valve working with piloting pressure of 100 bar, with mineral oil at a temperature of 50°C, at viscosity of 36 cSt and with PA and BT connections.

The energizing and de-energizing times are obtained at the pressure variation which occurs on the lines.

TIMES (± 10%) [ms]	ENERGIZING	DE- ENERGIZING	
	DC - RAC	DC	RAC
DSP5K* - DSP5RK*	70	60	160
DSP7K*	80	70	170
DSP8K*	90	70	170
DSP10K*	120	90	190

7 - HYDRAULIC CHARACTERISTICS

PRESSURES (bar)	DSP5K* DSP5RK*	DSP7K*	DSP8K*	DSP10K*
Max pressure in P, A, B ports	320	350	350	350
Max pressure in T line with external drainage	210	250	210	210
Max pressure in T line with internal drainage	210	210	210	210
Max pressure in Y line with external drainage	210	210	210	210
Min piloting pressure NOTE 1	5 ÷ 12			6 ÷ 12
Max piloting pressure NOTE 2	210	210	210	280

NOTE 1: minimum piloting pressure can be the lower range value at low flows rates, but with higher flow rates the higher value is needed.

NOTE 2: if the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure. Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered.

Add the letter **Z** to the identification code to order this option (see par. 5). Consider that, by adding the pressure reducing valve, the overall dimensions increase 40 mm in height.

MAXIMUM FLOW RATES		DSP5K* DSP5RK*		DSP7K*		DSP8K*		DSP10K*	
Spool type	[l/min]	PRESSURES							
		at 210 bar	at 320 bar	at 210 bar	at 350 bar	at 210 bar	at 350 bar	at 210 bar	at 350 bar
S4 - SA4 - SB4		120	100	200	150	500	450	750 (NOTE)	600 (NOTE)
Other spools		150	120	300	300	600	500	900	700

NOTE: for the DSP10K* valve these values are the same even for S2 - SA2 - SB2 spools.

8 - PILOT AND DRAIN

DSP*K* valves are available with piloting and drainage, both internal and external.

The version with external drainage allows for a higher back pressure on the outlet.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

8.1 - Backpressure valve incorporated on line P (C option)

DSP7K* and DSP8K* valves are available upon request with backpressure valve incorporated on line P. This is necessary to obtain the piloting pressure when the control valve, in rest position, has the line P connected to the T port (spools S2 - S4 - S*2 - S*4 - T*02). The cracking pressure is of 5 bar with a minimum flow rate of 15 l/min.

In the C version the piloting is always internal.

NOTE: the backpressure valve can't be used as check valve because it doesn't assure the seal.

Add **C** to the identification code for this request (see paragraph 5).

For DSP7K* only, the backpressure valve can be also delivered separately and it can be easily mounted on line P of the main control valve. Ask for code **0266577** to order the backpressure valve.

The curve refers to the pressure drop (body part only) with backpressure valve energized to which the pressure drop of the reference spool must be added (see paragraph 6).

9 - OPTIONS

9.1 - Control of the main spool stroke: C

With the help of special side plugs, it is possible to introduce stroke controls in the heads of the piloted valve so as to vary the maximum spool clearance opening.

This solution allows control of the flow rate from the pump to the actuator and from the actuator to the outlet, obtaining a double adjustable control on the actuator.

Add the letter **C** to the identification code to request this device (see paragraph 5).

dimensions in mm

	DSP5K* DSP5RK*	DSP7K*	DSP8K*	DSP10K*
A	280	319	401.5	520

9.2 - Control of the main spool shifting speed: D

By placing a MERS type double flow control valve between the pilot solenoid valve and the main distributor, the piloted flow rate can be controlled and therefore the changeover smoothness can be varied.

Add the letter **D** to the identification code to request this device (see paragraph 5).

dimensions in mm

	DSP5K* DSP5RK*	DSP7K*	DSP8K*	DSP10K*
B	218.5	225.5	254.5	310.5

9.3 - Subplate with throttle on line P

It is possible to introduce a subplate with a restrictor on line P between the pilot solenoid valve and the main distributor.

restrictor Ø0.8 for DSP5K*, DSP5RK*, DSP7K* and DSP8K*
restrictor Ø1.5 for DSP10K*:

To request include in the code (par. 5):

P08 for DSP5K*, DSP5RK*, DSP7K* and DSP8K*

P15 for DSP10K*

dimensions in mm

	DSP5K* DSP5RK*	DSP7K*	DSP8K*	DSP10K*
C	188.5	195.5	224.5	280.5

16 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

17 - INSTALLATION

Installation must adhere to instructions reported in the *Use and Maintenance manual*, always attached to the valve. Unauthorized interventions can be harmful to people and goods because of the explosion hazards present in potentially explosive atmospheres.

Configurations with centering and recall springs can be mounted in any position; The RK versions, without springs and with mechanical detent, must be mounted with the longitudinal axis horizontal.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

18 - MANUAL OVERRIDES

18.1 - CB - Blind ring nut

The metal ring nut protects the solenoid tube from atmospheric agents and isolates the manual override from accidental operations. The ring nut is tightened on a threaded fastener that keeps the coil in its position even without the ring nut.

To access the manual override loosen the ring nut and remove it; then reassemble hand tightening, until it stops.

Activate the manual override always and only with non-sparking tools suitable for use in potentially explosive atmospheres.

More information on safe use of explosion-proof components are provided in the instruction manual, always supplied with the valve.

18.2 - CK1 - Knob manual override

This turning knob is available for DC valves only.

18.3 - CH - Lever manual override

The lever manual override is available for DS3K only. The seals choice leads the type of the standard ring nut to be mounted.

The lever device is always placed at side A.

19 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for Ø 8÷10 mm cables);
- ATEX II 2GD, I M2; IECEx Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: -70 °C ÷ +220 °C
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

20 - SUBPLATES

(see catalogue 51 000)

	DS3K*	DL5BK*		DSP5K*	DSP7K*	DSP8K*
Type with rear ports	PMMD-AI3G	PMD4-AI4G	-	PME4-AI5G	PME07-AI6G	-
Type with side ports	PMMD-AL3G	-	PMD4-AL4G	PME4-AL5G	PME07-AL6G	PME5-AL8G
P, T, A, B ports dimensions	3/8" BSP	3/4" BSP	1/2" BSP	3/4" BSP	1" BSP	1 1/2" BSP
X, Y ports dimensions	-	-	-	1/4" BSP	1/4" BSP	1/4" BSP

NOTE: Subplates (to be ordered separately) do not contain neither aluminium nor magnesium at a rate higher than the value allowed by norms according to ATEX directive for category II 2GD and I M2.

The user will bear to do the complete assessment of the ignition risk that can occur from the relative use in potentially explosive environments.

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

1 - ATEX CLASSIFICATION AND TEMPERATURES

Diplomatic certifies the combination valve-coil for the valves suitable for application and installation in potentially explosive atmospheres, according to ATEX directive; the supply always includes the declaration of conformity to the directive and the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environments.

Coils assembled on these valves have been separately certified according to ATEX directive and so they are suitable for use in potentially explosive atmospheres.

1.1 - ATEX classification for valves

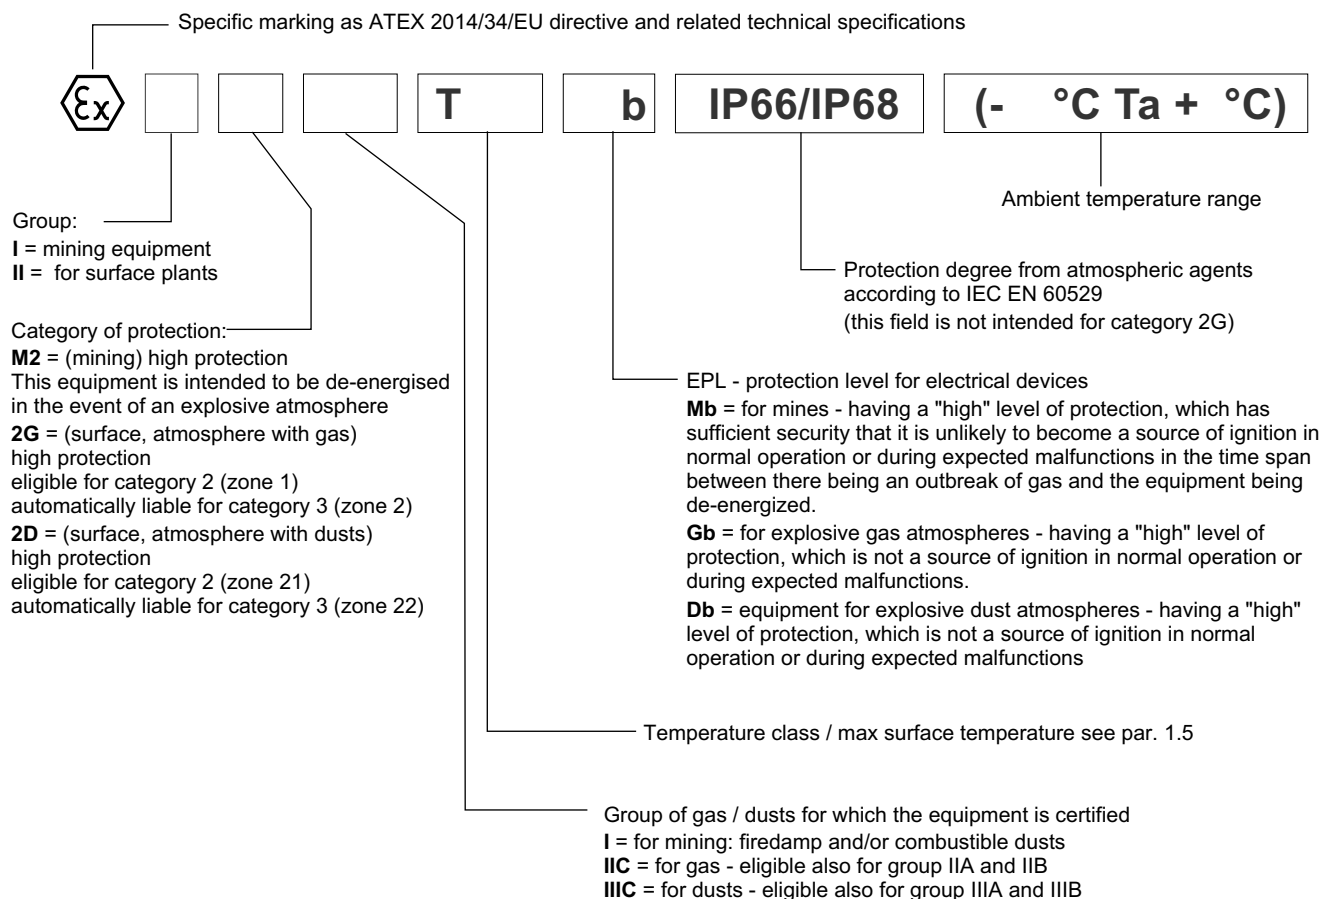

Type examination certificate: AR18ATEX055

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

ATEX II 2G ATEX II 2D	*KD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
ATEX I M2	*KDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

1.2 - ATEX marking for valves

valve code		N and V seals	NL seals
*KD2	for gas for dusts	 II 2G IIC T4 Gb (-20°C Ta +80°C)  II 2D IIIC T154°C Db IP66/IP68 (-20°C Ta +80°C)	 II 2G IIC T4 Gb (-40°C Ta +80°C)  II 2D IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KD2 /T5	for gas for dusts	 II 2G IIC T5 Gb (-20°C Ta +55°C)  II 2D IIIC T129°C Db IP66/IP68 (-20°C Ta +55°C)	 II 2G IIC T5 Gb (-40°C Ta +55°C)  II 2D IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KDM2	mining	 I M2 I T150°C Mb IP66/68 (-20°C Ta +75°C)	 I M2 I T150°C Mb IP66/68 (-40°C Ta +75°C)

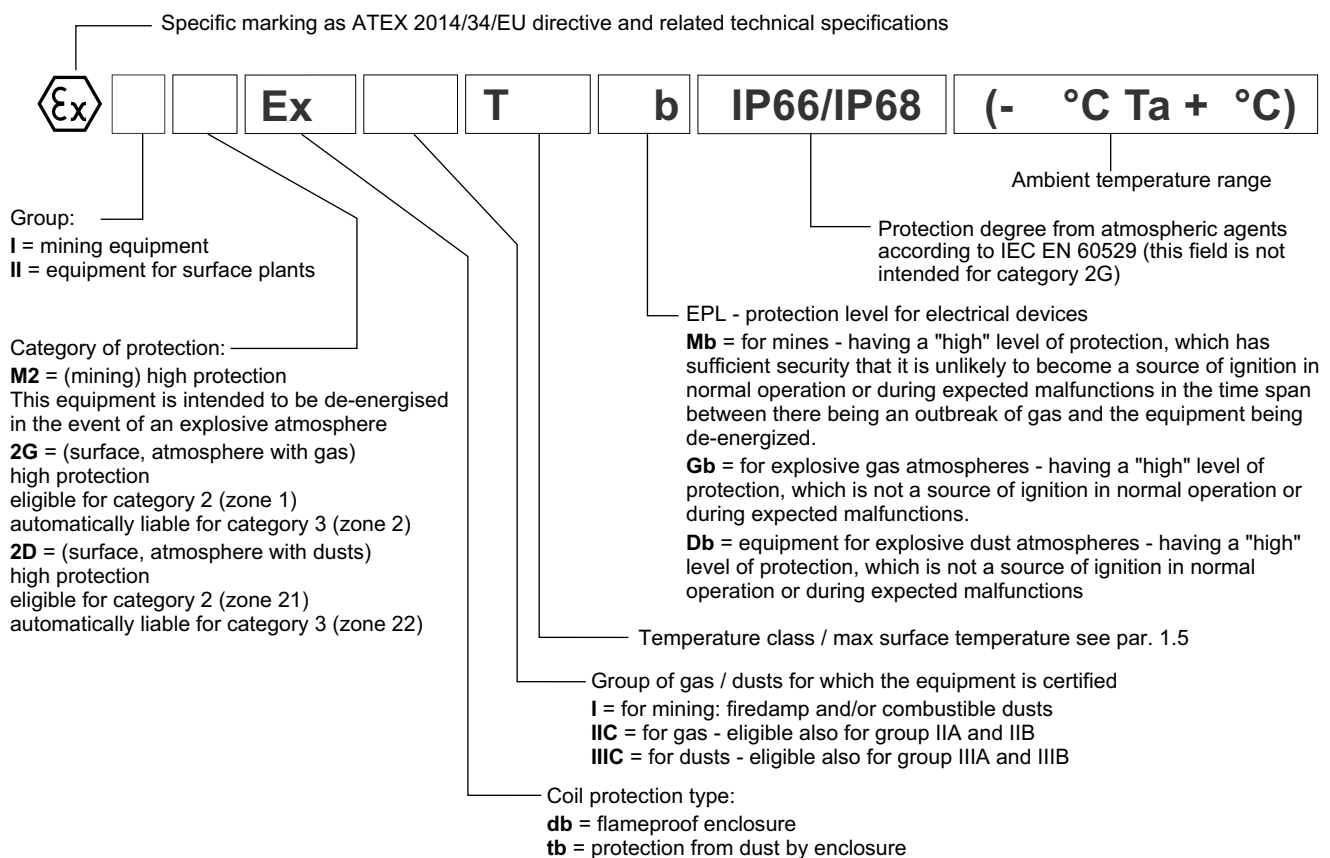

1.3 - ATEX classification of the coils

The coil of the explosion-proof valves is ATEX certified itself and as such is identified with its own tag, carries the relative ATEX marking. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

1.4 - ATEX marking on coils

for valve type *KD2	for gas	 II 2G Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	 II 2D Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
for valve type *KD2 /T5	for gas	 II 2G Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	 II 2D Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
for valve type *KDM2	mining	 I M2 Ex db I T150°C Mb IP66/IP68 (-40°C Ta +75°C)

1.5 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

The valves in group II can also be used for less limiting temperature classes (surface temperature allowed higher).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
ATEX II 2G ATEX II 2D	*KD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas)	T3, T2, T1 T200°C and higher
		of fluid			T154°C (dusts)	
	*KD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas)	T4, T3, T2, T1 T135°C and higher
		of fluid			T129°C (dusts)	
ATEX I M2	*KDM2	of ambient	-20 / +75 °C	-40 / +75 °C	T150°C	-
		of fluid				

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Dipomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

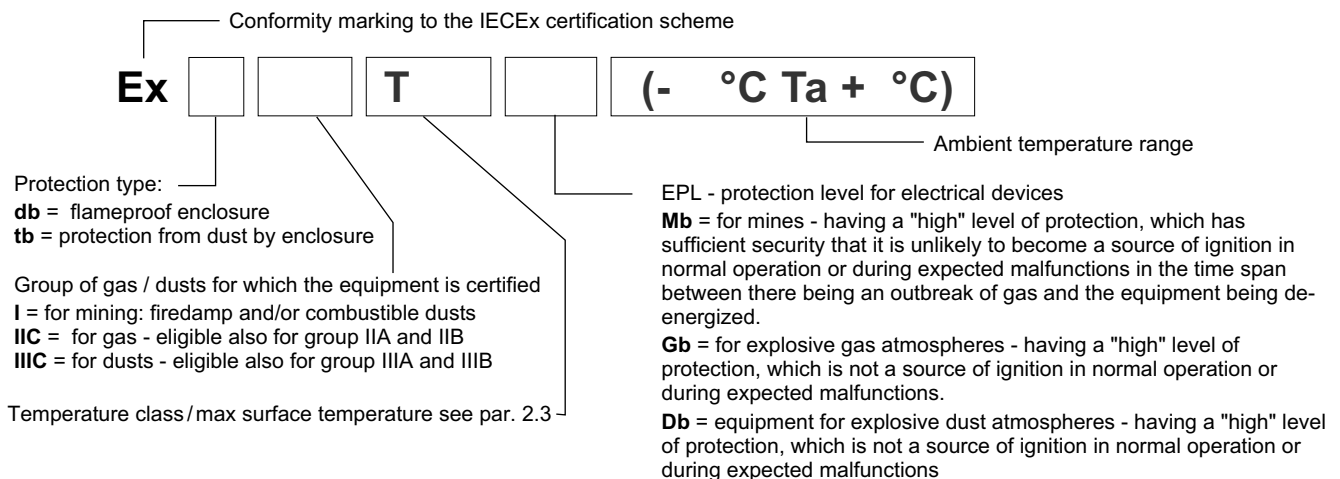

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
IECEx Gb IECEx Db	*KXD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas) T135°C (dusts)	T3, T2, T1 T200°C and higher
		of fluid				
	*KXD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas) T100°C (dusts)	T4, T3, T2, T1 T135°C and higher
		of fluid				
IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

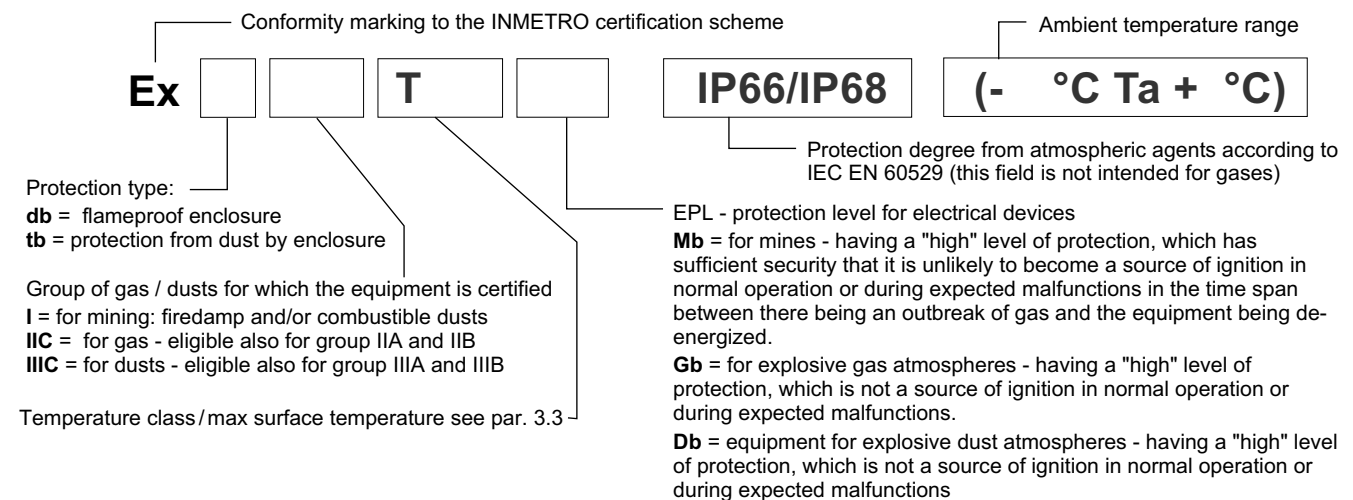

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
INMETRO Gb INMETRO Db	*KBD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas)	T3, T2, T1 T200°C and higher
		of fluid			T154°C (dusts)	
	*KBD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas)	T4, T3, T2, T1 T135°C and higher
		of fluid			T129°C (dusts)	
INMETRO Mb	*KBDM2	of ambient	-20 / +75 °C	-40 / +75 °C	T150°C	-
		of fluid

DSH*

LEVER OPERATED DIRECTIONAL CONTROL VALVE

MOUNTING SURFACES

DSH3 ISO 4401-03

DSH5 ISO 4401-05

p max (see performances table)

Q nom (see performances table)

OPERATING PRINCIPLE

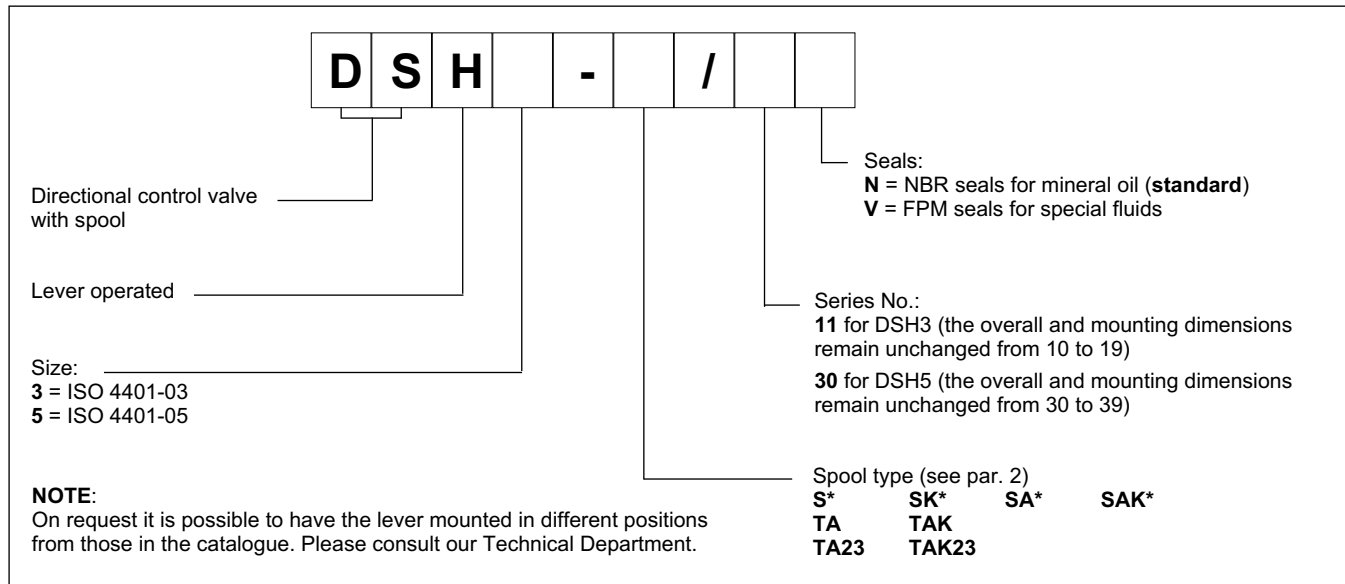

- The DSH* are lever operated directional control valves, available with 3 or 4 ways and with several types of interchangeable spools (1).
- The valve body (2) is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop.
- They are available with 2 or 3 positions with return spring or mechanical retention.
- On DSH3 version is possible to rotate the lever (3) by 180° compared with the standard position, depending on installation requirements (par. 7).

PERFORMANCES (with mineral oil of viscosity of 36 cSt at 50°C)

		DSH3	DSH5
Maximum working pressure:	- P - A - B ports	350	320
	- T port	210	160
Nominal flow rate	l/min	75	150
Ambient temperature range	°C	-20 / +60	
Fluid temperature range	°C	-20 / +80	
Fluid viscosity range	cSt	10 ÷ 400	
Fluid contamination degree		according to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25	
Mass	kg	1.3	4.2

1 - IDENTIFICATION CODE

2 - SPOOL TYPE

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

4 - PRESSURE DROPS Δp -Q (values obtained with viscosity 36 cSt at 50 °C)

SPOOL TYPE	CURVE	
	P→A	P→B
TA, TAK	1	1

NOTE: Values in the graphs are relevant to the standard valve. The operating limits can be considerably reduced if a 4-way valve is used with port A or B plugged.

6 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; valves with mechanical detent must be mounted with the longitudinal axis horizontal.

Valve fixing is by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity and/or smoothness are not met, fluid leakage between valve and mounting surface can easily occur.

	P→A	P→B
DSR3L-TA	2	2
DSR3L-R	1	1
DSR3H-TA	1	1

6 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type R valves - without springs - must be mounted with the longitudinal axis horizontal. Valve fixing is by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing. If the minimum values of planarity and/or smoothness are not met, fluid leakage between valve and mounting surface can easily occur.

PNEUMATICALLY OPERATED DIRECTIONAL CONTROL VALVE

SUBPLATE MOUNTING

DSA3 ISO 4401-03

DSA5 ISO 4401-05

p max (see performances table)

Q nom (see performances table)

OPERATING PRINCIPLE

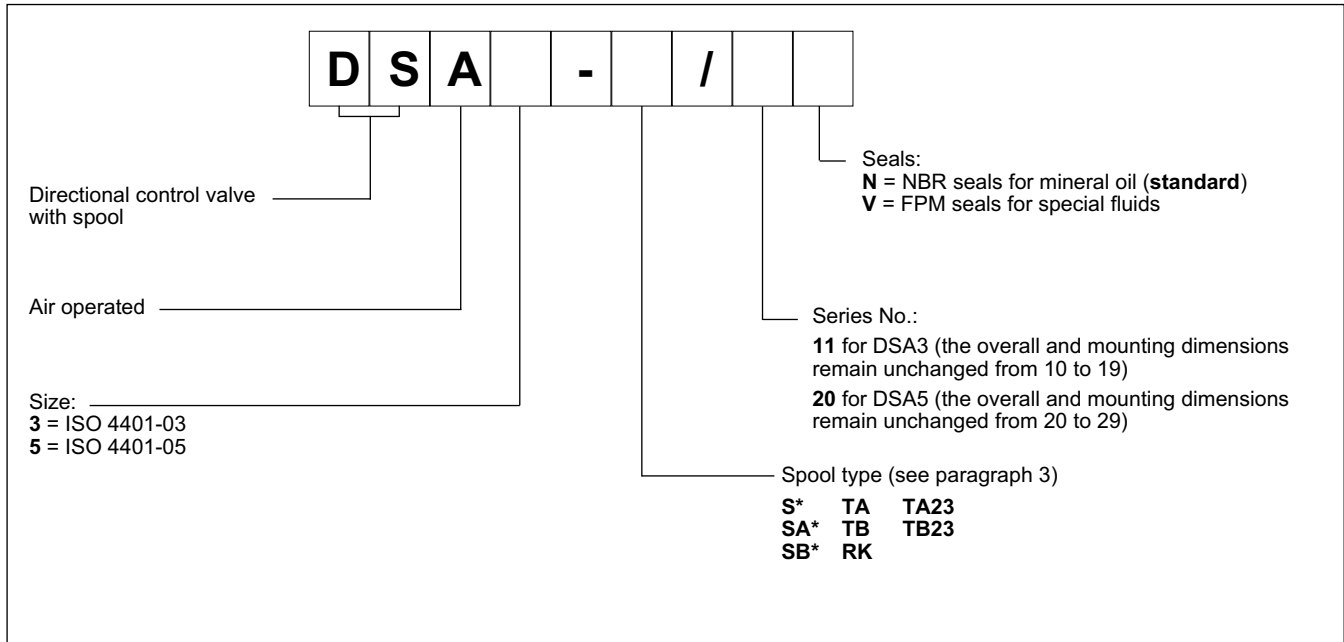

- The DSA* are pneumatically operated (1) directional control valves, available with 3 or 4 ways with several interchangeable spools (2) and with mounting interface according to ISO 4401 standards.
- The valve body (3) is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop.
- It is available with 2 or 3 positions with return spring, or with 2 positions with mechanical retention.
- The Y external drain is available (standard) for the ISO 4401-05 size and it must be connected when there is backpressure higher than 25 bar on the T port.

PERFORMANCES (with mineral oil of viscosity 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

4 - SPOOL TYPE

Type S*:
2 operations - 3 positions
with spring centering

Type RK:
2 operations - 2 positions
with mechanical retention

Type SA*:
1 operation side A
2 positions (central + external)
with spring centering

Type TA:
1 operation side A
2 external positions
with return spring

Type SB*:
1 operation side B
2 positions (central + external)
with spring centering

Type TB:
1 operation side B
2 external positions
with return spring

Besides the diagrams shown, which are the most frequently used, other special versions are available: consult our technical department for their identification and operating limits.

DSC3

HYDRAULICALLY OPERATED DIRECTIONAL CONTROL VALVE

SERIES 11

SUBPLATE MOUNTING ISO 4401-03

p max (see performances table)
Q nom (see performances table)

MOUNTING SURFACE

OPERATING PRINCIPLE

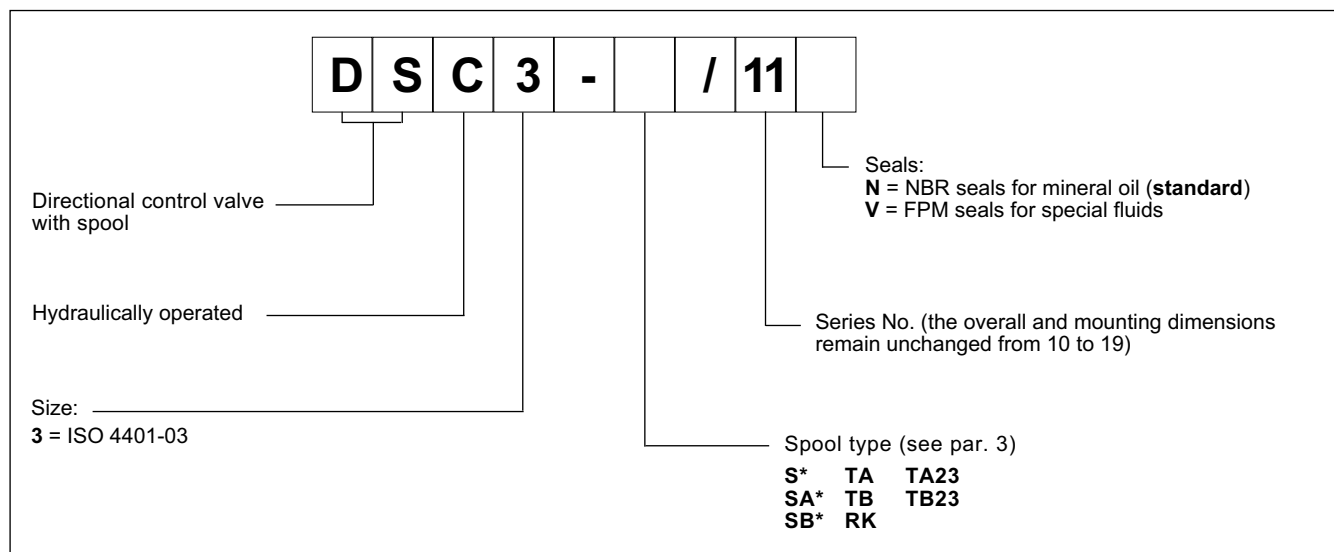

- The DSC3 are hydraulically operated directional control valves, available with 3 or 4 ways with several interchangeable spools and with mounting interface according to ISO 4401 standards.
- The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop.
- It is available with 2 or 3 positions with return spring, or with two positions with mechanical retention.

PERFORMANCES (measured with mineral oil of viscosity 36cSt at 50°C)

Maximum working pressure: - P A B ports - T port	bar	350 25
Piloting pressure - min - max	bar	15 (NOTE 1) 210
Nominal flowrate	l/min	75
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass: single operation valve double operation valve	kg	1,3 1,7

NOTE 1: The piloting pressure must be higher than the counterpressure on T port, of 15 bar at least: to allow the cursor reversal at middle the piloting pressure has to lower quickly at 0 bar.
The piston return spring generates a minimum backpressure of 0.5 bar on the piloting line.

1 - IDENTIFICATION CODE

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

SELF-REVERSING VALVE

SERIES 10

MOUNTING SURFACES

DSB3 ISO 4401-03

DSB5 ISO 4401-05

p max (see performances table)

Q nom (see performances table)

OPERATING PRINCIPLE

- The DSB* are directional control valves with self-reversing spool and mounting interface according to ISO 4401-03 and 4401-05 standards.
- The valves realize the reciprocation of the flow direction when the flowrate stops in A or B line (f.e., when a cylinder reaches the end stroke). The reversing process is independent of the line pressure.

5 - OVERALL AND MOUNTING DIMENSIONS DSB5

6 - KNOB MANUAL OVERRIDE

The knob manual override **CK** allows to set the pressure of the relief valve without using shut-off valves.

7 - INSTALLATION

The valves can be mounted in any position. Valve fixing is by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity and/or smoothness are not met, fluid leakage between valve and mounting surface can easily occur.

We suggest to use the circuits shown, connecting the A port with the rear chamber of the cylinder. In this way, with the start of the pump, the valve places itself, so as to retract the rod. To work properly the valve needs an area ratio of the cylinder chambers included between 1:1,25 and 1:2.

7.1 - Standard valve

To set the system relief valve correctly, the self-reversing function must be inactive.

To do so, close the shut-off valve, start the pump, set the pressure relief valve and stop the pump. Then, open the shut-off valve and restart the pump.

7.2 - Valve with knob manual override

To set the system relief valve correctly, the self-reversing function must be inactive.

To do so, completely unscrew the set screw then tighten the knob until it is at mechanical stop. The spool is now clamped in position $P \rightarrow B$ and $A \rightarrow T$. Start the pump, set the pressure of the relief valve and then stop the pump. Re-establish the working conditions of the valve, unscrewing almost completely the knob and screwing the set screw, until its point is aligned with the edge of the knob.

The valve is in normal working conditions when the knob is tightened and the point of the set screw is aligned with the edge of the knob.

Do not use the manual override when the valve is on: if it is necessary stop the pump.

DT03-2G	1
DT03-2H	1

3 - FLOW LIMITATION

When the solenoid valve is fed by an accumulator or by high delivery pumps it is necessary to limit the flow to the working limits by means of orifices. The orifice must be located on the accumulator side always.

WARNING! During the transition from one to the other end position all ports are interconnected. This means that during the switching the oil will be flowing from the accumulator to the tank through the valve, until the swithing is completed.

That is why the maximum flow should be limited up to 12 l/min by placing orifices.

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

5 - ELECTRICAL FEATURES

5.1 - Solenoids

These are essentially made up of two parts: tube and coil.

The tube is threaded onto the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation. The coil is fastened to the tube by a threaded nut, and can be turned 360° on its axis, compatible with space available.

The interchangeability of coils of different voltages is allowed within the same type of supply current: alternating or direct (DC / RAC).

NOTE: The protection degree is guaranteed only with connector correctly mated and installed.

VOLTAGE SUPPLY FLUCTUATION	± 10% Vnom
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION: Atmospheric agents (EN 60529) Coil insulation (VDE 0580) Impregnation	IP 65 (NOTE) class H class F

5.2 - Current and power consumption

The table shows the consumption values for the different coil type.

It is necessary to always use "D" type connectors (with rectifier incorporated) and RAC coils for alternating current supply.

Rectified current supply takes place by using a bridge rectifier bridge, externally or fitted within the "D" type connectors, between the alternating current source (24V or 110V, /50 or /60 Hz) and the coil.

Coil	Voltage [V]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt. [W]	Coil code
12V-CC	12	5,6	2,14	25,7	1902050
24V-CC	24	21,8	1,10	26,4	1902051
24RAC	24	17	1,23	26	1902052
110RAC	110	420	0,23	22	1902053
220RAC	220	1750	0,11	22	1902054

5.3 - Switching times

The values indicated refer to a flow rate of Q = 10 l/min, p = 210 bar working with mineral oil at a temperature of 50°C, a viscosity of 36 cSt and supply voltage equal to 90% of the nominal voltage.

TIMES (±10%)	ENERGIZING	DE-ENERGIZING
	30 ms	50 ms

5.4 - Electric connectors

The solenoid valves are never supplied with connector.

Connectors must be ordered separately. See catalogue 49 000.

6 - OVERALL AND MOUNTING DIMENSIONS

NOTE: The solenoid position here shown is for A-B-F-G versions.

For the other versions the solenoid is on the opposite side.

DT3K*

EXPLOSION-PROOF SOLENOID ACTUATED POPPET VALVE ATEX, IECEx, INMETRO

SERIES 10

**SUBPLATE MOUNTING
ISO 4401-03**

p max 350 bar
Q max 25 l/min

OPERATING PRINCIPLE

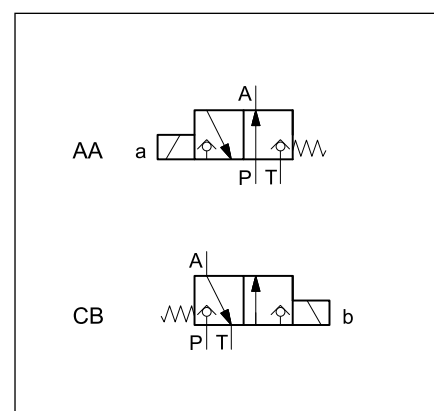

- Directional solenoid actuated poppet valve, direct operated, with ISO 4401-03 mounting surface.
- Three-port version, normally open or normally closed. These valves apply in hydraulic circuits applications where leakage free is strictly required.
- They are compliant with ATEX, IECEx and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Maximum operating pressure: P - A - B ports T port	bar	350 210
Maximum flow	l/min	25
Operating temperatures (ambient and fluid)	°C	see data sheet 02 500
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree		according to ISO 4406:1999 class 20/18/15
Recommended viscosity	cSt	25
Mass	kg	2,3

HYDRAULIC SYMBOLS

Solenoid actuated poppet valve

Size: ISO 4401-03

Explosion-proof certification: **See table 1.1**

3-ports version

Types of configuration:
AA = normally open P→A, solenoid on side A
CB = normally closed P→A, solenoid on side B

Variant on line P (omit if not required):
D15 = orifice Ø1.5

Series No.
(The overall and mounting dimensions remain unchanged from 10 to 19)

Seals:
For temperature range -20 / +80 °C
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Option: **/T5** version in T5 temperature class. Omit if not required.

Blind ring nut (see par. 6)

Connection type for cable gland
upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Power supply
Direct current (DC)
D12 = 12 V
D24 = 24 V
D48 = 48 V
D110 = 110 V
Alternate current with built-in rectifier bridge (RAC)
R120 = 120 V
R240 = 240 V

Version with monobloc steel coil
Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.
On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

1.1 - Names of valves per certification

	ATEX		IECEX		INMETRO	
for gases for dusts	KD2	II 2GD	KXD2	IECEX Gb IECEX Db	KBD2	INMETRO Gb INMETRO Db
for mines	KDM2	I M2	KXDM2	IECEX Mb	KBDM2	INMETRO Mb

NOTE: Refer to the technical data sheet 02 500 for marking, operating temperatures and available versions.

2 - CHARACTERISTIC CURVES

(values obtained with viscosity 36 cSt at 50 °C, with DC solenoid valves)

2.1 - Pressure drops

2.2 - Performance limits

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage, with mineral oil with viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

2.3 - Switching times

The indicated values are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

TIMES ($\pm 10\%$) [ms]	ENERGIZING	DE-ENERGIZING
DC	250	130

3 - FLOW LIMITATION

In applications where the poppet valve is fed by an accumulator or by high delivery pumps it is necessary to limit the flowrate within the valve working limits by means of orifices. The orifice must be located on accumulator side always.

WARNING! During transition from initial position to end position all the valve ports are connected. This means that as long as the switching is not completed, the oil will flow from the P and A lines to the tank.

4 - ELECTRICAL CHARACTERISTICS

(values $\pm 5\%$)

Coil type	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt. [W]
D12	12	7,2	1,7	20
D24	24	28,7	0,83	20
D48	48	115	0,42	20
D110	110	549	0,2	22

Coil type (NOTE)	Nominal voltage [V]	Freq. [Hz]	Resistance at 20°C [Ω]	Current consumpt. [A]	Power consumpt. [VA]
R120	110V-50Hz 120V-60Hz	50/60	489,6	0,19	21
				0,21	25
R240	230V-50Hz 240V-60Hz	50/60	2067,7	0,098	22,5
				0,1	24

VOLTAGE SUPPLY FLUCTUATION (ripple included)	$\pm 10\% V_{nom}$
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU
CLASS OF PROTECTION Atmospheric agents Coil insulation (VDE 0580)	IP66/IP68 class H

NOTE: type R* coils are for alternating current supply for both 50 or 60 Hz. For R* coils the resistance can not be measured in the usual way because of the presence of diodes bridge inside the coil.

4.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9 ± 6 Nm.

Electrical wiring must be done following in compliance with standards about protection against explosion hazards.

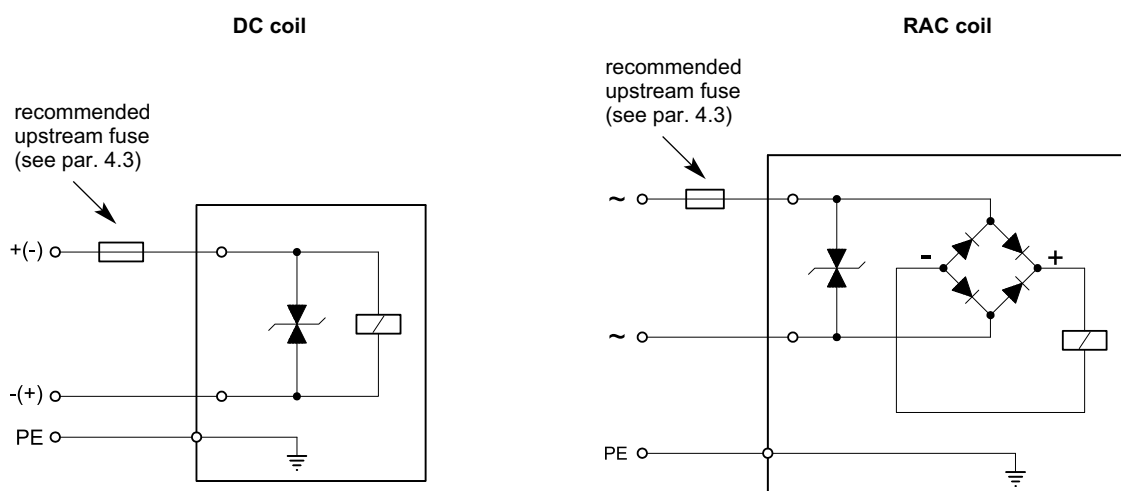

Characteristics of the cables connectable for wiring are indicated in the table below:

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals).

Cable glands (which must be ordered separately, see paragraph 8) allow to use cables with external diameter between 8 and 10 mm.

4.2 - Electrical diagrams

4.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max 3 x I_n according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source. The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,7	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,83	1,25	- 49	
D48	48	0,42	0,6	- 81	
D110	110	0,2	0,3	- 309	
R120	120	0,21	0,3	- 3	
R240	240	0,1	0,15	- 3	

5 - OVERALL AND MOUNTING DIMENSIONS

6 - CB - BLIND RING NUT

The metal ring nut protects the solenoid tube from atmospheric agents and isolates the manual override from accidental operations. The ring nut is tightened on a threaded fastener that keeps the coil in its position even without the ring nut.

To access the manual override, loosen the ring nut and remove it; then reassemble hand tightening, until the ring stops.

Activate the manual override always and only with non-sparking tools suitable for use in potentially explosive atmospheres.

More information on safe use of explosion-proof components are provided in the instruction manual, always supplied with the valve.

7 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

8 - INSTALLATION

Installation must adhere to instructions reported in the *Use and Maintenance manual*, always attached to the valve. Unauthorized interventions can be harmful to people and goods because of the explosion hazards present in potentially explosive atmospheres.

Valves can be mounted in any position. Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

9 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for Ø 8÷10 mm cables);
- ATEX II 2GD, I M2; IECEx Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: -70 °C ÷ +220 °C
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

10 - SUBPLATES

(see catalogue 51 000)

Type with rear ports	PMMD-AI3G
Type with side ports	PMMD-AL3G
P, T, A, B ports dimensions X, Y ports dimensions	3/8" BSP -

NOTE: Subplates (to be ordered separately) do not contain neither aluminium nor magnesium at a rate higher than the value allowed by norms according to ATEX directive for category II 2GD and I M2.

The user will bear to do the complete assessment of the ignition risk that can occur from the relative use in potentially explosive environments.

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

1 - ATEX CLASSIFICATION AND TEMPERATURES

Diplomatic certifies the combination valve-coil for the valves suitable for application and installation in potentially explosive atmospheres, according to ATEX directive; the supply always includes the declaration of conformity to the directive and the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environments.

Coils assembled on these valves have been separately certified according to ATEX directive and so they are suitable for use in potentially explosive atmospheres.

1.1 - ATEX classification for valves

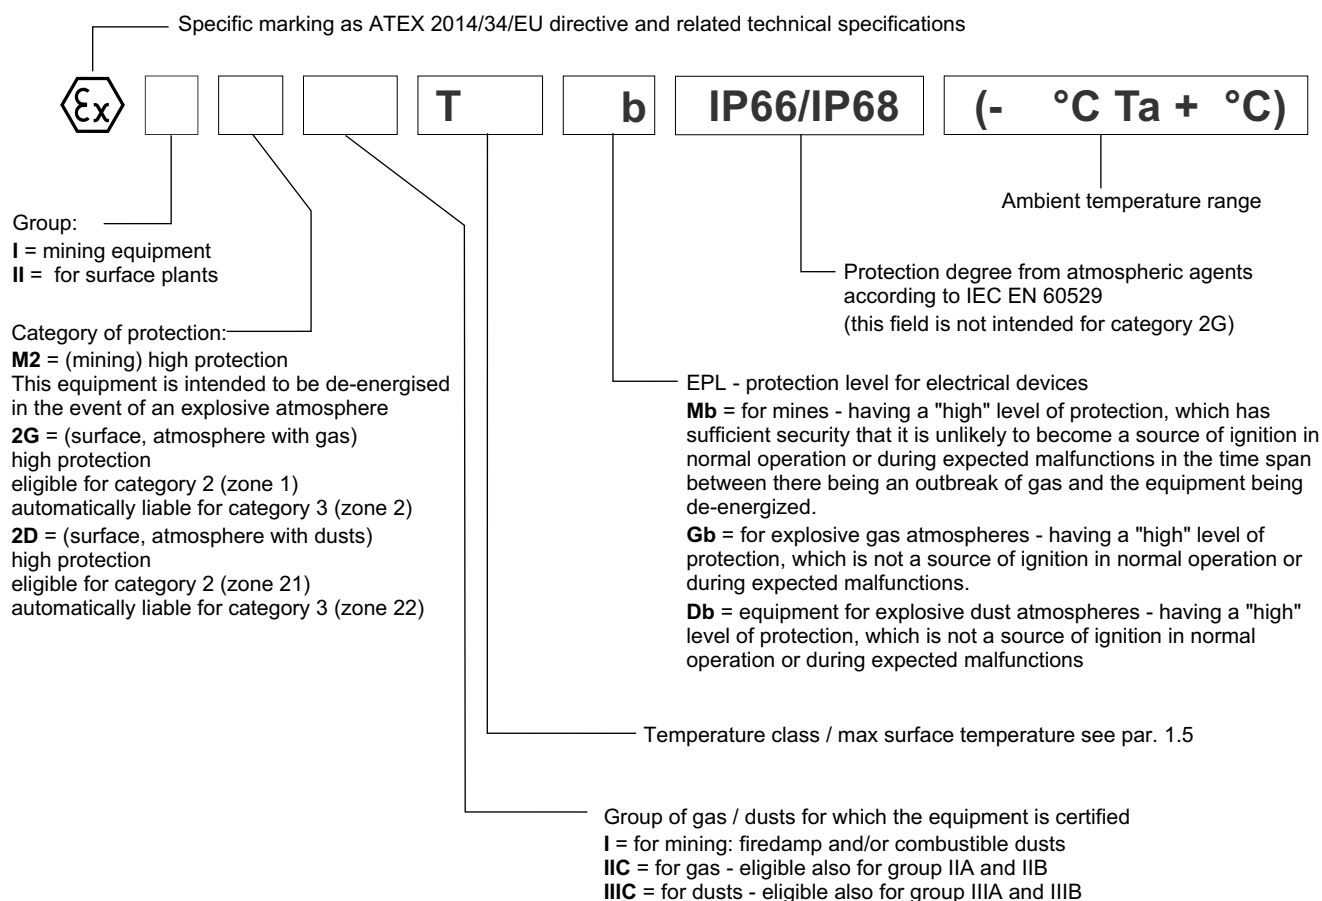

Type examination certificate: AR18ATEX055

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

ATEX II 2G ATEX II 2D	*KD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
ATEX I M2	*KDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

1.2 - ATEX marking for valves

valve code		N and V seals	NL seals
*KD2	for gas for dusts	II 2G IIC T4 Gb (-20°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-20°C Ta +80°C)	II 2G IIC T4 Gb (-40°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KD2 /T5	for gas for dusts	II 2G IIC T5 Gb (-20°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-20°C Ta +55°C)	II 2G IIC T5 Gb (-40°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KDM2	mining	I M2 I T150°C Mb IP66/68 (-20°C Ta +75°C)	I M2 I T150°C Mb IP66/68 (-40°C Ta +75°C)

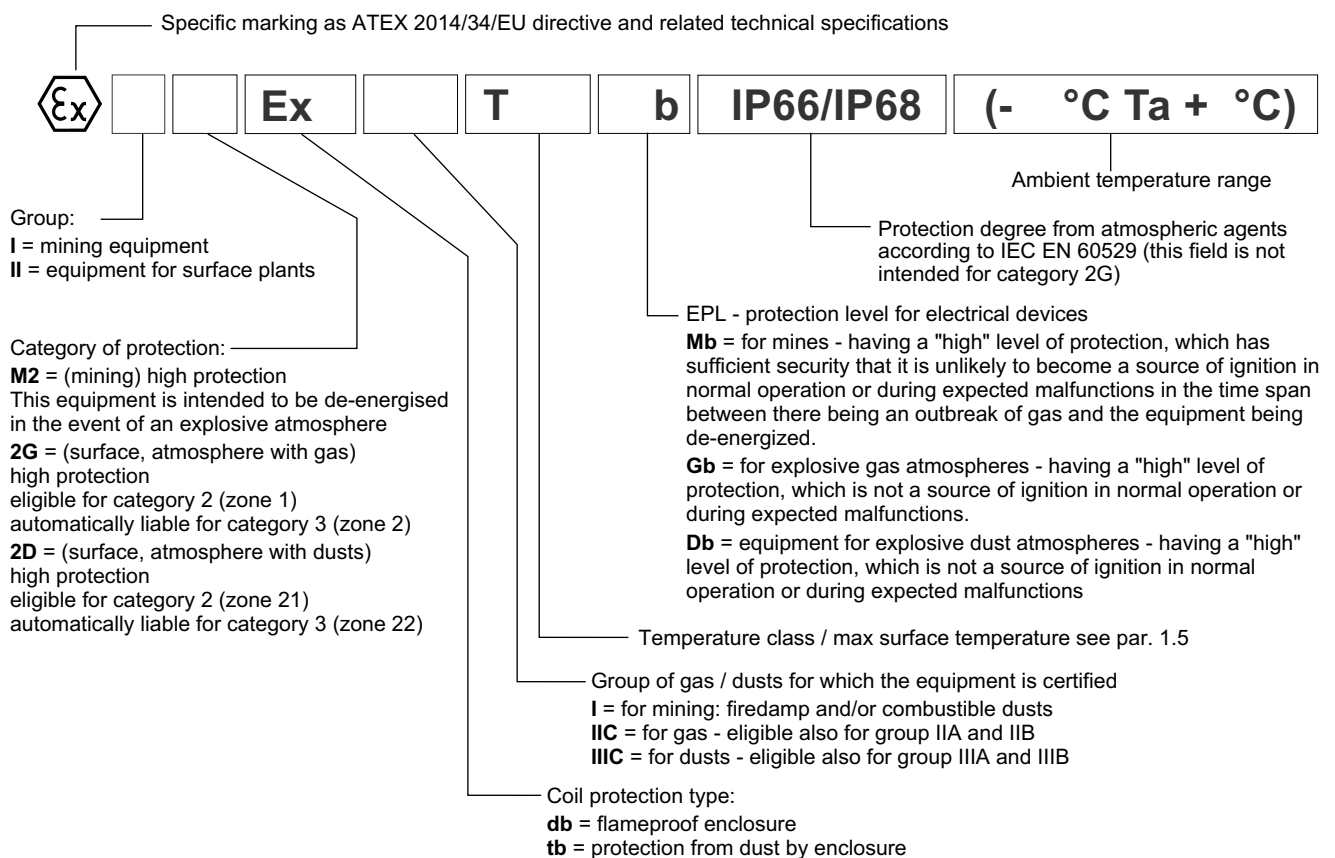

1.3 - ATEX classification of the coils

The coil of the explosion-proof valves is ATEX certified itself and as such is identified with its own tag, carries the relative ATEX marking. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

1.4 - ATEX marking on coils

for valve type *KD2	for gas	 II 2G Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	 II 2D Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
for valve type *KD2 /T5	for gas	 II 2G Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	 II 2D Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
for valve type *KDM2	mining	 I M2 Ex db I T150°C Mb IP66/IP68 (-40°C Ta +75°C)

1.5 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

The valves in group II can also be used for less limiting temperature classes (surface temperature allowed higher).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
ATEX II 2G ATEX II 2D	*KD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas)	T3, T2, T1 T200°C and higher
		of fluid			T154°C (dusts)	
	*KD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas)	T4, T3, T2, T1 T135°C and higher
		of fluid			T129°C (dusts)	
ATEX I M2	*KDM2	of ambient	-20 / +75 °C	-40 / +75 °C	T150°C	-
		of fluid				

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Diplomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

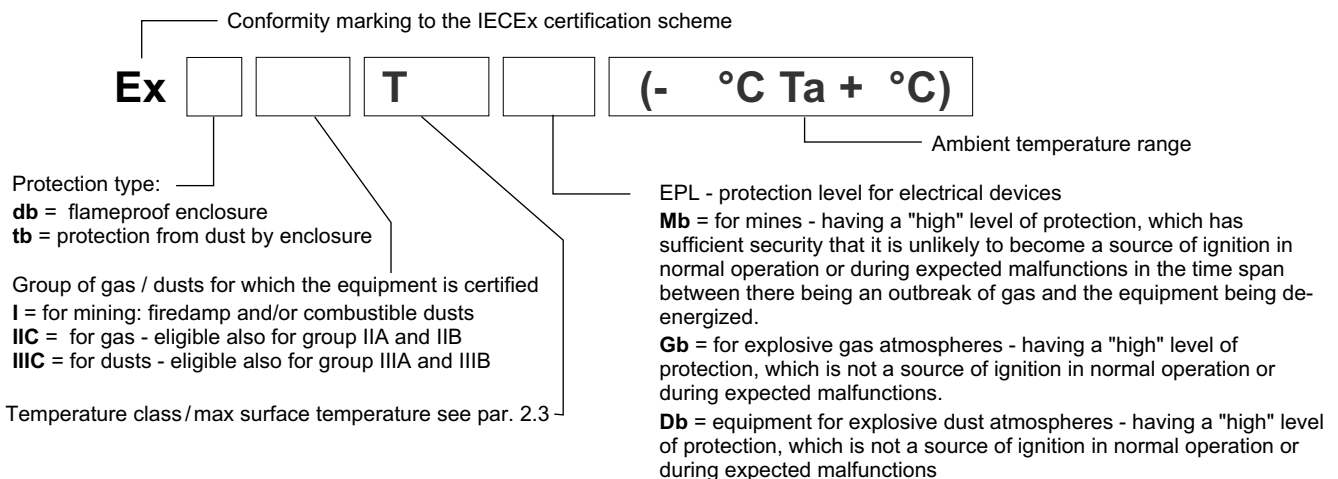

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
IECEx Gb IECEx Db	*KXD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas) T135°C (dusts)	T3, T2, T1 T200°C and higher
		of fluid				
	*KXD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas) T100°C (dusts)	T4, T3, T2, T1 T135°C and higher
		of fluid				
IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
INMETRO Gb INMETRO Db	*KBD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas)	T3, T2, T1
		of fluid			T154°C (dusts)	T200°C and higher
	*KBD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas)	T4, T3, T2, T1
		of fluid			T129°C (dusts)	T135°C and higher
INMETRO Mb	*KBDM2	of ambient	-20 / +75 °C	-40 / +75 °C	T150°C	-
		of fluid

Recommended viscosity	cSt	25
Mass MDT-D	kg	1,7
MDT-SA/SB		1,2

HYDRAULIC SYMBOLS

1 - IDENTIFICATION CODE

NOTE: Solenoid valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) can be ordered separately. See catalogue 49 000.

2 - CHARACTERISTIC CURVES (values obtained with viscosity 36 cSt at 50°C)

3 - SUPPLY VOLTAGES

A connector with bridge rectifier and RAC coils are always used for alternating current supply.

Times $\pm 10\%$	
Energizing	30 ms
De-energizing	50 ms

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

5 - OVERALL AND MOUNTING DIMENSIONS

CARTRIDGE SOLENOID VALVE

SERIES 10

CARTRIDGE TYPE

seat 3/4-16 UNF-2B ISO 725

p max **350** bar

Q nom **50** l/min

OPERATING PRINCIPLE

- The KT08 is a 2-ways solenoid valve, poppet type, cartridge execution, available in normally closed version (NC) and normally open version (NO) with nominal flow rate of 50 l/min.
- It ensures a low internal leakage, which decreases while the pressure increases.
- The valve can be ordered with direct current or rectified current solenoids and with five different types of electrical connections, in order to cover many installation requirements (see paragraph 7).
- For every version, the emergency manual override is an available option (see paragraph 9).

Cartridge _____
solenoid valve

Valve type _____
T = poppet type

Nominal dimension _____
08 = mounting interface 3/4-16 UNF-2B ISO 725

Spool types: _____
2NC = 2-way normally closed
2NO = 2-way normally open

Series no.: _____
(the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

See **NOTE 2**

Coil electrical connection:
(see paragraph 7)
K1 = plug for connector type
EN 175301-803 (ex DIN 43650)
(**standard**)

For **DC** supply only:
K2 = plug for connector type
AMP JUNIOR
K4 = outgoing cables
WK7 = plug DEUTSCH DT04-2P
for male connector type
DEUTSCH DT06-2S
WK8 = plug for connector type
AMP SUPER SEAL

Coil type:
D12 = 12 V } direct current
D24 = 24 V } (**standard**)
R110 = 110 V } rectified
R230 = 230 V } current
D00 = valve without coil (see **NOTE 1**)

NOTE 1: The coil locking ring and the relevant seals are included in the supply.
NOTE 2: The manual override **CM** is available as an option (see paragraph 9).

1.1 - Coil identification code

C	14	L3	-		/	10
---	----	----	---	--	---	----

Power supply _____

D12 = 12 V } direct current
D24 = 24 V } (**standard**)
R110 = 110 V } rectified
R230 = 230 V } current

Series no.: _____
(the overall and mounting dimensions remain unchanged from 10 to 19)

Coil electrical connection (see paragraph 7)
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
For **D12** and **D24** coils only:
K2 = plug for connector type AMP JUNIOR
K4 = outgoing cables
WK7 = plug DEUTSCH DT04-2P for male connector type
DEUTSCH DT06-2S
WK8 = plug for connector type AMP SUPER SEAL

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - PRESSURE DROPS Δp -Q

(obtained with viscosity of 36 cSt at 50 °C)

The values in graphs refer to both NC and NO valves and they differ for the mounting interface used.

standard mounting interface dimensions
3/4-16 UNF-2B ISO 725

dimensions in mm

oversize mounting interface dimensions
3/4-16 UNF-2B ISO 725

dimensions in mm

4 - SWITCHING TIMES

The values indicated refer to a valve tested with Q = 25 l/min, p = 350 bar, working with mineral oil at a temperature of 50°C and a viscosity of 36 cSt.

TIMES (±10%)		
	ENERGIZING	DE-ENERGIZING
KT08-2NC	60 ms	85 ms
KT08-2NO	85 ms	60 ms

5 - ELECTRICAL FEATURES

5.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded onto the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation. The coil is fastened to the tube by a threaded nut, and can be rotated according to the available space.

The interchangeability of coils of different voltages both D or R type is possible without removing the tube.

Protection from atmospheric agents IEC 60529

The IP protection degree is intended for the whole valve. It is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

Versions with CM manual override are IP65 always.

Electric connection	IP65	IP66	IP67	IP68	IP69 IP69K (*)
K1 EN 175301-803	x	x			
K2 AMP JUNIOR	x		x		
K4 outgoing cables	x				
WK7 DEUTSCH DT04 male	x		x	x	x
WK8 AMP SUPER SEAL	x	x	x	x	x

(*) The protection degree IP69K is not taken into account in IEC 60529 but it is included in both ISO 20653.

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION : Coil insulation (VDE 0580) Impregnation:	class H class H

5.2 - Current and absorbed power

In the table are shown current and power consumption values relevant to the different coil types. "R" coil must be used when the valve is fed with AC power supply subsequently rectified by means of rectifier bridge, externally or incorporated in the "D" type connector (see cat. 49 000).

	Resistance at 20°C [Ω] (±1%)	Absorbed current [A] (±5%)	Absorbed power (±5%) [W] [VA]	Coil code

BDL1

STACKABLE DIRECTIONAL CONTROL VALVES SERIES 10

p max 350 bar
Q max 15 l/min

OPERATING PRINCIPLE

- BDL1 is an assemblage of stackable valves, very versatile thanks to the modular design.
- Stackable elements have been designed to be assembled in parallel connection, mounting up to 8 stackable directional valves.
- BD* assemblies are suitable for compact applications, mainly in mobile industries and in mini-power packs.
- The directional valves have a thickness of 28 mm and 1/8" BSP connections on working ports.
- Inlet elements have P and T ports 1/4" BSP.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Maximum operating pressure: - P-A-B ports - T / T1 ports	bar	350 280
Maximum flowrate	l/min	15
Pressure drops Δp - Q	see paragraph 3	
Electrical characteristics	see paragraph 6	
Operating limits	see paragraph 4	
Electrical connections	see paragraph 7	
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass (directional valve)	kg	0.8
Surface treatment of inlet and outlet elements and of valve body	zinc-nickel	

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODES OF SEPARATE ELEMENTS

Here below are shown the identification codes for the separate elements of the stackable valve.

1.1 - Directional valve element

BD	L	1	-	B18	-	/	10	-	/
----	---	---	---	-----	---	---	----	---	---

Stack directional valve element, on-off

13 mm solenoid tube

Size : thickness 28 mm

Ports 1/8" BSP

Spool type (see point 1.2)

Series no. (the overall and mounting dimensions remain unchanged from 10 to 19)

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Manual override:
Omit for pin manual override integrated in the tube (**standard**).
CM = manual override boot protected

Coil electrical connection:
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
K2 = plug for connector type AMP JUNIOR
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S

Coil type:
DC coils
D12 = 12 V
D24 = 24 V
D00 = valve without coil supplied with locking ring

NOTE: A galvanic surface treatment zinc-nickel is applied to body elements and plates, making the assembly suitable to withstand a salt spray exposure time of **600** hours (test carried out according to the UNI EN ISO 9227 and assessment test carried out according to UNI EN ISO 10289).

1.2 - Available spools

12 - IDENTIFICATION CODE FOR STACK VALVE ASSEMBLY

13 - ASSEMBLY EXAMPLE AND HYDRAULIC DIAGRAM

BD*

STACKABLE DIRECTIONAL CONTROL VALVE SERIES 10

p max (see table of performances)
Q max (see table of performances)

OPERATING PRINCIPLE

- BDL, BDM and BDS are stacked valve assemblies, very well-rounded thanks to their modular design.
- Elements have been designed to be assembled in parallel connection, mounting up to 10 stackable valves. The same elements allow to create series circuits by inserting plugs in order to divert the oil path.
- Elements specifically designed for BD*2 series circuits complete the BD* range.
- BD* assemblies are suitable for compact applications in the mobile and in mini-power pack industries.
- Directional valve elements are available in two thicknesses, with working ports 3/8" BSP, 1/2" BSP, SAE-06 and SAE-08 threaded.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

		BDL	BDM	BDS

Mass (BDS3-B38-S)	kg	1,57	1,73	2,1
Surface treatment of inlet and outlet elements and valves bodies	zinc-nickel			

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODES OF SEPARATE ELEMENTS

Here below are shown the identification codes for the separate elements of the stackable valve. Parallel circuits can be assembled with these elements. The same elements allow to create series circuits by inserting plugs in order to divert the oil path.

1.1 - Directional valve element

BD			-		-		/	10		-		/	
-----------	--	--	---	--	---	--	---	-----------	--	---	--	---	--

Stack directional valve element, on-off

Solenoid tube (mm): _____
L = 14
M = 19
S = 22 (only size 3)

Size : _____
2 = thickness 38 mm
3 = thickness 46 mm

Ports: _____
B38 = 3/8" BSP
B12 = 1/2" BSP (only for size 3)
S06 = 9/16" 18 UNF (SAE 06)
S08 = 3/4" 16 UNF (SAE 08) (only for size 3)

Spool type _____
 (see point 1.2)

Series no. _____
 (the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Manual override (see par. 10.6 - 10.8):
 for **BDL**:
 omit for manual override boot protected integrated in the coil locking ring (**standard**)
 for **BDM** and **BDS**:
 omit for pin manual override integrated in the tube (**standard**).
CM = manual override boot protected
 for **BDL**, **BDM** and **BDS**
CK1 = turning knob override
CHL = light duty hand lever. p max 50 bar in T line (not available for series circuits)

Coil electrical connection:
See below for availability, see par. 6 and 7 for details
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
K7, **WK7**, **WK7D** = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S

The electrical connection K2 (AMP JUNIOR type) is available upon request

Coil type:
 DC coils
D12 = 12 V
D24 = 24 V
D28 = 28 V
D48 = 48 V
D00 = valve without coil supplied with locking ring

NOTE: Variants are available. See paragraph 10.1

Available coils

available

upon request

The letter 'W' identifies coils with an high IP degree. This IP degree is reached by specific surface treatments and / or design adaptations.

NOTE: A galvanic surface treatment zinc-nickel is applied to body elements and plates, so BDS valves with WK* type coils and the BDL type valves suitable to withstand a salt spray exposure time of 600 hours. BDS valves with K* type coils and BDM valves are suitable to withstand a salt spray exposure time of 240 hours (test carried out according to the UNI EN ISO 9227 and assessment test carried out according to UNI EN ISO 10289).

1.2 - Available spools

Type S:
 2 solenoids - 3 positions
 spring centring

Type SA*: 1 solenoid side A
 2 positions (central + external)
 spring centring

Type SB*: 1 solenoid side B
 2 positions (central + external)
 spring centring

Type TA*:
 1 solenoid side A
 2 external positions
 with return spring

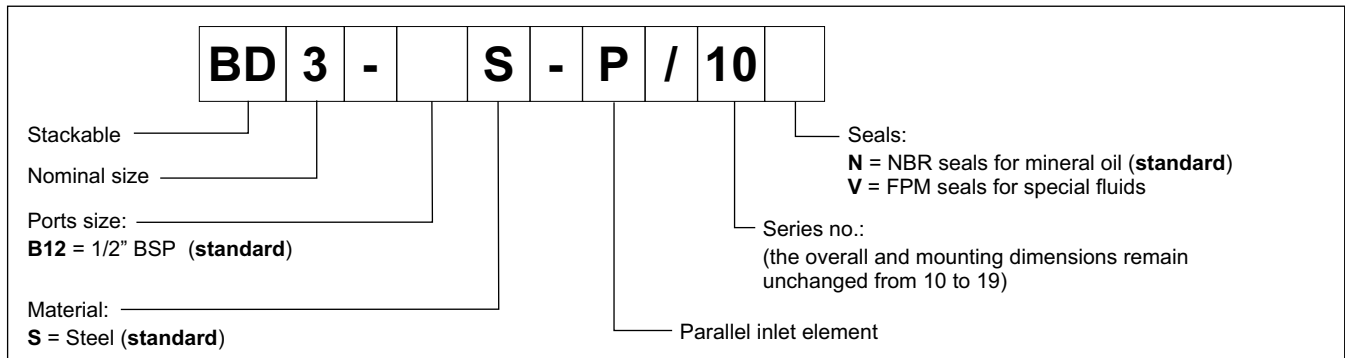

Type TB*:
 1 solenoid side B
 2 external positions
 with return spring

NOTE 1: BDS valves use spools of DS3 solenoid valve. Please refer to catalogue 41150 for others spools.

NOTE 2: Further spools for BDL and BDM are upon request. Please contact our technical department.

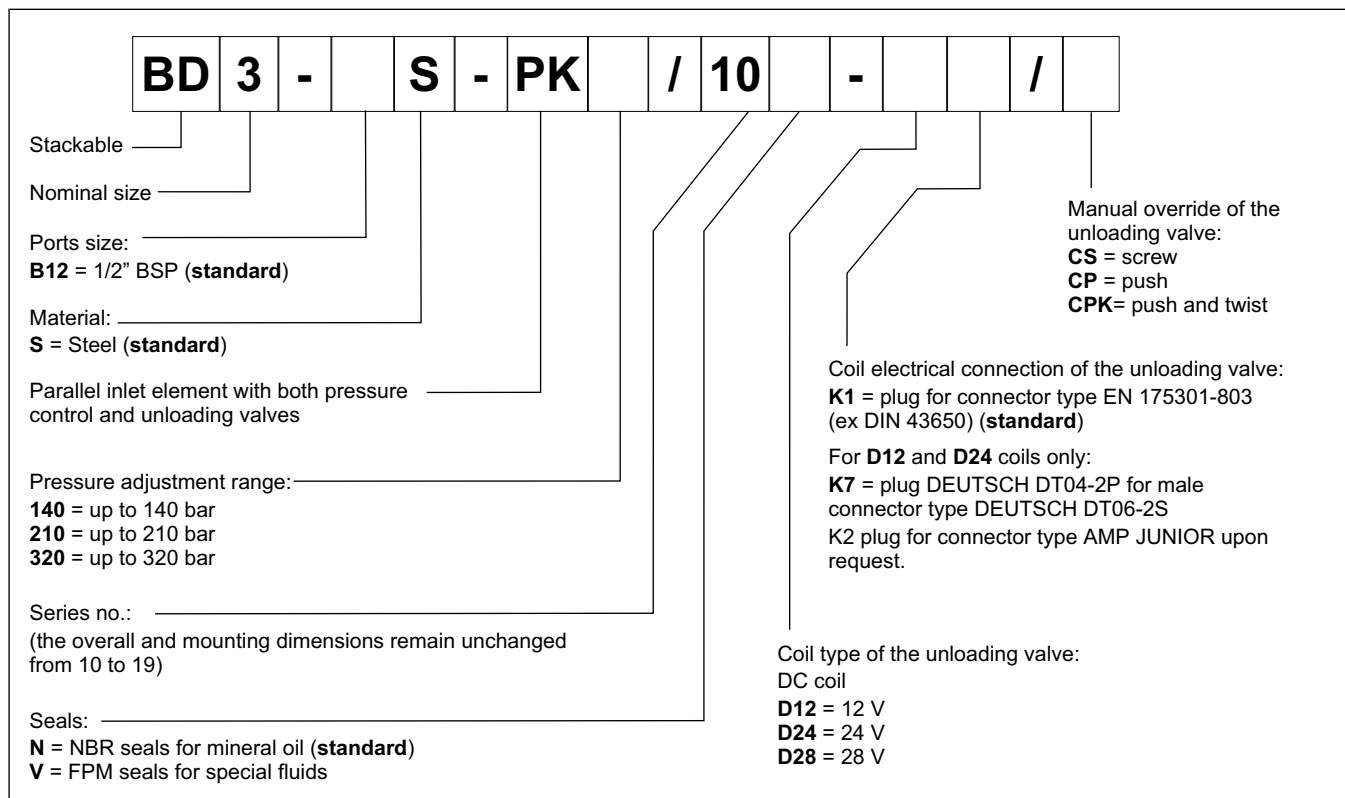

1.3 - Inlet element without pressure control valve

1.4 - Inlet element with pressure control valve

1.5 - Inlet element with both pressure control and unloading valves

1.6 - Inlet element for flow control valve

BD	3	-	B38	S	-	P			-	Q	/	10		-		/	
----	---	---	-----	---	---	---	--	--	---	---	---	----	--	---	--	---	--

Stackable

Nominal size

Ports size: _____
3/8" BSP (**standard**)

Material: _____
S = Steel (**standard**)

Parallel inlet element with pressure relief valve

K = with unloading valve. Omit if not required.

Pressure relief valve adj. range: _____
140 = up to 140 bar
210 = up to 210 bar
320 = up to 320 bar

Mounting interface ISO 6263-03 style for flow control valve
(to be ordered separately, see catalogue 82220).

Series no.: _____
(the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Manual override of the unloading valve:
CS = screw
CP = push
CPK = push and twist

Coil electrical connection of the unloading valve:
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)

For **D12** and **D24** coils only:
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S
K2 plug for connector type AMP JUNIOR upon request.

Coil type of the unloading valve:
DC coil
D12 = 12 V
D24 = 24 V
D28 = 28 V

NOTE: if no unloading valve is needed, the identification code ends with seals digit.
Example: BD3-B38S-P140-Q/10N

1.7 - Outlet elements

BD	3	-		S	-	R		/	10
----	---	---	--	---	---	---	--	---	----

Stackable

Nominal size

Ports size: _____
Omit for blind plate
B38 = 3/8" BSP

Material: _____
S = Steel (**standard**)

Outlet element (rear)

Series no.: _____
(the overall and mounting dimensions remain unchanged from 10 to 19)

Outlet port:
00 = blind plate
(do not use in stack assemblies for series connection)
01 = outlet port P
02 = outlet port T
03 = outlet port both for P and T

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - CHARACTERISTIC CURVES

BDL	25 ÷ 75	15 ÷ 25
BDM	25 ÷ 75	15 ÷ 25
BDS	25 ÷ 75	15 ÷ 25

6 - ELECTRICAL FEATURES

6.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation. The coil is fastened to the tube by a threaded ring, and can be rotated to suit the available space.

6.2 - Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree, correctly connected and installed.

The protection degree IP69K is not taken into account in IEC 60529 but it is included in ISO 20653.

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr

D24	21	1.15	28	1903561	1903651

6.5 - BDS (solenoid tube Ø22)

Coils with letter 'W' feature a zinc-nickel surface treatment, that makes them resistant to exposure to the salt spray for 600 hours (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

The WK7D coils include a suppressor diode of pulses for protection from voltage peaks during switching. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coils and to 58.9 V in the D24 coils.

code **WK7D** (W7 version only - coil with diode)

8 - ELECTRICAL CONNECTORS

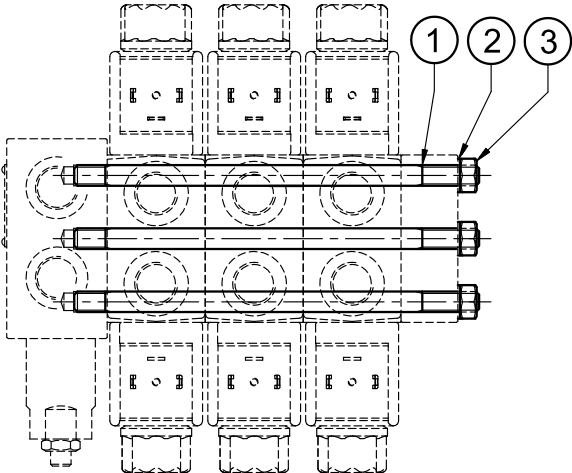

The solenoid valves are supplied without connectors. Connectors for electrical connections K1 and WK1 (EN 175301-803, ex DIN 43650) can be ordered separately. See catalogue 49 000.

9 - INSTALLATION

The stacked valve assembly can be installed in any position without impair the proper functioning.

9.1 - Fixing and tie-rods

Please contact the technical dept. for dimensional check of special assemblies before order.

12 - IDENTIFICATION CODE FOR STACKED VALVE ASSEMBLY

BD			-			/ 10		-		/	XXXXX
-----------	--	--	----------	--	--	-------------	--	----------	--	----------	--------------

Stacked valve assembly

Solenoid tube (mm):
L = 14
M = 19
S = 22 (only size 3)

Size: _____
2 = thickness 38 mm
3 = thickness 46 mm

Circuit type: _____
P = parallel
S = series (parallel elements with plugs)
C = series (series elements)
 Available for size 2 only

No. of directional valves _____

Configuration code (5 digits), assigned by Duplomatic

Coil electrical connection:
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S

Coil type:
 DC coils
D12 = 12 V
D24 = 24 V
D28 = 28 V
D00 = valve without coil supplied with locking ring

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Series no.:
 (the overall and mounting dimensions remain unchanged from 10 to 19)

13 - CONNECTION SCHEMES EXAMPLES

13.1 - BD**-P parallel connection

Parallel circuit is obtained with elements for parallel connection (see par. 1).

13.2 - BD**-S series connection

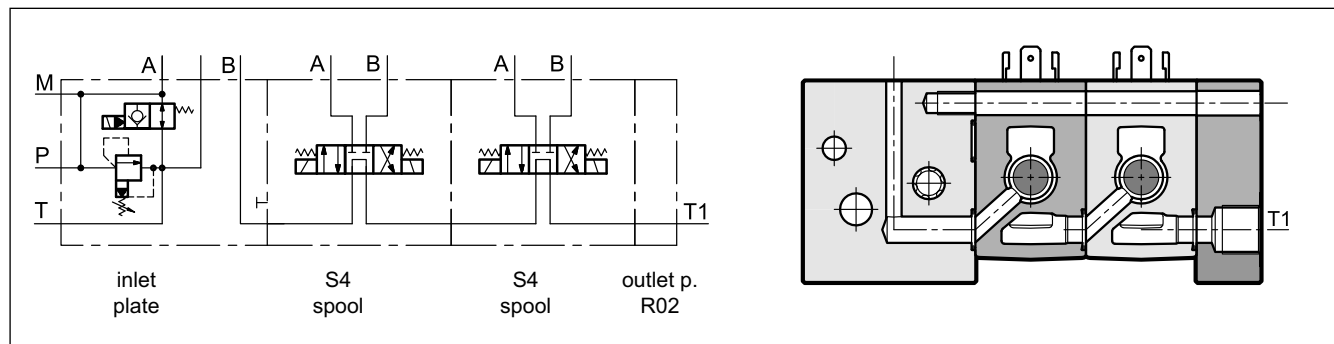

Series circuit is obtained by inserting plugs in elements for parallel connection (see par. 1).

Please note that this kind of configuration requires a different outlet plate, depending on the number (even or odd) of directional valves in the assembly.

13.3 - BDL2-C and BDM2-C series connection

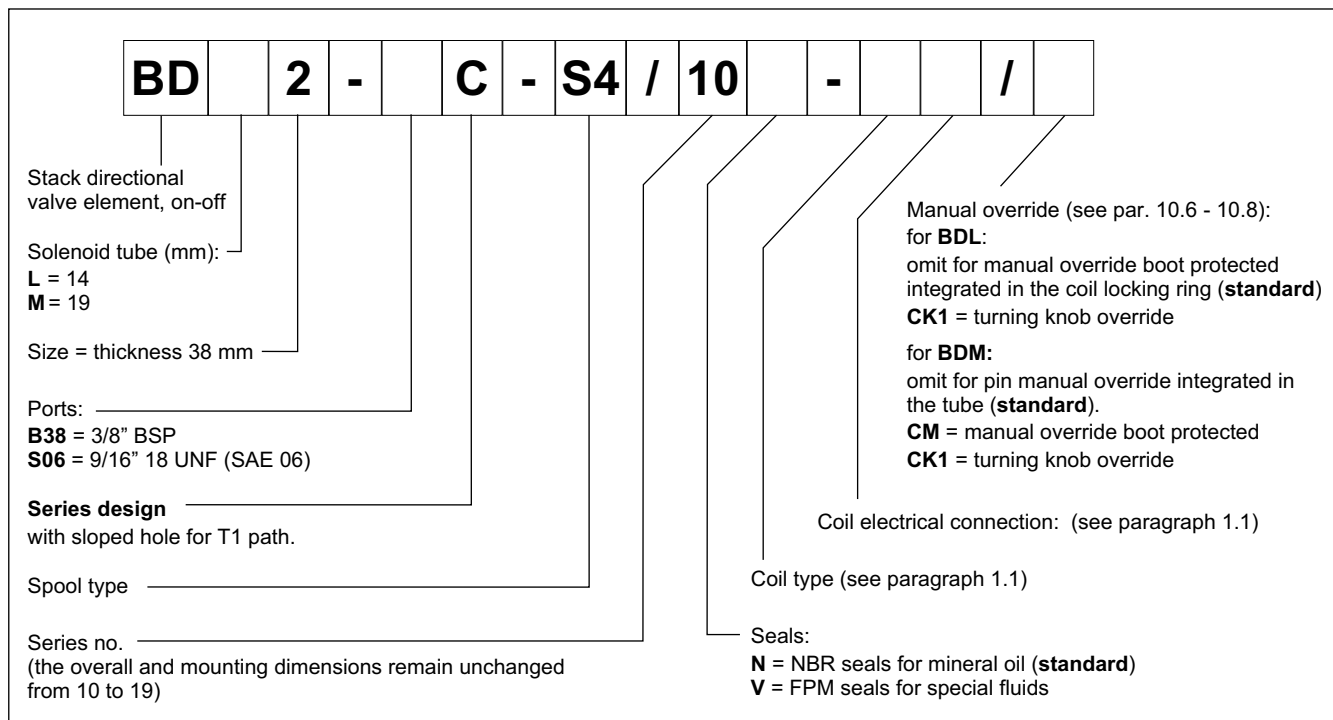

BD*2-C series connection is obtained with elements designed for series (see par. 14). The series elements are available in size 2 only.

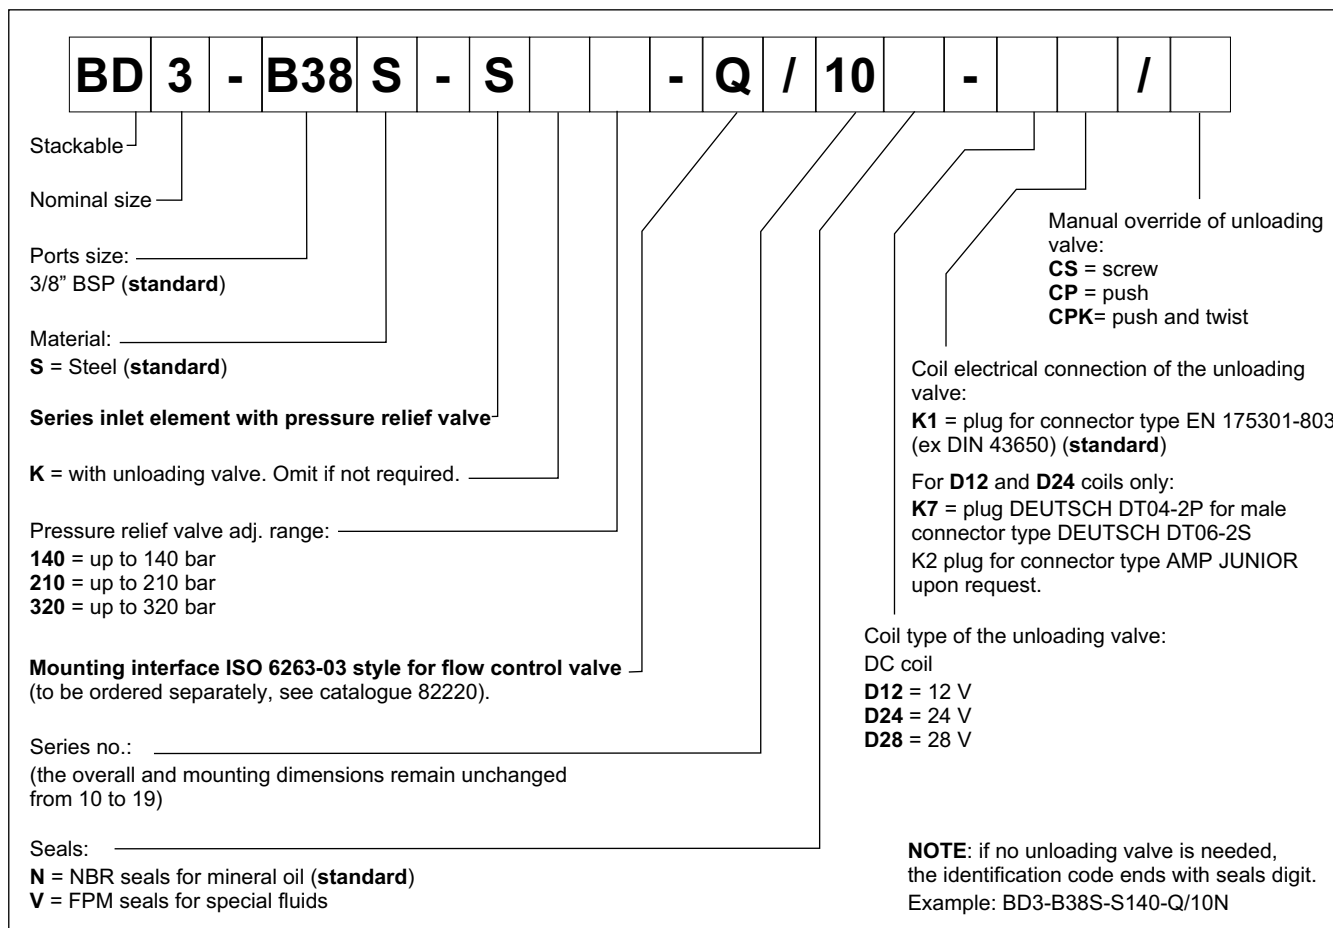

14 - IDENTIFICATION CODES OF SEPARATE ELEMENTS FOR BDL2 AND BDM2 SERIES CIRCUITS

14.1 - Directional valve element

This code identifies BD*2 elements, designed for series connection. Series circuits with BD*3 modules are feasible by inserting plugs to divert the oil path (see paragraph 13.2).

14.2 - Inlet elements for flow control valve

14.3 - Outlet elements

Please choose the proper outlet element amongst those in paragraph 1.7. Overall dimensions are at paragraph 11.3.

15 - CHARACTERISTIC CURVES AND OPERATING LIMITS FOR SERIES

Please refer to diagrams at par. 3 for pressure drops, whereas operating limits are here below.

15.1 - BDL2-B38C-S4

15.2 - BDM2-B38C-S4

16 - DIMENSIONS OF ELEMENTS FOR SERIES CONNECTION

16.1 - BD*2-B38C-S4/10* - directional valve element

The BDM2 configuration is showed here. The same directional valve is available as BDL2. For non-quoted dimensions, please refer to the drawings for parallel circuits. Overall dimensions are the same.

16.2 - Inlet elements for flow control valve

BD3-B38S-SK***-Q with pressure control and unloading valves

dimensions in mm

NOTE :The same component
without part no. 8 is:
BD3-B38S-S*-Q**
with pressure control
without unloading valve

1	Pressure control valve
2	Locking nut: spanner 13
3	Socket hex adjustment screw: Allen key 4 Clockwise rotation to increase pressure
4	Maximum screw stroke
5	Mounting surface with sealing rings: 2 OR type 2043 (10.82x1.78)
6	P and T ports: 3/8" BSP
7	Pressure gauge port: 1/4" BSP
8	Unloading valve Here shown with K1 connection
9	Push and twist manual override: see identification codes for further choices.
10	Element label
11	Encumbrance of flow control valve. To be ordered separately. See catalog 82220

NOTE: for missing dimensions of mounting interface
please refer to the par 10.1 'mounting surfaces'.

BLS6

BANKABLE LOAD SENSING PROPORTIONAL CONTROL VALVE

SERIES 12

p max 300 bar
Q max 120 l/min

OPERATING PRINCIPLE

- The BLS6 directional control valve is stackable and can be assembled up to 8 different proportional and on/off modules .
- Each module is equipped with a meter-in compensator that keep constant the flow, independently from load changes.
- Sections with pressure compensators are not influenced in any way by other operated functions, provided that sufficient pump capacity is available. To correctly work, the sum of the flows contemporarily used must not overcome the 90% of the inlet flow.
- Working ports A and B are threaded 1/2" BSP. On the inlet module the ports P1, P2 and T1 are threaded 3/4" BSP.
- The manual lever override is available as option.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Maximum operating pressure: - A and B ports - P1 and P2 ports - T1 port	bar	300 250 20
Maximum flowrate: - A and B ports - P1 and P2 ports - T1 port	l/min	45 100 120
Electrical characteristics	see paragraph 4	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Single body mass	kg	4,5
Surface treatment of body and plates	galvanic, zinc-nickel	

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODES FOR LOOSE MODULES

Here below are shown the identification codes of all the loose components of the bankable valve. To order a whole assembled valve, please use the codes at paragraphs 9 and 10.

The inlet section is available in different versions for fixed pumps and for systems with Load Sensing pump.

1.1 - Proportional module

BLS	6	-			/	12	V	-			/	
------------	----------	---	--	--	---	-----------	----------	---	--	--	---	--

Compensated direct operated directional valve with proportional control

Size _____

Spool type: _____
PC = closed centers
PA = open centers

Solenoid position: _____
 (omit for configuration with two solenoids)
A = 1 solenoid on side A
B = 1 solenoid on side B

Spool nominal flow (see below) _____

Manual override (see par. 11)

Coil electrical connection: (see paragraph)
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (standard)
K7 = plug for connector type DEUTSCH DT04-2P male

Coil type:
D12 = Nominal solenoid voltage 12V DC
D24 = Nominal solenoid voltage 24V DC

Seals:
V = FPM seals (standard)

Series no. (the overall and mounting dimensions remain unchanged from 10 to 19)

SPOOLS

Valve configuration depends on the combination of the following elements:
 number of proportional solenoids, spool type, nominal flow rate.

2 solenoids configuration:
 3 positions with spring centering

1 solenoid on side A.
 2 positions (central + external) with spring centering

1 solenoid on side B.
 2 positions (central + external) with spring centering

SYMMETRICAL	
max flow	Δp
05/05	4
09/09	8
15/15	4
25/25	8
30/30	4
45/45	8

ASYMMETRICAL	
max flow	Δp
09/06	8
15/10	4
25/15	8
30/20	4
45/30	8

SINGLE FLOW	
max flow	Δp
30	4
45	8

1.2 - On-off modules

Proportional and on-off modules can be used together. In this case, the description for the spool type in the identification code has to be as follow:

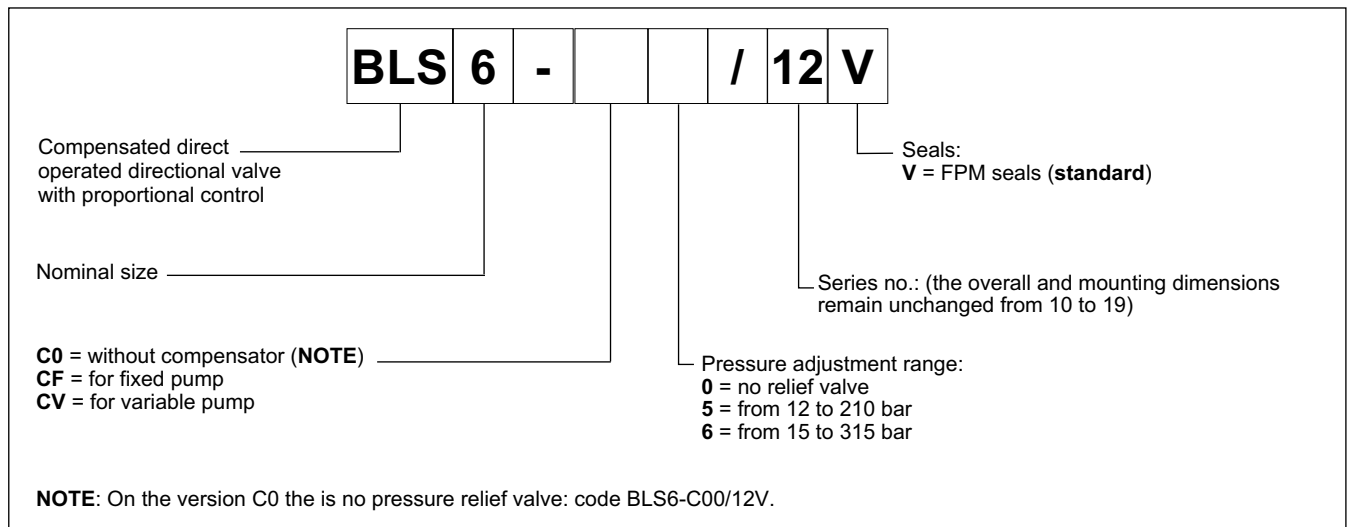

SC = closed center with on-off solenoid

SA = open center with on-off solenoid

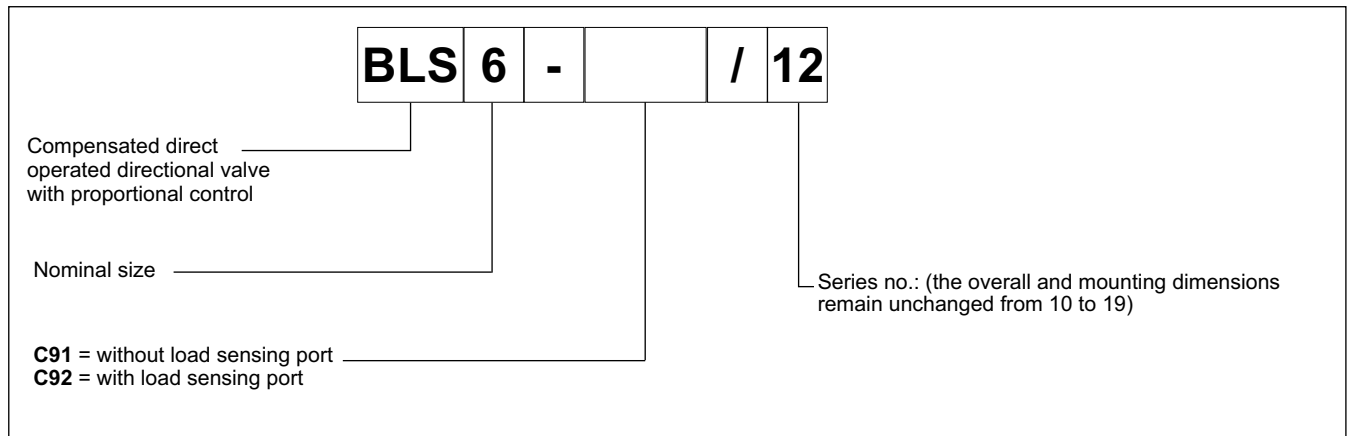

Two spools for high flow rates are available: SC60/60 and SA60/60.

1.3 - Inlet plates

The inlet section is available in different versions, for fixed and for variable pumps with load sensing. The version for fixed pump can be easily converted to work with variable pumps and vice versa.

1.4 - End plates

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4 or fluids HFDR type. For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

3 - CHARACTERISTIC CURVES

(values obtained with viscosity 36 cSt at 50 °C)

Typical constant flow rate obtained through the embedded compensator, and current with 12V solenoid type (for D24 version the maximum current is 860 mA), measured for the various spool types available.

PROPORTIONAL MODULES PRESSURE DROPS Δp -Q SYMMETRICAL FLOWS - PC AND PA SPOOLS

ASYMMETRICAL FLOWS - PC and PA SPOOLS

4 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut.

It can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C) K1 coil K7 coil	Ω	3.66 4	17.6 19
NOMINAL CURRENT	A	1.88	0.86
DUTY CYCLE		100%	
PWM FREQUENCY	Hz	200	100
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation:	class H class F		

Protection from atmospheric agents IEC EN 60529

Plug-in type	IP 65	IP 69 K
K1 EN 175301-803 (ex DIN 43650)	x (*)	
K7 DEUTSCH DT04 male	x	x (*)

(*) The protection degree is guaranteed only with the connector correctly connected and installed

5 - STEP RESPONSE

(measured with mineral oil with viscosity of 36 cSt at 50°C with electronic control units)

Step response is the time (delay) taken for the valve to reach 90% of the set position value following a step change of the reference signal.

Reference signal step	0 → 100%	100 → 0%
STEP RESPONSE [ms]		
BLS6	50	40

6 - ELECTRICAL CONNECTIONS

connection for EN 175301-803 (ex DIN 43650) connector code **K1 (standard)**

connection for DEUTSCH DT04-2P connector type code **K7**

7 - ELECTRICAL CONNECTORS

The on-off modules are supplied without connectors. For on-off coils with standard electrical connection K1 type EN 175301-803 (ex DIN 43650) connectors can be ordered separately: see catalogue 49 000.

8 - OVERALL AND MOUNTING DIMENSIONS

8.1 - Proportional module

8.2 - Inlet plates

dimensions in mm

BLS6-C00

1	Mounting surface with sealing rings: n° 4 OR 2056 (14x1.78) 90 shore
2	Load Sensing port: 1/4" BSP with orifice
3	P1, P2 and T1 ports: 3/4" BSP
4	Pressure gauge port: 1/4" BSP

8.2 - Inlet plates

8.3 - End plates

9 - IDENTIFICATION CODE OF ASSEMBLED VALVE

BLS6	-			-		-		-		/ 12 V	-		/	
------	---	--	--	---	--	---	--	---	--	--------	---	--	---	--

Compensated direct operated directional valve with proportional control

Inlet module: _____
C0 = without compensator (**NOTE**)
CF = for fixed pump
CV = for variable pump

Pressure adjustment range: _____
0 = no relief valve
5 = from 12 to 210 bar
6 = from 15 to 315 bar

Proportional module: _____
 Choose open or closed centre, and then the spool type, like code in par. 1.1
 Repeat for each proportional module required, max 8 modules.

End plate: _____
C91 = without load sensing port
C92 = with load sensing port

Manual override on all proportional modules (see par. 11)

Coil electrical connection: (see paragraph 6)
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
K7 = plug for connector type DEUTSCH DT04-2P male

Coil type:
D12 = Nominal solenoid voltage 12V DC
D24 = Nominal solenoid voltage 24V DC

Seals:
V = FPM seals (**standard**)

Series no.: (the overall and mounting dimensions remain unchanged from 10 to 19)

NOTE: The version C0 is available only without the pressure relief valve, with code BLS6-C00/12V.

Coding example:
BLS6-C00-PC30/30-PC30/30-C92/12V-D24K1: assembled valve includes: inlet module without 3 way compensator; 2 prop. modules with closed center flow 30/30; end plate without load sensing port; FPM seals, 24V DC coils and K1 connection.
BLS6-CF5-PA45/30-PA45/30-PC30/30-PAB15/15-C91/12V-D12K1: assembled valve includes: inlet module for fixed pump, with pressure max 210 bar; 2 prop. modules with open center flow 45/30, 1 prop. module with close center, flow 30/30 and 1 prop. module with open center and solenoid only on side B, flow 15/15; end plate with load sensing port; FPM seals, 12V DC coils and K1 connection.
NOTE: To obtain the best performances, we suggest that the spool with the higher flowrate should be the first, and then the others in descending order.

10 - INSTALLATION AND OVERALL DIMENSIONS OF THE ASSEMBLED VALVE

dimensions in mm

Modules	A (NOTE)	B
2	212	132,5
3	262	182,5
4	312	232,5
5	362	282,5
6	412	332,5
7	462	382,5
8	512	432,5

NOTE: with the inlet plate
BLS6-C00 the dimension is
10 mm shorter.

1	Inlet module
2	Pressure relief valve
3	Proportional modules
4	End plate
5	Fixing studs
6	Fixing holes
7	Manual lever override module

Fixing kit

The fixing kit includes,
all zinc-coated

3 studs,
3 self locking nuts
3 washers

Please use the following codes to
order it :

No. of body modules	Code
2	3404150010
3	3404150011
4	3404150012
5	3404150013
6	3404150014
7	3404150015
8	3404150016

Tightening torque: 25 Nm

11 - MANUAL OVERRIDE

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

Three different manual overrides are available upon request:

- **CM** manual override, boot protected.
- **CH** lever manual override.
- **CK** knob. When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening.

NOTE: The overall dimension shown in the drawings is for the proportional modules; In ON-OFF modules consider an increase of 5 mm compared to the reported dimensions.

12 - ELECTRONIC CONTROL UNITS

One solenoid

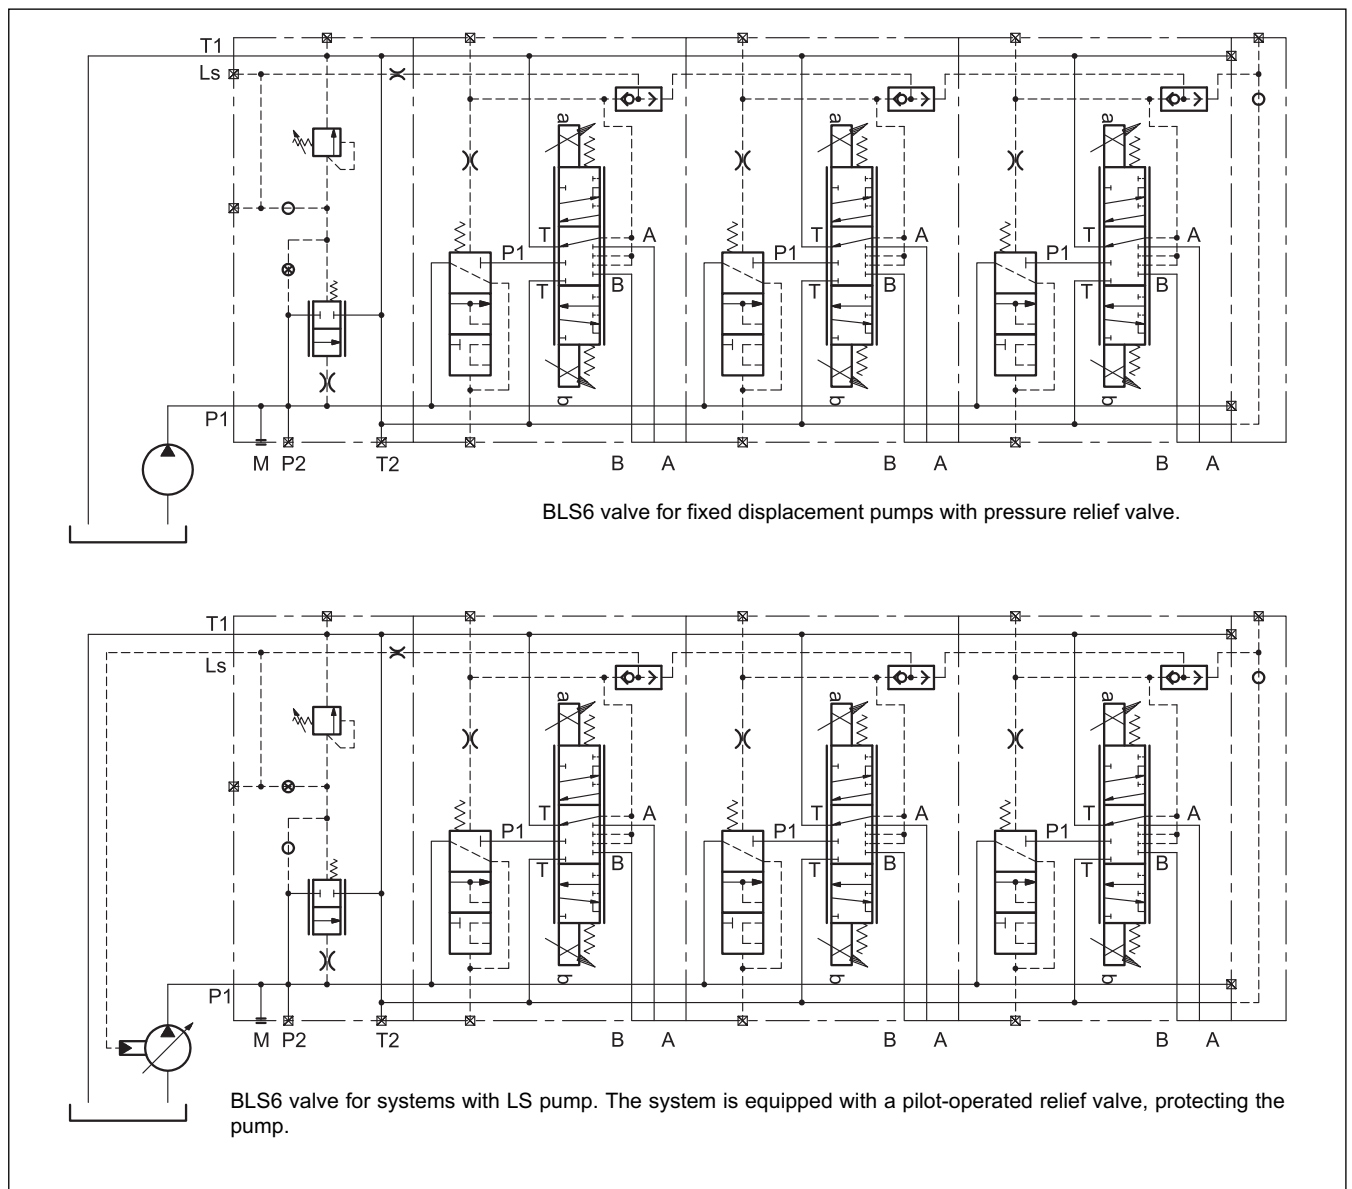

EDC-111	for solenoid 24V DC	plug version	see cat. 89 120
EDC-141	for solenoid 12V DC		
EDM-M111	for solenoid 24V DC	DIN EN 50022 rail mounting	see cat. 89 250
EDM-M141	for solenoid 12V DC		

These cards drive only a module at once.
Every module to be driven with electronic card must have its one.

Two solenoids

EDM-M211	for solenoid 24V DC	rail mounting DIN EN 50022	see cat. 89 250
EDM-M241	for solenoid 12V DC		

13 - EXAMPLES OF APPLICATION

BFD*

SIX WAYS BANKABLE FLOW DIVERTER SERIES 10

p max **320** bar

Q max **90** l/min

OPERATING PRINCIPLE

- BFD* is a 6 ways bankable flow diverter that allows the simultaneous connection of two utilities, alternating the direction of flow through a solenoid operated directional valve.
- It is available in two sizes, depending on the requested flow, and is used mainly for compact applications for the mobile sector.
- The BFD* valve is also suitable for series mounting, lining up to max 5 modules.
- The external drain is available as an option on both sizes.
- The BFD* diverters are supplied with a finishing surface treatment zinc-nickel, suitable to ensure a salt spray resistance up to 240 hours. Versions with plastic coil or with zinc-nickel finished coil reach 600 hour resistance.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

		BFD06	BFD10
Maximum operating pressure: - with drain Y	bar	250 320	
Maximum flow	l/min	60	90
Pressure drops Δp - Q	see paragraph 3		
Electrical features	see paragraph 6		
Operating limits	see paragraph 4		
Electrical connections	see paragraph 11		
Ambient temperature range	°C	-20 / +50	
Fluid temperature range	°C	-20 / +80	
Fluid viscosity range	cSt	10 ÷ 400	
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15		
Recommended viscosity	cSt	25	
Mass	kg	3	4,2

------------	--	----------	--	----------	------------	----------	-----------	--	----------	--	--	----------	--	--

Bankable 6 ways flow diverter

Nominal size
06 = 60 l/min
10 = 90 l/min

Ports: (see **NOTE 1**)
G038 = 3/8" BSP (for BFD06 only)
G012 = 1/2" BSP

Spool type

Series:
(the overall and mounting dimensions remain unchanged from 10 to 19)

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Option:
Y = External drain
(see par. 13.1)

Manual override: (see par. 14)
Omit for override integrated in the tube (**standard**)
CM = boot protected
CK = knob

Coil electrical connection
K1 = plug for DIN 43650 connector (**standard**)
K7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S (available only for BFD06)
NOTE fo BFD06: to obtain a salt spray resistance up to 600 hours buy coil type:
WK1 = plug for DIN 43650 connector
WK7D = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S, with diode.
These versions include the CM manual override to protect the solenoid tube.
WK1 e WK7D connections are available for D12 and S24 coils only.
(see sections 6 and 11)

Coil type
D12 = 12 V
D24 = 24 V
D28 = 28 V (BFD06 only)
D00 = valve without coils (see **NOTE 2**)

NOTE 1: On BFD06 are available upon request for the threads 3/4" 16 UNF (**S08**).

NOTE 2: The locking rings of the coils and the relevant O-Rings are supplied together with valves.

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - CHARACTERISTIC CURVES

(obtained with viscosity 36 cSt at 50 °C)

3.1 - Pressure drops Δp -Q at initial position

4 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

VALVE	CURVE
BFD06	1
BFD06*/Y	2
BFD10	3
BFD10*/Y	4

5 - SWITCHING TIMES

The values indicated are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

TIMES ms ($\pm 10\%$)	ENERGIZING	DE-ENERGIZING
BFD06	25 ÷ 75	20 ÷ 50
BFD10	50 ÷ 100	20 ÷ 40

6 - ELECTRICAL CHARACTERISTICS

6.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

Protection from atmospheric agents EN 60529

Plug-in type	IP
K1 DIN 43650	IP 65
K7 DEUTSCH DT04 male	IP 69 K

NOTE: The protection degree is guaranteed only with the connector correctly connected and installed.

NOTE 2: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC) (NOTE 2)	In compliance with 2004/108/EC
LOW VOLTAGE	In compliance with 2006/95/EC
CLASS OF PROTECTION : Coil insulation (VDE 0580) Impregnation	class H class F (BFD06) class H (BFD10)

6.2 - Current and absorbed power

WK1 and WK7D coils have a zinc-nickel surface treatment and are specific for the high resistant version to salt spray.

The WK7D coil includes a suppressor diode of pulses for protection from voltage peaks during switching. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coil and to 58.9 V in the D24 coil.

Valve	Coil	Resistance at 20°C [Ω] (±5%)	Current consumption [A] (±10%)	Absorbed power [W] (±10%)	Coil code			
					K1	WK1	K7	WK7D

Fastening of single valve: 4 SHC screws ISO 4762 M6x50
Tightening torque: 8 Nm (A8.8 screws)
Threads of mounting holes: M6x12

10 - INSTALLATION

The solenoid operated valve can be installed in any position without undermining the proper functioning.

11 - ELECTRICAL CONNECTIONS

The standard connection K1 (for connector DIN 43650) is described in the dimension drawings. The K7 and WK7D connections are only available for BFD06* valves.

connection for plug DEUTSCH DT04-2P
for male connector type DEUTSCH
DT06-2S
code **K7**

connection for plug DEUTSCH DT04-2P
for male connector type DEUTSCH
DT06-2S
code **WK7D** (W7 version only)

12 - ELECTRICAL CONNECTORS

The solenoid valves are supplied without connectors. For coils with standard electrical connection K1 type (DIN 43650) the connectors can be ordered separately: see catalogue 49 000.

13 - OPTIONS

13.1 - Subplate external drain port (option Y)

This version allows the operation with pressures up to 320 bar on the ports.

It consists in a Y drain hole realized on the valve coupling interface, where the Y port is connected with the solenoid tubes: in this way the tubes are not stressed by the pressure operating on the valve ports.

14 - MANUAL OVERRIDES

14.1 - Boot manual override

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface. Option is available on both versions.

14.2 - Knob

When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening.

Spanner: 3 mm

15 - SERIES CONFIGURATION

The BFD* valve can also be assembled in series, bundled up to 5 individual modules. The fixing kit must be ordered separately. It includes: rods and screws, nuts, security washers and OR, as indicated in the table below.

15.1 - Hydraulic scheme, dimensions and installation

VD*-W*

CHECK VALVES

SERIES 30

p max **400** bar

Q max (see table of performances)

PRESSURE DROPS Δp -Q

OPERATING PRINCIPLE

- VD*-W* valves are check valves with threaded "BSP" ports for mounting in-line on hydraulic lines.
- They allow the flow to pass freely in one direction, blocking it in the opposite direction.
- In rest conditions, the valve poppet is kept closed by a spring. The poppet opens when the pressure in the intake line "A" exceeds the set value of the spring, added to any pressure in the outlet line "B".
- Available in eight sizes for flow rates of up to 850 l/min and with five different cracking pressures.

HYDRO-PILOT OPERATED CHECK VALVES SERIES 12

SUBPLATE MOUNTING
ISO 5781-06
ISO 5781-08

p max **320** bar
Q max (see table of performances)

OPERATING PRINCIPLE

- VP*-P*-MU valves are check valves with hydraulic release, constructed in a version with subplate mounting in accordance with ISO 5781 standards.
- They incorporate the functions of a normal one-way check valve with the facility, by means of external piloting, to release the poppet and allow the oil to pass also in the direction opposite to the free flow, from B to A.
- In rest conditions, the valve poppet, which is a cone on edge seal type, is kept closed by a spring with fixed setting. When piloting pressure is sent to port X, the release piston is operated, thus opening the main poppet and allowing the free flow from B to A.
- The drainage port Y isolates the front face of the control piston from chamber A.
- They are available in two sizes for flow rates up to 100 l/min and with different cracking pressures in the free flow direction.

PERFORMANCES (working with mineral oil of viscosity of 36 cSt at 50°C)

2 - CHARACTERISTIC CURVES (values obtained with viscosity 36 cSt at 50°C)

NOTE: The curves shown in the graph refer to B→A and A→B flow with the valve released hydraulically.
For A→B flow, with the valve not released hydraulically, add the cracking pressure to the values shown.

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - VP3-P*-MU OVERALL AND MOUNTING DIMENSIONS

5 - VP5-P*-MU OVERALL AND MOUNTING DIMENSIONS

6 - USE

The VP*-P*-MU check valves with hydraulic release are used in circuits where the position of the actuators must be maintained even in the absence of hydraulic power.

They are available in two versions with the following characteristics:

VP*-P*-MU

The VP*-P*-MU valves are check valves with hydraulic release that incorporate the functions of a normal one-way check valve with the possibility to release the poppet by means of external piloting, thus allowing flow of the oil also in the opposite direction of the free flow, from B to A. The valve poppet, a cone on edge seal type, is kept closed by a spring with fixed setting during rest conditions. When pilot pressure is sent to port X, the release piston is activated and opens the main poppet, thus allowing the reverse flow.

These valves have hydraulic isolation of the front face of the release piston from chamber A of the valve, by external drainage Y. This solution eliminates problems which can occur if, during the release phase of the valve, pressure builds up in chamber A near to or greater than the piloting pressure X, causing a backward movement of the piston and thus unwanted closure of the valve.

VP*-P*-MU

VP*-P*/P-MU

The VP*-P*/P-MU valves are check valves with hydraulic release that, in addition to the characteristics of the preceding version, are equipped with a decompression device.

They are recommended when operating with high working pressures or with high loads that act as pressure multipliers.

The circuit (chamber B) is decompressed prior to complete opening of the valve during the release phase.

This prevents pressure shocks in the circuit and because of the high ratio existing between the areas of the control piston and the decompression device, release can occur even at a low piloting pressure.

Pilot pressure to port X operates the release piston which first opens the pre-opening poppet, causing decompression of the sealed chamber, it then opens the main poppet, allowing free flow from B to A.

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(values measured with viscosity of 36 cSt at 50°C)

Δp - Q characteristic with flow A → B.

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - OPENING AND PILOTING PRESSURES

Valve code	Cracking pressure A - B [bar]	Minimum pilot pressure [bar]	Pilot pressure ratio p (B) / p (X)	Pre-opening pressure (option /P) [bar]	Pilot volume for opening valve [cm³]
CFP-S032	0,12	8,0	3,6	p(X) = 0,18 x p(B) + 7	1,22
CFP-S040			3,9		2,36
CFP-S050			4,2		4,91
CFP-S063	4,2		8,13		
CFP-S080	4,5		12,72		
CFP-S100	4,3		28,63		
CFP-S125	4,3		-	67,86	

5 - INSTALLATION

The valves up to size 63 can be mounted in any position. For the larger sizes (ND 80, ND 100 and ND 125) is required the vertical mounting.

6 - OVERALL DIMENSIONS

7 - CONNECTION FLANGE - INSTALLATION AND DIMENSIONS

NOTE 1: Calculated diameters for PN 16 - DIN 2448 steel pipes

NOTE 2: For application with standard connection flange type UNI2284 - UNI2285 - UNI2286, special bushings to fit on fastening bolts must be provided in order to ensure a correct valve mounting.

For information about the installation with UNI connector flange, please consult our technical department.

LOGIC ELEMENTS

LC* CARTRIDGE VALVES
ISO 7368 - DIN 24342

LP* COVERS

LCM* MONITORED LOGIC EL.

ND 16 - 25 - 32 - 40 - 50 - 63

p max **420** bar

Q max (see table of performances)

OPERATING PRINCIPLE

— Logic elements are cartridge valves suitable for installation in blocks or manifolds. They are available in five different sizes: ND 16 - 25 - 32 - 40 - 50 - 63.

— They are designed to perform complex hydraulic circuits, using functional compact blocks, with high flow rates and low pressure drops.

— They are made of a cartridge valve with ISO 7368 / DIN 24342 cavity bore and a control cover (4). The cover includes the cartridge valves pilot lines; some versions are designed for the installation of ISO 4401-03 valves, to realise different control functions (see paragraph 8 for diagrams and function descriptions). A low leakage version, obtained inserting a seal into the seat no. 5, is also available.

— The cartridge valves are composed of a jacket (2), a poppet (1), and a closing spring (3). The poppet can either be standard (S) or with a damping nose (D), suitable for a smooth flow control during the valve opening and closing phases.

— Two types of cartridge valves are available:

- **Q** type: used for flow and directional control and as a check valve.

The areas involved are:

A1 - corresponding to the seat diameter area, considered as reference area = 1

A3 - corresponding to the jacket internal diameter area.

A2 - corresponding to the difference between A3 - A1

The area ratio A1/A3 is 1/1,66.

The valve opens when the pressure, acting either on area A1 (flow from A to B) or on area A2 (flow from B to A), is higher than the pressure acting on area A3 (added to the spring load value).

- **P** type: used for pressure control.

In this case the areas A1 and A3 are equivalent (area ratio 1:1) and the valve enables the flow direction from A to B only.

— **LCM*** are logic elements with spool position monitoring used for directional control, flow control, piloting and as check valve. They are certified by TÜV.

Available sizes are ND 16, 25, 32, 40 and 50.

1 - IDENTIFICATION CODE FOR CARTRIDGE VALVES

Cartridge valve

Shutter type:
(area ratio A1 / A3):
QS = flow rate control (1:1,66)
QD = flow rate control with damping
nose (1:1,66)
PS = pressure control (1:1)

LC-/N/

LL = Low leakage version, with seal between C and B.
Not available for QS0.5 and LC16-PS*
Omit if not required.

Seals:
NBR seals for mineral oil

20 - for ND 16, 25, 32, 40 and 50
21 - for ND 63
(the overall and mounting dimensions remain unchanged from 20 to 29)

Nominal cracking pressure on section A1:
Verify the versions availability in the table below. Other cracking pressure values are available on request.
0.5 = 0,5 bar
1 = 1 bar
2 = 2 bar
4 = 4 bar

8 - FUNCTIONAL DIAGRAMS

8.1 - R cover for directional control and check valve function with external pilot X

Functional diagrams	Description
	<p>Piloting of the cartridge valve through the X port, available on the mounting surface or with pipe connection 1/4" BSP.</p> <p>For ND 40 and ND 50 sizes, the external piloting function can be realised by using control cover type D, with blanking plate code 1950751 (to be ordered separately).</p>

8.2 - D cover for directional control and check valve function

Functional diagrams	Description
	<p>Piloting of the cartridge valve by means of solenoid valve type DS3-TA (to be ordered separately - see catalogue 41 150)</p> <ul style="list-style-type: none"> - solenoid valve OFF = A ↔ B intercepted flow - solenoid valve ON = A ↔ B free flow

8.3 - DZ cover for directional control with possibility to pilot other cartridges in line

Functional diagrams	Description
	<p>The DZ cover enables the piloting of its cartridge valves and also of other valves connected to Z1 and Z2 pilot lines.</p> <p>The solenoid valve type DS3-S10 must be ordered separately (see catalogue 41 150).</p>

8.4 - DF1 cover for directional control and check function with double pilot line

Functional diagrams	Description
	<p>The DF1 cover gives the possibility of a double pilot line through X and Z1 ports.</p> <p>The solenoid valve type DS3-TA must be ordered separately (see catalogue 41 150).</p> <ul style="list-style-type: none"> - solenoid valve OFF = A ↔ B intercepted flow - solenoid valve ON = A → B free flow, B → A intercepted (if pilot line X is connected with B and if Z1 is connected with A).

8.5 - DF2 cover for directional control and check function with priority piloting from two external lines

Functional diagrams	Description
	<p>The cartridge valve can be simultaneously piloted from X and Z1 lines.</p> <p>The shuttle valve, integrated in the cover, enables the automatic selection of the pilot line which has the higher pressure (priority line).</p> <p>The solenoid valve type DS3-TA must be ordered separately (see catalogue 41 150).</p> <ul style="list-style-type: none"> - solenoid valve OFF = A ↔ B intercepted flow - solenoid valve ON = A ↔ B free flow

8.6 - Q cover for flow control function

Functional diagrams	Description
	<p>Flow control function by means of cover with stroke limiter.</p> <p>For a better flow control and to avoid the wear of the valve seat, this cover is normally used with a QD4 cartridge type.</p>

8.7 - DP* cover for pressure control function

Functional diagrams	Description
	<p>Pressure control function with a built-in relief valve.</p> <ul style="list-style-type: none"> - max. adjustment pressure DP4 = 140 bar - DP6 = 350 bar <p>The top blanking plate code 1950591 must be ordered separately.</p>
	<p>Pressure control function with electrical unloading by means of DS3-SA2 solenoid valve (to be ordered separately - see catalogue 41 150).</p> <ul style="list-style-type: none"> - solenoid valve OFF = unloading at minimum pressure - solenoid valve ON = pressure controlled by the built-in relief valve.
	<p>Pressure control function with electrical unloading and two step pressure by means of the solenoid valves DS3-S2 (to be ordered separately - see catalogue 41 150), MCI*-SAT/10 (for 16, 25 and 32 sizes - to be ordered separately) and MCD*-SAT (for 40, 50 and 63 sizes to be ordered separately - see catalogue 61 200)</p> <ul style="list-style-type: none"> - solenoid valve OFF = unloading at minimum pressure - solenoid valve ON side a = pressure controlled by the relief valve integrated in the cover - solenoid valve ON side b = pressure controlled by the relief valve (MCI* or MCD*)

	<p>Pressure control function with electrical control and three steps pressure by means of the solenoid valves DS3-S3 (to be ordered separately - see catalogue 41 150), MCI*-DT/10 (for 16 - 25 and 32 sizes - to be ordered separately) and MCD*-DT/51 (for 40 and 50 sizes - to be ordered separately - see catalogue 61 200)</p> <ul style="list-style-type: none"> - solenoid valve OFF = pressure controlled by the cover relief valve. - solenoid valve ON side a = pressure controlled by the relief valve on side b. - solenoid valve ON side b = pressure controlled by the relief valve on side a.
--	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

8.8 - DPE* cover for pressure control function

Functional diagram	Description
	<p>Pressure control function by means of PRED3 proportional valve (to be ordered separately see catalogue 81 210).</p> <ul style="list-style-type: none"> - max. adjustment pressure DPE4 = 140 bar - DPE6 = 350 bar - proportional valve OFF = unloading at minimum pressure - proportional valve ON = proportional control of pressure

9 - TIGHTENING TORQUES FOR COVERS

Tightening torques in the chart below were calculated for screws with class A10.9, applying a total friction coefficient $\mu = 0,15$.

We recommend these tightening torques for screws suitable for the specified friction coefficient and for tightenings done with manual torque wrench.

Size	Screws type (no. 4 pcs.)	Tightening torque ($\pm 10\%$) [Nm]
16	M8	32
25	M12	110
32	M16	270
40	M20	530
50	M20	530
63	M30	1900

NOTE: Screws characteristics for each type of cover are described in paragraph 10.

11 - MONITORED LOGIC ELEMENTS

Monitored logic elements are made of a cartridge valve with directional function and of a cover with built-in inductive proximity sensor. The PNP type sensor with closed contact states the condition of A↔B intercepted flow.

The LCM* monitored logic elements were tested on a voluntary basis by TÜV and found to comply with the applicable requirements of the following standards:

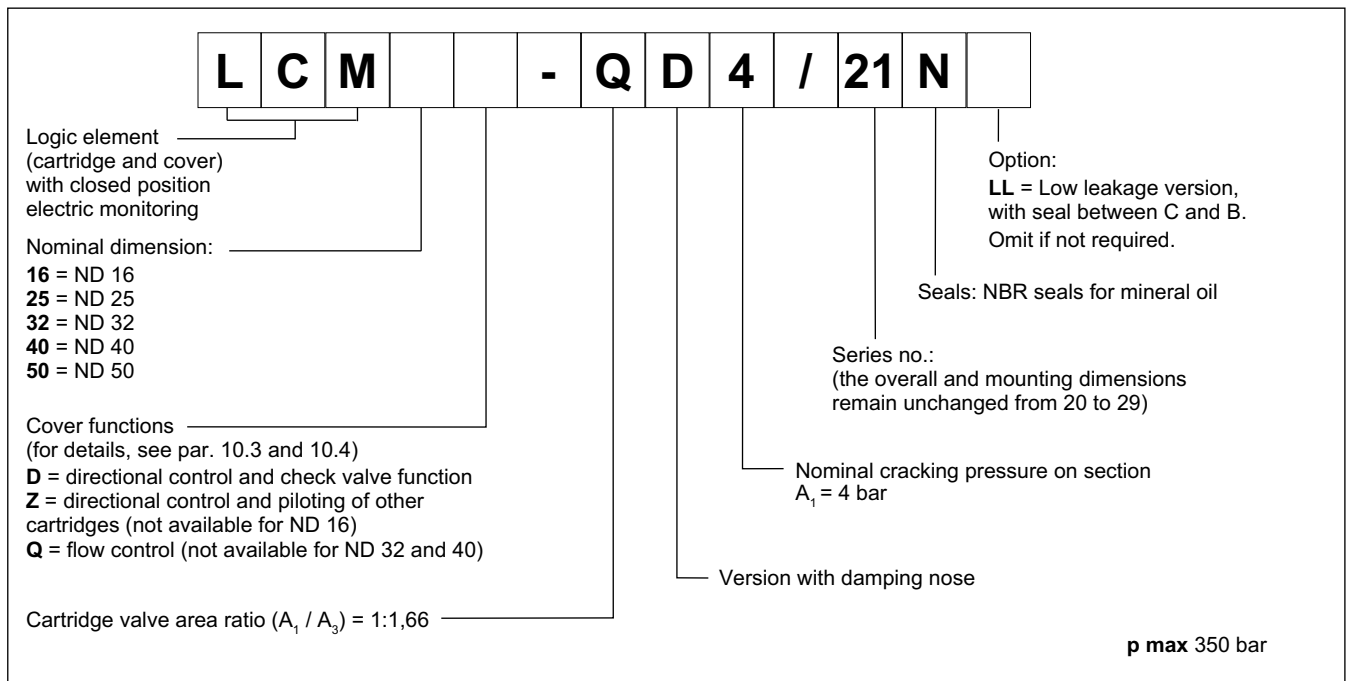

- UNI EN ISO 4413:2012 - Hydraulic fluid power – General rules and safety requirements for systems and their components
- UNI EN 12622:2014 - Safety of machine tools - Hydraulic press brakes
- UNI EN 693:2001+A2:2011 - Machine tools – Safety – Hydraulic presses
- UNI EN 201:2010 - Plastics and rubber machines - Injection moulding machines - Safety requirements
- UNI EN 422:2009 - Rubber and Plastic machines – Safety requirements

Certificate: TÜV IT 14 MAC 0042

WARNING! These valves must be installed and commissioned by qualified personnel only. Before starting any installation, commissioning or maintenance is mandatory read the *manual of use and maintenance*, delivered together with the valve.

11.1 - Identification code of monitored logic elements

11.8 - Technical characteristics of proximity sensor and connector

PROXIMITY SENSOR PNP TYPE

Rated voltage	V DC	24
Power supply voltage range	V DC	10 ÷ 30
Absorbed current	mA	200
Output	normally open contact	
Electric protection	polarity inversion short circuit overvoltage	
Electric connection	with connector	
Max operating pressure	bar	350
Operating temperature range	°C	-25 / +80
Class of protection according to IEC EN 60529 standards (atmospheric agents)		IP68
Spool position LED		NO

CONNECTION SCHEME

valve closed = closed contact (A↔B intercepted flow)
valve open = open contact (A↔B free flow)

SIGNAL STATUS

According to the safety standards rules, the position signal must change its status before the effective valve opening.

ELECTRIC CONNECTOR (to be ordered separately)

code: ECM3S/M12L/10/L5

Connector: pre-wired connector M12 - IP68

cable: with 3 conductors 0.34 mm² - length 5 mt

cable material: polyurethane resin (oil resistant)

GREEN LED: indicates power supply voltage to the connector.

If the LED is off, the connector is not powered.

YELLOW LED: show the valve status.

- valve at initial position yellow led ON - green led ON
- switched valve yellow led OFF - green led ON

EC

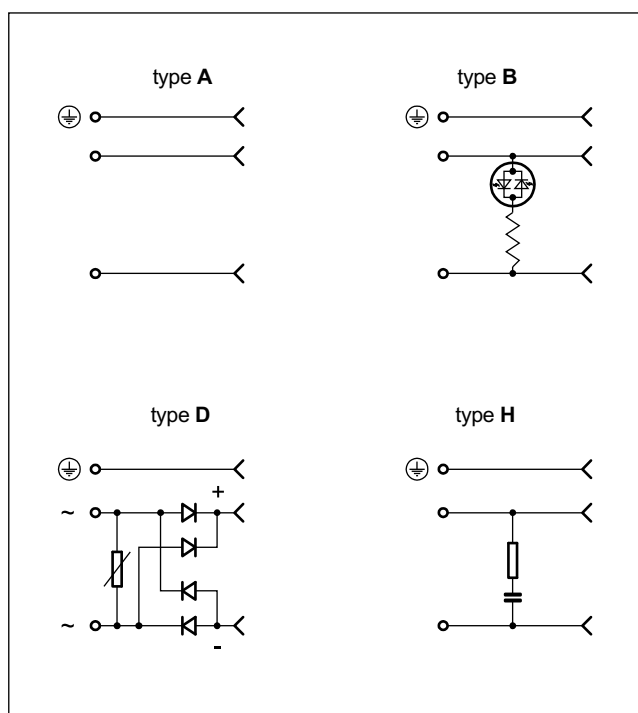

ELECTRIC CONNECTORS

SERIES 10

EN 175301-803
(ex DIN 43650 / ISO 4400)

type A

ELECTRICAL DIAGRAM

DESCRIPTION

- The EC connectors, are according to EN 175301-803 form "A" and are used for the electrical connection of solenoid vaves.
- When they are correctly installed and coupled they provide protection according to IEC EN 60529 standards, class of protection IP65/67.
- The class of insulation is in compliance with IEC 60664-1 2007 specifications, with operating voltage up to 250 V, overvoltage category II, operating degree 3.
- The wire terminal block is removable from the external housing for simplifying the wire connection to the clamps, and it allow the electrical contacts to be turned through 90° (except version H) if required.
- Four different types with specific functions are available:
 - type **A**, connector two poles + ground
 - type **B***, with LED
(available voltages: 10 ÷ 50 and 70 ÷ 250V)
 - type **D**, with bridge rectifier
 - type **H**, with RC damping circuit
- Type A is also available in gray colour, to differentiate the solenoids mounted on the side "a" or "b".
- They are supplied with M3 fixing screw and NBR gasket.

TECHNICAL CHARACTERISTICS

		type A	type B*	type D	type H
Voltage supply	V DC/AC	up to 230	10 ÷ 50 / 70 ÷ 250	up to 230	up to 230
Number of poles		2 + ground			
Current on connections: nominal maximum	A	10 16			
Contact resistance	mΩ	≤ 4			
Maximum conductor size	mm	1,5			
Cable exit		Pg9 / Pg11 unified			
Electromagnetic compatibility (EMC)		according to 2014/30/EU			
Low voltage		according to 2014/35/EU			
Protection degree		IP 65/67 - IEC 60529			
Insulation class		class C (IEC 60664-1:2007-04)			
Operating temperature	°C	-40 / +90			

1 - IDENTIFICATION CODE

Electric connector
EN 175301-803 (ex DIN 43650 / ISO 4400)

Series No.
(the overall and mounting dimensions remain unchanged from 10 to 19)

Connector type

Colour:

A = two poles + ground

Type A

B1 = two poles + ground with led which burns when the solenoid is energized
power supply voltage $10 \div 50$ V AC/DC

B = black (**standard**)

A = grey

B2 = two poles + ground with led which burns when the solenoid is energized
power supply voltage $70 \div 250$ V AC/DC

Type B

N = transparent

D = two poles + ground with Graetz bridge rectifier:
for alternating current power supply source with direct current coils with
current consumption max 1 ampere.

Types D, H

B = black

H = two poles + ground with RC damping circuit, to avoid voltage peaks as
circuit opening, suitable for alternating and direct current coils.

NOTE: For the connectors type A - D - H it is not necessary to specify the operating voltage, as the power supply voltage is up to 230 V.

2 - OVERALL AND MOUNTING DIMENSIONS

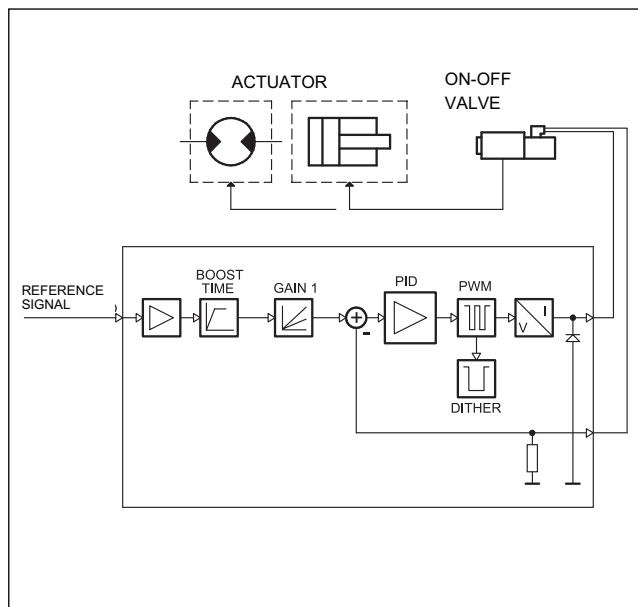

ECL

POWER SAVING DEVICE FOR ON-OFF SOLENOID VALVES SERIES 20

PLUG VERSION

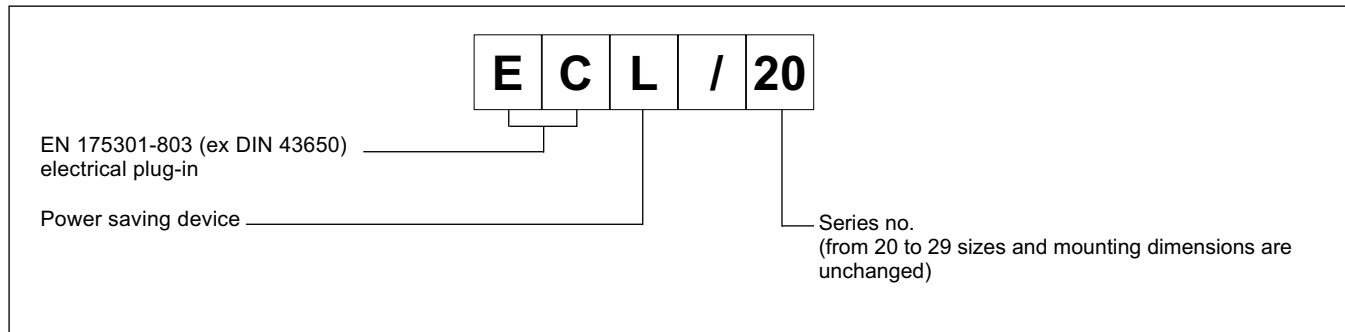

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	8 ÷ 30 Ripple included
Max current	A	2,60
Absorbed current with valve not switched	mA	40
Current absorbed by the switching command (at 30 VDC)	mA	10 max
Full power feeding time	ms	50
Holding current regulating range	% I MAX	50 ÷ 100
Holding current default	% I MAX	40
Connector type		EN 175301-803 (ex DIN 43650)
Electromagnetic compatibility (EMC) - emissions IEC EN 61000-6-4 - immunity IEC EN 61000-6-2		according to 2014/30/EU standards (see paragraph 5 - NOTE)
Protection to atmospheric agents		IP 65/67
Operating temperature range	°C	-20 / +70
Mass	kg	0,10

1 - IDENTIFICATION CODE

The ECL connector is a digital amplifier controlling open loop on-off valves directly from PLC.

The unit supplies a set current independently from temperature variations or load impedance.

Setting is possible by buttons and display inside the case, or with a PC by RS232 with the software EDC-PC/10, (see paragraph 6.2).

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The connector requires a power supply of 24V DC (pin 1 and 2). The power supply voltage must be rectified and filtered, and it has not to be higher than 6A.

NOTE: The value of the power supply voltage on the connector must be higher than the rated working voltage of the solenoid to be controlled.

The power required by the card depends on the power supply voltage and on the maximum value of the supplied current.

2.2 - Electrical protection

The connector is protected against overvoltage and polarity inversion. On the output a protection against any short circuit is foreseen.

2.3 - Functioning

This device operates by feeding the solenoid valve at the max current value for a time sufficient to guarantee the complete valve energizing (50 ms). The current is therefore automatically reduced at holding.

default values: $I_{MAN} = 1A$
threshold : 200 mV
freq: 200 Hz

I_{MAX} = max current
 I_{MAN} = holding current

3 - SIGNALS

3.1 - POWER ON (Power supply)

Displays indicate the connector is ON and with +24 V DC.

4 - ADJUSTMENTS

There are two way adjustments: variables view and parameters editing. The first one enables the real time monitoring of the control values, for both required and read current, on both channels. The second modality enables the operating parameters view and editing.

4.1 - Variables view

The card is switched on at the variables view modality, and it shows the first variable value, that is the C1 parameter, current solenoid.

- C1: current supplied from ECL to the solenoid read on real time
- U1: Threshold reference signal.
9.9 = Threshold active

4.2 - Parameters editing

To access the parameter editing, press the key (2) for at least 3 seconds.

The first parameter displayed is G1. To modify it, press the key (1) for two seconds, until the display starts blinking. Use the key (2) to increase the value and the key (1) to decrease it. To save the new value, press both the keys. The display stops blinking.

Pressing the key (2) again is possible to scroll all the parameters. To modify the other parameters, repeat the steps above-mentioned for the G1 parameter.

The variables that can be selected are:

- G1:** "I Max" current, expressed in milliAmpere.
It sets the maximum current to the solenoid, when the reference signal is at the maximum value. It is used to limit the maximum value of the supplied current.
Default value of $I_{max} = 1000 \text{ mA}$
Range = 50 ÷ 100% of I_{max}
- Fr:** PWM frequency, in Hertz.
It sets the PWM frequency, which is the pulsating frequency of the solenoid current.
Default value = 200
Range = 100 ÷ 500 Hz

DISPLAY VIEW EXAMPLE:

REFERENCE (V)	VARIABLE U1 (V)	VARIABLE C1
0	00	40. (mA)
10	10.	2.6 (A)

5 - INSTALLATION

The connector type electronic unit is suitable for direct assembly on the solenoid of the relative on-off valve. With the 4-core connector for supply and for the reference signal.

NOTE: To observe EMC requirements it's important that the control unit electrical connection is in compliance with the wiring diagram of chapter 7.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources as power wires, electrical motors, inverters and electrical switches.

In environments where there are critical electromagnetic interferences, a complete protection of the connection wires can be requested.

6 - START UP, CONTROL SETTINGS AND SIGNAL

6.1 - Set up

Settings can be changed by either acting on the (1) and (2) keys located on the card front panel, or using the EDC-PC software kit.

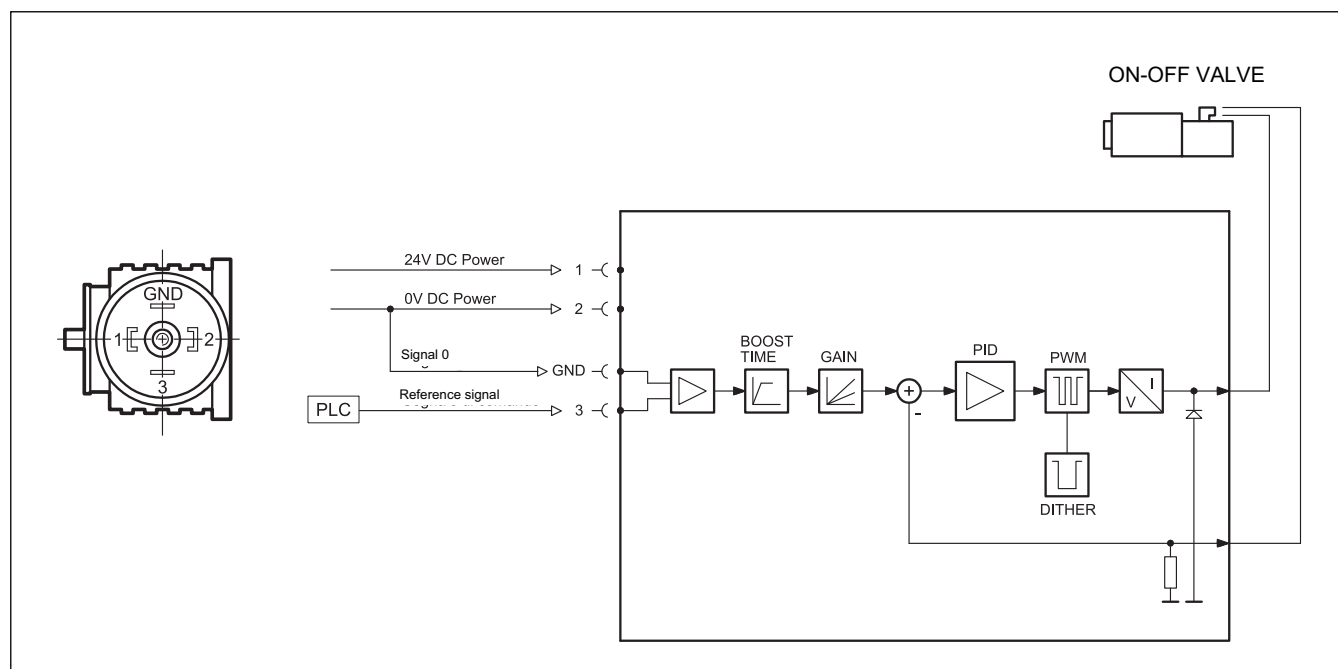

6.2 - EDC-PC/10 Software (code 3898301001)

The relevant hardware and software kit (to be ordered separately) allows to read the values and to set the connector easily.

The software communicates, through a flat cable, to the ECL; the connector is behind the protecting gate.

The EDC-PC/10 software compatibility is guaranteed only on Windows XP® operating systems.

ECF

AMPLIFIED CONNECTOR FOR FAST COMMAND (RAPID) ON-OFF VALVES SERIES 20

OPERATING PRINCIPLE

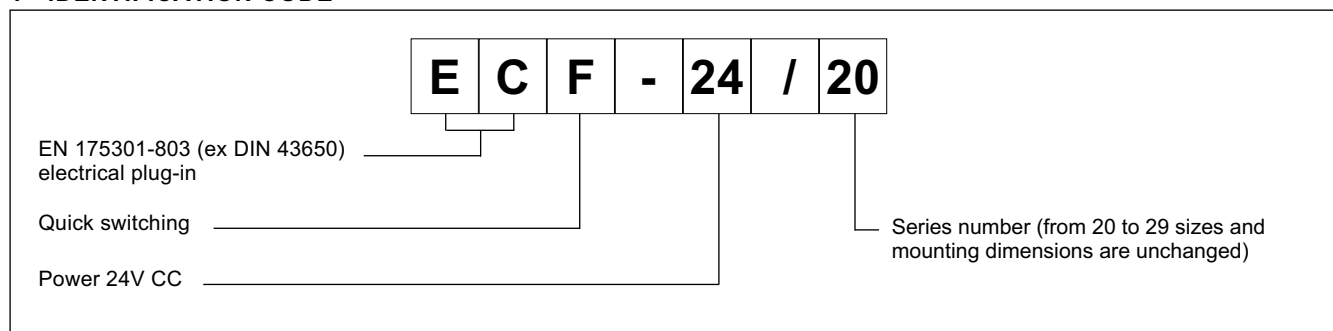

PLUG VERSION

TECHNICAL CHARACTERISTICS

Power supply	V DC	24 ÷ 30 ripple included
Required power	W	min 50 - max 150 (see paragraph 2.1)
Output current	mA	max 3000 (see paragraph 1)
Power supply electrical protections		– overload over 33V – polarity inversion
Output electrical protections		Short-circuit
Analogue electrical protections		up to 30 V DC
Reference signal	V DC	24
Connector type		EN 175301-803 (ex DIN 43650)
Electromagnetic compatibility (EMC) - emissions IEC EN 61000-6-4 - immunity IEC EN 61000-6-2		according to 2014/30/EU standards (see paragraph 5 - NOTE 1)
Protection to atmospheric agents		IP 65/67
Operating temperature range	°C	-20 / +70
Mass	kg	0,10

1 - IDENTIFICATION CODE

The ECF connector is a digital amplifier controlling open loop on-off valves.

The unit supplies a set current independently from temperature variations or load impedance.

A quick solenoid energizing is possible in two different ways, according to the used coil type (12V o 24V)

Setting is possible by buttons and display inside the case, or with a PC by RS232 with the software EDC-PC, (see paragraph 6.2).

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The connector requires a power supply of 24V DC (terminals 1 and 2). The power supply voltage must be rectified and filtered, and it has not to be higher than 6A.

NOTE: The value of the power supply voltage on the connector must be higher than the rated working voltage of the solenoid to be controlled.

The power required by the card depends on the power supply voltage and on the maximum value of the supplied current.

2.2 - Electrical protection

The connector is protected against overvoltage and polarity inversion. On the output a protection against any short circuit is foreseen.

2.3 - Operation with 12V coils

Using 12V coils, the ECF device allows a quick solenoid energizing (G1), overboosting the solenoid just for the time needed to energize it (PI). Then, the voltage will be lowered at the rated value.

The de-energizing is fast, and is 3 ms.

At overboosting time, the power-supply unit must be able to provide a 6 A intensity current strength.

2.4 - Operation with 24V coils

24V coils do not require overboosting. A quick de-energizing is guaranteed.

3 - SIGNALS

3.1 - POWER ON (Power supply)

Displays indicate the connector is ON and with +24 V DC.

4 - ADJUSTMENTS

There are two adjustment modes: variables view and parameters set. The first one enables the real time monitoring of the control values, for both required and read current, on both channels. The second mode enables the operating parameters view and editing.

4.1 - Variables view

The card is switched-on at the variables view mode, and it shows the first variable value, that is the C1 parameter, current solenoid.

C1: current supplied from ECF to the solenoid read on real time

4.2 - Parameters editing

To access the parameter editing, press the key (2) for at least 3 seconds.

The first parameter displayed is G1. To modify it, press the key (1) for two seconds, until the display starts blinking. Use the key (2) to increase the value and the key (1) to decrease it. To save the new value, press both the keys. The display stops blinking.

Pressing the key (2) again is possible to scroll all the parameters. To modify some the parameter, repeat the steps above-mentioned for the G1 parameter.

DISPLAY VIEW EXAMPLE:

REFERENCE	VARIABLES
(V)	(Ampere)
0	0.0 (mA)
24	2.6 (A)

The variables that can be selected are:

- G1:** "I Max" current, expressed in Ampere.
It sets the maximum current to the solenoid, when the reference signal is at the maximum value +24 V. It is used to limit the maximum value of the supplied current.
Default value = 2000 mA
Range = 0 ÷ 3000 mA
- PI:** Overboosting time.
It determines the regulation of solenoid overboosting time and it is measured by milliseconds.
Default value = 40 ms
Range = 0 ÷ 500 ms
- Fr:** PWM frequency, in Hertz.
It sets the PWM frequency, which is the pulsating frequency of the solenoid current.
Default value = 200
Range = 100 ÷ 500Hz

5 - INSTALLATION

The connector type electronic unit is suitable for direct assembly on the solenoid of the relative on-off valve. With the 4-core connector for supply and for the reference signal.

NOTE: To observe EMC requirements it's important that the control unit electrical connection is in compliance with the wiring diagram of chapter 7.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources as power wires, electrical motors, inverters and electrical switches.

In environments where there are critical electromagnetic interferences, a complete protection of the connection wires can be requested.

6 - START UP, CONTROL SETTINGS AND SIGNAL

6.1 - Set up

Settings can be changed by either acting on the (1) and (2) keys located on the card front panel, or using the EDC-PC software kit.

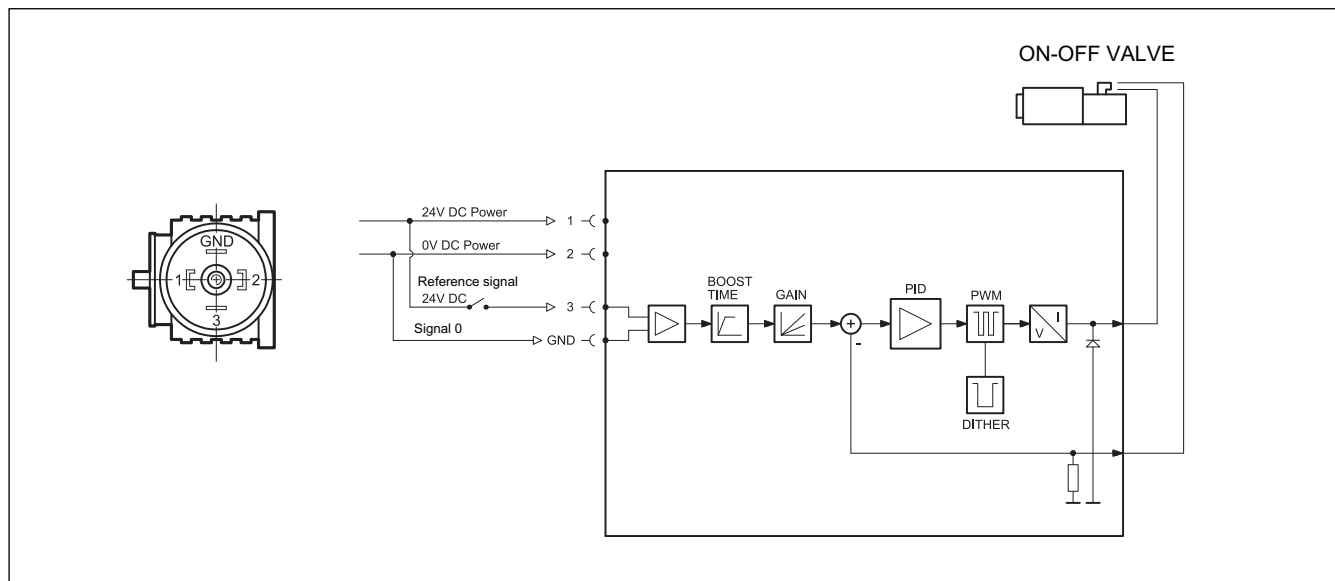

6.2 - EDC-PC Software (code 3898301001)

The relevant hardware and software kit (to be ordered separately) allows to read the values and to set the connector easily.

The software communicates, through a flat cable, to the ECF; the connector is behind the protecting gate.

The EDC-PC software compatibility is guaranteed only on Windows XP® operating systems.

(CETOP 4.2-4-08-320)

dimensions in mm

Technical drawing of the CETOP 4.2-4-08-320 valve, showing front, top, and side views with dimensions in mm.

Front View (Top): Shows two main ports, A and B, with a diameter of $\phi 13$. The overall width is 100 mm, and the height is 48 mm. The distance between the centers of ports A and B is 76 mm. The distance from the left edge to the center of port A is 75 mm, and from the center of port B to the right edge is 54 mm.

Side View (Left): Shows the side profile with a width of 82 mm and a height of 43 mm. The center of the port is located 12 mm from the top and 12 mm from the bottom.

Top View (Middle): Shows the top of the valve with a width of 205 mm and a height of 140 mm. The distance between the centers of ports A and B is 76 mm. The distance from the left edge to the center of port A is 75 mm, and from the center of port B to the right edge is 54 mm. The distance between the centers of ports L and T is 181 mm. The distance between the centers of ports X and Y is 116 mm. The distance between the centers of ports G and P is 25 mm. The distance between the centers of ports L and X is 65 mm, and between ports Y and P is 97 mm.

Side View (Right): Shows the side profile with a width of 82 mm and a height of 43 mm. The center of the port is located 12 mm from the top and 12 mm from the bottom.

Bottom View (Bottom): Shows the bottom of the valve with a width of 205 mm and a height of 48 mm. The distance between the centers of ports T and P is 76 mm. The distance from the left edge to the center of port T is 54 mm, and from the center of port P to the right edge is 75 mm.

This series of modular subplates has been designed to make hydraulic circuits and can be used directly on power packs or on any other section of the machine.

The subplates are assembled by means of 4 tie-rods with seal seats incorporated in the subplate.

The above assembly achieves compact units (including pressure and discharge manifolds): one face per subplate is used for connection to services and the other to mount ISO 4401-03 valves.

Complex circuits can also be set up using modular valves.

The recommended mounting configuration for **P2*** subplates on hydraulic power packs is with the main axis positioned vertically to obtain the bundle of pipes to utilities in two vertical rows; however assembly is not restricted to this configuration.

10 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

11 - PRESSURE LIMIT ON P

Depending on the tie-rod type and on the number of assembled subplates it is necessary to pay attention to the maximum pressure on P in order to avoid extruding the O-Rings.

- The P2A*L series of manifolds is designed for connection in parallel of two or more ISO 4401-03 valves.
- The monocast design enables the simple creation of circuits without the use of pipes and fittings, thereby reducing overall dimensions to a minimum.
- All sections feature a common pressure and discharge fitting on both ends of the subplate.
- Maximum flow rate can be increased up to double the output if the sub-plates are powered at both ends.
- Each section is fitted with work ports A and B positioned on the side of the sub-plate.
- Subplates are available in aluminium.

(values obtained with viscosity of 36 cSt at 50°C)

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

P4D-RQM5

MODULAR SUBPLATE WITH PRESSURE RELIEF VALVE AND UNLOADING SOLENOID VALVE

SERIES 30

p max **350** bar
Q max **250** l/min

OPERATING PRINCIPLE

PERFORMANCES (measured with mineral oil of viscosity 36cSt at 50°C)

Maximum operating pressure	bar	350
Maximum flow on P (3/4") and T (1")	l/min	250
Maximum flow on P ₁ and T ₁ (1/2")		120
Minimum flow		10
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	10

NOTE: for the solenoid valve DS3 characteristics see catalogue 41 150.

2 - CHARACTERISTIC CURVES

(values obtained with viscosity of 36 cSt at 50°C)

NOTE: The maximum flow deliverable to P1 port is 120 l/min (for P2D and P4D modular subplates).
The maximum flow through the pressure relief valve (additional 3/4" BSP P port) is 250 l/min.

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

8	Unloading solenoid valve

P4D-RQM5

SERIES 30

5 - ADJUSTMENT KNOB

The P4D-RQM5 valves can be equipped with a SICBLOC adjustment knob.

To operate it, push and rotate at the same time.

To request this option, add: **/M** (see paragraph 1).

6 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors.

Connectors type EN 175301-803 (ex DIN 43650) for K1 connections can be ordered separately. See catalogue 49 000.

7 - MANUAL OVERRIDE, BOOT PROTECTED: **CM**

Whenever the solenoid valve installation may involve exposure to atmospheric agents or utilization in tropical climates, use of the manual override, boot protected, is recommended.

Add the suffix **CM** to request this device (see paragraph 1).

For overall dimensions see catalogue 41 150.

PRM2

DIRECT OPERATED PRESSURE RELIEF VALVE

SERIES 10

MODULAR VERSION
ISO 4401-02

p max 320 bar

Q max 20 l/min

MOUNTING SURFACE

ISO 4401-02-01-0-05
(CETOP 4.2-4-R02-320)

OPERATING PRINCIPLE

- The PRM2 valve is a direct operated pressure relief valve made as a modular version with mounting surface according to the ISO 4401 standards.
- It can be assembled with all ISO 4401-02 modular valves without use of pipes, using suitable tie-rods or bolts.
- It is available in versions for single relief on P or B with discharge in T, or two independent relief on A and B with discharge in T, all with three different pressure adjustment ranges.
- This valve is normally used as a hydraulic circuit pressure limiting device or as a limiting device of the pressure peaks generated during the movement of hydraulic actuators.
- It is supplied with a countersunk hex adjustment screw and locking nut.

PERFORMANCES

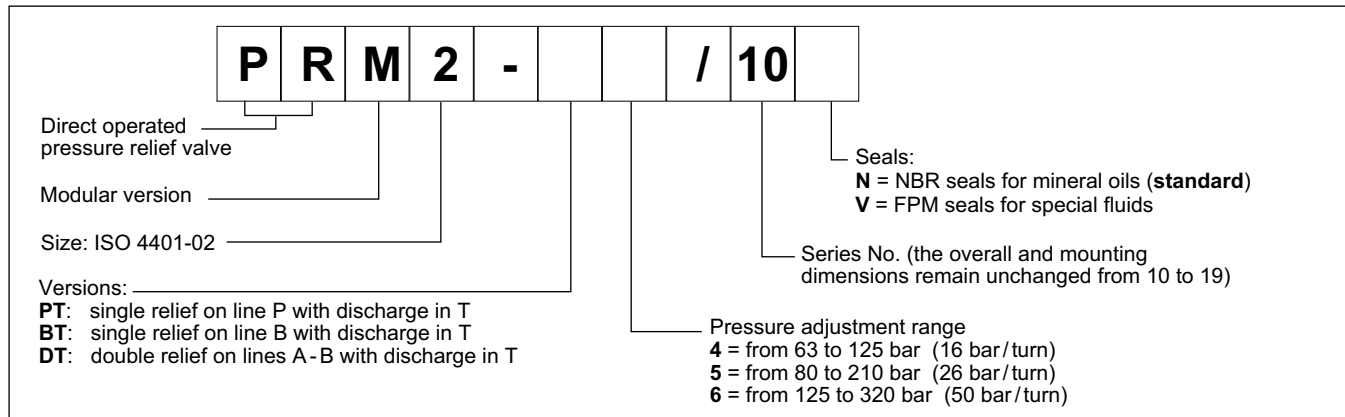

(measured with mineral oil of viscosity 36cSt at 50°C)

Maximum operating pressure	bar	320
Minimum controlled pressure	see Δp diagram.	
Maximum flow rate	l/min	20

MCD

DIRECT OPERATED PRESSURE RELIEF VALVE

SERIES 51

MODULAR VERSION ISO 4401-03

p max **350** bar
Q max (see table of performances)

MOUNTING INTERFACE

OPERATING PRINCIPLE

- The MCD valve is a direct operated pressure relief valve made as a modular version with mounting surface according to the ISO 4401 standards.
- It can be assembled with all ISO 4401-03 modular valves without use of pipes, using suitable tie-rods or bolts.
- It is available in versions for single adjustment on one control line, or dual on two control lines and with four different pressure adjustment ranges.
- This valve is normally used as a hydraulic circuit pressure limiting device or as a limiting device of the pressure peaks generated during the movement of hydraulic actuators.
- It is normally supplied with a hexagonal head adjustment screw, locking nut and limitation of the maximum adjustment travel.

CONFIGURATIONS (see hydraulic symbols table)

- “SP”: controls the pressure on line P with discharge in T
- “SAT”: controls the pressure on line A with discharge in T
- “SBT”: controls the pressure on line B with discharge in T

- “DT”: controls the pressure on lines A-B with discharge in T

p max **350** bar

Q max (see table of performances)

MOUNTING INTERFACE

ISO 4401-03-02-0-05
CETOP 4.2-4-03-350

OPERATING PRINCIPLE

- The valve PBM3 is a direct operated three-way pressure regulator, developed as a modular version with mounting surface according to the ISO 4401 standards.
- Its aim is to adjust the output backpressure coming from the actuator, so as to allow the input free flow.
- It is normally used on upright mounted cylinders where the counterbalance of a load weighting on the rod of the cylinder itself is needed.

PERFORMANCES (measured with mineral oil of viscosity 36cSt at 50°C)

Maximum operating pressure	bar	350
Check valve cracking pressure	bar	3,5

PZM2

PRESSURE REDUCING VALVE DIRECT OPERATED WITH VARIABLE ADJUSTMENT SERIES 21

MODULAR VERSION ISO 4401-02

p max **320** bar

Q max **20** l/min

MOUNTING SURFACE

ISO 4401-02-01-0-05
(CETOP 4.2-4-R02-320)

OPERATING PRINCIPLE

- The PZM2 valve is a three-ports pressure reducing valve, direct operated, spool type, made as modular version, with ports according to the ISO 4401 standards and can be assembled quickly, without use of pipes, under the ISO 4401-02 solenoid valves.
- The PZM2 is a normally open valve. The hydraulic fluid flows freely in the pressure line. When the inlet pressure in P exceeds the value set by the spring, the valve opens the outlet port to the tank line until the outlet pressure has been reduced to the set value.
- The valve construction provides good adjustment sensitivity with reduced drainage flow. The drainage to the tank line is internal.
- The three-ports design provides protection of the secondary circuit from pressure surges since it allows a reverse flow from the actuator to the tank line.

PERFORMANCES

(measured with mineral oil of viscosity 36cSt at 50°C)

CONFIGURATIONS (see hydraulic symbols at par.1)

- MZD*: pressure reduction on line P, drainage connected with line T.
- MZD*/A and MZD*/RA: pressure reduction on line A toward the actuator and maximum pressure in line B, drainage connected with line T.
- MZD*/B and MZD*/RB: pressure reduction on line B toward the actuator and maximum pressure in line A, drainage connected with line T.

PERFORMANCES (measured with mineral oil of viscosity 36cSt at 50°C)

Maximum operating pressure	bar	350
Maximum pressure on port T		10
Maximum flow rate in the controlled lines	l/min	50
Maximum flow rate in the free lines		75
Drainage flow rate		≤ 0,08
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	1,4

OPERATING PRINCIPLE

- The MZD valve is a three-way spool type direct operated pressure reducing valve. It is normally open in the rest position and the hydraulic fluid passes freely from the P1 line to the P line.

The spool is subjected to the line P pressure on one side, and on the other side by the adjustment spring. When the pressure in line P exceeds the value set by the spring, the valve closes until the pressure in P (reduced) equals the calibrated value.

- The valve construction provides good adjustment sensitivity with reduced drainage flow. The drainage is connected to line T inside the valve.
- The three-way design provides protection of the secondary circuit from pressure surges since it allows a reverse flow from the actuator to the T discharge line.

— It is made as a modular version with ports according to the ISO 4401 standards and can be assembled quickly, without use of pipes, under the ISO 4401-03 solenoid valves.

— The variable adjustment version is supplied with a hexagonal head adjustment screw. Upon request, it can be equipped with a SICBLOC adjustment knob.

— The fixed adjustment version is available set at value 20, 25 or 30 bar pressure.

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

Z4M

PILOT OPERATED PRESSURE REDUCING VALVE

SERIES 50

MODULAR VERSION ISO 4401-05

p max **350** bar
Q max (see table of performances)

MOUNTING INTERFACE

CONFIGURATIONS

(see hydraulic symbols table)

- Z4M*-I: pressure reduction on line P - drainage connected to line T_B.
- Z4M*-A: pressure reduction on line A and full pressure on line B.
- Z4M*-B: pressure reduction on line B and full pressure on line A.

PERFORMANCES

(measured with mineral oil of viscosity 36cSt at 50°C)

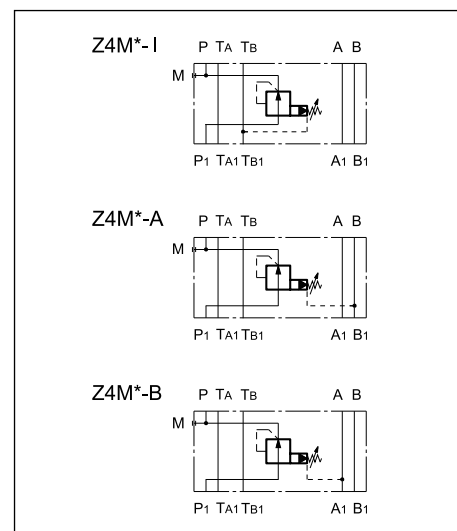

Maximum operating pressure: Z4M*-I Z4M*-A, Z4M*-B	bar	350 210
Maximum flow rate in the controlled line P	l/min	80
Maximum flow rate in the free lines		100
Drain flow rate		< 0,7
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Recommended effective viscosity	cSt	25
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Mass	kg	2,7

OPERATING PRINCIPLE

- The Z4M valve is a pilot operated pressure reducing valve shaped as modular version with mounting surface according to ISO 4401 standards.
- It reduces pressure on secondary circuit branches, assuring stability of the controlled pressure and even changing the flow that passes through the valve.
- It can be assembled quickly under ISO 4401-05 directional solenoid valves without the use of pipes.
- It is supplied with a hex socket adjustment screw, locking nut and a travel limiting device for maximum adjustment.
- It is available in four different pressure adjustment ranges, up to 320 bar.

HYDRAULIC SYMBOLS

1 - IDENTIFICATION CODE

PZM7

PRESSURE REDUCING VALVE

SERIES 10

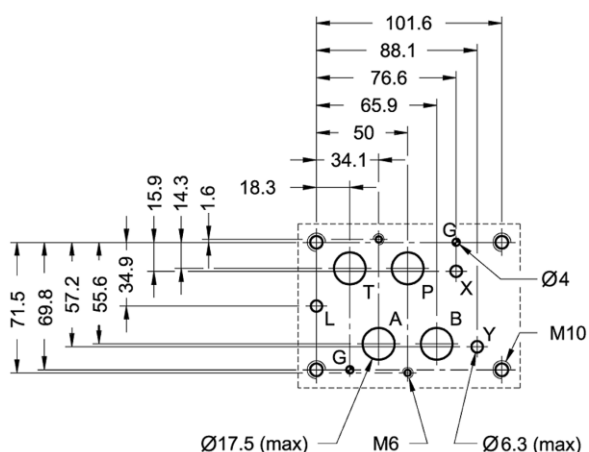

MODULAR VERSION ISO 4401-07

p max 350 bar
Q max 250 l/min

MOUNTING INTERFACE

ISO 4401-07-07-0-05
(CETOP 4.2-4-07)

OPERATING PRINCIPLE

- The PZM7 valve is made as a modular valve and has a mounting surface according to the ISO 4401-07 standards.
- It is a two-stage type and is used to assure stability of the controlled pressure, even changing the flow that travels through the valve.
- The PZM7 valve can be assembled quickly under DSP7 directional valves (see catalogue 41 420), without use of pipes, using suitable tie-rods or bolts, forming compact modular groups.
- It is normally supplied with an adjustment screw.

CONFIGURATIONS (see hydraulic symbols table)

- Configuration "PZM7-P": pressure reduction on line P - external drainage
- Configuration "PZM7-PA": pressure reduction on line A and valve on line P

PERFORMANCES (measured with mineral oil of viscosity 36cSt at 50°C)

4 - OVERALL AND MOUNTING DIMENSIONS

MSD

DIRECT OPERATED SEQUENCE VALVE

SERIES 50

MODULAR VERSION ISO 4401-03

p max **350** bar
Q max (see table of performances)

MOUNTING INTERFACE

ISO 4401-03-02-0-05
(CETOP 4.2-4-03-350)

OPERATING PRINCIPLE

— The MSD valve is a direct operated sequence valve of the spool type and is used to control two or more actuators in succession.

At rest position, it is normally closed and the spool is subject to pressure in line P1 on one side and to the adjustment screw on the other side. When the pressure in line P1 reaches the set value of the screw, the valve opens and allows passage of the fluid in the pressure line of the main circuit.

The valve stays open until the pressure in the circuit drops below the calibrated value set by the spring.

— It is made as a modular version with ports according to the ISO 4401 standards and can be assembled quickly without the use of pipes under the ISO 4401-03 directional solenoid valves.

— It is normally supplied with a hexagonal head adjustment screw. Upon request, it can be equipped with a SICBLOC adjustment knob with micrometric indication and automatic locking.

PERFORMANCES (measured with mineral oil of viscosity 36cSt at 50°C)

SD4M

DIRECT OPERATED SEQUENCE VALVE

SERIES 50

MODULAR VERSION ISO 4401-05

p max **320** bar

Q max (see table of performances)

MOUNTING INTERFACE

ISO 4401-05-05-0-05
(CETOP 4.2-4-R05-320)

The valve with internal pilot can be installed both on ISO 4401-05-04-0-05 or ISO 4401-05-05-0-05 type of mounting interface.

OPERATING PRINCIPLE

— The SD4M valve is a direct operated sequence valve of the spool type, made as a modular version with a mounting surface according to the ISO 4401 standards.

It is used to drive two or more actuators in succession. It is normally closed in rest position. On one side, the spool is subjected to the push of a small piston on which the line (P1) pressure acts and, on the other side, to the adjustment spring. When the pressure in line P1 reaches the calibrated value of the spring, the valve opens and allows passage of the fluid in the controlled line (P). The valve stays open until the pressure in the circuit drops below the set calibration value.

— Versions with internal or external pilot are available. The version with external pilot has the port "X" according to the ISO 4401-05-05-0-05 mounting interface.

— It can be assembled quickly without use of pipes under the ISO 4401-05 directional solenoid valves.

— It is normally supplied with a countersunk hex adjustment screw, locking nut and maximum adjustment travel limiting device.

PCM3

TWO AND THREE-WAY PRESSURE COMPENSATOR WITH FIXED OR VARIABLE ADJUSTMENT SERIES 10

MODULAR VERSION ISO 4401-03

p max **350** bar

Q max **40** l/min

MOUNTING INTERFACE

APPLICATION EXAMPLES

Two-way compensator with fixed adjustment, combined with a proportional valve type DSE3-A*

OPERATING PRINCIPLE

- The PCM3 valve is available as two or three-way pressure compensator, developed as modular version with mounting surface according to the ISO 4401.
- Its aim is to keep the pressure drop setting (characteristic Δp) between the line P and alternatively the lines A and B, at a constant level.
- It is used together with proportional directional valves, in order to control the flow rate independently of pressure variations.
- The selection of the pilot pressure on the lines A and B is carried out automatically via a shuttle check valve built into the compensator.
- The setting of the variable adjustment compensator (characteristic Δp) can be varied from 7 to 33 bar, via a socket hex adjustment screw or an adjustment knob.
- The fixed adjustment compensator is available with setting (characteristic Δp) of 4 and 8 bar.

PERFORMANCES (working with mineral oil of viscosity of 36 cSt at 50°C)

Max operating pressure	bar	350
Characteristic Δp : fixed adjustment variable adjustment	bar	4 - 8 7 ÷ 33

TWO- AND THREE-WAY PRESSURE COMPENSATOR WITH FIXED ADJUSTMENT

SERIES 10

MODULAR VERSION ISO 4401-08

p max **320** bar
Q max **300** l/min

MOUNTING INTERFACE

APPLICATION EXAMPLES

Two-way compensator with fixed adjustment and internal piloting, combined with a proportional valve type DSPE8-A*

PERFORMANCES (with mineral oil of viscosity of 36 cSt at 50°C)

Max operating pressure	bar	320
Characteristic Δp	bar	4 - 8
Max flow rate	l/min	300
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	13,5

OPERATING PRINCIPLE

- The PCM8 valve is a two or three-way pressure compensator, developed as a modular version with mounting surface according to ISO 4401-08.
- Its function is to keep the pressure drop setting (characteristic Δp) between the line P and alternatively the lines A and B at a constant level.
- It is normally used together with proportional directional valves, in order to control the flow rate independently of the pressure variations.
- The selection of the piloting pressure on the lines A and B is carried out automatically via a shuttle check valve built into the compensator.
- They are available with fixed adjustment (characteristic Δp) of 4 and 8 bar.

— The load sensing port can also be used as pressure gauge port or as remote pressure control.

Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	1,3

OPERATING PRINCIPLE

-
- This is a non-compensated flow control valve with a check valve for reverse free flow. It is made in modular version and with mounting surface according to the ISO 4401 standards; it can be assembled quickly without use of pipes, but using only suitable tie-rods or bolts, thus forming compact modular groups.
 - It is also available as a reversible valve (G* versions). The control takes place as meter-in or meter-out, depending on the way in which the valve is facing the OR subplate.
 - The built-in check valve allows the reverse free flow (cracking pressure of 0,5 bar).
 - It is supplied with a hexagon socket adjustment screw.

HYDRAULIC SYMBOLS

Flow restrictor valve with
check valve for reverse free flow

Configurations:
D: meter-out control in lines A and B (**standard**)
RD: meter-in control in lines A and B
SA: meter-out control in line A
SB: meter-out control in line B

Configurations G* - reversible valve (**NOTE 1**)
GD: control in lines A and B
GSA: control in line A
GSB: control in line A

Option: W7 surface treatment.
Omit if not required (**NOTE 2**)

Seals:
omit for mineral oils
V = viton for special fluids

Series No.
(the overall and mounting dimensions
remain unchanged from 50 to 59)

M = Adjustment with SICBLOC knob
(omit for adjustment with hexagonal head adjustment
screw)

NOTE 1: the valve body does not provide the OR seats. The mounting interface is achieved by interposition of an OR subplate. The control of flow (meter-in or meter-out) is depending on the way of assembly the valve on the subplate.

NOTE 2: Upon request we can supply these valves completely with zinc-nickel surface treatment on the body. Add the suffix **/W7** at the end of the identification code.

2 - CHARACTERISTIC CURVES

(values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

PILOT OPERATED CHECK VALVE SERIES 10

MODULAR VERSION ISO 4401-02

p max 320 bar
Q max 30 l/min

MOUNTING SURFACE

OPERATING PRINCIPLE

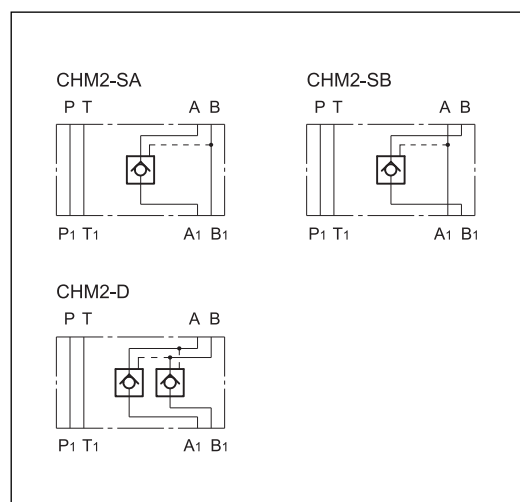

- The CHM2 valve is a hydraulically released check valve with spring closing and with cone on edge seals; the mounting surface is according to the ISO 4401 standards.
- Its use allows:
 - prevention of flow in one direction;
 - flow in the same direction, if opened by a pilot pressure;
 - free flow in the other direction.
- The CHM2 valves are always mounted downstream of the DL2 type directional solenoid valves (see cat. 41 100) and can be assembled with all other ISO 4401-02) valves.

MOUNTING INTERFACE

ISO 4401-03-02-0-05
(CETOP 4.2-4-03-350)

OPERATING PRINCIPLE

- The MVR-RS/P valve is a check valve that incorporates also the function of flow restriction.
- It is made as a modular version with mounting surface according to the ISO 4401-03 standards.
- It can be quickly assembled under the ISO 4401-03 directional solenoid valves and modular valves, without use of pipes and using suitable tie-rods or bolts.
- It is used when it is necessary to control the flow in a direction and to avoid backflows or the self-emptying of the lines in the opposite direction.
- Control of the flow is obtained with a socket hex screw with locking nut.

OPERATING PRINCIPLE

- The RPC1*/M valve is a flow control valve with pressure and temperature compensation, made as a modular version with mounting surface according to the ISO 4401 standards.
- It can be assembled quickly under the ISO 4401-03 directional solenoid valves and allows easy execution of hydraulic circuits where control of the speed of the actuators is required.
- It is available in six flow adjustment ranges up to 30 l/min.
- Combined with MDS3 type solenoid operated directional control valves (see cat. 41 251), it's possible to obtain circuits for the fast/slow control of the work actuators.

RLM3

ELECTRIC FAST / SLOW SPEED SELECTION VALVE SERIES 10

MODULAR VERSION ISO 4401-03

p max **250** bar

Q max (see table of performances)

MOUNTING SURFACE

ISO 4401-03 -02-0-05
(CETOP 4.2-4-03-250)

OPERATING PRINCIPLE

- The RLM3 valve is a compact group that allows control of the fast/slow flow through use of an open/close solenoid valve. The adjustment of the flow is carried out with the RPC1 compensated flow control valves (see catalogue 32 200) with six adjustment ranges.
- The fast/slow speed selection is obtained with the KT08 solenoid cartridge poppet valve (see catalogue 43 100).
- Made as a modular version, the mounting surface is according to iso 4401 standards.
- The RLM3 valve can be assembled quickly under ISO 4401-03 directional solenoid valves without use of pipes, permitting the construction of directional and speed controls for actuators in a single work-station.

PERFORMANCES

(measured with mineral oil of viscosity 36cSt at 50°C)

Maximum operating pressure	bar	250
Maximum flow rate in controlled lines	l/min	1 - 4 - 10 - 16 - 22 - 30
Maximum flow rate in the free lines		65
Minimum controlled flow rate	l/min	0,025
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	3,1

CONFIGURATIONS

(see hydraulic symbols)

- Configuration "A": meter-out control from the actuator on chamber A.
- Configuration "T": control on discharge T of the directional solenoid valve for speed control in both directions of movement.

1 - IDENTIFICATION CODE

WK7 = plug DEUTSCH DT04-2P for male connector type DEUTSCH DT06-2S
WK8 = plug for connector type AMP SUPER SEAL

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - HYDRAULIC SYMBOLS

4 - PRESSURE DROPS ΔP -Q

(obtained with viscosity of 36 cSt at 50 °C)

The values in graphs refer to the fast flow through the solenoid valve and are equal for A (normally open) and C (normally closed) versions.

5 - SWITCHING TIME

The values are obtained according to the ISO 6403 standard, with mineral oil at 50°C, with viscosity of 36 cSt.

TIMES [ms]	ENERGIZING	DE-ENERGIZING
RLM3*-A*	85	60
RLM3*-C*	60	85

6 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

7 - ELECTRICAL FEATURES

7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded onto the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation. The coil is fastened to the tube by a threaded nut, and can be rotated according to the available space.

The interchangeability of coils of different voltages both D or R type is possible without removing the tube.

Protection from atmospheric agents IEC 60529

The IP protection degree is intended for the whole valve. It is guaranteed only with both valve and connector of an equivalent IP degree, correctly connected and installed.

Versions with CM manual override are IP65 always.

Electric connection	IP65	IP66	IP67	IP68	IP69 IP69K (*)
K1 EN 175301-803	x	x			
K2 AMP JUNIOR	x		x		
K4 outgoing cables	x				
WK7 DEUTSCH DT04 male	x		x	x	x
WK8 AMP SUPER SEAL	x	x	x	x	x

(*) The protection degree IP69K is not taken into account in IEC 60529 but it is included in both ISO 20653.

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION : Coil insulation (VDE 0580) Impregnation:	class H class H

7.2 - Current and absorbed power

In the table are shown current and power consumption values relevant to the different coil types. "R" coil must be used when the valve is fed with AC power supply subsequently rectified by means of rectifier bridge, externally or incorporated in the "D" type connector (see cat. 49 000).

	Resistance at 20°C [Ω] (±1%)	Absorbed current [A] (±5%)	Absorbed power (±5%)		Coil code				
			[W]	[VA]	K1	K2	K4	WK7	WK8

ATEX 2014/34/EU
SERIES 20

ISO 6020-2
DIN 24554

DESCRIPTION

- Double acting cylinders constructed in compliance with ISO 6020-2 and DIN 24554.
- The compact design of the square ends with tie rods plus the high quality material and seals render these cylinders highly reliable and therefore strongly recommended for all types of industrial applications.
- The cylinder is available with 14 different mounting styles as well as a vast range of accessories to meet all application requirements.

- A - scraper ring
- B - Piston rod seal
- C - Piston seal
- D - Guide rings
- E₁ - Front cushioning adjustment screw
- E₂ - Rear cushioning adjustment screw
- F₁ - Front cushion
- F₂ - Rear cushion
- G - Bushing

ATEX 2014/34/EU rated version for installation in potentially explosive atmospheres is now available. The standard version of cylinders is ATEX II 2GD classified, whereas cylinders with proximity sensors are ATEX II 3GD classified. The declaration of conformity to the up mentioned standards is always supplied with the cylinder. See paragraph 3 for details.

PERFORMANCES

Nominal operating pressure (continuous service)	bar	160
Maximum operating pressure	bar	210
Peak pressure	bar	250
Maximum speed (standard)	m/s	0,5
Maximum stroke (standard)	mm	5000
Fluid temperature range (standard)	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree		According to ISO 4406:1999 class 20/18/15
Recommended viscosity	cSt	25
Security factor in relation with nominal pressure		≥ 4

1 - CHARACTERISTICS

1.1 Bores and piston rods

Ø 25 to Ø 200 mm bores are available to enable a vast choice according to required force.

Three piston rod diameters are available for each bore (with the exception of the Ø 25 mm bore, for which the intermediate piston rod is not available):

- standard piston rod with 1:1.25 area ratio
- intermediate piston rod with 1:1.45 area ratio
- oversized piston rod with 1:2 area ratio

1.2 Cushioning

On request, gradual and adjustable cushioning devices can be fitted in the front and/or rear ends of the cylinder without affecting overall dimensions.

The special design of the cushions ensures optimal repeatability also in the event of variations in fluid viscosity.

Cushioning devices are always recommended as they ensure impact-free stopping even at high speed thus reducing pressure surges and impact transferred to the mounting supports.

For all the available bores, cushioning is adjustable by means of a needle.

Rapid piston start-up is guaranteed by the bypass system located inside the front cushioning cone and rear cushioning ring.

The table below shows cushioning cone lengths:

Bore (mm)	25	32	40	50	63	80	100	125	160	200
Front cone length (mm)	17	17	28	28	28	28	30	30	38	45
Rear cone length (mm)	17	17	26	26	26	28	31	30	38	55

1.3 Connections

The cylinders are supplied as standard with cylindrical BSP threads and spot facing for seal rings in compliance with ISO 1179. Connections which are oversized compared to those shown in the dimensional tables are available upon request. For further information and for the order identification code, please consult our technical office.

For correct cylinder operation, fluid velocity must not exceed 5 m/s.

1.4 Connection position

Standard positions of the oil ports, cushioning adjustment screws, breathers and end-stroke proximity sensors are shown in the relevant diagram according to the mounting style.

Connection positions different from the standard can be provided upon request.

Other options positions will be rotated accordingly.

For special requests please consult our technical office.

Front view - piston rod side

1.5 Seals

The table below illustrates seal characteristics in relation to hydraulic fluid and operating temperatures.

Type	Seal type	Seal material	Hydraulic fluid	Minimum pressure [bar]	Operating pressure [°C]	Max speed [m/s]
K	Standard	nitrile polyurethane	mineral oil	10	-20 / +80	0,5
M	Low friction	nitrile PTFE	Mineral oil Water glycol	20 (note)	-20 / +80	15
V	high temperature and/or aggressive fluid	Viton PTFE	Special fluids	10	-20 / +150	1

NOTE: for lower pressure use consult our technical office

1.6 Strokes

Standard cylinders are available with strokes up to 6000 mm. Longer cylinder strokes can be supplied on request.

Stroke tolerances are:

- 0 + 1 mm for strokes up to 1000 mm
- 0 + 4 mm for strokes up to 6000 mm

1.7 Spacers

If the cylinder stroke exceeds 1000 mm we recommend the use of spacers which can be inserted to reduce loads on the piston rod bushing and prevent the piston from sticking.

Spacers are constructed in hardened and tempered steel with PTFE facing. Every spacer is 50 mm long.

We recommend to insert n° 1 spacer for strokes from 1001 to 1500 mm, with an increment of n° 1 spacer for every 500 mm stroke. Remember that the overall length of the cylinder increases according to the number of inserted spacers (50 mm for each spacer).

1.8 Tie rod tightening torque

If cylinder has been disassembled, re-assemble it and tighten the tie rod lock nuts cross-wise applying a gradual torque up to the value indicated in the table below. The values below refer to dry threads.

Bore [mm]	25	32	40	50	63	80	100	125	160	200
Tie rod	M5	M6	M8	M12	M12	M16	M16	M22	M27	M30
	x0.8	x1	x1	x12.5	x12.5	x1.5	x1.5	x1.5	x2	x2
Torque [Nm]	5	9	20	70	70	160	160	450	820	1150

1.9 Breathers

On request cylinder ends can be supplied with breathers for the elimination of air. This is necessary when the entire stroke is not used or when connections are not facing upwards.

1.10 Surface finish

Standard cylinders are supplied painted with Duplomatic black opaque colour with a paint thickness of 40µ. The rod is chromed.

3 - ATEX 2014/34/EU RATED VERSION

ATEX 2014/34/EU rated version cylinders for installation in potentially explosive atmospheres are now available. The standard version of cylinders is ATEX II 2GD classified, whereas cylinders with proximity sensors are ATEX II 3GD classified.

The supply is always delivered accompanied by:

- the ATEX declaration of conformity
- the operating and maintenance user manual, where are described all the information for the proper use of cylinders in potentially explosive environments.

TYPE EXAMINATION CERTIFICATE N°: **CEC 10 ATEX 138**

3.1 - Identification code

To order the ATEX-rated version, simply insert the letter K in the initial part of the identification code. The description becomes HCK2-*

For cylinders without end-stroke proximity sensors please order with the identification code shown at paragraph 2.

Example: HCK2C-200/90-500-K3-S-11/20

For cylinders equipped with end-stroke proximity sensors please refer to the identification code shown at paragraph 22.1.

Example: HCK2F-FP22-80/56-200-K3-S-11/20

The ATEX-rated cylinders equipped with end-stroke proximity sensors are compliant with the specifications listed paragraph 22; Also the same limitations described in that paragraph are effective. (NB: for bores Ø160 and Ø200 contact our technical department).

The proximity sensors are compliant with the description and the wiring diagram shown at the paragraph 22.2.

3.2 - Classification

Cylinders without end-stroke proximity sensors have this ATEX mark:

II 2GD ck IIC T4 (-20°C Ta +80°C)

EX: Specific marking of explosion protection as ATEX 2014/34/EU directive and related technical specification requests.

II: Group II for surface plants

2: Category 2 high protection, eligible for zone 1 for gases and zone 21 for dust (automatically be eligible for zone 2 category 3 for gases and zone 22 for dust)

GD: for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures.

ck: protection by constructional safety and by liquid immersion

IIC: Gas group

(automatically eligible for group IIA and IIB)

T4: Temperature class for gas (max surface temperature)

-20°C Ta +80°C: Ambient temperature range

Cylinders with end-stroke proximity sensors have this ATEX mark:

II 3GD ck IIC T4 (-20°C Ta +80°C)

EX: Specific marking of explosion protection as ATEX 2014/34/EU directive and related technical specification requests

II: Group II for surface plants

3: Category 3 standard protection, eligible for zone 2 for gases (zone 22 for dust)

GD: for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures.

ck: protection by constructional safety and by liquid immersion

IIC: Gas group

(automatically eligible for group IIA and IIB)

T4: Temperature class for gas (max surface temperature)

-20°C Ta +80°C: Ambient temperature range

3.3 - Operating temperatures

The operating ambient temperature must be between -20°C and +80 °C.

The fluid temperature for the standard version seals (K) and for low friction seals (M) must be between -20°C and +80°C, as for viton (V) seals must be between -20°C and +120 °C.

The actuators are T4 (T135° C) class temperature classified, so they are eligible for operation also at higher class temperature (T3, T2, T1 (T200° C).

3.4 - Admitted velocities

The maximum permissible speed is 0.5 m/s for standard cylinder seals (K) and 1 m/s for actuators with low friction seals (M) or Viton (V).

3.5 - Connectors

The connectors for the end-stroke proximity are available upon request. They are metal, to be wired. The ordering code is **0680961**. One connector per sensor is needed.

3.6 - Grounding points

The ATEX certified actuators are supplied with two grounding points, one on the rear head and one on the rod, for the wire of the cylinder with the ground (M4 screws).

The bottom grounding point must always be connected whereas the connection of the rod grounding point can be avoided in case the whole mechanical stroke is covered during the cylinder operating phase (from the mechanical stop on the cylinder head to the mechanical stop on the bottom), or in case the rod has already been grounded through the mechanical connection between the rod itself and the machine/plan it is installed on.

In order to verify such a condition it is necessary to test the equipotentiality of the parts and a maximum resistance equal to 100Ω as per the EN13463-1 norm.

4 - OVERALL AND MOUNTING DIMENSIONS

Standard = male thread

W = female thread

X = light male thread

Y = light female thread

200	90 110 140	25	103	160	172	32	92	98	356	324

NOTE: Double rod cylinders are developed with two separate rods, fixed together by means of threading. Because of this mounting style, the rod with female threading is less resistant than the other.

To simplify the identification of the more resistant rod, the "M" marking is stamped on its end.

We recommend the use of the weaker rod for the less demanding applications.

18 - ROD DIAMETER SELECTION

To ensure adequate stability, cylinders must be calculated for maximum compressive load according to the following simplified procedure:

- Refer to the table to identify the stroke factor according to the mounting style.
- To calculate the reference length, multiply the working stroke by the stroke factor.

- To calculate the thrust force, multiply the total cylinder area by the operating pressure.
- On the diagram, find the point of intersection between the thrust force and reference length.
- Identify the minimum rod diameter on the curve above the previous point of intersection.

Cylinders with rod diameters smaller than the value plotted in the diagram will not guarantee sufficient rigidity.

Mounting style	Rod connection	Mounting	Stroke factor
A-P-R-T	Fixed and supported		2
	Fixed and rigidly guided		0.5
	Jointed and rigidly guided		0.7
B-Q-U	Fixed and supported		4
	Fixed and rigidly guided		1
	Jointed and rigidly guided		1.5
H	Jointed and rigidly guided		1

Mounting style	Rod connection	Mounting	Stroke factor

	Jointed and rigidly guided		2
G	Fixed and supported		2
	Fixed and rigidly guided		0.5
	Jointed and rigidly guided		0.7
L	Jointed and supported		3
	Jointed and rigidly guided		1.5

19 - THEORETICAL FORCES

Push force

$$F_s = P \cdot A_t$$

Pull force

$$F_t = P \cdot A_a$$

F_s = Force (extension) in N

F_t = Force (retraction) in N

A_t = Total area in mm²

A_a = Annular area in mm²

P = Pressure in MPa

1 bar = 0.1 MPa

1 kgf = 9.81 N

Bore mm	Ø rod mm	Total area mm ²	Annular area mm ²

	110		21 913
	140		16 022

20 - THEORETICAL VELOCITY

Configuration 1

The diagram illustrates a conventional cylinder application: the fluid is delivered by means of a directional control valve in alternation to the front chamber while the rear chamber is connected to tank and vice versa. To calculate velocity and force, proceed as follows:

$$\text{Velocity (extension)} \quad V = \frac{Q \cdot 1000}{A_t \cdot 60}$$

$$\text{Velocity (retraction)} \quad V = \frac{Q \cdot 1000}{A_a \cdot 60}$$

$$\text{Force (extension)} \quad F = P \cdot A_t$$

$$\text{Force (retraction)} \quad F = P \cdot A_a$$

Configuration 2

When the system requires high velocity with relatively low forces, we recommend using a regenerative circuit. The diagram 2 illustrates the simplest version of this type of set-up.

The annular chamber is permanently connected to the pump while the full bore end is connected alternately to the pump, in which case the piston rod extends as a result of the differential areas (both chambers are supplied at the same pressure), and to tank, in which case the piston rod retracts.

$$\text{Velocity (extension)} \quad V = \frac{Q \cdot 1000}{A_s \cdot 60}$$

$$\text{Velocity (retraction)} \quad V = \frac{Q \cdot 1000}{A_a \cdot 60}$$

$$\text{Force (extension)} \quad F = P \cdot A_s$$

$$\text{Force (retraction)} \quad F = P \cdot A_a$$

V = Velocity in m/s
 Q = Flow rate in l/min
 A_t = Total area (piston bore) in mm²
 A_a = Annular area ($A_t - A_s$) in mm²
 F = Force in N
 P = Pressure in MPa
 A_s = Rod area ($A_t - A_a$) in mm²
 Q_d = Flow rate through directional control valve (Q +return flow rate from small chamber) in l/min

NOTE: In regenerative circuits, the sizing of the directional control valve is fundamental. Flow rate through the directional control valve is calculated according to the following formula:

$$Q_d = \frac{V \cdot A_t \cdot 60}{1000}$$

1 bar = 0.1 MPa

1 kgf = 9.81 N

22 - END-STROKE PROXIMITY SENSORS

On request, cylinders can be supplied with end-stroke proximity sensors type PNP, with normally open output. They are mounted on the front and rear end of the cylinder and they supply an electric signal when the piston rod reaches the stroke end.

They are available for all cylinder mounting styles, from Ø40, with the following limits:

bore Ø40:

mounting	A-H	available on rear end only
mounting	B-N	available on front end only

bore Ø50:

mounting	H	available on rear end only
mounting	N	available on front end only

bores Ø80 and Ø100:

mounting	N	available on front end only
----------	---	-----------------------------

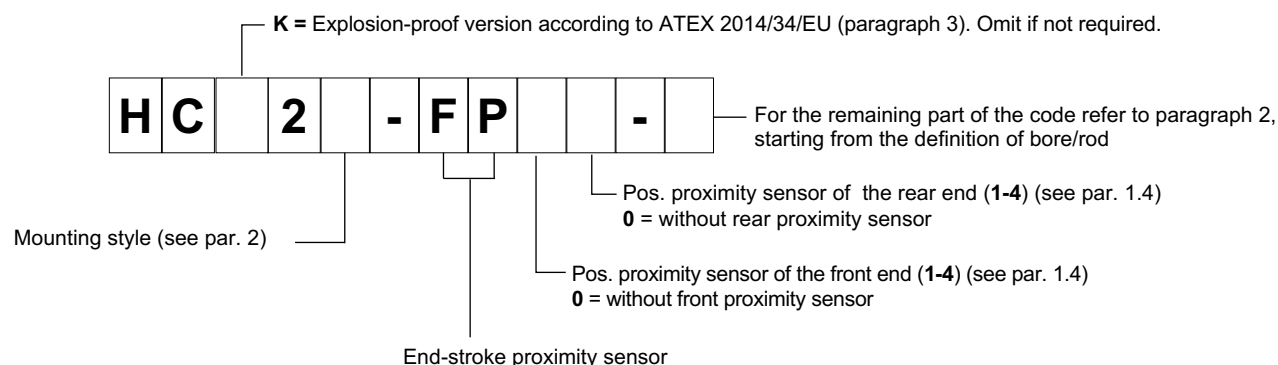

bores Ø125/56, Ø160 and Ø200:

mounting	A	available on rear end only
mounting	B	available on front end only

In order to ensure the correct functioning of the system, cylinders must be equipped with cushionings.

These sensors can be only used to provide the switching signal and not to control voltage loads.

22.1 - Identification code

22.2 - Technical characteristics and electrical connection

Rated voltage	VDC	24
Power supply voltage range	VDC	10 ÷ 30
Absorbed current	mA	200
Output	normally open contact	
Electric protection	polarity inversion short circuit overvoltage	
Electric connection	with connector	
Maximum operating pressure	bar	500
Operating temperature range	°C	-25 / +80
Class of protection according IEC EN 60529 (atmospheric ag.)	IP68	
Piston position LED (NOTE)	NO (it's on the connector)	

22.3 - Connectors

Connectors for proximity sensors must be ordered separately, by specifying the code: **ECM3S/M12L/10**

NOTE: These connectors are not suitable for ATEX-rated cylinders. The connectors for the ATEX-rated cylinders are described at paragraph 3.5.

Connector: pre-wired connector M12 - IP68
Cable: with 3 conductors 0.34 mm² - length 5 mt.
Cable material: polyurethane resin (oil resistant)

The connector has two LEDs, one green and one yellow.

GREEN: Connector power supply.
The LED burn when the connector is supplied.

YELLOW: position signal.
ON - piston at stroke end
OFF - piston not at stroke end

23 - MAGNETIC END-STROKE SENSORS

Upon request, cylinders can be supplied with adjustable magnetic sensors, mounted on tie rods, which allow the reading in every position of the piston, both intermediate and end stroke. The "switching zone" of these sensors can reach about 30÷40 mm, depending on piston speed and cylinder bore. Therefore, if the Client needs to read with precision only the signal of the stroke end, and not of other positions, we recommend the use of end-stroke proximity sensors (see par. 22), rather than magnetic sensors.

Magnetic sensors are available for bores Ø 25 to Ø 125 included. For cylinders with strokes under 80 mm and for cylinders with mid swinging mounting type, we recommend to consult our technical office, because, in some applications, magnetization problems of cylinder parts could happen, affecting the correct functioning of the system. Moreover we recommend to use these cylinders with operating pressure lower than 160 bar (peak free) and not to use them as mechanical stop; for this reason, consider a stroke of 15÷20 mm more than necessary.

Cylinders are supplied with 2 magnetic sensors, already mounted on tie rods, which can be of two types:

- Reed magnetic sensors (**standard**): they are sensors with normally open contact, which commute exploiting the magnetic field generated by the plastroferrite ring inserted in the piston. They have a long electric life and a switching power which allows to control voltage loads directly.
- Magnetic sensors with Hall effect: they are sensors which read the voltage variation generated by the piston movement, by means of a normally open electronic semiconductor type PNP. Because of the absence of moving parts inside the sensors, they guarantee a much longer electric life than that of Reed sensors, a high sensitivity and switching reliability. As opposed to Reed sensors, these sensors can be used only to provide the switching signal and not to control voltage loads.

23.1 - Identification code

23.2 - Mounting and overall dimensions

1	Bracket fastening screw
2	Socket for fastening to the tie rod
3	Bracket for fastening to the tie rod
4	Sensor fastening screw
5	Magnetic sensor

Reed sensors for Ø 25 and Ø 32 bore and sensors with Hall effect

Reed sensors for Ø 40 ÷ Ø 125 bore

23.3 - Technical Characteristics And Electrical Connection

Reed sensors (FMR)

		Reed sensor without connector (for 25 and 32 bores)	Reed sensor with connector (for 40, 50, 63, 80, 100 and 125 bores)
Sensor version		Reed	Reed
Contact		normally open	normally open
Maximum power	W	20	50
Maximum voltage	V AC/DC	130	250
Minimum voltage	V AC/DC	3	3
Voltage drop	V	2,5	2,5
Maximum power	mA	300	1000
Wiring		2 cables	2 cables
Connection		cable (L = 2 m)	connector (with cable L = 2 m)
Cable section	mm ²	0,25	0,25
Varistor	V	-	250
Sheath material		PVC	PVC
Contact indicator		red led	red led
Operating temperature range	°C	-20 / +80	-20 / +80

Hall effect sensors (FMH)

Sensor version		Hall effect
Contact		normally open
Sensor type		PNP
Maximum voltage	V AC/DC	30
Minimum voltage	V AC/DC	10
Voltage drop	V	0,5
Maximum power	mA	200
Wiring		3 cables
Connection		cable (L = 2 m)
Cable section	mm ²	0,14
Wire covering material		PVC
Contact indicator		red led
Operating temperature range	°C	-20 / +80

HYDRAULIC CYLINDERS

HCK3

HYDRAULIC CYLINDERS

ATEX 2014/34/UE

SERIES 10

ISO 6022
DIN 24333

DESCRIPTION

- Double acting cylinders constructed in compliance with ISO 6022 and DIN 24333.
- The materials used to make these cylinders are particularly resistant and make them suitable for applications in the iron and steel sector.
- The cylinder is available with 5 different mounting styles as well as a range of accessories to meet all application requirements.

A - scraper ring
B - piston rod seal
C - guide ring
D - drain seal (O-Ring)
E - piston rod seal
F - guide ring
G - piston seal
H1 - front cushioning adjustment screw
H2 - rear cushioning adjustment screw
L1 - front cushion
L2 - rear cushion
M - front cushioning bushing
N - rear cushioning bushing

ATEX 2014/34/UE rated version for installation in potentially explosive atmospheres is now available. The standard version of cylinders is ATEX II 2GD classified, whereas cylinders with proximity sensors are ATEX II 3GD classified. The declaration of conformity to the up mentioned standards is always supplied with the cylinder. See paragraph 3 for details.

PERFORMANCES

Nominal operating pressure (continuous service)	bar	250
Maximum operating pressure	bar	320
Maximum speed (standard)	m/s	0,5
Maximum stroke (standard)	mm	5000
Fluid temperature range (standard)	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree		According to ISO 4406:1999 class 20/18/15
Recommended viscosity	cSt	25

1 - CHARACTERISTICS

1.1 - Bores and piston rods

Ø 50 to Ø 400 mm bores are available to enable a vast choice according to required force.

Two piston rod diameters are available for each bore:

- reduced piston rod with area ratio 1:1.65
- standard piston rod with area ratio 1:2

1.2 - Cushionings

On request, gradual and adjustable cushioning devices can be fitted in the front and/or rear ends of the cylinder without affecting overall dimensions.

The special design of the cushions ensures optimal repeatability also in the event of variations in fluid viscosity.

Cushioning devices are always recommended as they ensure impact-free stopping even at high speed thus reducing pressure surges and impact transferred to the mounting supports.

The cylinder ends of bores higher than 160mm with cushioning can have an additional port connected directly with the braking chamber. This connection must be used in case of application, near the cylinder, of a pressure relief valve set at 350 bar, to limit overpressures during braking. For further information and for the order identification code, please consult our technical office.

The table below shows cushioning cone lengths:

Bore (mm)	50	63	80	100	125	140	160	180	200	250	320	400
Front cone length (mm)	38	40	50	50	60	60	75	75	80	100	100	110
Rear cone length (mm)	34	42	58	49	64	64	68	73	69	101	99	108

1.3 - Connections

The cylinders are supplied as standard with cylindrical BSP threads and spot facing for seal rings in compliance with ISO 1179.

Connections which are oversized compared to those shown in the dimensional tables are available upon request. For further information and for the order identification code, please consult our technical office.

For correct cylinder operation, fluid velocity must not exceed 5 m/s.

1.4 - Connection position

Standard positions of the oil ports, cushioning adjustment screws, breathers, optional external drain and optional end-stroke proximity sensors, are indicated in the table below.

Connection positions different from the standard are available upon request. As a consequence, the other options positions will be rotated.

For special requests, please consult our technical office.

Frontal view - piston side

	POSITION
Connections	1
Cushioning adjustment	3
Breathers	4
Drainage	1
Proximity end stroke	2
Optional port (see par. 1.2)	4

1.5 - Seals

The table below illustrates seal characteristics in relation to hydraulic fluid and operating temperatures.

Type	Seal type	Seal material	Hydraulic fluid	Minimum pressure [bar]	Operating pressure [°C]	Max speed [m/s]
K	Standard	nitrile polyurethane	mineral oil	10	-20 / +80	0,5
M	Low friction	nitrile PTFE	Mineral oil Water glycol	20 (note)	-20 / +80	15
V	high temperature and / or aggressive fluid	Viton PTFE	Special fluids	10	-20 / +150	1

NOTE: for lower pressure use consult our technical office.

1.6 - Strokes

Standard cylinders are available with strokes up to 5000 mm. Longer cylinder strokes can be supplied on request.

Stroke tolerances are:

- 0 + 1 mm for strokes up to 1000 mm
- 0 + 4 mm for strokes up to 5000 mm.

1.7 - Spacers

In the case of cylinder strokes above 1000 mm we recommend the use of spacers which can be inserted to reduce loads on the piston rod bushing and prevent the piston from sticking.

Spacers are constructed in hardened and tempered steel with PTFE facing.

Every spacer is 50 mm long. We recommend to insert 1 spacer for strokes from 1001 to 1500 mm, with an increment of 1 spacer for every 500 mm stroke.

You must remember that the overall length of the cylinder increases according to the number of inserted spacers (50 mm for each spacer).

1.8 - Drainage

A connection for external drainage on the front end (even on the back end for double-rod cylinders) can be supplied upon request, for fluid drops recovery of the first seal of the rod, without any modification to the overall dimensions.

Connection: 1/8" BSP for bore up to Ø 100 included - 1/4" BSP for higher bores.

1.9 - Breathers

On request cylinder ends can be supplied with breathers for the elimination of air. This is necessary when the entire stroke is not used or when connections are not facing upwards.

1.10 - Surface finish

The cylinders are supplied painted with Duplomatic black opaque colour with a paint thickness of 40µ. The rod is chromed.

2 - IDENTIFICATION CODE

K = Explosion-proof version according to ATEX 2014/34/UE (paragraph 3). Omit if not required.

(indicate for
spare parts
requests)

Dimension XV
for "L" mounting
(omit for other
mounting styles)

N. of spacers multiple of 50
mm (omit if not required)
(see par. 1.7)

Back end connection position (1-4)
(see par. 1.4)

Front end connection position (1-4)
(see par. 1.4)

Drainage for second rod. Omit if not required
(see par. 1.8)

0 = without drainage
E = external drainage with connection
on the back end

Drainage (see par. 1.8)

0 = without drainage
E = external drainage with connection on the front end

Breathers (see par. 1.9)

0 = without breathers
S = front and back breathers

Cushioning (see par. 1.2):

0 = without cushioning 1 = front
2 = back 3 = front and back

Seals (see par. 1.5):

K = standard (nitrile + polyurethane)
M = low friction (nitrile + PTFE)
V = high temperature (viton + PTFE)

Stroke (mm) - For cylinders with spacers indicate the working stroke.

Double rod threading (omit if not required).
See single rod for dimensions

Double rod (omit if not required)

See single rod for dimensions. Not available with mounting style B-D-F.

Rod threading: Male thread (**standard**)

W = Female thread (see par. 4)

3 - ATEX 2014/34/UE RATED VERSION

ATEX 2014/34/UE rated version cylinders for installation in potentially explosive atmospheres are now available. The standard version of cylinders is ATEX II 2GD classified, whereas cylinders with proximity sensors are ATEX II 3GD classified.

The supply is always delivered accompanied by:

- the ATEX declaration of conformity
- the operating and maintenance user manual, where are described all the information for the proper use of cylinders in potentially explosive environments.

TYPE EXAMINATION CERTIFICATE N°: **CEC 10 ATEX 138**

3.1 - Identification code

To order the ATEX-rated version, simply insert the letter K in the initial part of the identification code. The description becomes HCK3-.*.

For cylinders without end-stroke proximity sensors please order with the identification code shown at paragraph 2.

Example: HCK3C-200/125-350-K3-S-0-11/20

For cylinders equipped with end-stroke proximity sensors please refer to the identification code shown at paragraph 16.1.

Example: HCK3F-FP22-80/56-225-K3-S-0-11/20

The ATEX-rated cylinders equipped with end-stroke proximity sensors are compliant with the specifications listed paragraph 16; Also the same prescriptions described in that paragraph are effective. (NB: for bores Ø125 and Ø400 feasibility contact our technical department).

The proximity sensors are compliant with the description and the wiring diagram shown at the paragraph 16.2.

3.2 - Classification

Cylinders without end-stroke proximity sensors have this ATEX mark:

II 2GD ck IIC T4 (-20°C Ta +80°C)

EX: Specific marking of explosion protection as ATEX 2014/34/UE directive and related technical specification requests.

II: Group II for surface plants

2: Category 2 high protection, eligible for zone 1 for gases and zone 21 for dust (automatically be eligible for zone 2 category 3 for gases and zone 22 for dust)

GD: for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures.

ck: protection by constructional safety and by liquid immersion

IIC: Gas group
(automatically eligible for group IIA and IIB)

T4: Temperature class for gas (max surface temperature)
-20°C Ta +80°C: Ambient temperature range

Cylinders with end-stroke proximity sensors have this ATEX mark:

II 3GD ck IIC T4 (-20°C Ta +80°C)

EX: Specific marking of explosion protection as ATEX 2014/34/UE directive and related technical specification requests

II: Group II for surface plants

3: Category 3 standard protection, eligible for zone 2 for gases (zone 22 for dust)

GD: for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures.

ck: protection by constructional safety and by liquid immersion

IIC: Gas group
(automatically eligible for group IIA and IIB)

T4: Temperature class for gas (max surface temperature)
-20°C Ta +80°C: Ambient temperature range

3.3 - Operating temperatures

The operating ambient temperature must be between -20°C and +80 °C.

The fluid temperature for the standard version seals (K) and for low friction seals (M) must be between -20°C and +80°C, as for viton (V) seals must be between -20°C and +120 °C.

The actuators are T4 (T135° C) class temperature classified, so they are eligible for operation also at higher class temperature (T3, T2, T1 (T200° C).

3.4 - Admitted velocities

The maximum permissible speed is 0.5 m/s for standard cylinder seals (K) and 1 m/s for actuators with low friction seals (M) or Viton (V).

3.5 - Connectors

The connectors for the end-stroke proximity are available upon request. They are metal, to be wired. The ordering code is **0680961**. One connector per sensor is needed.

3.6 - Grounding points

The ATEX certified actuators are supplied with two grounding points, one on the rear head and one on the rod, for the wire of the cylinder with the ground (M4 screws).

The bottom grounding point must always be connected whereas the connection of the rod grounding point can be avoided in case the whole mechanical stroke is covered during the cylinder operating phase (from the mechanical stop on the cylinder head to the mechanical stop on the bottom), or in case the rod has already been grounded through the mechanical connection between the rod itself and the machine/plan it is installed on.

In order to verify such a condition it is necessary to test the equipotentiality of the parts and a maximum resistance equal to 100Ω as per the EN13463-1 norm.

4 - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

Standard = male thread

W = female thread

* For bores Ø 180 (piston rod Ø 110) and higher, the rod has 4 holes at 90° realized on Ø NA and of Ø shown in the table.

A pin wrench UNI 6752 - DIN 1810 must be used.

400	250 280	53	628	2"	360	110	163	333	975	812

NOTE: Double rod cylinders are developed with two separate rods, fixed together by means of threading.

Because of this mounting style, the rod with female threading is less resistant than the other. To simplify the identification of the more resistant rod, the "M" marking is stamped on its end.

We recommend the use of the weaker rod for the less demanding applications.

11 - ROD DIAMETER SELECTION

To ensure adequate stability, cylinders must be calculated for maximum compressive load according to the following simplified procedure:

- Refer to the table to identify the stroke factor according to the mounting style.
- To calculate the reference length, multiply the working stroke by the stroke factor.

- To calculate the thrust force, multiply the total cylinder area by the operating pressure.

- On the diagram, find the point of intersection between the thrust force and reference length.

- Identify the minimum rod diameter on the curve above the previous point of intersection.

Cylinders with rod diameters smaller than the value plotted in the diagram will not guarantee sufficient rigidity.

Mounting style	Rod connection	Mounting	Stroke factor
A	Fixed and supported		2
	Fixed and rigidly guided		0.5
	Jointed and rigidly guided		0.7
B	Fixed and supported		4
	Fixed and rigidly guided		1
	Jointed and rigidly guided		1.5

12 - THEORETICAL FORCES

Push force

$$F_s = P \cdot A_t$$

Pull force

$$F_t = P \cdot A_a$$

F_s = Force (extension) in N

F_t = Force (retraction) in N

A_t = Total area in mm²

A_a = Annular area in mm²

P = Pressure in MPa

1 bar = 0.1 MPa

1 kgf = 9.81 N

Bore mm	Ø rod mm	Total area mm ²	Annular area mm ²
50	32 36	1964	1159 946
63	40 45	3117	1861 1527
80	50 56	5027	3063 2564
100	63 70	7854	4737 4006
125	80 90	12272	7245 5910
140	90 100	15394	9032 7540
160	100 110	20106	12252 10603
180	110 125	25447	15943 13175
200	125 140	31416	19144 16022
250	160 180	49087	28981 23640

400	250 280	125664	76576 64089

13 - THEORETICAL VELOCITIES

Configuration 1

The diagram illustrates a conventional cylinder application: the fluid is delivered by means of a directional control valve in alternation to the front chamber while the rear chamber is connected to tank and vice versa.

To calculate velocity and force, proceed as follows:

Velocity (extension)

$$V = \frac{Q \cdot 1000}{A_t \cdot 60}$$

Velocity (retraction)

$$V = \frac{Q \cdot 1000}{A_a \cdot 60}$$

Force (extension)

$$F = P \cdot A_t$$

Force (retraction)

$$F = P \cdot A_a$$

Configuration 2

When the system requires high velocity with relatively low forces, we recommend using a regenerative circuit. Diagram 2 illustrates the simplest version of this type of set-up.

The annular chamber is permanently connected to the pump while the full bore end is connected alternately to the pump, in which case the piston rod extends as a result of the differential areas (both chambers are supplied at the same pressure), and to tank, in which case the piston rod retracts.

Velocity (extension)

$$V = \frac{Q \cdot 1000}{A_s \cdot 60}$$

Velocity (retraction)

$$V = \frac{Q \cdot 1000}{A_a \cdot 60}$$

Force (extension)

$$F = P \cdot A_s$$

Force (retraction)

$$F = P \cdot A_a$$

V = Velocity in m/s

Q = Flow rate in l/min

A_t = Total area (piston bore) in mm²

A_a = Annular area ($A_t - A_s$) in mm²

F = Force in N

P = Pressure in MPa

A_s = Rod area ($A_t - A_a$) in mm²

Q_d = Flow rate through directional control valve (Q+return flow rate from small chamber) in l/min

1 bar = 0.1 MPa

1 kgf = 9.81 N

NOTE: In the case of regenerative circuits, the sizing of the directional control valve is fundamental. Flow rate through the directional control valve is calculated according to the following formula:

$$Q_d = \frac{V \cdot A_t \cdot 60}{1000}$$

14 - MASSES

Bore	Ø rod	Mass for null stroke			Mass for 10 mm stroke
		Mounting style			
		A - B	D - F	L

15 - SEAL KIT IDENTIFICATION CODE

S K / H C 3 - / / - / 10											
Seal kit									Series no. indicated on cylinder		
Bore (mm)									Seals: K = standard (nitrile + polyurethane) M = low friction (nitrile + PTFE) V = high temperature (viton + PTFE)		
Rod (mm)									Double rod (omit if not required)		

NOTE: the seal kit includes all the seals of a full-options cylinder (cushionings and external drain).

16 - END-STROKE PROXIMITY SENSORS

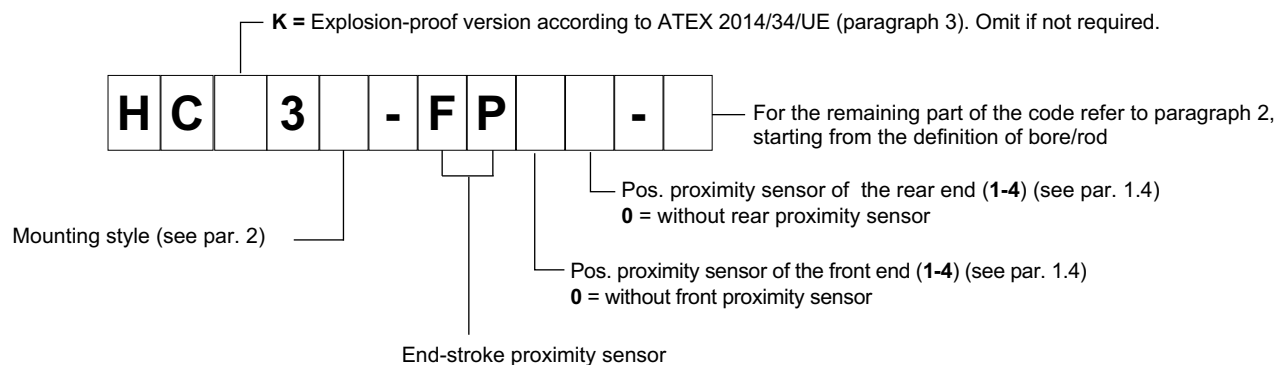

Upon request, cylinders can be supplied with end-stroke proximity sensors type PNP, with normally open output. They are mounted on the front and rear end of the cylinder and they supply an electric signal when the piston rod reaches the stroke end. They are available for all cylinder mounting styles, on both ends and for every available bore.

In order to ensure the correct functioning of the system, cylinders must be equipped with cushionings.

These sensors can be only used to provide the switching signal and not to control voltage loads.

16.1 - Identification code

16.2 - Technical characteristics and electrical connection

Rated voltage	VDC	24
Power supply voltage range	VDC	10 ÷ 30
Absorbed current	mA	200
Output	normally open contact	
Electric protection	polarity inversion short circuit overvoltage	
Electric connection	with connector	
Maximum operating pressure	bar	500
Operating temperature range	°C	-25 / +80
Class of protection according IEC EN 60529 (atmospheric ag.)		IP 68
Piston position LED (NOTE)		NO (it's on the connector)

16.3 - Connectors

Connectors for proximity sensors must be ordered separately, by specifying the code: **ECM3S/M12L/10**

NOTE: These connectors are not suitable for ATEX-rated cylinders. The connectors for the ATEX-rated cylinders are described at paragraph 3.5.

Connector: pre-wired connector M12 - IP68
Cable: with 3 conductors 0.34 mm² - length 5 mt.
Cable material: polyurethane resin (oil resistant)

The connector has two LEDs, one green and one yellow.

GREEN: Connector power supply.
The LED burn when the connector is supplied.

YELLOW: position signal.
ON - piston at stroke end
OFF - piston not at stroke end

CRE
DIRECT OPERATED
PRESSURE CONTROL VALVE
WITH ELECTRIC PROPORTIONAL
CONTROL
SERIES 20

CARTRIDGE TYPE

p max **350** bar
Q max **1,5** l/min

SEAT DIMENSIONS: D-10A

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Maximum operating pressure: - P port - T port	bar	350 2
Minimum controlled pressure	see Δp -Q diagram	
Nominal flow Maximum flow	l/min	0,5 1,5
Step response	see paragraph 5	
Hysteresis (with PWM 200 Hz)	% of p nom	< 5%
Repeatability	% of p nom	< $\pm 1,5\%$
Electrical characteristic	see paragraph 4	
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass	kg	0,54

OPERATING PRINCIPLE

- The CRE valve is a direct operated pressure control valve with electric proportional control with cartridge execution which can be used in blocks and panels with type D-10A seat.
- The valve is suitable as a pilot stage for remote control of two stage pressure control and reducing valves.
- Pressure adjustment can be continuous in proportion to the current supplied to the solenoid.

— The valve can be controlled directly by a current control power supply unit or by means of the relative electronic control units to exploit valve performance to the full (see paragraph 8).

- The valve is available in three pressure control ranges up to 250 bar.

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control curves according to the current supplied to the solenoid, measured with input flow rate $Q=0,5$ l/min. The curves have been obtained without any hysteresis and linearity compensation and they are measured without any backpressure in T.

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

PRESSURE VARIATION $p_{max} = f(Q)$

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N).

For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.66	16.6
MAXIMUM CURRENT	A	1.9	0.85
DUTY CYCLE		100%	
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
CLASS OF PROTECTION Atmospheric agents (IEC EN 60529)	IP65		

5 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with a valve of pressure range up to 140 bar and with input flow rate Q = 0,5 l/min.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	80	40

6 - INSTALLATION

We recommend to install the CRE valve either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 2.

Ensure that there is no air in the hydraulic circuit. In particular applications, it can be necessary to vent the air entrapped in the solenoid tube, by using the apposite drain screw in the solenoid tube. Ensure that the solenoid tube is always filled with oil (see par. 7). At the end of the operation, make sure of having screwed correctly the drain screw.

Connect the valve T port directly to the tank. **Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.**

7 - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (7) placed at the end of the solenoid tube.

* The 4,5 mm dimension can be reduced to 0,5 mm by increasing the axial dimensions of the D-10A seat of 4 mm.

Mass	kg	1,6

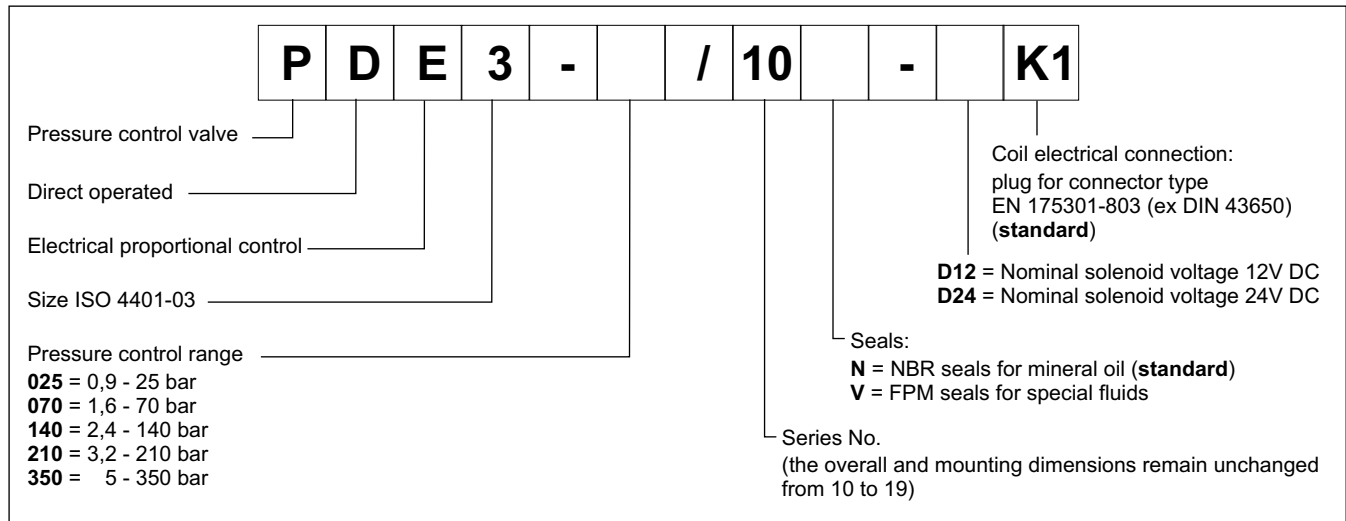

OPERATING PRINCIPLE

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(obtained with viscosity of 36 cSt at 50°C, and valves with D24 coil)

Typical control curves according to the current supplied to the solenoid, measured with input flow rate $Q = 1$ l/min.

Curves have been obtained without any hysteresis and linearity compensation and they are measured without any backpressure in T. The full scale pressure is set in factory with a flow rate of 1 l/min. In case of higher flow rate, the full scale pressure will increase considerably (see diagram $p_{max} = f(Q)$).

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

PRESSURE VARIATION $p_{max} = f(Q)$

3 - MAX PRESSURE VALUES

This valve incorporates a mechanical limit of the maximum pressure, that operates independently of the applied current. This kind of design ensures that the pressure cannot rise over even if the solenoid current exceeds the maximum current ($I > I_{\max}$).

Values obtained with oil viscosity of 36 cSt at 50°C, $Q = 1$ l/min

		PDE3-025	PDE3-070	PDE3-140	PDE3-210	PDE3-350
pressure value at 800 mA	bar	25	77	142	217	360
max pressure value when $I > I_{\max}$	bar	33,5	90	161	252	390

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

5 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.66	17.6
NOMINAL CURRENT	A	1.88	0.86
DUTY CYCLE	100%		
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
CLASS OF PROTECTION atmospheric agents (EN 60529) coil insulation (VDE 0580) Impregnation	IP65 class H class F		

6 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with a PDE3-210 and with an input flow rate of $Q = 1$ l/min and pressure oil volume of 0,1 litre. The response time is affected both by the flow rate and the oil volume in the pipework.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	60	70

7 - INSTALLATION

We recommend installing these valves with the solenoid downward, either in horizontal or vertical position. If the valve is installed on vertical axis with the solenoid upward, you should consider possible variations of the minimum controlled pressure from those indicated in paragraph 2.

Ensure that there is no air in the hydraulic circuit. In certain applications it might be necessary to vent the air entrapped in the solenoid tube by unfastening the drain screw placed in the solenoid tube.

Ensure the solenoid tube is always filled with oil. Make sure the drain screw has been put back correctly at the end of the task.

Connect the valve T port directly to the tank. **Add any backpressure value detected in the T line to the controlled pressure value.**

Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols.

If minimum values are not observed, fluid can easily leaks between the valve and support surface.

8 - OVERALL AND MOUNTING DIMENSIONS

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (3) placed at the end of the solenoid tube.

Valve fastening: 4 SHC screws M5x30 - ISO 4762

Mass	kg	2

OPERATING PRINCIPLE

- The PDE3G* valve is a direct operated pressure control valve, with integrated electric proportional control and mounting interface in compliance with ISO 4401 standards.
- It is suitable to pilot two-stage valves, for pressure control in hydraulic circuits.
- Valves are available with different types of electronics, with analogue or fieldbus interfaces
 - A solenoid current monitoring signal is available.
 - Five pressure control ranges are available, up to 350 bar.
 - The valves are easy to install. The driver manages digital settings directly.

3.2 - On-board electronics diagrams

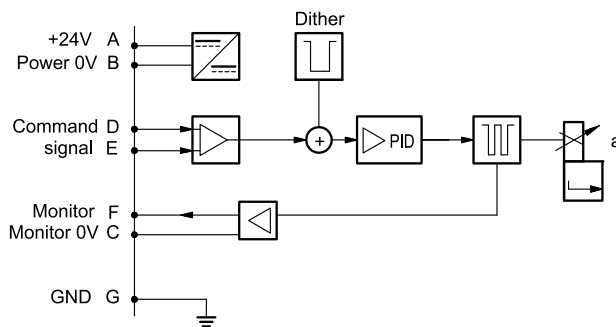

VERSION A - External Enable

VERSION B - Internal Enable

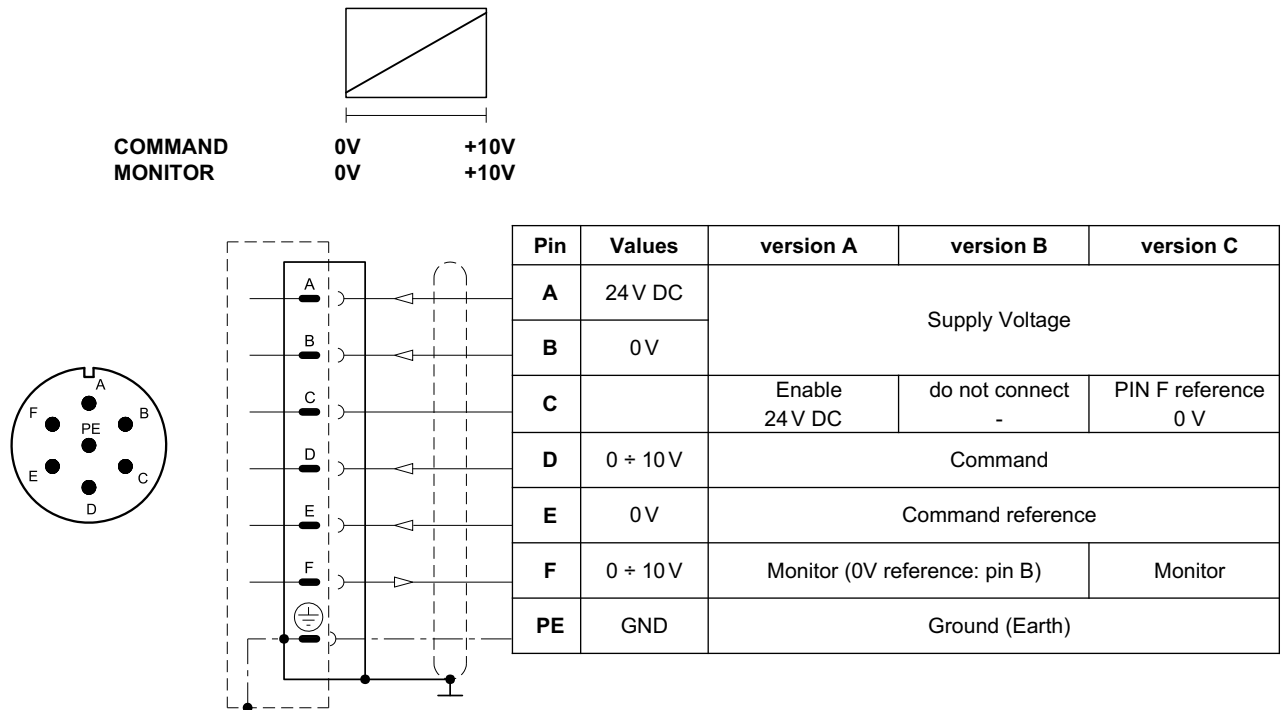

VERSION C - 0V Monitor

3.3 - Versions with voltage command (E0)

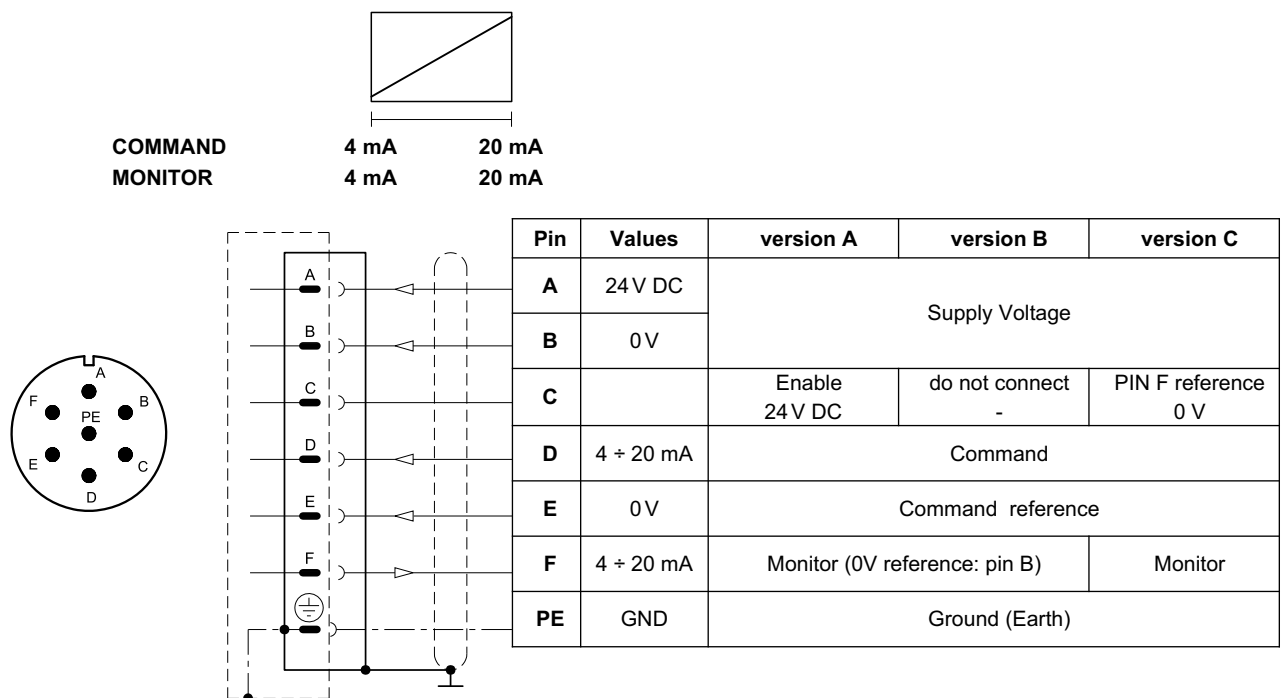

The reference signal is between $0 \div 10V$. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

3.4 - Versions with current command (E1)

The reference signal is supplied in current $4 \div 20$ mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4 - PDE3GL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

4.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	0 ÷ 5 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
IO-Link communication (IOL): Data rate	kBaud	IO-Link Port Class B 230,4
Can Open communication (CA): Data rate	kbit	10 ÷ 1000
Data register (IOL and CA versions only)		solenoid voltage supply, solenoid faults (shortcircuit, bad config, internal), box temperature, switch-on time, vibrations
Connection		5-pin M12 code A (IEC 61076-2-101)

4.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	0 ÷ 10 V	Command
3	0 V	Command reference
4	0 ÷ 5 V	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	4 ÷ 20 mA	Command
3	0 V	Command reference
4	4 ÷ 20 mA	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0 V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0 V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

5 - DSE3GH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 3.2 and 3.3.

5.1 - Electrical characteristics

Command signal: voltage (E0) current (E1) digital (FD)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm) via fieldbus
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
Communication / diagnostic		via Bus register
Communication interface standards CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection		11 pin + PE (DIN 43651)

5.2 - X1 Main connection pin table

D1: one command			D0: full digital		
Pin	Values	Function	Pin	Values	Function
1	24 V DC	Main supply voltage	1	24 V DC	Main supply voltage
2	0 V		2	0 V

12	GND	Ground (Earth)	12	GND	Ground (Earth)

5.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

5.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

5.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

5.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

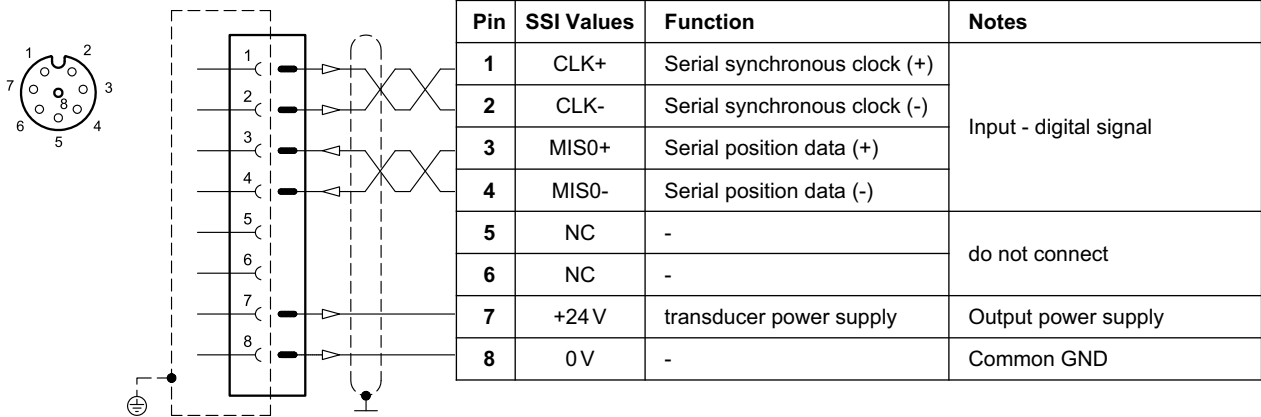

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

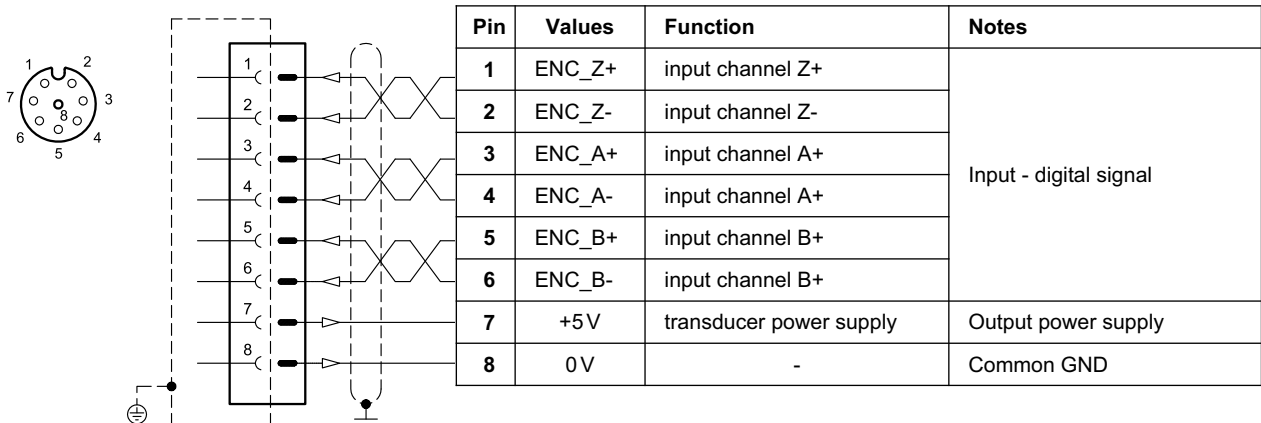

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

6 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control curves according to the reference signal for pressure control ranges, measured with input flow rate $Q = 1$ l/min. Characteristic curves measured without backpressure in T, with linearity compensation set by the onboard electronics.

The full scale pressure is set in factory with a flow rate of 1 l/min. In case of higher flow rate, the full scale pressure will increase considerably. See diagram $p_{max} = f(Q)$.

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

PRESSURE VARIATION $p_{max} = f(Q)$

7 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with a PDE3G-210 and with an input flow rate of $Q = 1$ l/min and pressure oil volume of 0,1 litre.

The response time is affected both by the flow rate and the oil volume in the pipework.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	60	20

8 - PDE3G - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

NOTE:

at the first start up or after a long period of no use, it is necessary to vent the air through the breather (2) placed at the end of the solenoid tube.

Fastening bolts: 4 SHCS M5x30 - ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: 4 OR type 2037 - 90 shore (9.25 x 1.78)
2	Breather: Allen key 4
3	Main connection 6 pin + PE
4	Mating connector 6 poles + PE , female type MIL-5015-G To be ordered separately. See catalogue 89 000

9 - PDE3GL - OVERALL AND MOUNTING DIMENSIONS

Fastening bolts: 4 SHCS M5x30- ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Breather: Allen key 4
3	Connection M12 A 5 pin
4	L1 LED
5	L2 LED
6	Mating connector M12 5 poles - code A, female To be ordered separately. See catalogue 89 000

10 - PDE3GH - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

X1	Main connection 11 pin + PE
X2	Fieldbus communication (IN)
X3	Fieldbus communication (OUT)
X4	X4 connection for analogue transducer
X7	X7 connection for digital transducer

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Breather: Allen key 4
3	Mating connector 11 poles + PE To be ordered separately. See catalogue 89 000
4	Mating connectors for fieldbus communication and signals To be ordered separately. See catalogue 89 000

Fastening bolts: 4 SHCS M5x30 - ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

NOTE: Depending on the chosen version, X4 and X7 connections may not be present. Please refer to section 5 for connection descriptions and pinout.

11 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

12 - INSTALLATION

We recommend installing these valves with the solenoid downward, either in horizontal or vertical position. If the valve is installed on vertical axis with the solenoid upward, you should consider possible variations of the minimum controlled pressure from those indicated in par. 6.

Ensure that there is no air in the hydraulic circuit. In certain applications it might be necessary to vent the air entrapped in the solenoid tube by unfastening the drain screw placed in the solenoid tube.

Ensure the solenoid tube is always filled with oil. Make sure the drain screw has been put back correctly at the end of the task. Connect the valve T port directly to the tank.

Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols.

If minimum values are not observed, fluid can easily leaks between the valve and support surface.

13 - ACCESSORIES

(to be ordered separately)

13.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

13.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

13.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

13.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connection, see catalogue 89 850.

14 - SUBPLATES

(see catalogue 51 000)

PMMD-AL3G rear ports
PMMD-AL3G side ports
Ports dimensions: P, T, A, B: 3/8" BSP

PDE3J*

PROPORTIONAL PRESSURE CONTROL VALVE, DIRECT OPERATED, WITH INTEGRATED ELECTRONICS FOR CLOSED LOOP

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

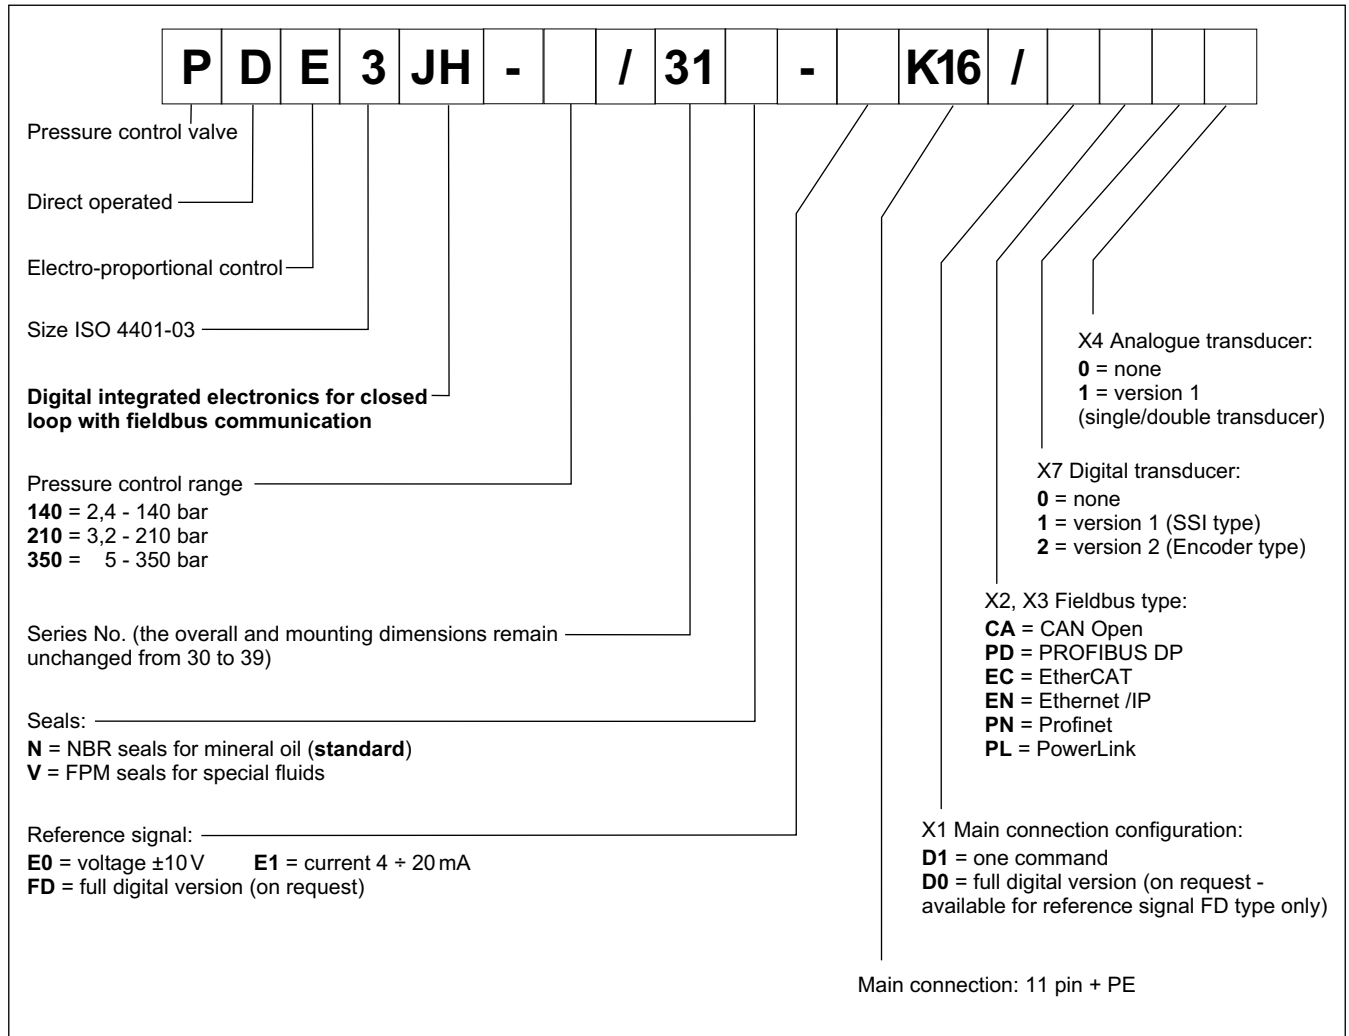

1.1 - Standard electronics

1.2 - Compact electronics

1.3 - Electronics with fieldbus communication

2 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	2A time lag
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

3 - PDE3J - STANDARD ELECTRONICS

3.1 - Electrical characteristics

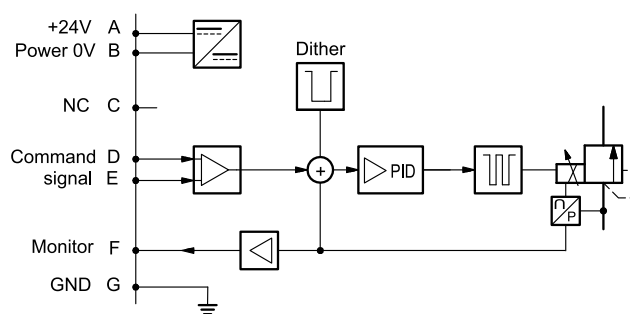

Command signal:	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (pressure at transducer):	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

3.2 - On-board electronics diagrams

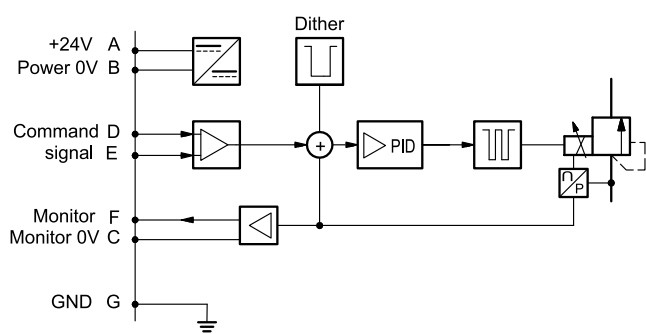

VERSION A - External Enable

VERSION B - Internal Enable

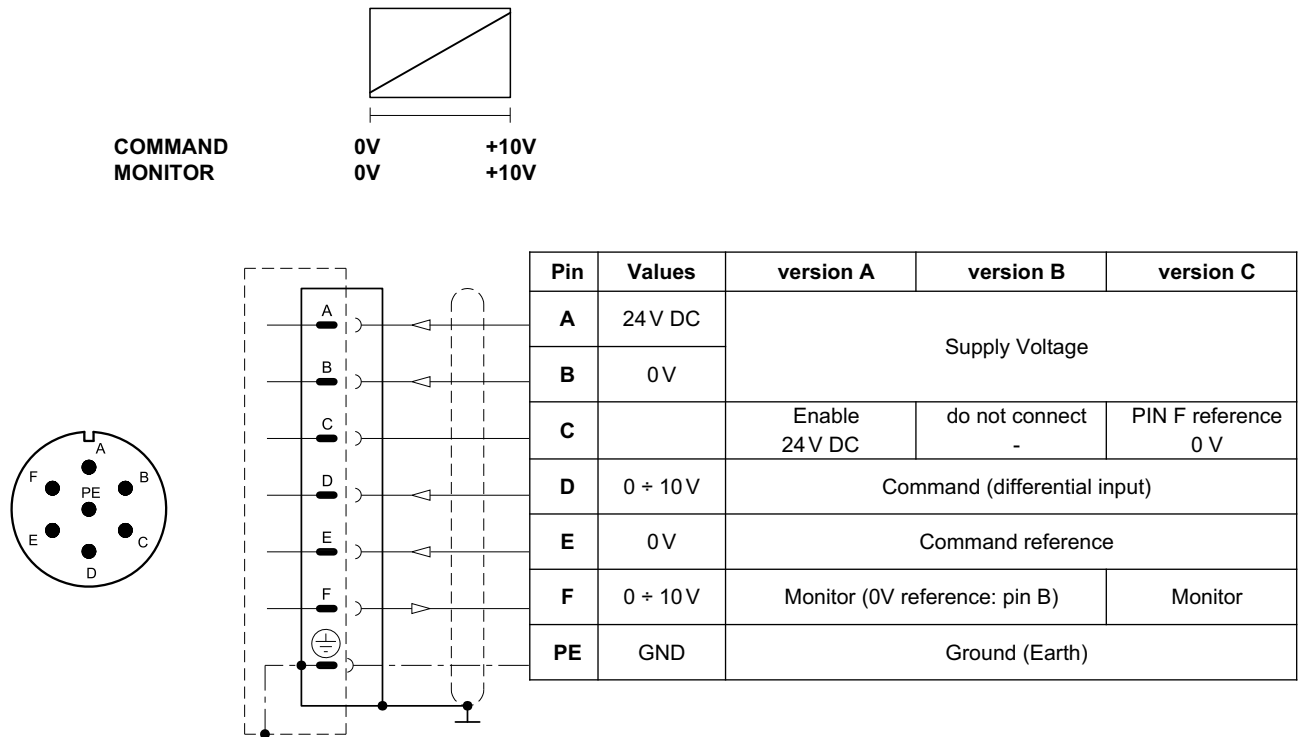

VERSION C - 0V Monitor

3.3 - Version with voltage command (E0)

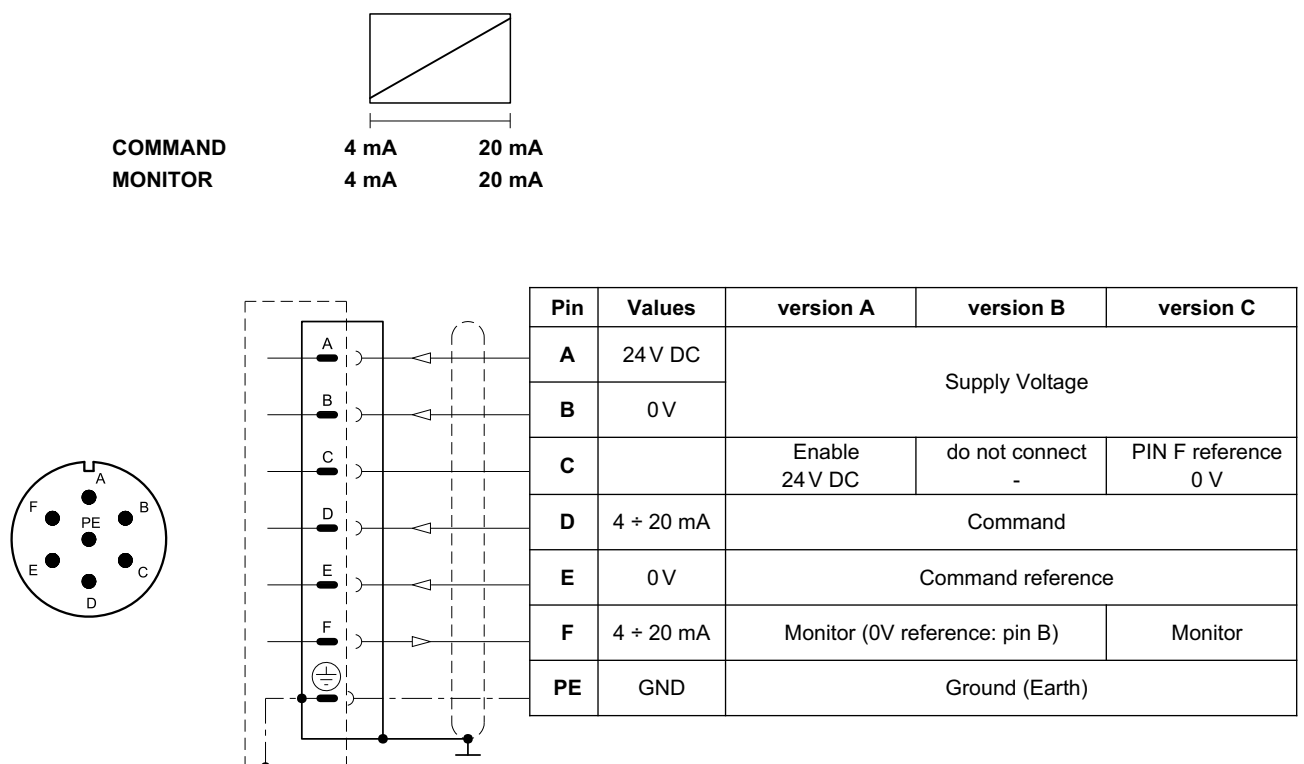

The reference signal is between 0 ÷ 10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

3.4 - Versions with current command (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4 - PDE3JL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

4.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (pressure at transducer): voltage (E0) current (E1)	V DC mA	0 ÷ 5 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
IO-Link communication (IOL): Data rate	kBaud	IO-Link Port Class B 230.4
Can Open communication (CA): Data rate	kbit	10 ÷ 1000
Data register (IOL and CA versions only)		solenoid voltage supply, solenoid faults (shortcircuit, bad config, internal), box temperature, switch-on time, vibrations
Connection		5-pin M12 code A (IEC 61076-2-101)

4.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	0 ÷ 10 V	Command
3	0 V	Command reference
4	0 ÷ 5 V	Monitor (0V reference: pin 5)

'E1' connection

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

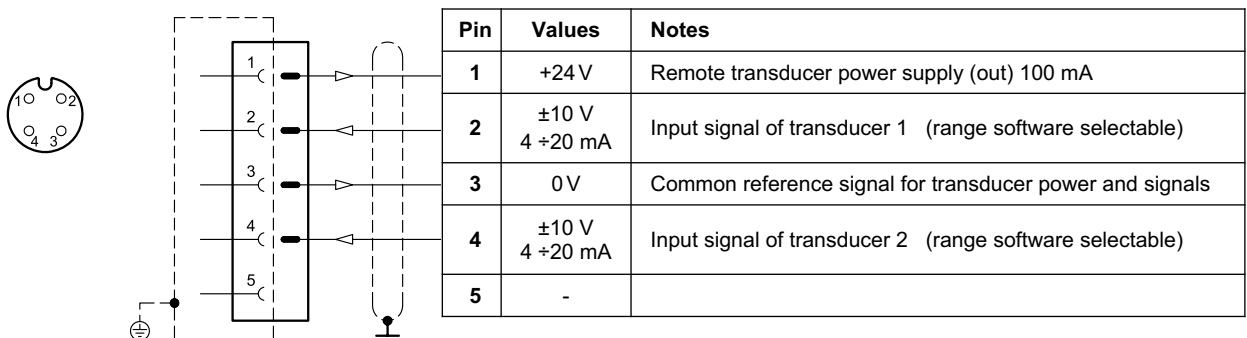

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

6 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control characteristics, according to the reference signal for available pressure control ranges, measured with input flow rate $Q = 1 \text{ l/min}$.

Characteristic curves measured without backpressure in T, with linearity and hysteresis compensation set by the onboard electronics.

7 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with a PDE3J-210 and with an input flow rate of $Q = 1 \text{ l/min}$ and pressure oil volume of 0,1 litre.

The response time is affected both by the flow rate and the oil volume in the pipework.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	60	20

11 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

12 - INSTALLATION

We recommend installing these valves with the solenoid downward, either in horizontal or vertical position. If the valve is installed on vertical axis with the solenoid upward, you should consider possible variations of the minimum controlled pressure from those indicated in paragraph 5.

Ensure that there is no air in the hydraulic circuit. In certain applications it might be necessary to vent the air entrapped in the solenoid tube by unfastening the drain screw placed in the solenoid tube.

Ensure the solenoid tube is always filled with oil. Make sure the drain screw has been put back correctly at the end of the task. Connect the valve T port directly to the tank.

Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols.

If minimum values are not observed, fluid can easily leaks between the valve and support surface.

13 - ACCESSORIES

(to be ordered separately)

13.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

13.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

13.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

13.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connection, see catalogue 89 850.

14 - SUBPLATES

(see catalogue 51 000)

PMMD-AI3G rear ports
PMMD-AL3G side ports

PRE3

PILOT OPERATED PRESSURE CONTROL VALVE WITH ELECTRIC PROPORTIONAL CONTROL

SERIES 20

SUBPLATE MOUNTING ISO 4401-03

p max **350** bar

Q max **40** l/min

MOUNTING INTERFACE

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Maximum operating pressure: - P port - T port	bar	350 2
Minimum controlled pressure	see p min = f(Q) diagram	
Minimum flow Maximum flow (see graph p max= f(Q))	l/min	2 40
Step response	see paragraph 6	
Hysteresis (with PWM 200 Hz)	% of p nom	< 5%
Repeatability	% of p nom	< ±1,5%
Electrical characteristic	see paragraph 5	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass	kg	3,5

OPERATING PRINCIPLE

- The PRE3 is a pilot operated pressure control valve with electric proportional control and mounting interface in compliance with ISO 4401 standards.
- It is suitable to modulate the pressure in hydraulic circuits.
- The valve can be controlled directly by a current control supply unit or by an electronic control unit to exploit valve performance to the full (see at paragraph 9).
- The design of this valve has a mechanical pressure limitation feature for higher safety of the application.
- Five pressure control ranges up to 350 bar are available.

HYDRAULIC SYMBOL

simplified

detailed

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control curves according to the current supplied to the solenoid (D24 version with maximum current 860 mA) for the available pressure control ranges, measured with input flow rate $Q = 10$ l/min. Curves have been obtained without any hysteresis and linearity compensation and they have been measured without any backpressure in T.

The full scale pressure is set in factory with a flow rate of 10 l/min. In case of higher flow rate, the full scale pressure will increase (see diagram $p_{max} = f(Q)$).

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

PRESSURE VARIATION $p_{max} = f(Q)$

3 - MAX PRESSURE VALUES

This valve incorporates a mechanical limit of the maximum pressure, that operates independently of the applied current. This kind of design ensures the pressure cannot rise over even if the solenoid current exceeds the maximum current ($I > I_{\max}$).

Values obtained with oil viscosity of 36 cSt at 50°C, Q = 10 l/min

		PRE3-025	PRE3-070	PRE3-140	PRE3-210	PRE3-350
pressure value at 800 mA	bar	28	82	145	215	335
max pressure value when $I > I_{\max}$	bar	30	86	155	230	350

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

5 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.66	17.6
MAXIMUM CURRENT	A	1.88	0.86
DUTY CYCLE	100%		
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
PROTECTION FROM ATMOSPHERIC AGENTS (IEC 60529)	IP65		
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation	class H class F		

6 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with a PRE3-210 and with input flow rate Q = 10 l/min, and a pressure oil volume of 1 litre. The response time is affected by both the flow rate and the oil volume inside the piping.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	80	40

7 - INSTALLATION

We recommend to install the PRE3 valve either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 2.

Ensure that there is no air in the hydraulic circuit. In particular applications, it can be necessary to vent the air entrapped in the solenoid tube, by using the apposite drain screw in the solenoid tube. Ensure that the solenoid tube is always filled with oil. At the end of the operation, make sure of having screwed the drain screw correctly.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

8 - OVERALL AND MOUNTING DIMENSIONS

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (3) placed at the end of the solenoid tube.

Fastening bolts: 4 SHC screws M5x70 - ISO 4762

Torque: 5 Nm (A8.8)

SERIES 32

SUBPLATE MOUNTING

ISO 4401-03

p max **350** bar
Q max **40** l/min

MOUNTING INTERFACE

OPERATING PRINCIPLE

- The PRE3G valve is a pilot operated pressure control valve with electric proportional control and mounting surface in compliance with ISO 4401 standards, controlled by an integral digital amplifier.

- It is suitable to modulate the pressure in hydraulic circuits.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

Maximum operating pressure: - P port - T port	bar	350 2
Minimum controlled pressure	see p min= f(Q) diagram	
Minimum flow Maximum flow (see p max = f(Q) diagram)	l/min	2 40
Step response	see paragraph 6	
Hysteresis	% of p nom	< 3%
Repeatability	% of p nom	< ±1%
Electrical characteristic	see paragraph 2	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass	kg	3,8

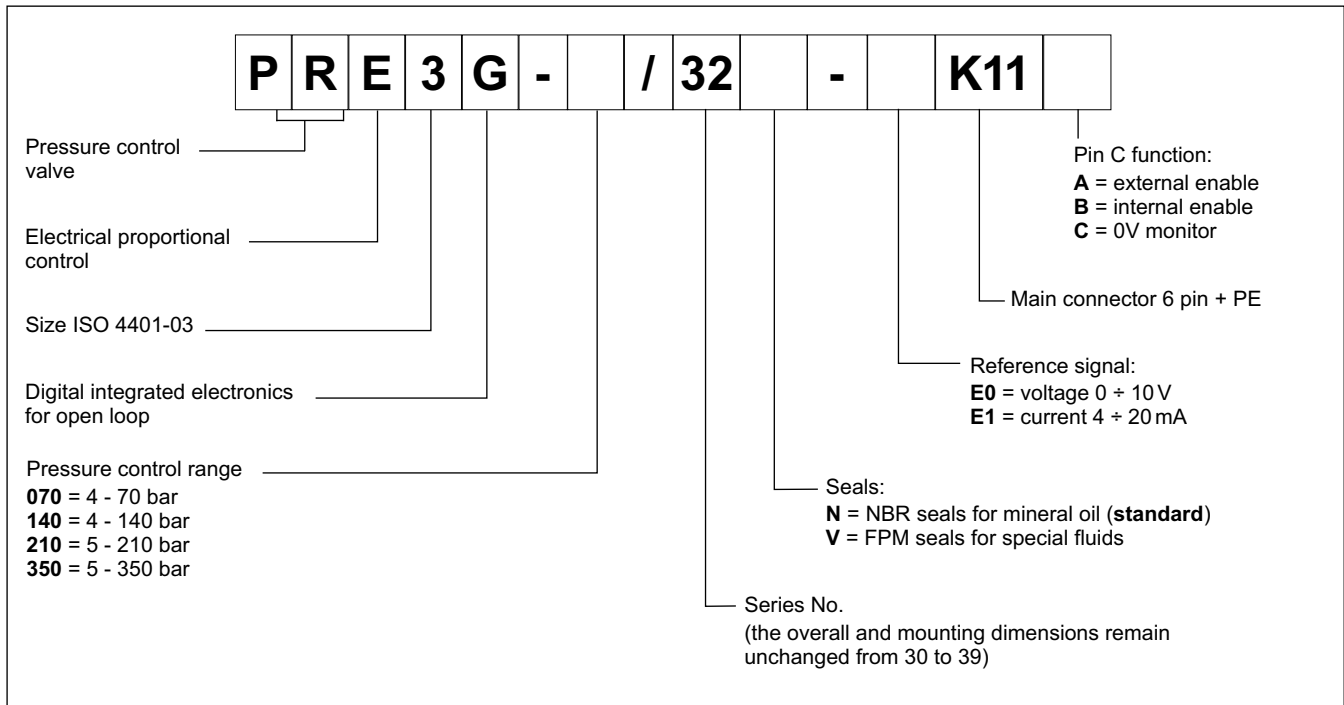

— The valves are available with command signal in voltage or current and on board electronics with internal enable, external enable or 0V monitor on pin C. A solenoid current monitoring signal is available.

- Valves are easy to install. The driver directly manages digital settings.

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - DETAILED SYMBOL

3 - ELECTRICAL CHARACTERISTICS

3.1 - Electrical on board electronics

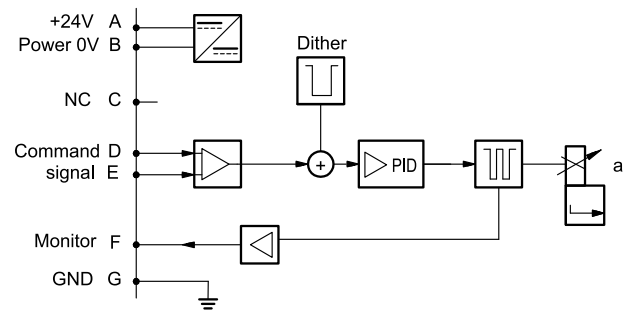

Duty cycle		100% (continuous operation)
Protection class according to IEC 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external		2A time lag
Command signals: voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri > 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Communication		LIN-bus Interface (with the optional kit)
Connection		7 - pin MIL-C-5015-G (DIN-EN 175201-804)
Electromagnetic compatibility (EMC) emissions EN 61000-6-4 immunity EN 61000-6-2		According to 2014/30/EU standards

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

VERSION C - 0V Monitor

4 - VERSIONS WITH VOLTAGE COMMAND (E0)

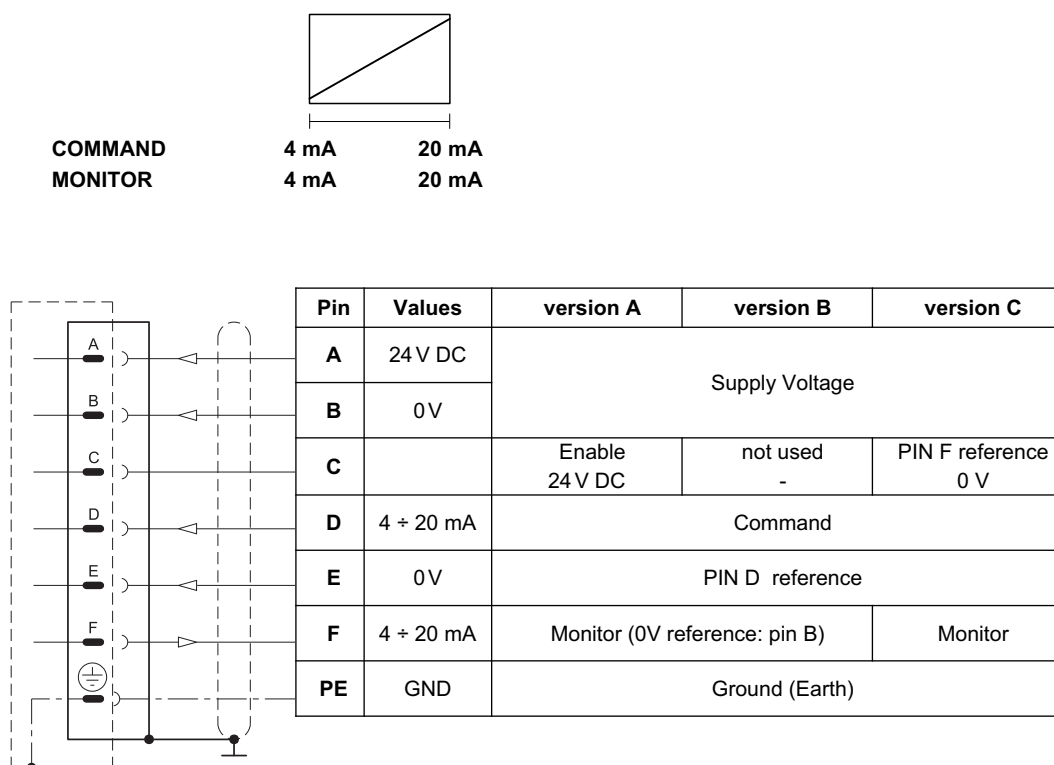

The reference signal is between 0 ÷ 10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5 - VERSIONS WITH CURRENT COMMAND (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

6 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control characteristics, according to the reference signal for available pressure control ranges, measured with input flow rate $Q = 10$ l/min. Characteristic curves measured without backpressure in T, with linearity compensation set by the onboard electronics.

The full scale pressure is set in factory with a flow rate of 10 l/min. In case of higher flow rate, the full scale pressure will increase (see diagram $p_{max} = f(Q)$).

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

PRESSURE VARIATION $p_{max} = f(Q)$

7 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with a PRE3G-210 and with an input flow rate of $Q = 10$ l/min and pressure oil volume of 0,1 litre.

The response time is affected both by the flow rate and the oil volume in the pipework.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	80	40

8 - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (3) placed at the end of the solenoid tube.

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: 4 OR type 2037 - 90 shore (9.25 x 1.78)
2	Breather: Allen key 4
3	Main connection
4	Mating electrical connector to be ordered separately. See at section 11

9 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

10 - INSTALLATION

We recommend to install the valves either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 6.

Ensure that there is no air in the hydraulic circuit. In particular applications, can be necessary to vent the air entrapped in the solenoid tube, by using the appropriate drain screw in the solenoid tube.

Ensure the solenoid tube is always filled with oil. At the end of the operation, make sure of having correctly replaced the drain screw.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

11 - ACCESSORIES

(to be ordered separately)

11.1- Mating connector

These valves have a plug for 7-pin mating connector, that is placed on the box of the integral motion control.

So as to avoid electromagnetic troubles and comply with the electromagnetic compatibility regulation EMC, it is recommended the use of a metal connector.

If a plastic connector is used, make sure that the protection characteristics IP and EMC of the valve are guaranteed.

Duplomatic offers a metal cable connector type MIL-C-5015-G (EN 175201-804).

name: **EX7S/L/10** code **3890000003**

11.2 - Connection cables size

Power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm²

Signal: 0,50 mm²

A suitable cable would have 7 isolated conductors, a separate screen for the signal wires and an overall screen.

11.3 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, see catalogue 89850.

PRE*

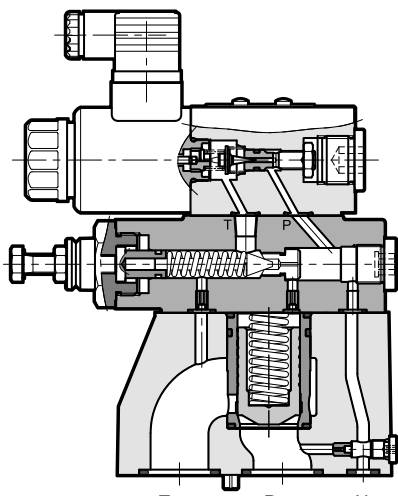

PROPORTIONAL PRESSURE RELIEF VALVES, PILOT OPERATED

SERIES 20

SUBPLATE MOUNTING ISO 6264

p max **350** bar
Q max (see table of performances)

OPERATING PRINCIPLE

- PRE* valves are pilot operated pressure relief valves with electric proportional control and mounting interface in compliance with ISO 6264 standards.
- These valves are used to control hydraulic circuit pressure and to enable the use of the full flow rate of the pump, even with settings approach the calibration value.
- The two-stage design and wide passages ensure reduced pressure drops thereby improving the system energy performance.
- The design of these valves has a mechanical pressure limitation feature inside the pilot stage, for higher safety of the application.
- Valves can be controlled directly by a current control supply unit or by means of an electronic control unit, to exploit valve performance to the full (see par. 11).
- They are fitted with a manual pressure relief valve which is factory set to $\geq 15\%$ of the maximum value in the pressure control range.

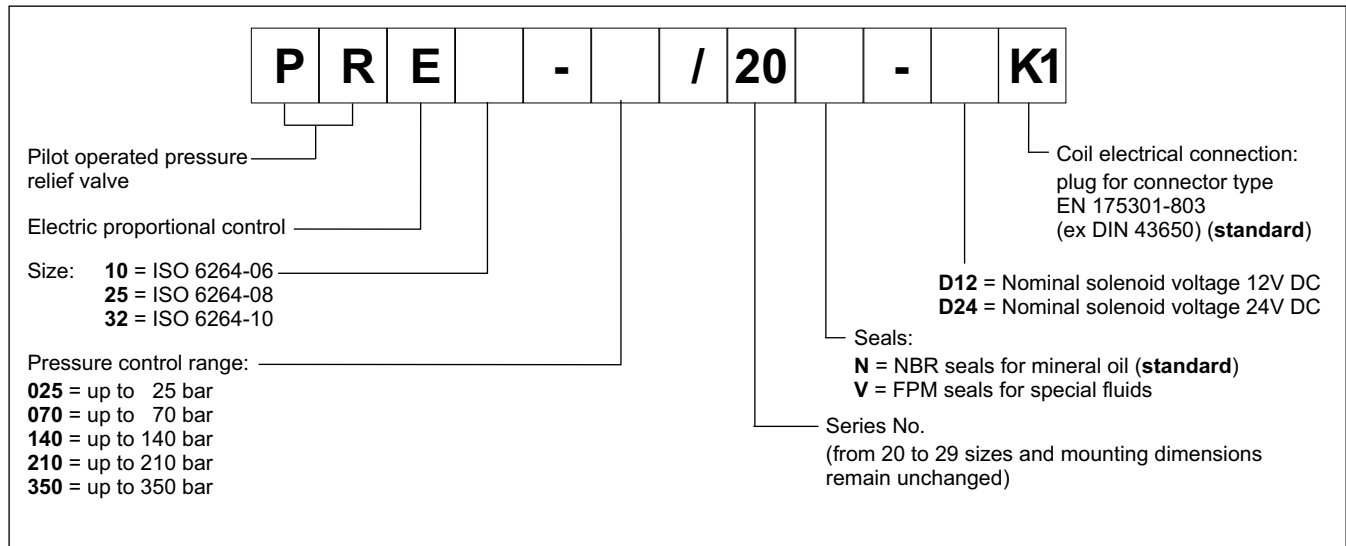

— They are available in three sizes for flow rates up to 500 l/min and in five pressure control ranges up to 350 bar.

PERFORMANCES (obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)		PRE10	PRE25	PRE32

PRE10K*	ISO 6264 - 06
PRE25K*	ISO 6264 - 08
PRE32K*	ISO 6264 - 10

OPERATING PRINCIPLE

- PDE3K* and PRE*K* are explosion-proof pressure relief valves with proportional control.
- They are compliant with ATEX, IECEx and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- A low temperature version (up to -40 °C) is also available.
- The valves can be controlled directly by a current power supply or by means of an electronic control unit, to exploit valve performance to the full (see par. 21).
- Upon request, these valves can be supplied with a finishing surface treatment (zinc-nickel) suitable to ensure a salt spray resistance up to 600 hours.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Option:
surface treatment
not standard.
Omit if not
required
(see **NOTE**)

Option: **/T5**
version in T5 temperature
class.
Omit if not required.

Connection type for cable gland
upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2
not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1
(ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2
not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1
(ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection:
junction box

Nominal solenoid voltage:
D12 = 12V DC
D24 = 24V DC

Version with monobloc steel coil

Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.

On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

NOTE: the valves are supplied with standard surface treatment of phosphating black.

Upon request we can supply these valves with full zinc-nickel surface treatment, suitable to ensure a salt spray resistance up to 600 h (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

For full zinc-nickel surface treatment add **/W7** at the end of the identification code.

1.1 - Names of valves per certification

	ATEX		IECEX		INMETRO	
for gases for dusts	KD2	II 2GD	KXD2	IECEX Gb IECEX Db	KBD2	INMETRO Gb INMETRO Db
for mines	KDM2	I M2	KXDM2	IECEX Mb	KBDM2	INMETRO Mb

NOTE: Refer to the technical data sheet 02 500 for marking, operating temperatures and available versions.

2 - HYDRAULIC SYMBOL

3 - CHARACTERISTIC CURVES FOR DIRECT OPERATED PROPORTIONAL VALVE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Typical control curves according to the current supplied to the solenoid for available pressure control ranges measured with input flow rate $Q = 1 \text{ l/min}$.

Curves have been obtained without any hysteresis and linearity compensation and they have been measured without any backpressure in T. The full scale pressure is set in factory with a flow rate of 1 l/min. In case of higher flow rate, the full scale pressure will increase considerably (see diagram $p_{\max} = f(Q)$).

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{\min} = f(Q)$

PRESSURE VARIATION $p_{\max} = f(Q)$

4 - MAX PRESSURE VALUES FOR DIRECT OPERATED PROPORTIONAL VALVE

This valve incorporates a mechanical limit of the maximum pressure, that operates independently of the applied current. This kind of design ensures the pressure cannot rise over even if the solenoid current exceeds the maximum current ($I > I_{\max}$).

Values obtained with oil viscosity of 36 cSt at 50°C, $Q = 1$ l/min

		PDE3K*-025	PDE3K*-070	PDE3K*-140	PDE3K*-210	PDE3K*-350
pressure value at 800 mA	bar	25	77	142	217	360
max pressure value when $I > I_{\max}$	bar	33,5	90	161	252	390

5 - ELECTRICAL CHARACTERISTICS

(values $\pm 5\%$)

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (AT 20°C)	Ω	3,8	15,6
NOMINAL CURRENT	A	1,88	0,86

DUTY CYCLE	100%

CLASS OF PROTECTION Atmospheric agents Coil insulation (VDE 0580)	IP66/IP68 class H

5.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9 ± 6 Nm.

Electrical wiring must be done following the instructions of the rules in compliance with standard about protection against explosion hazards.

Characteristics of the cables connectable for wiring are indicated in the table below:

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals) or from - 40 °C to +110 °C (for valves with NL seals).

Cable glands (which must be ordered separately, see paragraph 18) allow to use cables with external diameter between 8 and 10 mm.

5.2 - Electrical diagrams

5.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max 3 x I_n according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source. The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,88	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,86	1,25	- 49	

6 - PDE3K* OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

PDE3K* -*K9S*

Side port type	A

32 = ISO 6264-10

Explosion-proof certification: See table 1.1

Pressure control range:

PRE3K*:	PRE10K*, PRE25K* and PRE32K*
025 = 4 - 25 bar	025 = up to 25 bar
070 = 4 - 70 bar	070 = up to 70 bar
140 = 4 - 140 bar	140 = up to 140 bar
210 = 4 - 210 bar	210 = up to 210 bar
350 = 5 - 350 bar	350 = up to 350 bar

Series No. (the overall and mounting dimensions remain unchanged from 20 to 29)

Seals: For temperature range -20 / +80 °C
N = NBR seals for mineral oil (standard)
V = FPM seals for special fluids
For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Option: surface treatment not standard. Omit if not required (see NOTE)

Option: /T5 version in T5 temperature class. Omit if not required.

Connection type for cable gland upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Nominal solenoid voltage:
D12 = 12V DC
D24 = 24V DC

A version with monobloc coil made of steel is available. Please refer to details in page 2.

NOTE: the valves are supplied with standard surface treatment of phosphating black.

Upon request we can supply these valves with full zinc-nickel surface treatment, suitable to ensure a salt spray resistance up to 600 h (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

For full zinc-nickel surface treatment add /W7 at the end of the identification code.

8 - HYDRAULIC SYMBOLS

9 - CHARACTERISTIC CURVES OF PILOT OPERATED PROPORTIONAL VALVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

9.1 - PRE3K*

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

PRESSURE VARIATION $p_{max} = f(Q)$

9.2 - PRE10K*, PRE25K* and PRE32K*

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

PRESSURE VARIATION $p_{max} = f(Q)$

10 - MAX PRESSURE VALUES FOR PILOT OPERATED VALVES

These valves incorporate a mechanical limit of the maximum pressure, that operates independently of the applied current. This kind of design ensures the pressure cannot rise over, even if the solenoid current exceeds the maximum current ($I > I_{\max}$).

Values obtained with oil viscosity of 36 cSt at 50°C, Q = 10 l/min

		PRE3-025	PRE3-070	PRE3-140	PRE3-210	PRE3-350
pressure value at 800 mA	bar	28	82	145	215	335
max pressure value when $I > I_{\max}$	bar	30	86	155	230	350

Values obtained with oil viscosity of 36 cSt at 50°C, Q = 50 l/min

		PRE*-025	PRE*-070	PRE*-140	PRE*-210	PRE*-350
pressure value at 800 mA	bar	27	85	147	220	365
max pressure value when $I > I_{\max}$	bar	35	95	165	255	370

11 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with a valve of pressure range up to 210 bar and with input flow rate of Q = 1 l/min for PDE3K*, Q = 10 l/min for PRE3K* and Q = 50 l/min for PRE10K*, PRE25K* and PRE32K*.

REFERENCE SIGNAL	0 → 100%	100 → 0%
	Step response [ms]	
PDE3K*	60	70
PRE3K*	80	40
PRE10K*, PRE25K* and PRE32K*	120	90

(CETOP 4.4.2-2-R10-350)

18 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

19 - INSTALLATION

Installation must adhere to instructions reported in the *Use and Maintenance manual*, always attached to the valve. Unauthorized interventions can be harmful to people and goods because of the explosion hazards present in potentially explosive atmospheres.

We recommend to install the valves either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraphs 3 and 9.

Ensure that there is no air in the hydraulic circuit. In particular applications, it can be necessary to vent the air, by using the apposite drain screw in the solenoid tube. At the end of the operation, make sure of having correctly screwed the drain screw.

Connect the T port on the valve directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value. **Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.**

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

20 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for Ø 8÷10 mm cables);
- ATEX II 2GD, I M2; IECEx Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: -70 °C ÷ +220 °C
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

21 - ELECTRONIC CONTROL UNITS

EDM-M112	for solenoid 24V DC	DIN EN 50022 rail mounting	see catalogue 89 251
EDM-M142	for solenoid 12V DC		

NOTE: electronic control units offered are not explosion-proof certified; therefore, they must be installed outside classified areas.

22 - SUBPLATES

(see catalogue 51 000)

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

1 - ATEX CLASSIFICATION AND TEMPERATURES

Diplomatic certifies the combination valve-coil for the valves suitable for application and installation in potentially explosive atmospheres, according to ATEX directive; the supply always includes the declaration of conformity to the directive and the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environments.

Coils assembled on these valves have been separately certified according to ATEX directive and so they are suitable for use in potentially explosive atmospheres.

1.1 - ATEX classification for valves

Type examination certificate: AR18ATEX055

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

ATEX II 2G ATEX II 2D	*KD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
ATEX I M2	*KDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

1.2 - ATEX marking for valves

valve code		N and V seals	NL seals
*KD2	for gas for dusts	II 2G IIC T4 Gb (-20°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-20°C Ta +80°C)	II 2G IIC T4 Gb (-40°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KD2 /T5	for gas for dusts	II 2G IIC T5 Gb (-20°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-20°C Ta +55°C)	II 2G IIC T5 Gb (-40°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KDM2	mining	I M2 I T150°C Mb IP66/68 (-20°C Ta +75°C)	I M2 I T150°C Mb IP66/68 (-40°C Ta +75°C)

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Diplomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

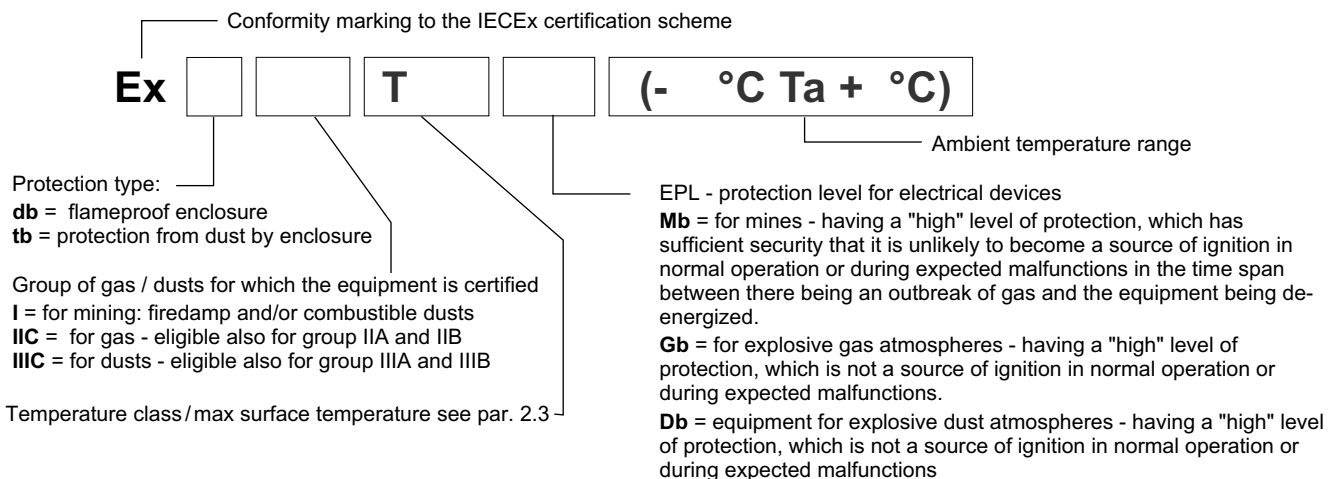

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
IECEx Gb IECEx Db	*KXD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas) T135°C (dusts)	T3, T2, T1 T200°C and higher
		of fluid				
	*KXD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas) T100°C (dusts)	T4, T3, T2, T1 T135°C and higher
		of fluid				
IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for

Q max (see table of performances)

OPERATING PRINCIPLE

- The PRE*G* valves are proportional pressure relief valves, pilot operated, with integrated electronics and mounting interface in compliance with ISO 6264 standards.
- These valves are used to control hydraulic circuit pressure and enable the use of the full flow rate of the pump, even with settings approaching calibrated values.
- The two-stage design and wide passages ensure reduced pressure drops thereby improving the system energy performance.
- They are fitted with a manual pressure relief valve which is factory set to $\geq 15\%$ of the maximum value in the pressure control range.
- Valves are available with different types of electronics, with analogue or fieldbus interfaces.
- They are available in three sizes with flow rates up to 500 l/min and in four pressure control ranges up to 350 bar.
- The valves are easy to install. The driver directly manages digital settings.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

		PRE10G*	PRE25G*	PRE32G*
Maximum operating pressure	bar	350		
Maximum flow	l/min	200	400	500
Step response		see paragraph 8		
Hysteresis	% of p nom	< 3%		
Repeatability	% of p nom	< ±1%		
Electrical characteristic		see paragraph 3		
Ambient temperature range	°C	-20 / +60		
Fluid temperature range	°C	-20 / +80		
Fluid viscosity range	cSt	10 ÷ 400		
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13			
Recommended viscosity	cSt	25		
Mass	kg	5.5	6.3	8.5

3 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	2A time lag
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

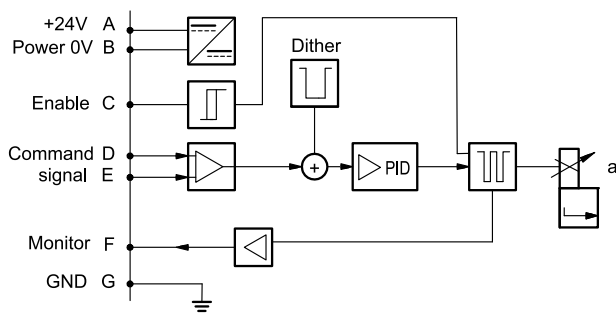

4 - PRE*G - STANDARD ELECTRONICS

4.1 - Electrical characteristics

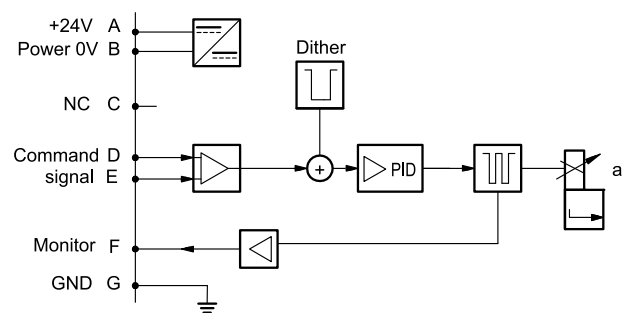

Command signal:	voltage (E0) current (E1)	V DC mA	0 + 10 (Impedance Ri = 11 kOhm) 4 + 20 (Impedance Ri = 58 Ohm)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	0 + 10 (Impedance Ro > 1 kOhm) 4 + 20 (Impedance Ro = 500 Ohm)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

4.2 - On-board electronics diagrams

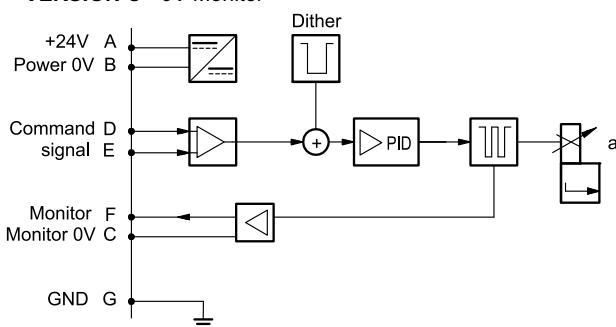

VERSION A - External Enable

VERSION B - Internal Enable

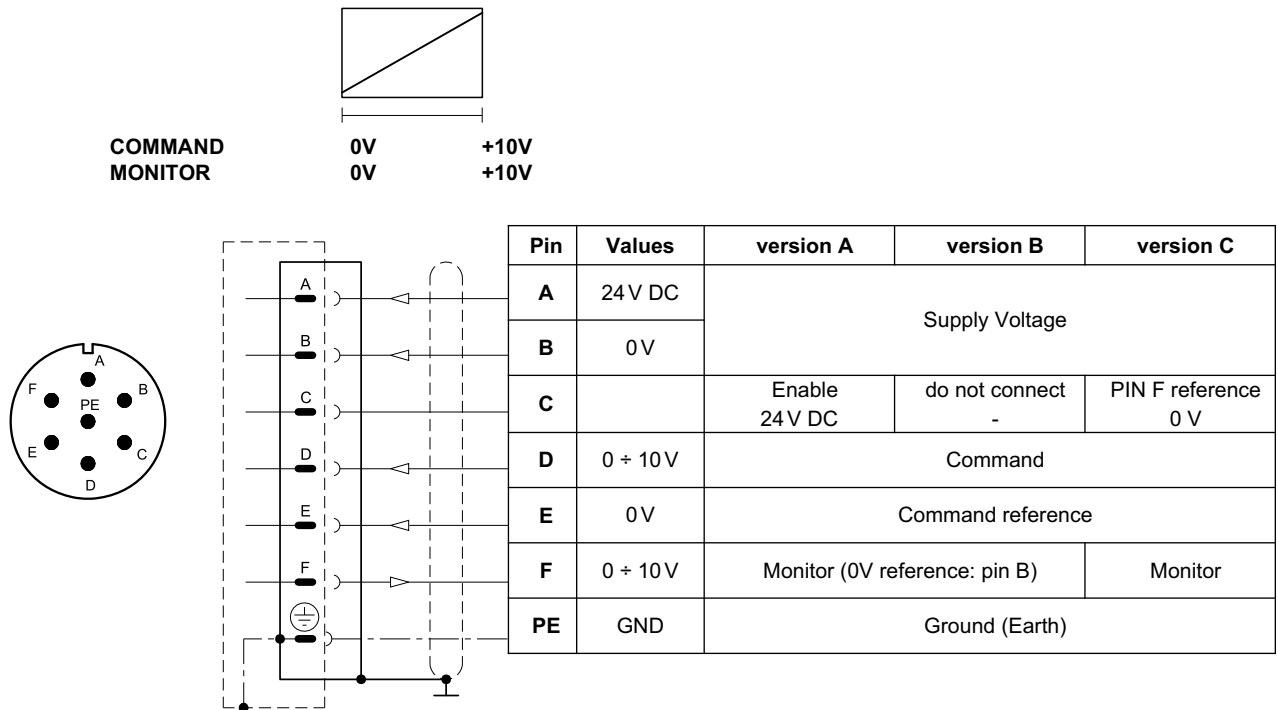

VERSION C - 0V Monitor

4.3 - Versions with voltage command (E0)

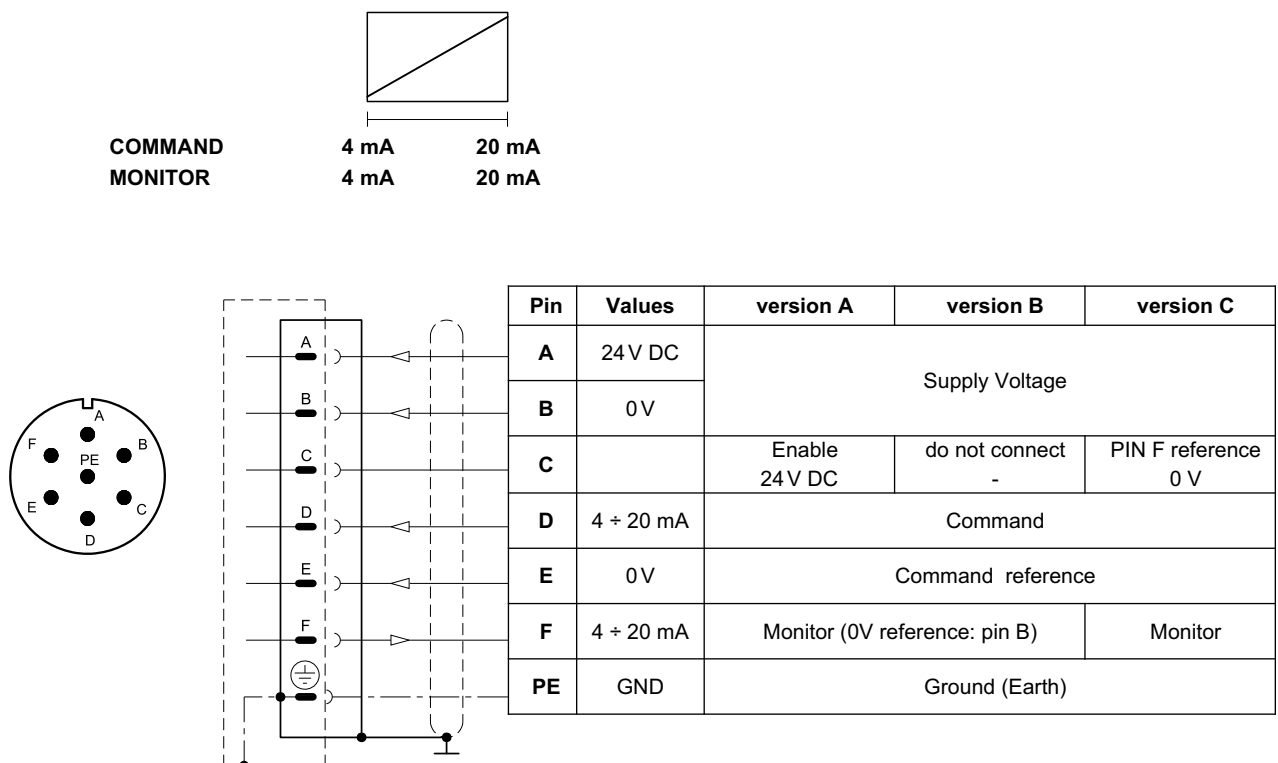

The reference signal is between $0 \div 10V$. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4.4 - Versions with current command (E1)

The reference signal is supplied in current $4 \div 20$ mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5 - PRE*GL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

5.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	0 ÷ 5 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
IO-Link communication (IOL):	Data rate	kBaud	IO-Link Port Class B 230.4
Can Open communication (CA):	Data rate	kbit	10 ÷ 1000
Data register (IOL and CA versions only)			solenoid voltage supply, solenoid faults (shortcircuit, bad config, internal), box temperature, switch-on time, vibrations
Connection			5-pin M12 code A (IEC 61076-2-101)

5.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V

6.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

6.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

6.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

6.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

6.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

Pin	SSI Values	Function	Notes
1	CLK+	Serial synchronous clock (+)	Input - digital signal
2	CLK-	Serial synchronous clock (-)	
3	MIS0+	Serial position data (+)	
4	MIS0-	Serial position data (-)	
5	NC	-	do not connect
6	NC	-	
7	+24 V	transducer power supply	Output power supply
8	0 V	-	Common GND

VERSION 2: ENCODER type

Pin	Values	Function	Notes
1	ENC_Z+	input channel Z+	Input - digital signal
2	ENC_Z-	input channel Z-	
3	ENC_A+	input channel A+	
4	ENC_A-	input channel A-	
5	ENC_B+	input channel B+	
6	ENC_B-	input channel B-	
7	+5 V	transducer power supply	Output power supply
8	0 V	-	Common GND

6.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

Pin	Values	Notes
1	+24 V	Remote transducer power supply (out) 100 mA
2	±10 V 4 ±20 mA	Input signal of transducer 1 (range software selectable)
3	0 V	Common reference signal for transducer power and signals
4	±10 V 4 ±20 mA	Input signal of transducer 2 (range software selectable)
5	-	

7 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Typical control characteristics, according to the reference signal for available pressure control ranges, measured with input flow rate $Q = 50$ l/min. Characteristic curves measured without backpressure in T, with linearity compensation set by the onboard electronics.

PRESSURE CONTROL $p = f(I)$

MINIMUM CONTROLLED PRESSURE $p_{min} = f(Q)$

minimum regulated pressure for pressure control ranges between 70 bar and 350 bar.

PRESSURE VARIATION $p_{max} = f(Q)$

8 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Response times obtained with PRE*G-210 valves, with an input flow rate of 50 l/min and a pressure oil volume of 2 litres. The response time is affected both by the flow rate and the oil volume in the pipework.

(CETOP 4.4.2-2-R06-350)

PRE25G*:

ISO 6264-08-13-*-97
(CETOP 4.4.2-2-R08-350)

PRE32G*:

ISO 6264-10-17-*-97
(CETOP 4.4.2-2-R10-350)

13 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

14 - INSTALLATION

We recommend to install the valves either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 7.

Ensure that there is no air in the hydraulic circuit. In particular applications, can be necessary to vent the air entrapped in the solenoid tube, by using the appropriate drain screw in the solenoid tube.

Ensure the solenoid tube is always filled with oil. At the end of the operation, make sure of having correctly replaced the drain screw. Connect the valve T port directly to the tank.

Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

15 - ACCESSORIES

(to be ordered separately)

15.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

15.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

15.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

15.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connection, see catalogue 89 850.

16 - SUBPLATES

PRE*J*

PROPORTIONAL PRESSURE RELIEF VALVES, PILOT OPERATED, WITH INTEGRATED ELECTRONICS AND PRESSURE CLOSED LOOP

SUBPLATE MOUNTING

p max **350** bar

Q max (see table of performances)

OPERATING PRINCIPLE

- PRE*J* valves are proportional pressure relief valves, pilot operated, with integrated electronics and pressure closed loop, with mounting interface in compliance with ISO 6264 standard.
- These valves are used to control hydraulic circuit pressure and enable the use of the full flow rate of the pump, even with settings approaching calibrated values.
- The two-stage design and wide passages ensure reduced pressure drops thereby improving the system energy performance.
- They are fitted with a manual pressure relief valve which is factory set to $\geq 15\%$ of the maximum value in the pressure control range.
- Valves are available with different types of electronics, with analogue or fieldbus interfaces.
- They are available in three sizes with flow rates up to 500 l/min and in four pressure control ranges up to 350 bar.
- The valves are easy to install. The driver directly manages digital settings.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and $p = 140$ bar)

		PRE10J*	PRE25J*	PRE32J*
Maximum operating pressure	bar	350

Pilot operated pressure relief valve

Electro-proportional control

Size: _____

10 = ISO 6264-06
25 = ISO 6264-08
32 = ISO 6264-10

Digital integrated electronics for closed loop with fieldbus communication

Pressure control range _____

140 = up to 140 bar
210 = up to 210 bar
350 = up to 350 bar

Series No. (the overall and mounting dimensions remain unchanged from 30 to 39) _____

Seals: _____

N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Reference signal: _____

E0 = voltage 0 ÷ 10 V
E1 = current 4 ÷ 20 mA
FD = full digital version (on request)

Option:
/ W7 = Zinc-nickel surface treatment (see **NOTE** par. 1.1)
 Omit if not required

X4 Analogue transducer:
0 = none
1 = version 1 (single/double transducer)

X7 Digital transducer:
0 = none
1 = version 1 (SSI type)
2 = version 2 (Encoder type)

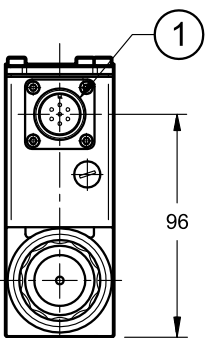

X2, X3 Fieldbus type:
CA = CAN Open
PD = PROFIBUS DP
EC = EtherCAT
EN = Ethernet /IP
PN = Profinet
PL = PowerLink

X1 Main connection configuration:
D1 = one command
D0 = full digital version (on request - available for reference signal FD type only)

Main connection 11 pin + PE

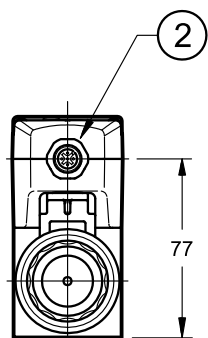

2 - COMPARISON AMONG INTEGRATED ELECTRONICS

JH type

134

dimensions in mm

NOTE 1: Depending on the chosen version, X4 and X7 connections may not be present. Please refer to sections 6 for connections descriptions and pinouts.

NOTE 2: Related mating connectors have to be ordered separately. See catalogue 89 000.

1	Connection 6 pin + PE
2	Connection M12 5 pin, code A, male
X1	Main connection 11 pin + PE
X2	Fieldbus communication (IN)
X3	Fieldbus communication (OUT)
X4	Connection for analogue transducer
X7	Connection for digital transducer

3 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	2A time lag
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

4 - PRE*J - STANDARD ELECTRONICS

4.1 - Electrical characteristics

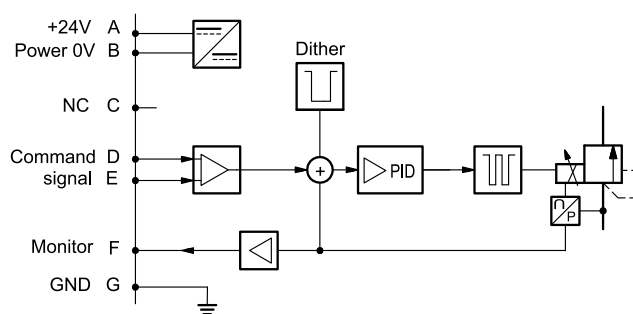

Command signal:	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (pressure at transducer):	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

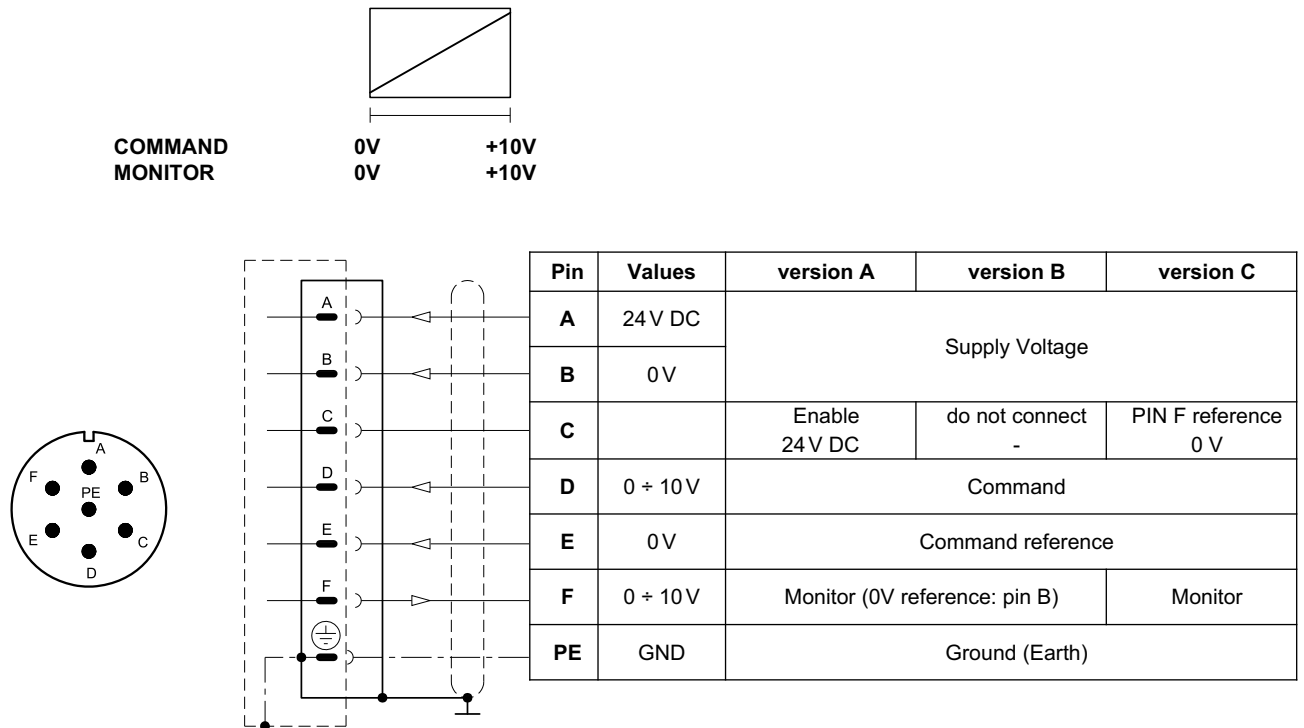

VERSION C - 0V Monitor

4.3 - Version with voltage command (E0)

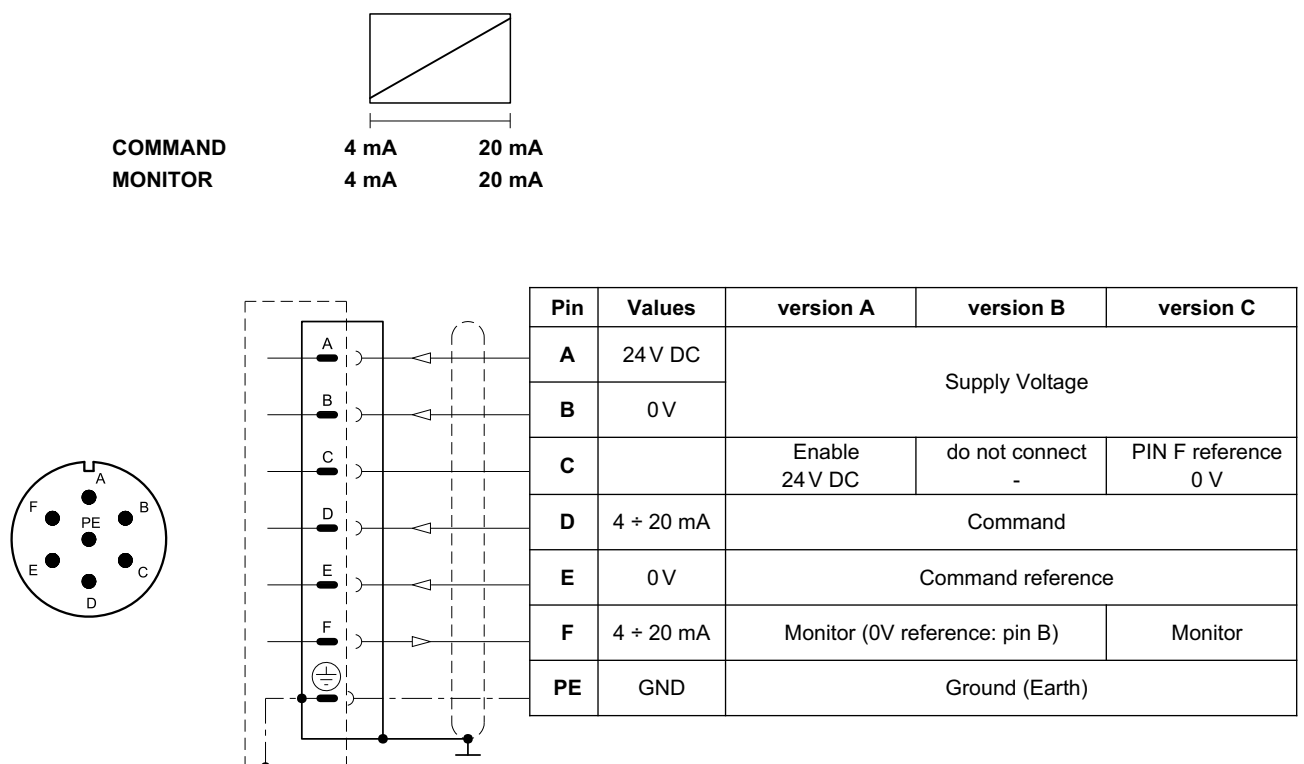

The reference signal is between 0 ÷ 10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4.4 - Version with current command (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5 - PRE*JL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

5.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (pressure at transducer): voltage (E0) current (E1)	V DC mA	0 ÷ 5 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
IO-Link communication (IOL): Data rate	kBaud	IO-Link Port Class B 230.4
Can Open communication (CA): Data rate	kbit	10 ÷ 1000
Data register (IOL and CA versions only)		solenoid voltage supply, solenoid faults (shortcircuit, bad config, internal), box temperature, switch-on time, vibrations
Connection		5 pin M12 code A (IEC 61076-2-101)

5.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	0 ÷ 10 V	Command
3	0 V	Command reference
4	0 ÷ 5 V	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	4 ÷ 20 mA	Command
3	0 V	Command reference
4	4 ÷ 20 mA	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0 V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0 V (GND)	
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

6 - PRE*JH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 4.3 and 4.4.

6.1 - Electrical characteristics

Command signal: voltage (E0) current (E1) digital (FD)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm) via fieldbus
Monitor signal (pressure at transducer): voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
Communication / diagnostic		via Bus register
Communication interface standards CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection		11 pin + PE (DIN 43651)

6.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	0 ÷ 10 V (E0) 4 ÷ 20 (E1)	Command
5	0 V	Command reference signal
6	0 ÷ 10 V (E0) 4 ÷ 20 (E1)	Monitor (0V reference pin 10)
7	NC	do not connect
8	NC	do not connect

12	GND	Ground (Earth)

6.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

6.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

6.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

6.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

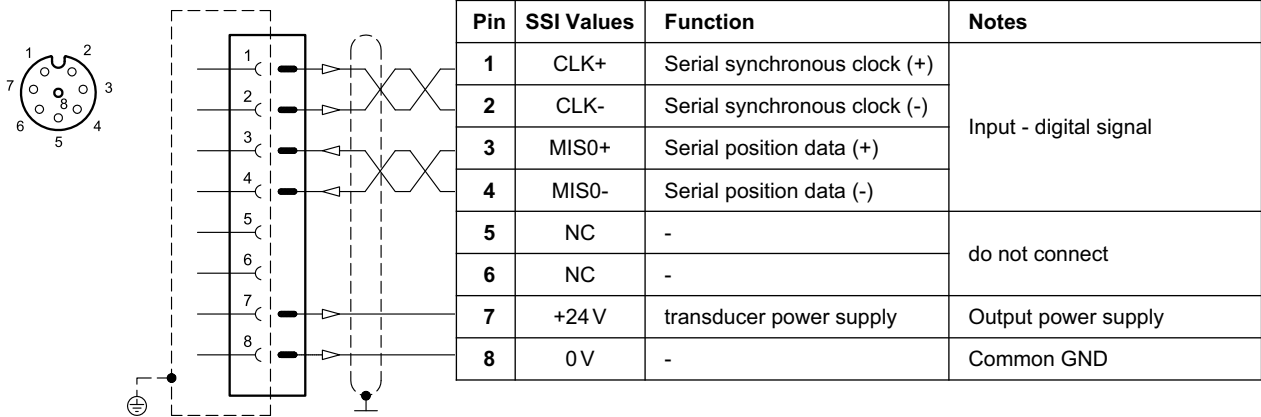

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

6.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

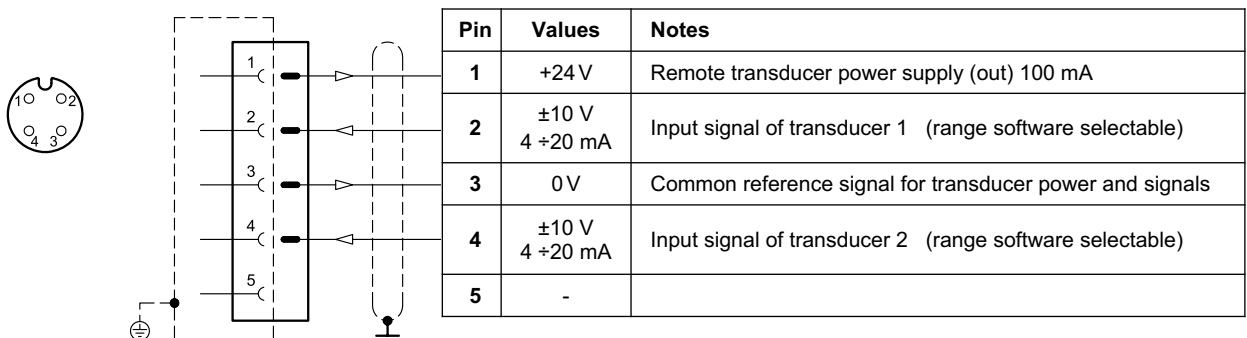

6.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

7 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control characteristics, according to the reference signal for available pressure control ranges, measured with input flow rate $Q = 50$ l/min. Characteristic curves measured without backpressure in T, with linearity and hysteresis compensation set by the onboard electronics.

minimum controlled pressure for pressure control ranges between 140 bar and 350 bar.

8 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Response times obtained with PRE*J*-210 valves, with an input flow rate of 50 l/min and a pressure oil volume of 2 litres. The response time is affected both by the flow rate and the oil volume in the pipework.

9 - OVERALL AND MOUNTING DIMENSIONS PRE10J*

dimensions in mm

PRE10JL

PRE10JH

NOTE 1: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (2) placed at the end of the solenoid tube.

12 - MOUNTING INTERFACES

PRE10J*:

ISO 6264-06-09-*-97
(CETOP 4.4.2-2-R06-350)

PRE25J*:

ISO 6264-08-13-*-97
(CETOP 4.4.2-2-R08-350)

PRE32J*:

ISO 6264-10-17-*-97
(CETOP 4.4.2-2-R10-350)

13 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

14 - INSTALLATION

We recommend to install the valves either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 7.

Ensure that there is no air in the hydraulic circuit. In particular applications, can be necessary to vent the air entrapped in the solenoid tube, by using the appropriate drain screw in the solenoid tube.

Ensure the solenoid tube is always filled with oil. At the end of the operation, make sure of having correctly replaced the drain screw. Connect the valve T port directly to the tank.

Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

15 - ACCESSORIES

(to be ordered separately)

15.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

15.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

15.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

15.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connection, see catalogue 89 850.

16 - SUBPLATES

(see catalogue 51 000)

MZE

PILOT OPERATED PRESSURE REDUCING VALVE WITH ELECTRIC PROPORTIONAL CONTROL

SERIES 58

MODULAR VERSION ISO 4401-03

p max **320** bar
Q max (see table of performances)

MOUNTING SURFACE

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Maximum operating pressure: - P-A-B ports - T port	bar	320 2
Minimum controlled pressure	see Δp -Q diagram	
Maximum flow in P line	l/min	30
Maximum flow on passing lines		50
Drain flow		0,4
Step response	see paragraph 5	
Hysteresis (with PWM 200 Hz)	% of p nom	< 3%
Repeatability	% of p nom	< $\pm 1,5\%$
Electrical characteristic	see paragraph 4	
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass	kg	1,8

OPERATING PRINCIPLE

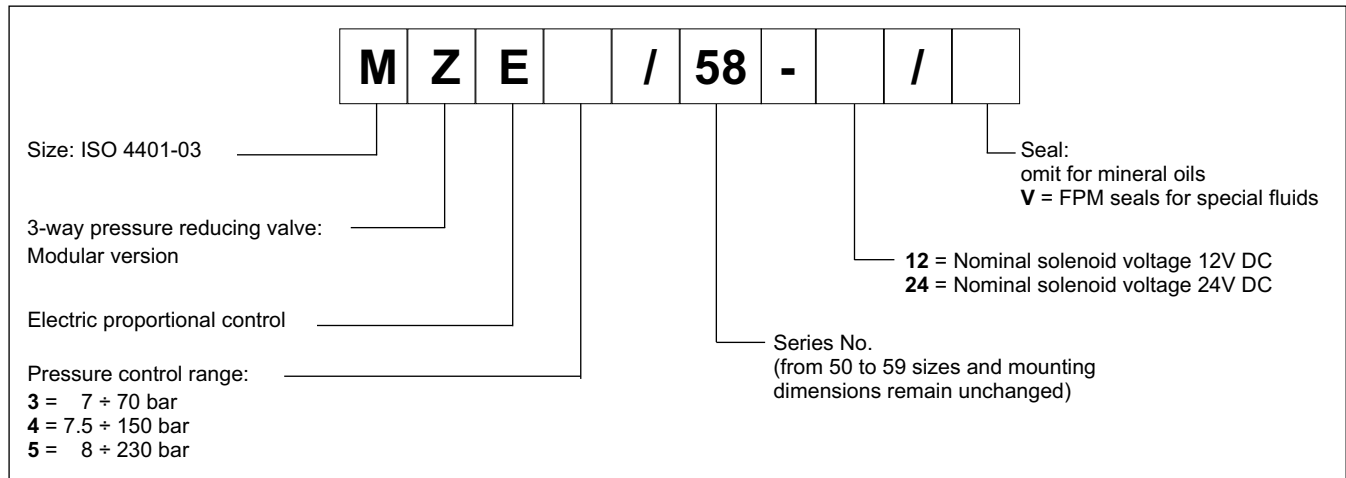

- MZE valves are 3-way pilot operated pressure reducing valves, with electric proportional control, designed as modular versions with mounting interface in compliance with ISO 4401 standards.
- The valves are used to reduce pressure in the secondary circuit branches thus ensuring stability of controlled pressure in the event of variations of the flow rate through the valve.
- Pressure can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or by an electronic control unit, to exploit valve performance to the full (see par. 8).
- The valve is available in three different pressure reduction ranges of up to 230 bar.
- The valve is available only with internal drain to the T line inside the valve.

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(measured with viscosity 36 cSt at 50°C)

PRESSURE CONTROL $p = f(I)$

The curves have been obtained with working lines closed (without flow).

PRESSURE VARIATION $p = f(Q)$

The curves have been obtained with inlet pressure 50 bar greater than nominal pressure.
Pressure values in P1 greater than 50 bar reduce flow values considerably.

PRESSURE DROP $\Delta p = f(Q)$

1. pressure drops $P1 \rightarrow P$
2. pressure drop in passing lines
(ex. $A \leftrightarrow A1$)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals.

For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.66	16.6
MAXIMUM CURRENT	A	1.9	0.85
DUTY CYCLE		100%	
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
CLASS OF PROTECTION: Atmospheric agents (IEC EN 60529)	IP 65		

5 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with input flow rate of Q = 25 l/min.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	100	80

6 - INSTALLATION

We recommend that MZE valves should be installed either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 2.

Ensure that there is no air in the hydraulic circuit. In particular applications, it can be necessary to vent the air entrapped in the solenoid tube, by using the apposite drain screw in the solenoid tube. Ensure that the solenoid tube is always filled with oil (see par.7). At the end of the operation, make sure of having screwed correctly the drain screw.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the reduced pressure value.

The maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

PZE3

**PROPORTIONAL 3-WAY
PRESSURE REDUCING VALVE,
PILOT OPERATED
SERIES 11**

SUBPLATE MOUNTING

ISO 4401-03

p max 350 bar

Q max 40 l/min

MOUNTING SURFACE

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

Maximum operating pressure: - P port - T port	bar	350 2
Maximum flow (see $p_{max} = f(Q)$ diagram)	l/min	40
Step response	see paragraph 5	
Hysteresis	% of p_{nom}	< 5%
Repeatability	% of p_{nom}	< $\pm 2\%$
Electrical characteristic	see paragraph 4	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass	kg	2,4

OPERATING PRINCIPLE

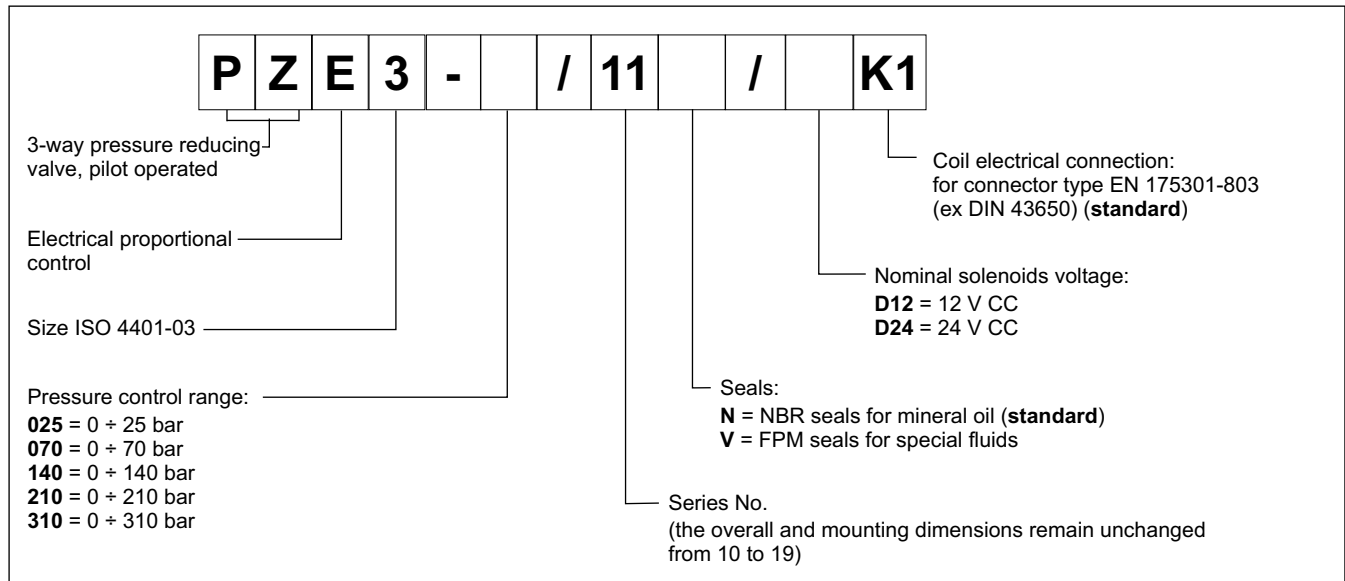

- The PZE3 valve is a proportional 3-way pressure reducing valve, pilot operated with mounting surface according to ISO 4401-03 standards.
- This valve controls the outlet pressure on port A by an electrical proportional control, reducing the inlet pressure from line P or relieving the overpressure from line A into T keeping it at the set value. (typically: hydraulic counter-weight or load balancing)
- PZE3 valves can be controlled directly by an amplifier or a proper electronic control unit

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

SET PRESSURE

MINIMUM PRESSURE $\Delta p = f(Q)$

Pressure drops A → T vs. flow, without backpressure in T port and command signal = 0V.

PRESSURE CONTROL $p = f(I)$

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

4 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube, secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.66	17.6
MAXIMUM CURRENT	A	1.88	0.86
DUTY CYCLE	100%		
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
PROTECTION FROM: Atmospheric agents (EN 60529)	IP 65		
CLASS OF PROTECTION: Coil insulation (VDE 0580) Impregnation	class H class F		

5 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	80	80

6 - INSTALLATION

We recommend installing the PZE3 valve either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what shown in paragraph 2.

Ensure that there is no air in the hydraulic circuit. In particular applications, it can be necessary to vent the air entrapped in the solenoid tube, by using the apposite drain screw in the solenoid tube. Ensure that the solenoid tube is always filled with oil. At the end of the operation, make sure of having screwed correctly the drain screw.

Connect the valve T port directly to the tank. **Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.**

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those shown in the relative symbol. If minimum values are not observed, fluid can easily leaks between valve and support surface.

7 - OVERALL AND MOUNTING DIMENSIONS

NOTE: at first start up, or after a long period of no use, it is necessary to vent the air through the breather (3) placed at the end of the solenoid tube.

Valve fastening: N. 4 bolts M5x40 - ISO 4762

Tightening torque: 5 Nm (A8.8 screws)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: 4 OR type 2037 (9.25x1.78) - 90 shore
2	Coil removal space

9 - SUBPLATES

(see catalogue 51 000)

PMMD-AI3G with ports on rear
PMMD-AL3G with side ports
Ports dimensions P, T, A and B: 3/8" BSP thread

PZE3G*

PROPORTIONAL 3-WAY PRESSURE REDUCING VALVE, PILOT OPERATED, WITH INTEGRATED ELECTRONICS

SUBPLATE MOUNTING ISO 4401-03

p max **350** bar
Q max **40** l/min

MOUNTING SURFACE

OPERATING PRINCIPLE

- PZE3G* valve is a proportional 3-way pressure reducing valve, pilot operated, with on-board electronics with mounting surface according to ISO 4401-03 standards.
- This valve controls the outlet pressure on port A, reducing the inlet pressure from line P or relieving the overpressure from line A into T keeping it at the set value. (typically: hydraulic counter-weight or load balancing)
- It is suitable to modulate the pressure in hydraulic circuits.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

Maximum operating pressure: - P port - T port	bar	350 2
Maximum flow (see p max = f(Q) diagram)	l/min	40
Step response	see paragraph 7	
Hysteresis	% of p nom	< 3%
Repeatability	% of p nom	< ±1%
Electrical characteristic	see paragraph 2	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass	kg	2.7

- It is available with different types of electronics, with analogue or fieldbus interfaces.
- Valves are easy to install. The driver directly manages digital settings

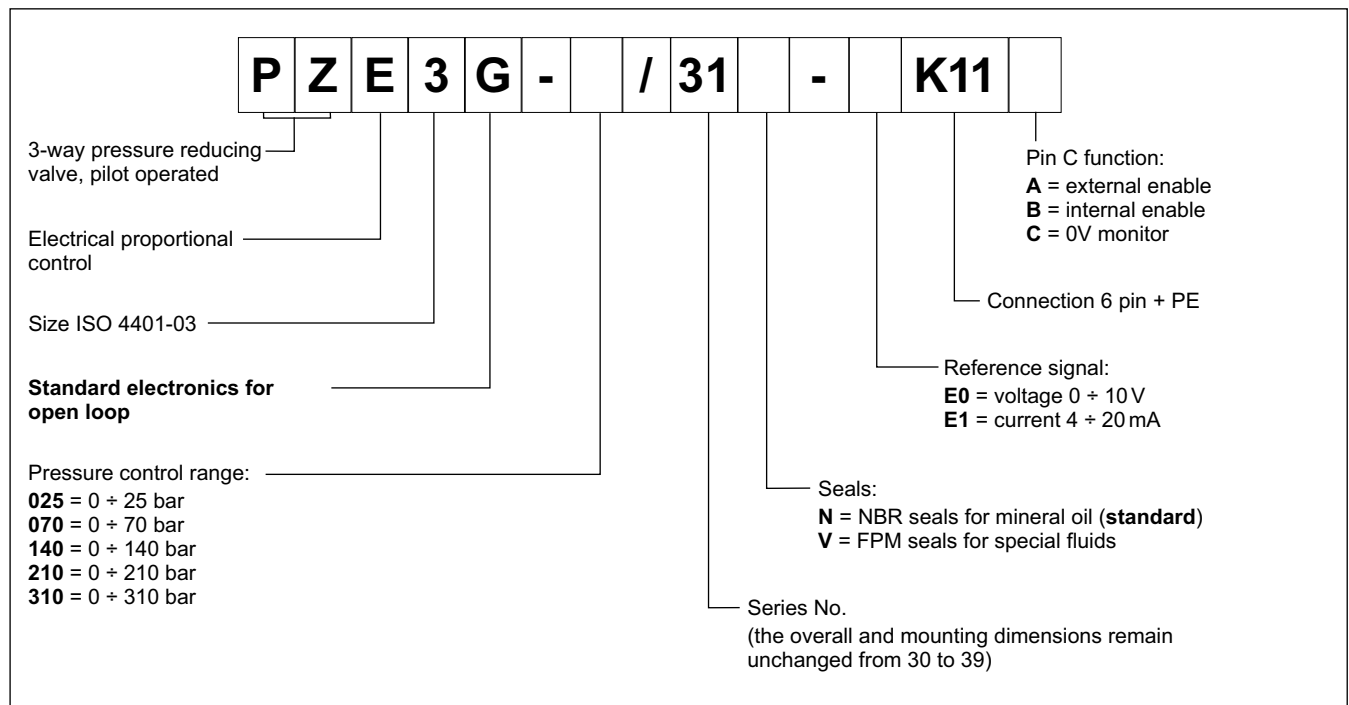

HYDRAULIC SYMBOL

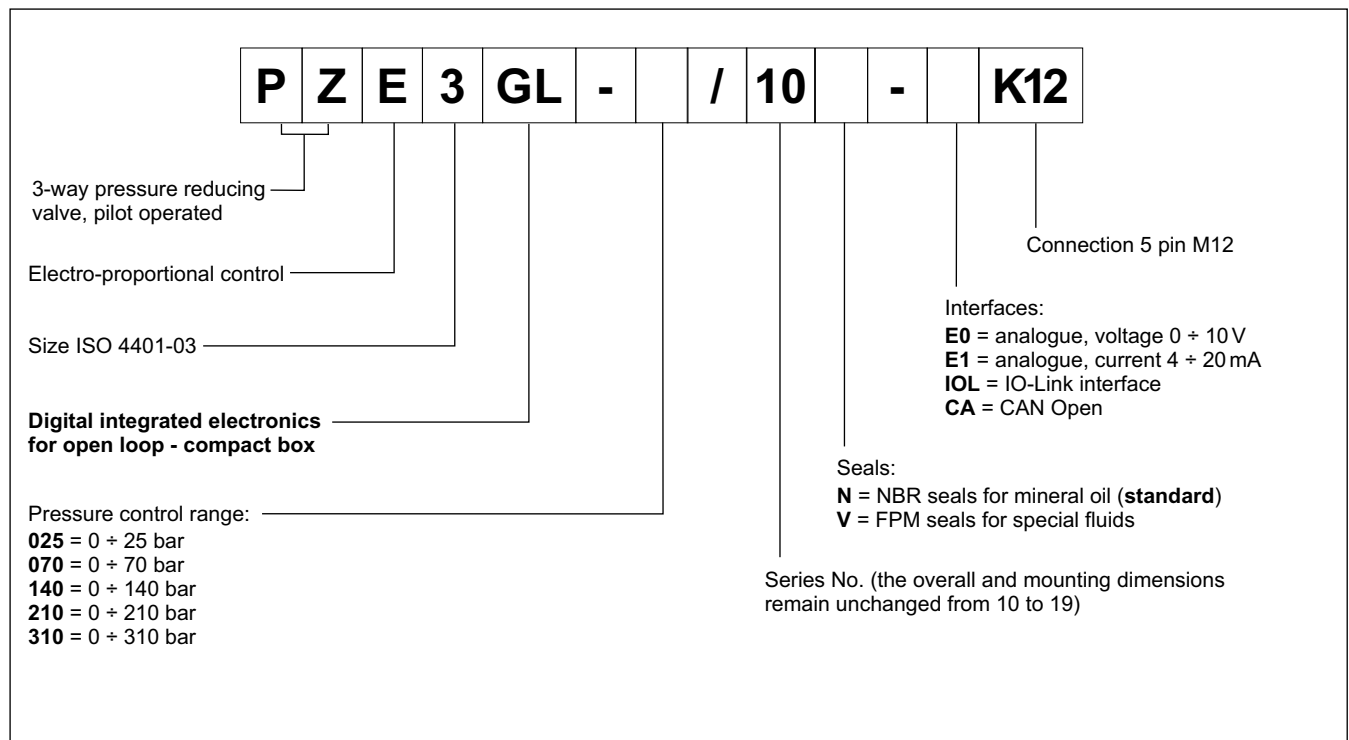

1 - IDENTIFICATION CODE

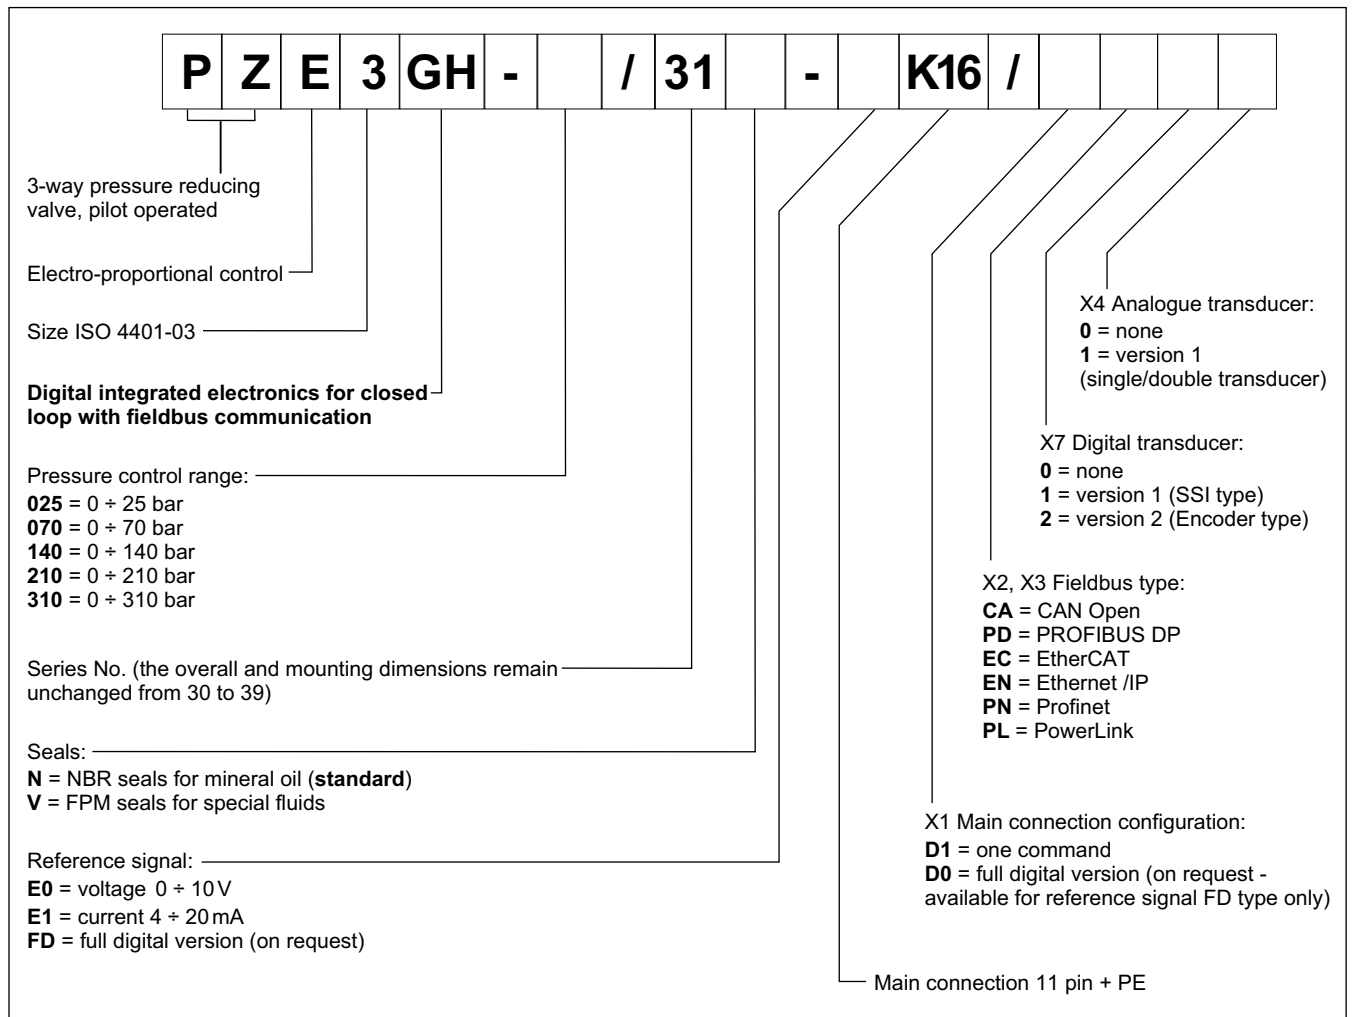

1.1 - Standard electronics

1.2 - Compact electronics

1.3 - Electronics with fieldbus communication

2 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	2A time lag
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

3 - PZE3G - STANDARD ELECTRONICS

3.1 - Electrical characteristics

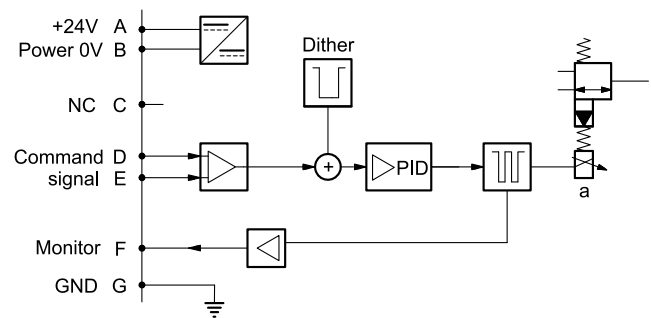

Command signal:	voltage (E0) current (E1)	V DC mA	0 + 10 (Impedance Ri = 11 kOhm) 4 + 20 (Impedance Ri = 58 Ohm)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	0 + 10 (Impedance Ro > 1 kOhm) 4 + 20 (Impedance Ro = 500 Ohm)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

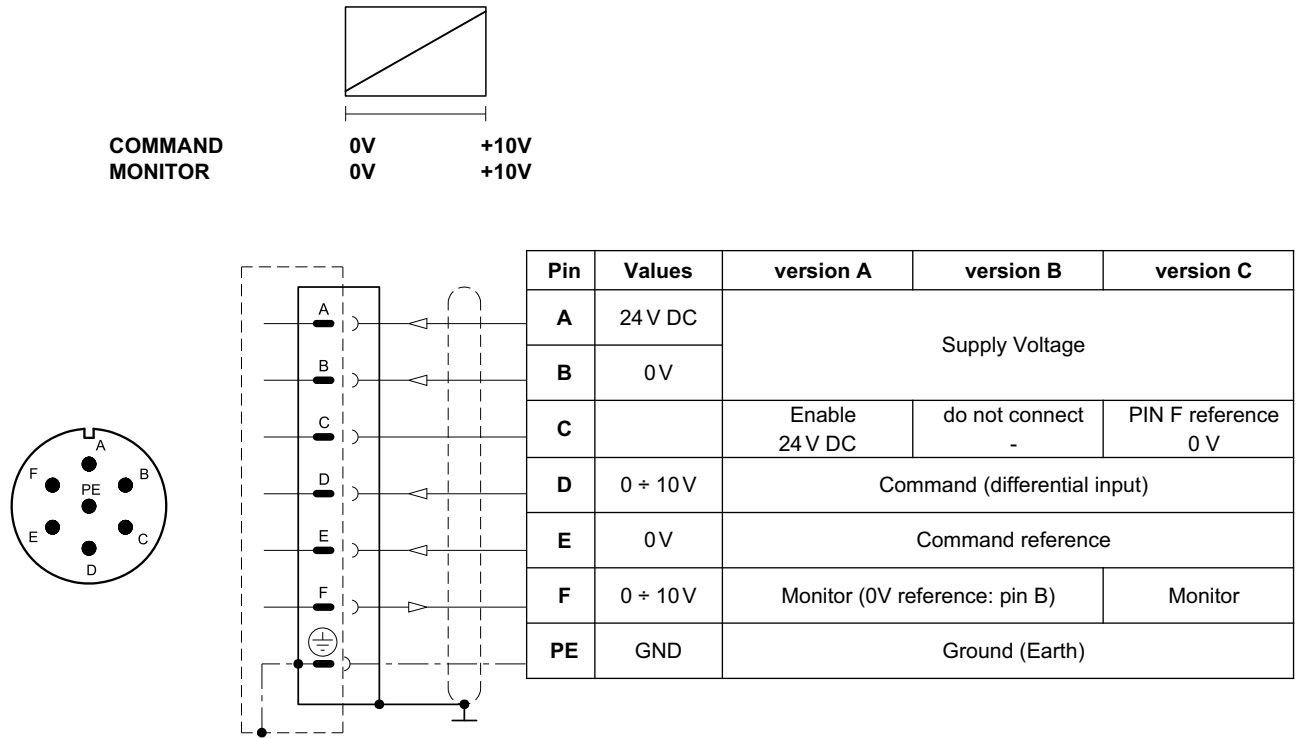

VERSION C - 0V Monitor

3.3 - Versions with voltage command (E0)

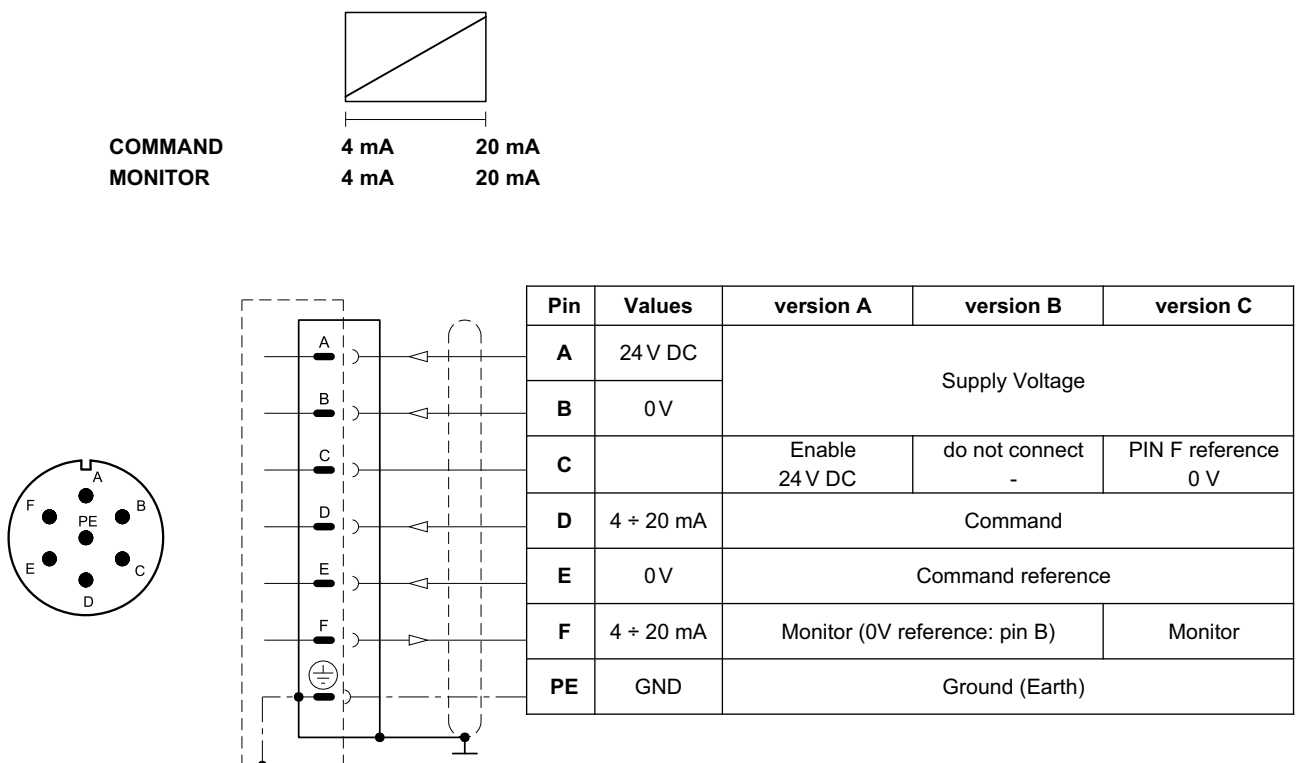

The reference signal is between 0 ÷ 10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

3.4 - Version with current command (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4 - PZE3GL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

4.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	0 ÷ 5 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
IO-Link communication (IOL): Data rate	kBaud	IO-Link Port Class B 230.4
Can Open communication (CA): Data rate	kbit	10 ÷ 1000
Data register (IOL and CA versions only)		solenoid voltage supply, solenoid faults (shortcircuit, bad config, internal), box temperature, switch-on time, vibrations
Connection		5-pin M12 code A (IEC 61076-2-101)

4.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	0 ÷ 10 V	Command
3	0 V	Command reference
4	0 ÷ 5 V	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	4 ÷ 20 mA	Command
3	0 V	Command reference
4	4 ÷ 20 mA	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0 V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0 V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

5 - PZE3GH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 3.3 and 3.4.

5.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	0 ÷ 10 (Impedance Ri = 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm) via fieldbus
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4+DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

5.2 - X1 Main connection pin table

D1: one command			D0: full digital		
Pin	Values	Function	Pin	Values	Function
1	24 V DC	Main supply voltage	1	24 V DC	Main supply voltage
2	0 V		2	0 V

12	GND	Ground (Earth)	12	GND	Ground (Earth)

5.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

5.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

5.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5 V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

5.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

Pin	SSI Values	Function	Notes
1	CLK+	Serial synchronous clock (+)	Input - digital signal
2	CLK-	Serial synchronous clock (-)	
3	MIS0+	Serial position data (+)	
4	MIS0-	Serial position data (-)	
5	NC	-	do not connect
6	NC	-	
7	+24 V	transducer power supply	Output power supply
8	0 V	-	Common GND

VERSION 2: ENCODER type

Pin	Values	Function	Notes
1	ENC_Z+	input channel Z+	Input - digital signal
2	ENC_Z-	input channel Z-	
3	ENC_A+	input channel A+	
4	ENC_A-	input channel A-	
5	ENC_B+	input channel B+	
6	ENC_B-	input channel B-	
7	+5 V	transducer power supply	Output power supply
8	0 V	-	Common GND

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

Pin	Values	Notes
1	+24 V	Remote transducer power supply (out) 100 mA
2	±10 V 4 ±20 mA	Input signal of transducer 1 (range software selectable)
3	0 V	Common reference signal for transducer power and signals
4	±10 V 4 ±20 mA	Input signal of transducer 2 (range software selectable)
5	-	

6 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control characteristics, according to the reference signal for available pressure control ranges. Characteristic curves measured without backpressure in T, with linearity compensation set by the onboard electronics.

PRESSURE CONTROL $p = f(I)$

SET PRESSURE $p_{max} = f(Q)$

MIN. CONTROLLED PRESSURE $p_{min} = f(Q)$

Pressure drops A → T vs. flow, without backpressure in T port and reference signal = 0 %

7 - RESPONSE TIMES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The response time is affected both by the flow rate and the oil volume in the pipework.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	80	80

8 - PZE3G - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (2) placed at the end of the solenoid tube.

Valve fastening: N. 4 SHC screws M5x40 - ISO 4762

Tightening torque: 5 Nm (A8.8 screws)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: 4 OR type 2037 - 90 shore (9.25 x 1.78)
2	Breather: Allen key 4
3	Main connection 6 pin + PE
4	Mating connector 6 poles + PE , female type MIL-5015-G To be ordered separately. See catalogue 89 000

9 - PZE3GL - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (2) placed at the end of the solenoid tube.

Fastening bolts: 4 SHC screws M5x40 - ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Breather: Allen key 4
3	Connection M12 A 5 pin
4	L1 LED
5	L2 LED
6	Mating connector M12 5 poles - code A, female To be ordered separately. See catalogue 89 000

10 - PZE3GH - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

X1	Main connection 11 pin + PE
X2	Fieldbus communication (IN)
X3	Fieldbus communication (OUT)
X4	X4 connection for analogue transducer
X7	X7 connection for digital transducer

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Breather: Allen key 4
3	Mating connector 11 poles + PE To be ordered separately. See catalogue 89 000
4	Mating connectors for fieldbus communication and signals To be ordered separately. See catalogue 89 000

NOTE 1: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (2) placed at the end of the solenoid tube.

NOTE 2: Depending on the chosen version, X4 and X7 connections may not be present.

Please refer to section 5 for connection descriptions and pinout.

Fastening bolts: 4 bolts M5x40 - ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

11 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

12 - INSTALLATION

We recommend to install the valves either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in section 6.

Ensure that there is no air in the hydraulic circuit. In particular applications, can be necessary to vent the air entrapped in the solenoid tube, by using the appropriate drain screw in the solenoid tube. So, ensure the solenoid tube is always filled with oil. When finished, make sure you have screwed the screw back in correctly.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

13 - ACCESSORIES

(to be ordered separately)

13.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

13.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

13.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

13.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connection, see catalogue 89 850.

14 - SUBPLATES

(see catalogue 51 000)

PMMD-AI3G with ports on rear
PMMD-AL3G with side ports
Ports dimensions P, T, A, B: 3/8" BSP thread

PZE3J*

PROPORTIONAL 3-WAY PRESSURE REDUCING VALVE, WITH PRESSURE CLOSED LOOP AND INTEGRATED ELECTRONICS

**SUBPLATE MOUNTING
ISO 4401-03**

p max 350 bar
Q max 40 l/min

MOUNTING SURFACE

OPERATING PRINCIPLE

- PZE3J* valve is a proportional 3-way pressure reducing valve, pilot operated, with pressure feedback, on-board electronics and mounting surface according to ISO 4401-03 standards.
- This valve controls the outlet pressure on port A, reducing the inlet pressure from line P or relieving the overpressure from line A into T keeping it at the set value. (typically: hydraulic counter-weight or load balancing)

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

Maximum operating pressure: - P port - T port	bar	350 2
Maximum flow (see p max = f(Q) diagram)	l/min	40
Step response	see paragraph 7	
Hysteresis	% of p nom	< 1 %
Repeatability	% of p nom	< ± 0.5%
Electrical characteristic	see paragraph 2	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass	kg	3

- The valve is available with different types of electronics, with analogue or fieldbus interfaces.
- The valve is easy to install. The driver directly manages digital settings.

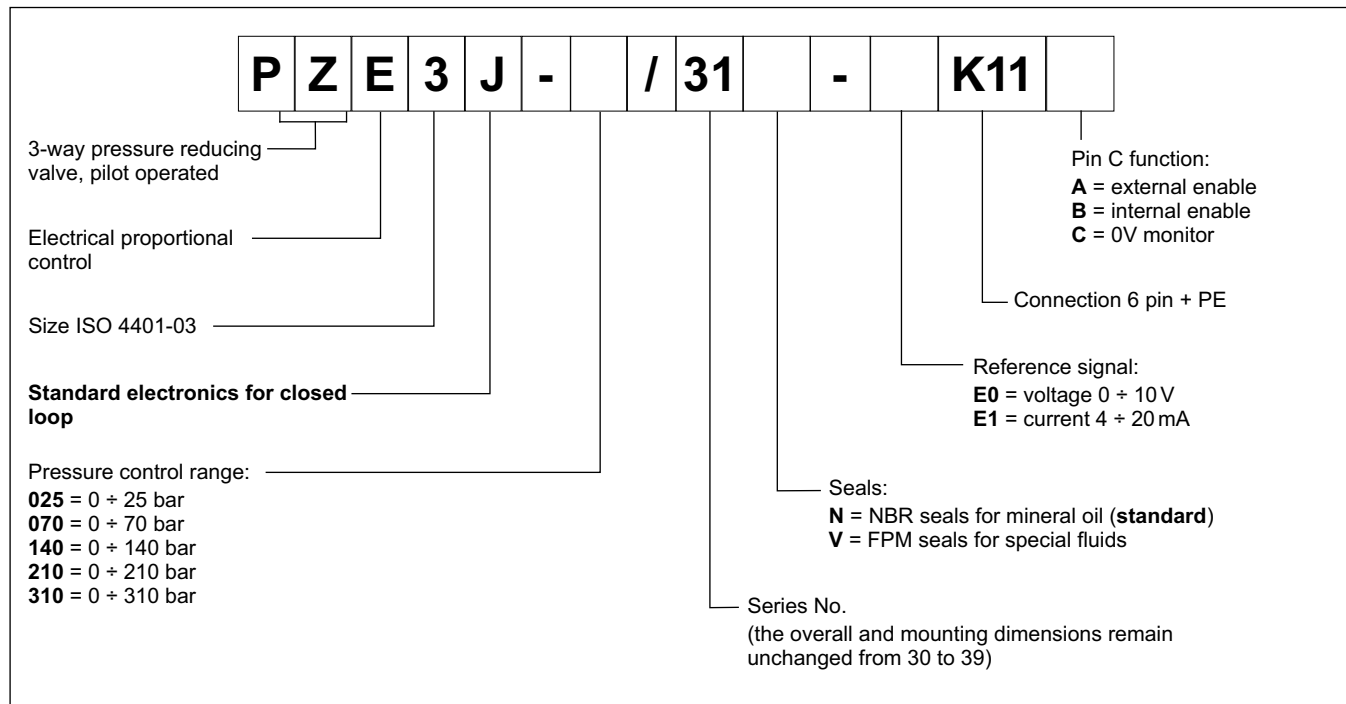

HYDRAULIC SYMBOL

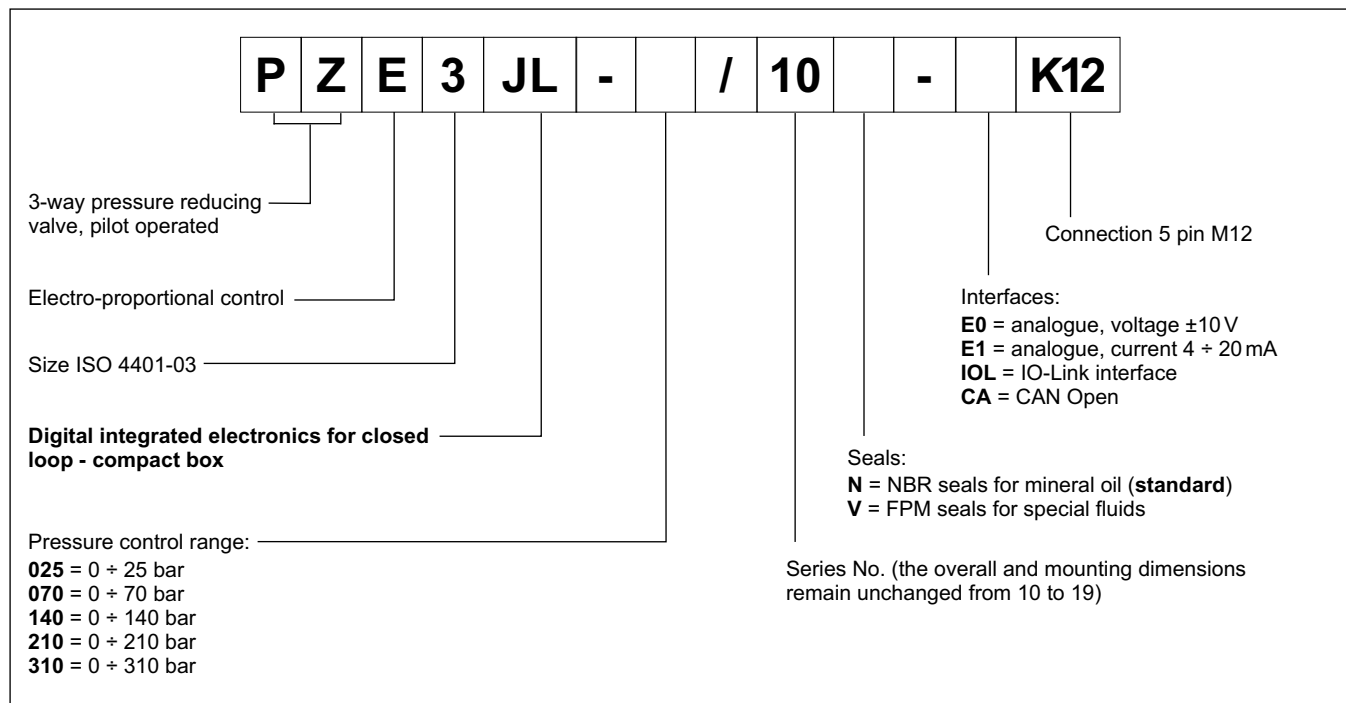

1 - IDENTIFICATION CODE

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

6 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control characteristics, according to the reference signal for available pressure control ranges. Characteristic curves measured without backpressure in T, with linearity and hysteresis compensation set by the onboard electronics.

Pressure drops $A \rightarrow T$ vs. flow, without backpressure in T port and reference signal = 0 %

7 - RESPONSE TIMES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

The response time is affected by both the flow rate and the oil volume in the pipework.

8 - PZE3J - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (2) placed at the end of the solenoid tube.

2	Breather: Allen key 4
3	Mating connector 11 poles + PE To be ordered separately. See catalogue 89 000
4	Mating connectors for fieldbus communication and signals To be ordered separately. See catalogue 89 000

11 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

12 - INSTALLATION

We recommend installing these valves with the solenoid downward, either in horizontal or vertical position. If the valve is installed on vertical axis with the solenoid upward, you should consider possible variations of the minimum controlled pressure from those indicated in paragraph 5.

Ensure that there is no air in the hydraulic circuit. In certain applications it might be necessary to vent the air entrapped in the solenoid tube by unfastening the drain screw placed in the solenoid tube.

Ensure the solenoid tube is always filled with oil. Make sure the drain screw has been put back correctly at the end of the task. Connect the valve T port directly to the tank.

Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols.

If minimum values are not observed, fluid can easily leaks between the valve and support surface.

13 - ACCESSORIES

(to be ordered separately)

13.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

13.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

13.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

13.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connection, see catalogue 89 850.

14 - SUBPLATES

Recommended viscosity	cSt	25
Mass: single solenoid valve	kg	1,6
double solenoid valve		2

OPERATING PRINCIPLE

- ZDE3 valves are direct operated pressure reducing valves with electric proportional control, with mounting interface in compliance with ISO 4401 standards.
- These valves are used to reduce pressure in the secondary circuit branches thus ensuring stability of controlled pressure in the event of variations of the flow rate through the valve.
- The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units to exploit valve performance to the full (see par. 10).

HYDRAULIC SYMBOLS

1 - IDENTIFICATION CODE

	Z	D	E	3	-		/	30	-		/	
--	----------	----------	----------	----------	---	--	---	-----------	---	--	---	--

Pressure reducing valve ———

Electric proportional control ———

Size ISO 4401-03 ———

Solenoids: ———

D = pressure reduction in A and B ports

SA = pressure reduction in A port (solenoid on side B)

SB = pressure reduction in B port (solenoid on side A)

Series No. ———

(from 30 to 39 sizes and mounting dimensions remain unchanged)

NOTE: The standard valve is supplied with surface treatment of phosphating black.

The zinc-nickel finishing makes the valve suitable to ensure a salt spray resistance up to 240 hours (test operated according to EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

Option:
/ **W7** = Zinc-nickel surface treatment (see **NOTE**)
Omit if not required

Manual override (see par. 7)

Coil electrical connection:
(see paragraph 5)

K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)

K7 = plug for connector type DEUTSCH DT04-2P male

D12 = Nominal solenoid voltage 12V DC

D24 = Nominal solenoid voltage 24V DC

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

2 - CHARACTERISTIC CURVES

(values obtained with a ZDE3-D/30N-D24K1 PWM 100 Hz and oil with viscosity 36 cSt at 50°C)

Pressure regulation is 0.5 bar lower in versions SA and SB

3 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE		V DC	12	24
RESISTANCE (at 20°C)	K1 coil K7 coil	Ω	3.66 4	17.6 19
MAXIMUM CURRENT		A	1.88	0.86
DUTY CYCLE			100%	
PWM FREQUENCY		Hz	200	100
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU			
PROTECTION FROM: Atmospheric agents (IEC 60529)	IP65			
CLASS OF PROTECTION: Coil insulation (VDE 0580) Impregnation	class H class F			

4 - STEP RESPONSE

(with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with input flow rate of Q = 5 l/min and p = 50 bar.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	30	30

5 - ELECTRIC CONNECTIONS

Connectors for standard K1 connection are always supplied with the valve.

connection for EN 175301-803
(ex DIN 43650) connector
code **K1 (standard)**

connection for
DEUTSCH DT06-2S male connector
code **K7**

6 - OVERALL AND MOUNTING DIMENSIONS

1	Mounting surface with sealing rings: 4 OR type 2037 - 90 shore (9.25x1.78)
2	Locking ring with boot protected manual override
3	Coil removal space
4	EN 175301-803 (ex DIN 43650) electrical connector
5	Connector removal space

Fastening bolts: 4 bolts M5x30 - ISO 4762
Torque: 5 Nm (A8.8)
Threads of mounting holes: M5x10

7 - MANUAL OVERRIDE

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

Two different manual override version are available upon request:

- **CM** version, manual override belt protected
- **CS** version, screw override with metal ring nut, provided with a M4 screw and a blocking locknut to allow the continuous mechanical operation.

CAUTION!: The manual override use doesn't allow any proportional regulation; indeed using this kind of override, the main stage spool will open completely and the whole inlet pressure will pass through A or B line.

8 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

9 - INSTALLATION

The ZDE3 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the reduced pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 30 bar.

EXPLOSION-PROOF PRESSURE REDUCING VALVES ATEX, IECEX, INMETRO SERIES 10

**SUBPLATE MOUNTING
ISO 4401-03**

**p max 100 bar
Q max 15 l/min**

OPERATING PRINCIPLE

- ZDE3K* are direct operated pressure reducing valves, with electric proportional control, with ISO 4401-03 mounting surface.
- They are compliant with ATEX, IECEX and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- A low temperature version (up to -40 °C) is also available.
- The valves are used to reduce pressure in the secondary circuit branches thus ensuring stability of controlled pressure in the event of variations of the flow rate through the valve.
- ZDE3K* valves are supplied with a finishing surface treatment (zinc-nickel) suitable to ensure a salt spray resistance up to 600 hours.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Pressure allowed in P port	bar	30 ÷ 100
Pressure allowed in T port (see par. 2)	bar	0 ÷ 30
Controlled pressure	bar	23
Maximum flow	l/min	15
Step response	ms	30
Hysteresis (with PWM 200 Hz)	% of p nom	< 4%
Repeatability	% of p nom	< ±1%
Electrical characteristic	see paragraph 4	
Operating temperatures (ambient and fluid)	see data sheet 02 500	
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13

SA = pressure reduction in A port (solenoid on side B)
SB = pressure reduction in B port (solenoid on side A)

Series No. _____
(from 30 to 39 sizes and mounting dimensions remain unchanged)

Seals: _____
For temperature range -20 / +80 °C
N = NBR seals for mineral oil (standard)
V = FPM seals for special fluids
For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Option: **/T5**
version in T5 temperature class.
Omit if not required.

Manual override:
CM = boot protected
standard for both N and V seals
not available for NL seals
CB = blind ring nut
standard for NL seals
available upon request for both N and V seals
see paragraph 8

Connection type for cable gland
upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2
not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2
not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Nominal solenoid voltage
D12 = 12 V DC
D24 = 24 V DC

Version with monobloc steel coil
Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.
On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

NOTE: zinc-nickel standard finishing surface treatment.
Test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards.

1.1 - Names of valves per certification

	ATEX		IECEX		INMETRO

NOTE: Refer to the technical data sheet 02 500 for marking, operating temperatures and available versions.

2 - CHARACTERISTIC CURVES

(obtained with ZDE3K*-D/10N-D24K9T01/CM with PWM 100Hz and oil with viscosity 36 cSt at 50°C)

3 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical step response times measured with input flow rate of $Q = 5$ l/min and $p = 50$ bar.

REFERENCE SIGNAL STEP	0 → 100%	100% → 0
response time [ms]	30	30

4 - ELECTRICAL CHARACTERISTICS

(values $\pm 5\%$)

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.8	15.6
NOMINAL CURRENT	A	1.88	0.86
PWM FREQUENCY	Hz	200	100

DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU
CLASS OF PROTECTION Atmospheric agents Coil insulation (VDE 0580)	IP66/IP68 class H

4.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9 + 6 Nm.

Electrical wiring must be done following in compliance with standards about protection against explosion hazards.

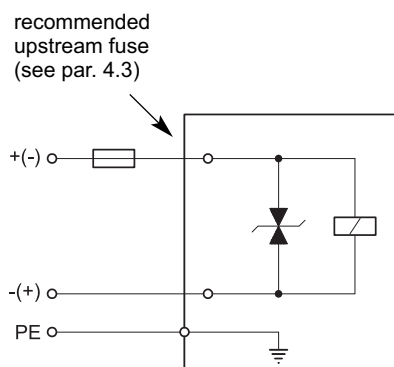

Characteristics of the cables connectable for wiring are indicated in the table below:

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals) or from - 40 °C to +110 °C (for valves with NL seals).

Cable glands (which must be ordered separately, see paragraph 9) allow to use cables with external diameter between 8 and 10 mm.

4.2 - Electrical diagram

4.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max 3 x I_n according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source.

The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,88	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,86	1,25	- 49	

5 - OVERALL AND MOUNTING DIMENSIONS

6 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

7 - INSTALLATION

Installation must adhere to instruction reported in the *Use and Maintenance manual*, always attached to the valve. Unauthorized interventions can be harmful to people and goods because of the explosion hazards present in potentially explosive atmospheres.

The valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the reduced pressure value.

In the T line the maximum admissible backpressure is 30 bar, under operational conditions.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

8 - MANUAL OVERRIDE CB

CB - Blind ring nut

The metal ring nut protects the solenoid tube from atmospheric agents and isolates the manual override from accidental operations. The ring nut is tightened on a threaded fastener that keeps the coil in its position even without the ring nut.

To access the manual override loose the ring nut and remove it; then reassemble hand tightening, until it stops.

Activate the manual override always and only with non-sparking tools suitable for use in potentially explosive atmospheres.

More information on safe use of explosion-proof components are provided in the instruction manual, always supplied with the valve.

CAUTION!: The manual override doesn't allow any proportional regulation; indeed using this kind of override, the spool opens the path completely and the whole inlet pressure will pass through A or B line.

9 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for Ø 8÷10 mm cables);
- ATEX II 2GD, I M2; IECEX Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: -70 °C ÷ +220 °C
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

1 - ATEX CLASSIFICATION AND TEMPERATURES

Diplomatic certifies the combination valve-coil for the valves suitable for application and installation in potentially explosive atmospheres, according to ATEX directive; the supply always includes the declaration of conformity to the directive and the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environments.

Coils assembled on these valves have been separately certified according to ATEX directive and so they are suitable for use in potentially explosive atmospheres.

1.1 - ATEX classification for valves

Type examination certificate: AR18ATEX055

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

ATEX II 2G ATEX II 2D	*KD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
ATEX I M2	*KDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

1.2 - ATEX marking for valves

valve code		N and V seals	NL seals
*KD2	for gas for dusts	II 2G IIC T4 Gb (-20°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-20°C Ta +80°C)	II 2G IIC T4 Gb (-40°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KD2 /T5	for gas for dusts	II 2G IIC T5 Gb (-20°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-20°C Ta +55°C)	II 2G IIC T5 Gb (-40°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KDM2	mining	I M2 I T150°C Mb IP66/68 (-20°C Ta +75°C)	I M2 I T150°C Mb IP66/68 (-40°C Ta +75°C)

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Diplomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

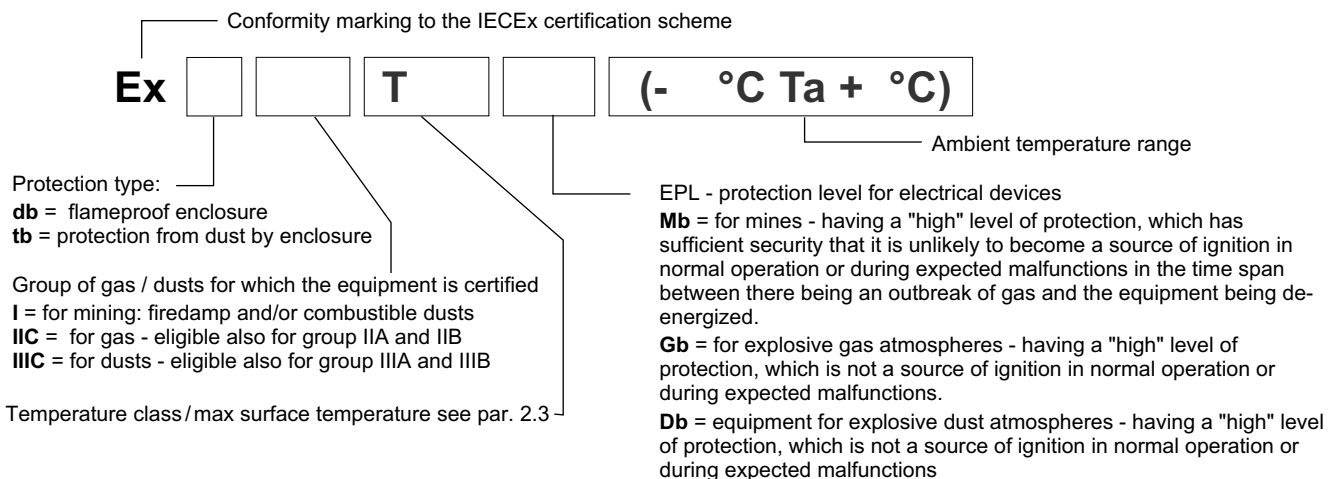

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
IECEx Gb IECEx Db	*KXD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas) T135°C (dusts)	T3, T2, T1 T200°C and higher
		of fluid				
	*KXD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas) T100°C (dusts)	T4, T3, T2, T1 T135°C and higher
		of fluid				
IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
INMETRO Gb INMETRO Db	*KBD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas)	T3, T2, T1 T200°C and higher
		of fluid			T154°C (dusts)	
	*KBD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas)	T4, T3, T2, T1 T135°C and higher
		of fluid			T129°C (dusts)	
INMETRO Mb	*KBDM2	of ambient	-20 / +75 °C	-40 / +75 °C	T150°C	-
		of fluid

ZDE3G*

DIRECT OPERATED PRESSURE REDUCING VALVE WITH PROPORTIONAL CONTROL AND INTEGRATED ELECTRONICS

SERIES 32

**SUBPLATE MOUNTING
ISO 4401-03**

**p max 100 bar
Q max 15 l/min**

MOUNTING INTERFACE

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

Operating pressure range port P	bar	30 ÷ 100
Operating pressure range port T (par. 5)	bar	0 ÷ 30
Controlled pressure	bar	23
Maximum flow	l/min	15
Hysteresis	% Q max	< 3 %
Repeatability	% Q max	< 1 %
Electrical characteristics	see paragraph 2	
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass: single solenoid valve	kg	1,9
double solenoid valve	kg	2,4

OPERATING PRINCIPLE

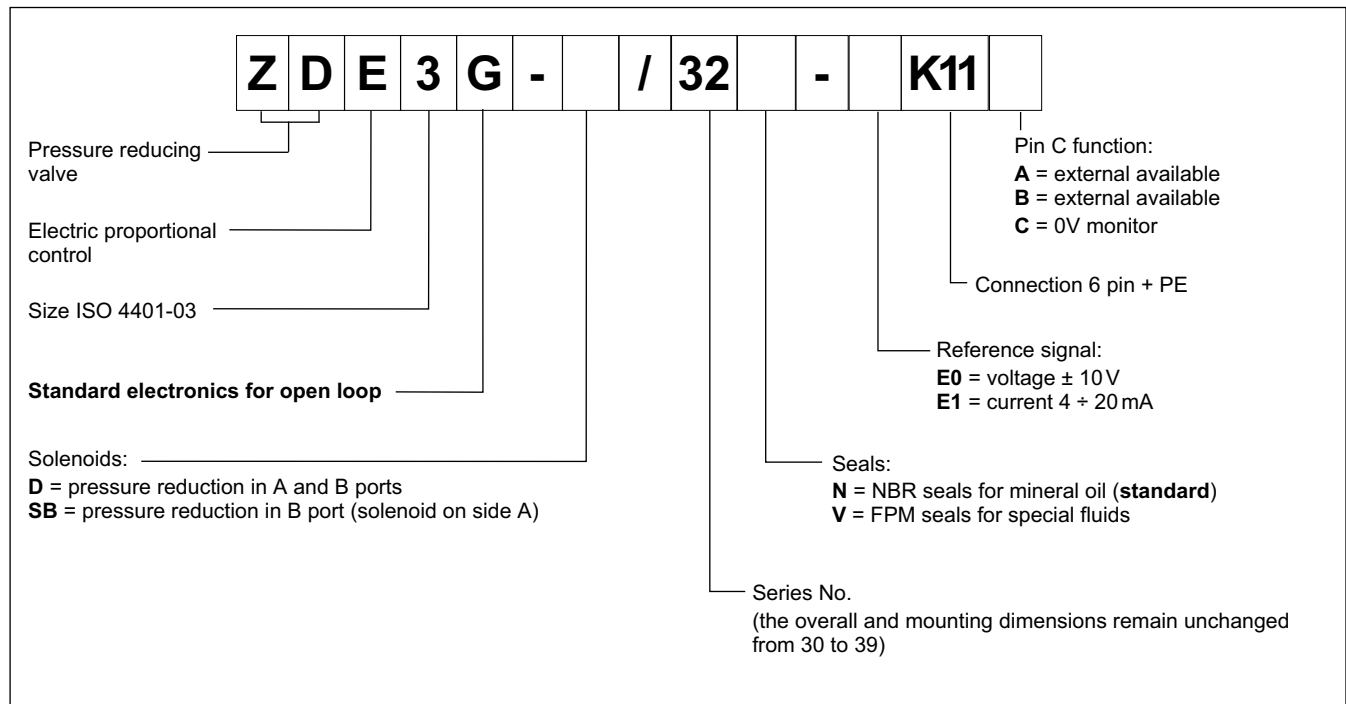

HYDRAULIC SYMBOL

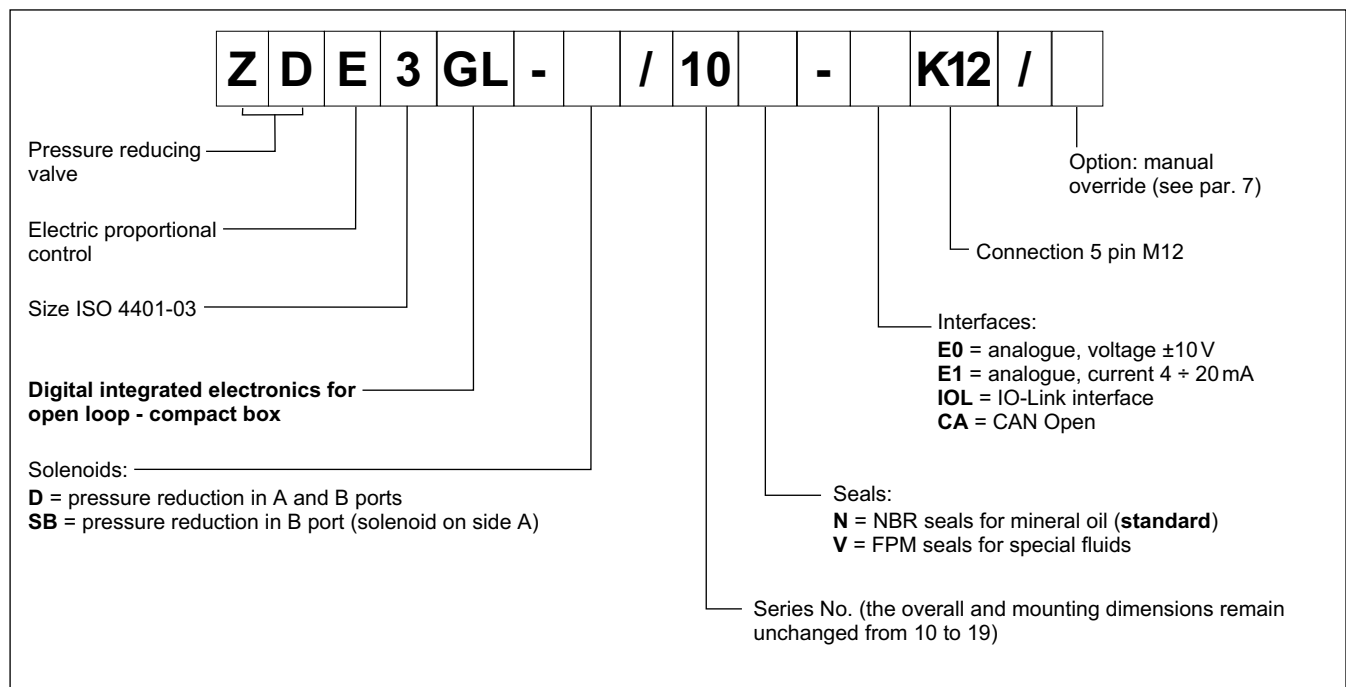

1 - IDENTIFICATION CODE

1.1 - Standard

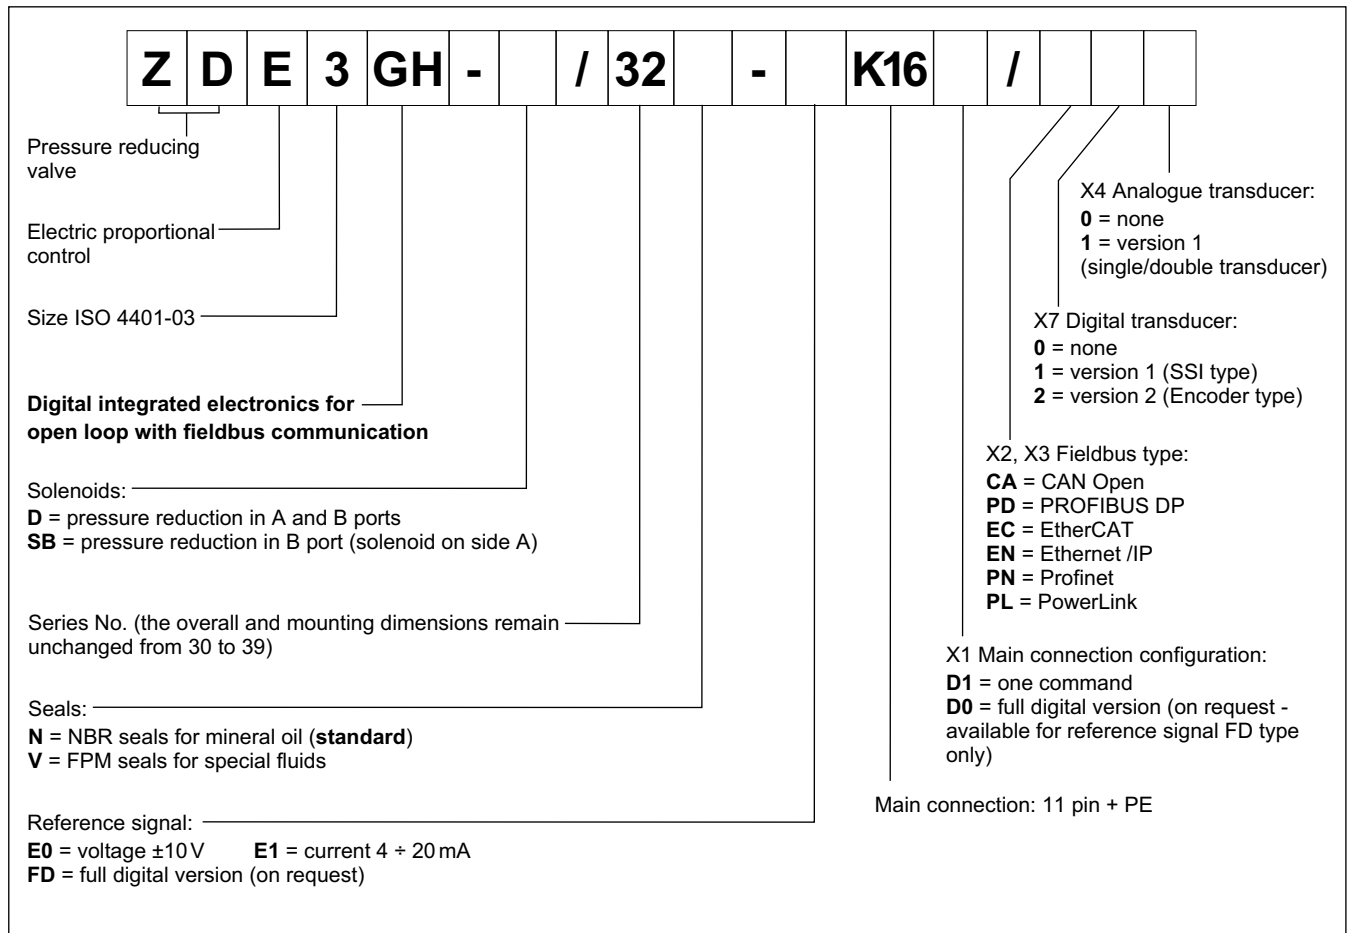

1.2 - Compact version

1.3 - Electronics with fieldbus communication

2 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	3
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

3 - ZDE3G - STANDARD ELECTRONICS

3.1 - Electrical characteristics

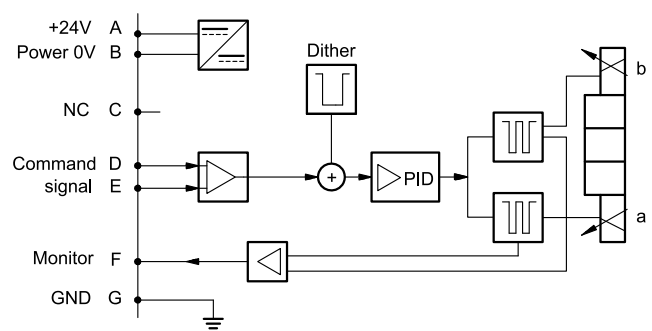

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

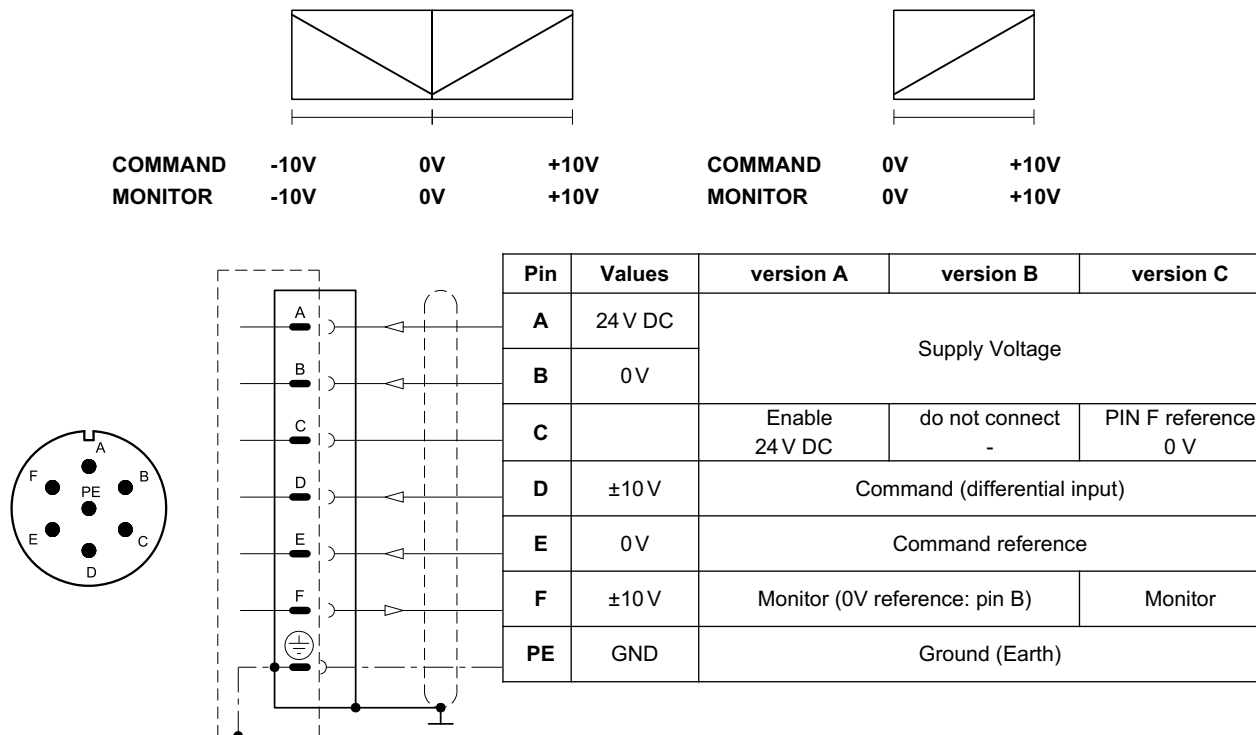

VERSION C - 0V Monitor

3.3 - Versions with voltage command (E0)

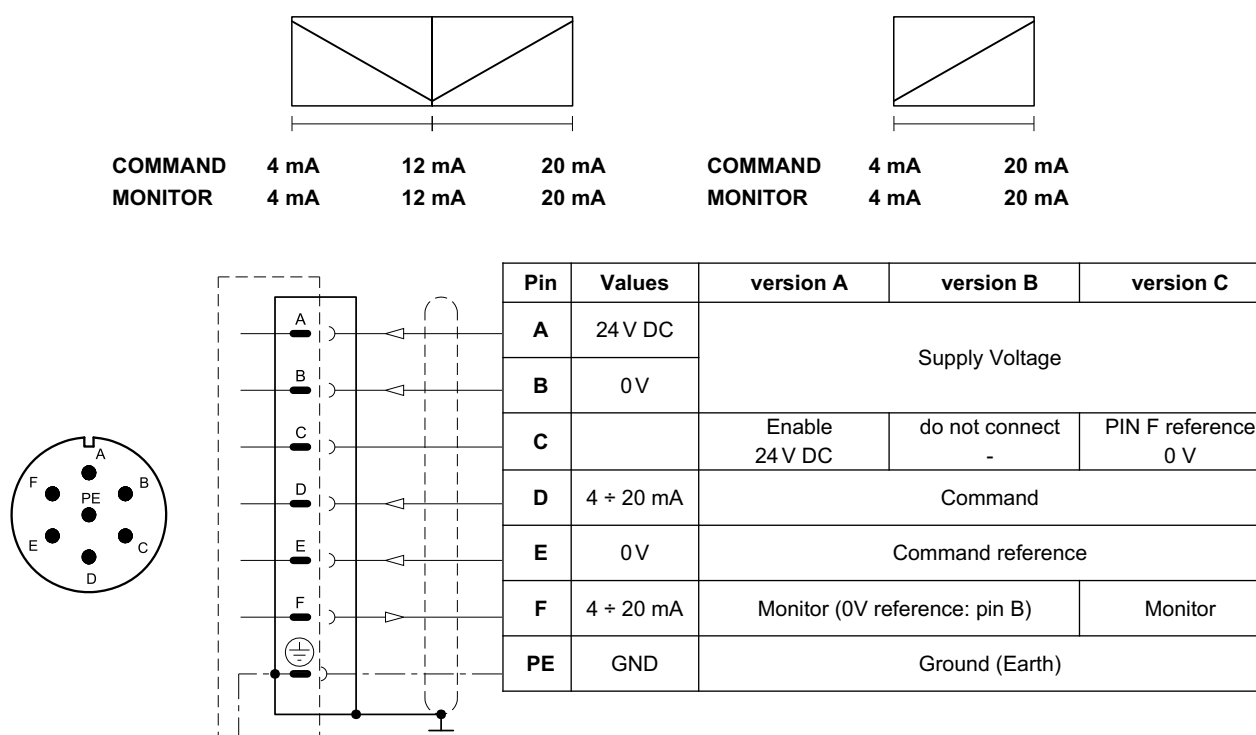

The reference signal is between -10V and +10V on double solenoid valve, and 0 + 10V on single solenoid valve SA. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

3.4 - Versions with current command (E1)

The reference signal is supplied in current $4 \div 20$ mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient restoring the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4 - ZDE3GL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

4.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	$0 \div 5$ (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
IO-Link communication (IOL): Data rate	kBaud	IO-Link Port Class B 230,4
Can Open communication (CA): Data rate	kbit	$10 \div 1000$
Connection		5-pin M12 code A (IEC 61076-2-101)

4.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$\pm 10 \text{ V}$	Command
3	0 V	Command reference
4	$0 \div 5 \text{ V}$	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$4 \div 20 \text{ mA}$	Command
3	0 V	Command reference
4	$4 \div 20 \text{ mA}$	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0 V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0 V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

5 - ZDE3GH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 3.3 and 3.4.

5.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

5.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	$\pm 10 \text{ V}$ (E0) $4 \div 20$ (E1)	Command
5	0 V	Command reference signal
6	$\pm 10 \text{ V}$ (E0) $4 \div 20$ (E1)	Monitor (0V reference pin 10)
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V reference pin 2)
12	GND	Ground (Earth)

D0: full digital

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	NC	do not connect
5	NC	do not connect
6	NC	do not connect
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V ref. pin 2)
12	GND	Ground (Earth)

5.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

5.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

5.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5 V	Termination supply signal
2	PB_A	Bus line (high)
3	0V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5 V	Termination supply signal
2	PB_A	Bus line (high)
3	0V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

5.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

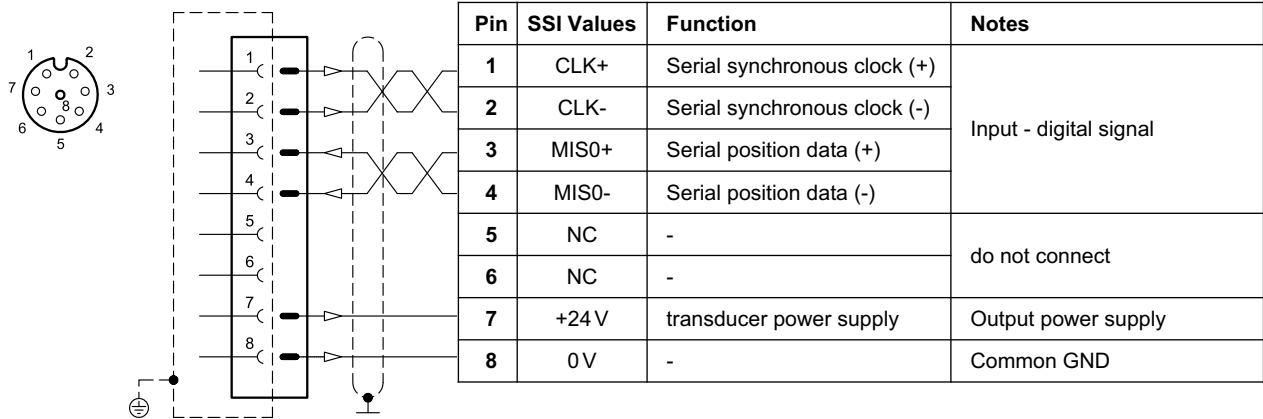

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

NOTE: Shield connection on connector housing is recommended.

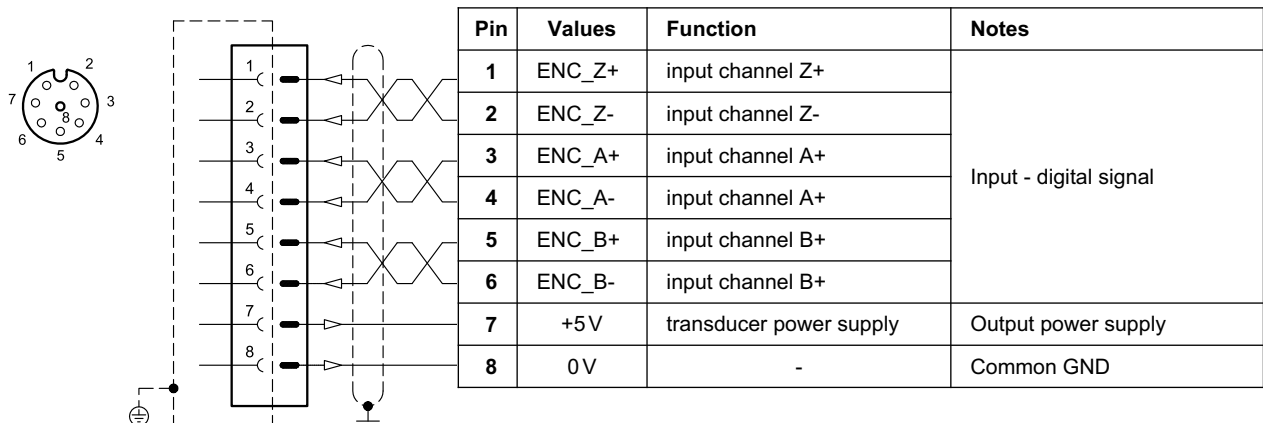

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

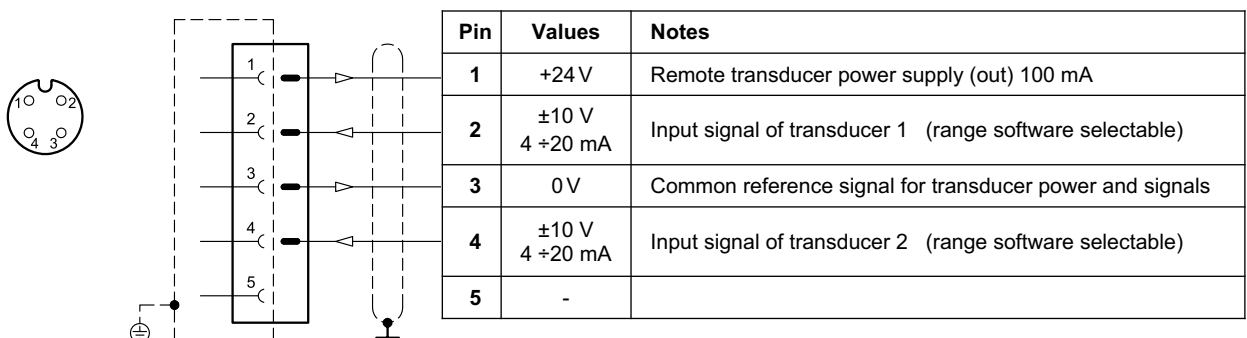

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

6 - CHARACTERISTIC CURVES

(obtained with oil with viscosity 36 cSt at 50°C)

Adjustment characteristics depending from reference signal, obtained with inlet pressure = 100 bar.

7 - STEP RESPONSE

Response times are obtained with an inlet pressure of 100 bar and oil volume of 0,3 litres. The response time is affected both by the flow rate and the oil volume in the pipework.

8 - ZDE3G - OVERALL AND MOUNTING DIMENSIONS

9 - ZDE3GL - OVERALL AND MOUNTING DIMENSIONS

ZDE3GL-*/K12

ZDE3GL-*/SA/K12

Fastening bolts: 4 SHC screws M5x30- ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Coil removal space
3	Standard manual override embedded in the solenoid tube
4	Connection M12 A 5 pin
5	L1 LED
6	L2 LED
7	Mating connector M12 5 poles - code A, female To be ordered separately. See catalogue 89 000

10 - ZDE3GH - OVERALL AND MOUNTING DIMENSIONS

ZDE3GH-*/K16

dimensions in mm

ZDE3GH-*/SA/K16

X1	Main connection 11 pin + PE
X2	Fieldbus communication (IN)
X3	Fieldbus communication (OUT)
X4	X4 connection for analogue transducer
X7	X7 connection for digital transducer

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Coil removal space (solenoid B only)
3	Manual override by pin integrated in the solenoid tube
4	Mating connector 11 poles + PE To be ordered separately. See catalogue 89 000
5	Mating connectors for fieldbus communication and signals To be ordered separately. See catalogue 89 000

Fastening bolts: 4 SHCS M5x30
ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

NOTE: Depending on the chosen version, X4 and X7 connections may not be present.
Please refer to section 5 for connection descriptions and pinout.

11 - MANUAL OVERRIDE

These valves have solenoids whose pin for manual operation is integrated in the tube. Actuate this override by pushing it with a suitable tool, minding not to damage the sliding surface.

Three other types of manual overrides can fit the ZDE3GL valve:

- **CM** version, manual override boot protected
- **CS** version, with metal ring nut provided with a M4 screw and a blocking locknut to allow the continuous mechanical operations.

CAUTION!: The manual override use doesn't allow any proportional regulation; indeed using this kind of override, the main stage spool will open completely and the whole inlet pressure will pass through A or B line.

12 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

13 - INSTALLATION

ZDE3G* valves can be installed in any position without impairing correct operation. Ensure that there is no air in the hydraulic circuit. Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the reduced pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 30 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

14 - ACCESSORIES

(to be ordered separately)

14.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

14.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

14.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

14.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, see catalogue 89 850.

15 - SUBPLATES

(see catalogue 51 000)

PMMD-AI3G rear ports
PMMD-AL3G side ports
Ports dimensions: P, T, A, B: 3/8" BSP

DZCE*

PRESSURE REDUCING VALVE WITH PROPORTIONAL CONTROL

SERIES 11

DZCE5 **CETOP P05**
DZCE5R **ISO 4401-05**
DZCE7 **ISO 4401-07**
DZCE8 **ISO 4401-08**

p max **350** bar
Q max (see table of performances)

OPERATING PRINCIPLE

- The DZCE* are pressure reducing valves with electric proportional control and mounting interface in compliance with ISO 4401 standards.
- These valves, besides reducing the pressure from line P to working line A, allow the flow to return from the line A to the return line T when a pressure greater than the set value is generated in the downstream circuit (flow path A): a typical case of hydraulic counterweight or load balancing.
- The pressure can be modulated continuously in proportion to the current supplied to the solenoid.
- They can be controlled directly by a current control supply unit or by means of the electronic control units (par. 12) to exploit valve performance to the full .
- They are available in CETOP P05, ISO 4401-05, ISO 4401-07 and ISO 4401-08 sizes.
- Every size can be supplied with several controlled flow rates, up to 500 l/min.

PERFORMANCES

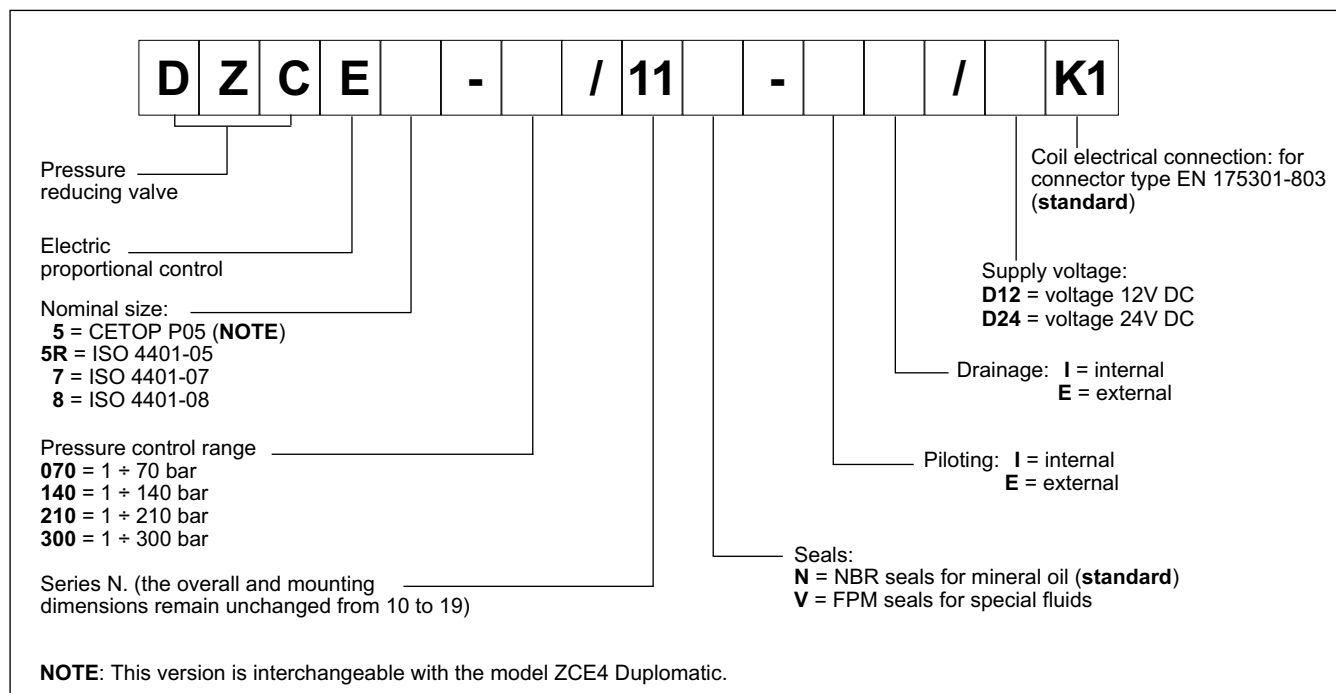

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

		DZCE5 DZCE5R	DZCE7	DZCE8
Maximum operating pressure	bar	350		
Maximum flow	l/min	150	300	500
Step response		see paragraph 6		
Hysteresis (with PWM 200 Hz)	% of p _{max}	< 4%		
Repeatability	% of p _{max}	< ±2%		
Electrical characteristic		see paragraph 5		
Ambient temperature range	°C	-20 / +60		
Fluid temperature range	°C	-20 / +80		
Fluid viscosity range	cSt	10 ÷ 400		
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13			
Recommended viscosity	cSt	25		
Mass	kg	7	9,2	15,3

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

2.1 - Characteristic curves DZCE5 and DZCE5R

ADJUSTMENT

MIN. CONTROLLED PRESSURE $p_{min} = f(Q)$

2.2 - Characteristic curves DZCE7

ADJUSTMENT

MIN. CONTROLLED PRESSURE $p_{min} = f(Q)$

2.3 - Characteristic curves DZCE8

ADJUSTMENT

MIN. CONTROLLED PRESSURE $p_{min} = f(Q)$

2.4 - Pressure control $p = f(I)$ DZCE5, DZCE5R, DZCE7 and DZCE8

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - PILOTING AND DRAINAGE

DZCE* valves are available with piloting and drainage, both internal and external.

We suggest using the version with external drainage, that allows a higher backpressure on the unloading.

VALVE TYPE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

P

5 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut.

It can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.66	17.6
NOMINAL CURRENT	A	1.88	0.86
DUTY CYCLE	100%		
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
CLASS OF PROTECTION: atmospheric agents (EN 60529) coil insulation (VDE 0580) Impregnation	IP 65 class H class F		

6 - STEP RESPONSE

(measured with mineral oil with viscosity of 36 cSt at 50°C with electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
response times [ms]		
DZCE5 and DZCE5R	100	70
DZCE7	100	50
DZCE8	100	50

7 - INSTALLATION

We recommend to install the DZCE* valve either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 2.

Ensure that there is no air in the hydraulic circuit. In particular applications, it can be necessary to vent the air entrapped in the solenoid tube, using the special drain screw and then ensure to screw it correctly.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

8 - DZCE5 AND DZCE5R OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (4) placed at the end of the solenoid tube.

Valve fastening: N. 4 bolts SHC M6x35 - ISO 4762
Tightening torque: 8 Nm (A 8.8 bolts)

DZCE*K*

EXPLOSION-PROOF PRESSURE REDUCING VALVE WITH PROPORTIONAL CONTROL ATEX, IECEx, INMETRO SERIES 11

DZCE5K* CETOP P05
DZCE5RK* ISO 4401-05
DZCE7K* ISO 4401-07
DZCE8K* ISO 4401-08

OPERATING PRINCIPLE

- The DZCE*K* are explosion-proof pressure reducing valves, pilot operated, with proportional control, available with CETOP P05, ISO 4401-05, ISO 4401-07 and ISO 4401-08 mounting surfaces.
- They are compliant with ATEX, IECEx and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- A low temperature version (up to -40 °C) is also available.
- They can be controlled directly by a current control supply unit or by means of an electronic card to exploit valve performance to the full (see par. 14).
- Upon request, DZCE*K* valves can be supplied with a finishing surface treatment (zinc-nickel) which is suitable to ensure a salt spray resistance up to 600 hours.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

		DZCE5K* DZCE5RK*	DZCE7K*	DZCE8K*
Maximum operating pressure	bar	350		
Maximum flow	l/min	150	300	500
Step response		see paragraph 3		
Hysteresis (with PWM 200 Hz)	% of p _{max}	< 4%		
Repeatability	% of p _{max}	< ±2%		
Electrical characteristic		see paragraph 4		
Temperature ranges (ambient and fluid)		see data sheet 02 500		
Fluid viscosity range	cSt	10 ÷ 400		
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13			
Recommended viscosity	cSt	25		
Mass	kg	7.3	9.5	15.6

Pressure reducing valve

Electric proportional control

Nominal size: _____
5 = CETOP P05
5R = ISO 4401-05
7 = ISO 4401-07
8 = ISO 4401-08

Explosion-proof certification: _____
See table 1.1

Pressure control range _____
070 = 1 ÷ 70 bar
140 = 1 ÷ 140 bar
210 = 1 ÷ 210 bar
300 = 1 ÷ 300 bar

Series N. (the overall and mounting dimensions remain unchanged from 10 to 19)

Seals: _____
For temperature range -20 / +80 °C
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids
For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Option: surface treatment not standard.
Omit if not required (see **NOTE**)

Option: **/T5** version in T5 temperature class.
Omit if not required.

Connection type for cable gland upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Nominal solenoid voltage:
D12 = 12V DC
D24 = 24V DC

Drainage: **I** = internal
E = external

Piloting: **I** = internal
E = external

Version with monobloc steel coil

Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.

On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

NOTE: the valves are supplied with standard surface treatment of phosphating black.

Upon request we can supply these valves with full zinc-nickel surface treatment, suitable to ensure a salt spray resistance up to 600 h (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standard).

For zinc-nickel surface treatment add **/W7** at the end of the identification code.

1.1 - Names of valves per certification

ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU
CLASS OF PROTECTION: Atmospheric agents Coil insulation (VDE 0580)	IP66/IP68 class H

4.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9÷6 Nm.

Electrical wiring must be done following in compliance with standards about protection against explosion hazards.

Characteristics of the cables connectable for wiring are indicated in the table below:

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals) or from - 40 °C to +110 °C (for valves with NL seals).

Cable glands (which must be ordered separately, see paragraph 13) allow to use cables with external diameter between 8 and 10 mm.

4.2 - Electrical diagram

4.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max 3 x I_n according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source. The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,88	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,86	1,25	- 49	

5 - PILOT AND DRAIN

The DZCE*K* valves are available with piloting and drainage, both internal and external.
We suggest to use the version with external drainage that allows a higher backpressure on the unloading.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

PRESSURES [bar]	MIN	MAX
Piloting pressure on X port	30	350
Pressure in T port with internal drain	-	2
Pressure in T port with external drain	-	250

DZCE5K* and DZCE5RK*

X: M5x6 plug for external pilot
Y: M5x6 plug for external drain

DZCE7K*

X: M6x8 plug for external pilot
Y: M6x8 plug for external drain

DZCE8K*

X: M6x8 plug for external pilot
Y: M6x8 plug for external drain

6 - DZCE5K* AND DZCE5RK* WITH UPPER CONNECTION - OVERALL AND MOUNTING DIMENSIONS

NOTE 1: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (4) placed at the end of the solenoid tube.

NOTE 2: for side port cable gland see paragraph 9.

(CETOP 4.2-4-08-350)

11 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

12 - INSTALLATION

Installation must adhere to instructions reported in the Use and Maintenance manual, always attached to the valve. Unauthorized interventions can be harmful to people and goods because of the explosion present in potentially explosive atmospheres.

We recommend to install the DZCE*K* valve either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 2.

Ensure that there is no air in the hydraulic circuit. In particular applications, it can be necessary to vent the air entrapped in the solenoid tube, using the special drain screw and then ensure to screw it correctly.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

13 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for Ø8÷10 mm cables);
- ATEX II 2GD, I M2; IECEx Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: -70 °C ÷ +220 °C
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

14 - ELECTRONIC CONTROL UNITS

EDM-M112	for solenoid 24V DC	DIN EN 50022 rail mounting	see cat. 89 251
EDM-M142	for solenoid 12V DC		

NOTE: electronic control units offered are not explosion-proof certified; therefore, they must be installed outside classified areas.

15 - SUBPLATES

(see catalogue 51 000)

	DZCE5K*	DZCE7K*	DZCE8K*
Type with rear ports	PME4-AI5G	PME07-AI6G	-
Type with side ports	PME4-AL5G	PME07-AL6G	PME5-AL8G
Thread of ports:	P - T - A - B X - Y	3/4" BSP 1/4" BSP	1 1/2" BSP 1/4" BSP

NOTE: Subplates (to be ordered separately) do not contain neither aluminium nor magnesium at a rate higher than the value allowed by norms according to ATEX directive for category II 2GD and I M2.

The user will bear to do the complete assessment of the ignition risk that can occur from the relative use in potentially explosive environments.

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

1 - ATEX CLASSIFICATION AND TEMPERATURES

Diplomatic certifies the combination valve-coil for the valves suitable for application and installation in potentially explosive atmospheres, according to ATEX directive; the supply always includes the declaration of conformity to the directive and the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environments.

Coils assembled on these valves have been separately certified according to ATEX directive and so they are suitable for use in potentially explosive atmospheres.

1.1 - ATEX classification for valves

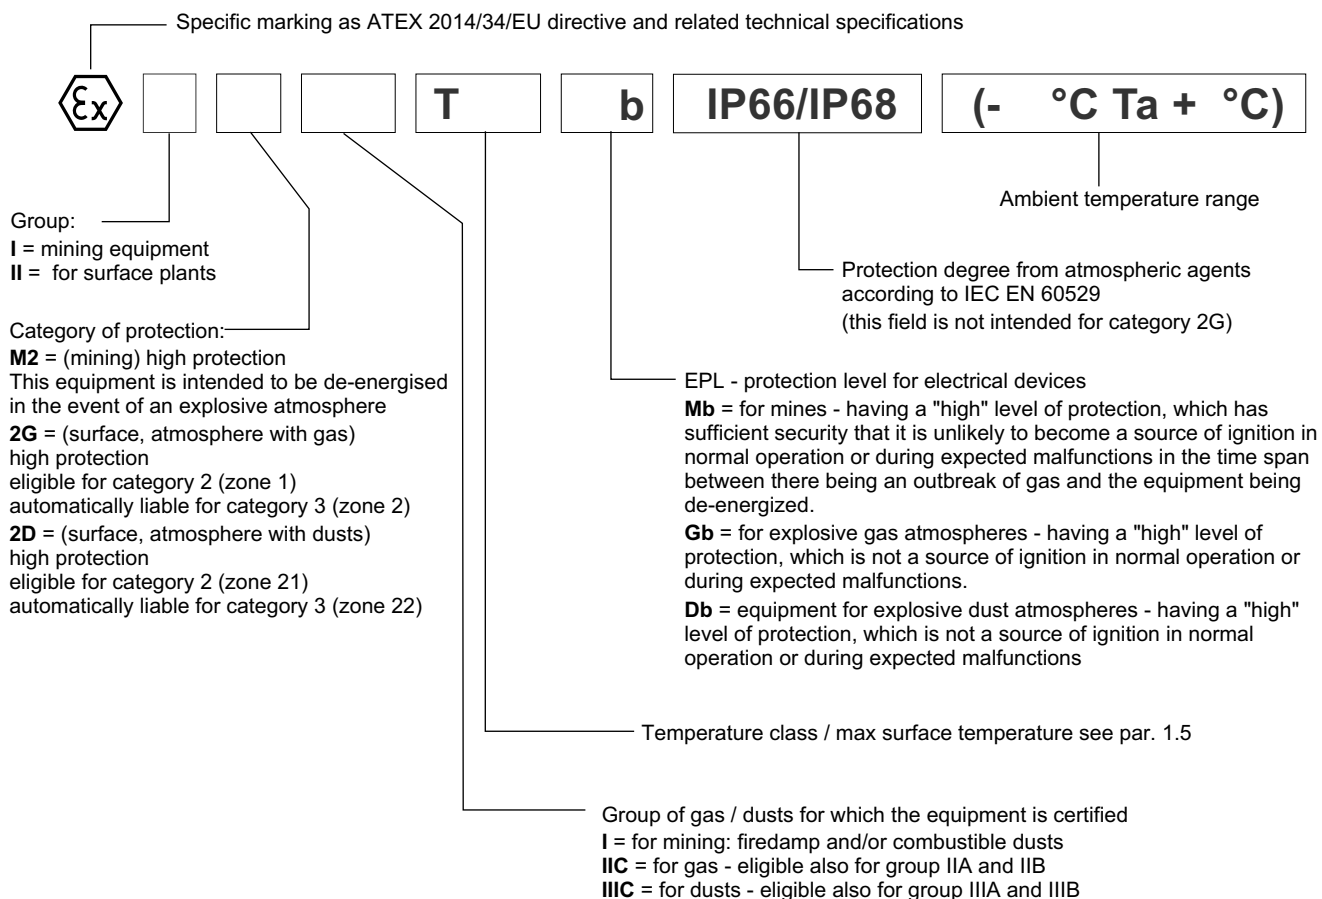

Type examination certificate: AR18ATEX055

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

ATEX II 2G ATEX II 2D	*KD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
ATEX I M2	*KDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

1.2 - ATEX marking for valves

valve code		N and V seals	NL seals
*KD2	for gas for dusts	II 2G IIC T4 Gb (-20°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-20°C Ta +80°C)	II 2G IIC T4 Gb (-40°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KD2 /T5	for gas for dusts	II 2G IIC T5 Gb (-20°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-20°C Ta +55°C)	II 2G IIC T5 Gb (-40°C Ta +55°C) II 2D IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KDM2	mining	I M2 I T150°C Mb IP66/68 (-20°C Ta +75°C)	I M2 I T150°C Mb IP66/68 (-40°C Ta +75°C)

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Diplomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

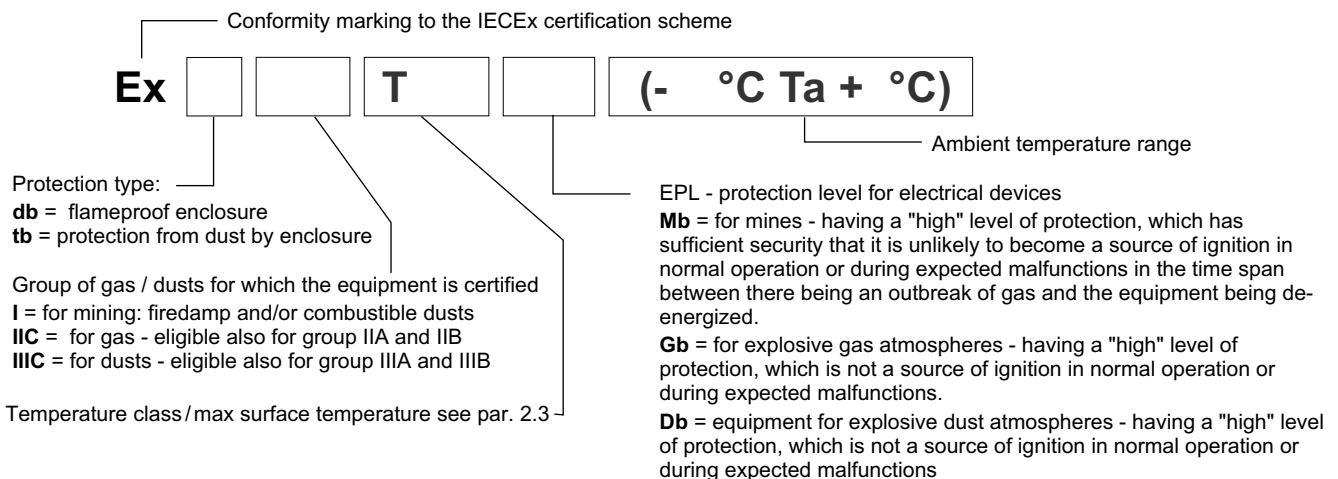

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for

IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

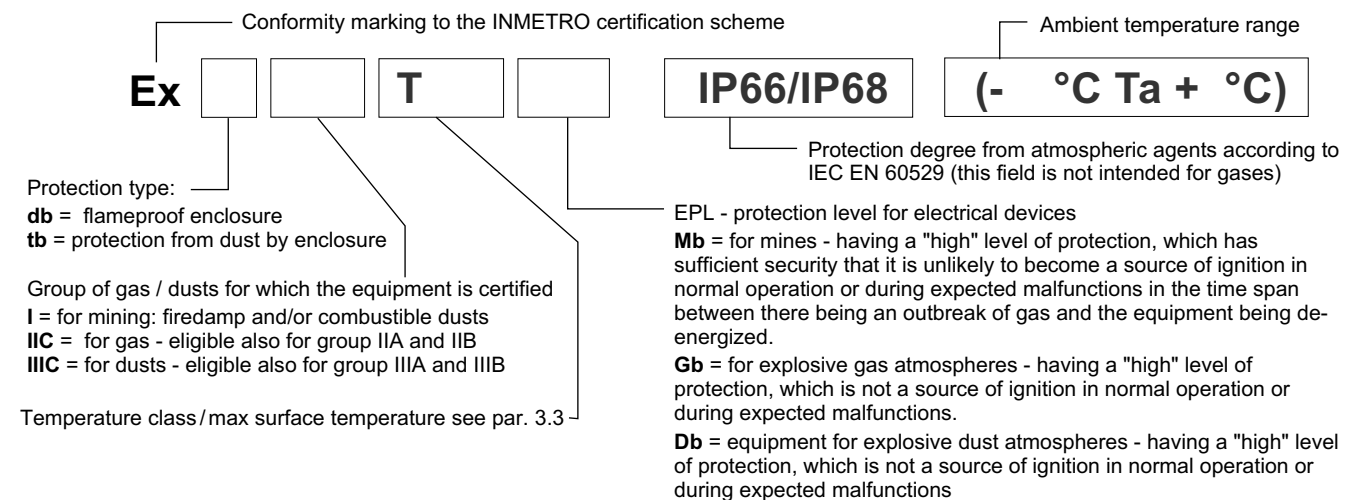

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

DZCE*G

PRESSURE REDUCING VALVES WITH PROPORTIONAL CONTROL AND INTEGRAL ELECTRONICS

SERIES 31

DZCE5G **CETOP P05**
DZCE5RG **ISO 4401-05**
DZCE7G **ISO 4401-07**
DZCE8G **ISO 4401-08**

p max **350** bar

Q max (see performance table)

OPERATING PRINCIPLE

- The DZCE*G are pressure reducing valves with electric proportional control with integrated electronics, with mounting interface in compliance with ISO 4401 standards.
- Those valves, besides reducing the pressure from line P to working line A, allow the flow to return from the line A to the return line T when a pressure greater than the set value is generated in the downstream circuit (flow path A): a typical case of hydraulic counterweight or load balancing.
- The valves are available with command signal in voltage or current and on board electronics with internal enable, external enable or 0V monitor on pin C.
- A solenoid current monitoring signal is available.
- The valves are easy to install. The driver directly manages digital settings. In the event of special applications, you can customize the settings using the optional kit (see par. 15.3)

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C p = 140 bar)

		DZCE5G DZCE5RG	DZCE7G	DZCE8G

2 - DETAILED SYMBOL

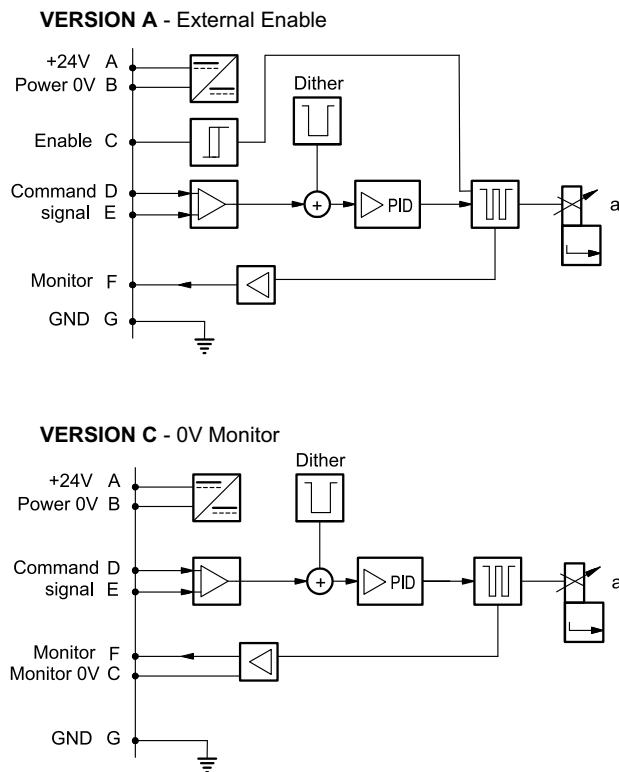

3 - ELECTRICAL CHARACTERISTICS

3.1 - Electrical on board electronics

Duty cycle		100% (continuous operation)
Protection class according to IEC 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external		2A time lag
Command signals: voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ri > 11 kOhm) 4 ÷ 20 (Impedance Ri = 58 Ohm)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	0 ÷ 10 (Impedance Ro > 1 kOhm) 4 ÷ 20 (Impedance Ro = 500 Ohm)
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Communication		LIN-bus Interface (with the optional kit)
Connection		7 - pin MIL-C-5015-G (DIN-EN 175201-804)
Electromagnetic compatibility (EMC) emissions EN 61000-6-4 immunity EN 61000-6-2		According to 2014/30/EU standards

3.2 - On-board electronics diagrams

4 - VERSIONS WITH VOLTAGE COMMAND (E0)

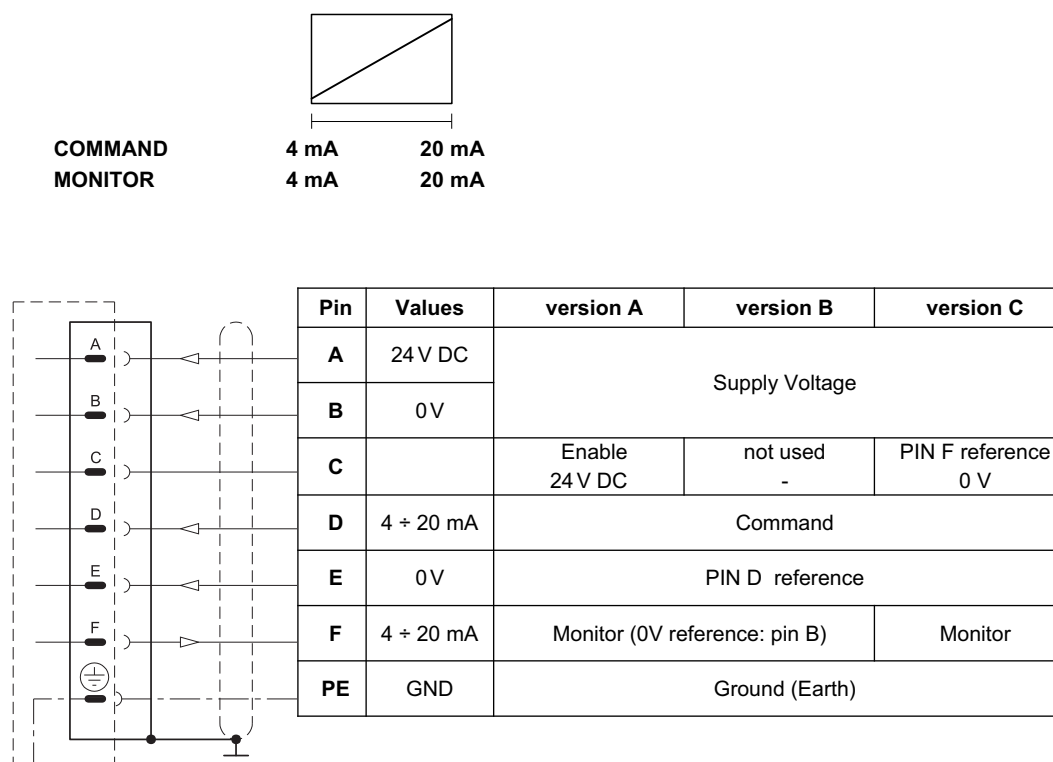

The reference signal is between 0 ÷ 10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5 - VERSIONS WITH CURRENT COMMAND (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

6 - CHARACTERISTIC CURVES

(with mineral oil with viscosity of 36 cSt at 50°C)

6.1 - Characteristic Curves of DZCE5G and DZCE5RG

6.2 - Characteristic Curves of DZCE7G

6.3 - Characteristic Curves of DZCE8G

6.4 - CONTROLLED PRESSURE $p = f(l)$

7 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C)

The graphs show the typical step response tested with static pressure 100 bar.

8 - PILOTING AND DRAINAGE

The valves are available with piloting and drainage, both internal and external. The version with external drainage allows a higher backpressure on the unloading.

TYPE OF VALVE	Plug assembly	
	X	Y
IE INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

5	Pressure gauge port 1/4 BSP"
6	Mating electrical connector to be ordered separately. See at section 15

11 - OVERALL AND MOUNTING DIMENSIONS DZCE8G

dimensions in mm

NOTE: at the first start up, or after a long period of no use, it is necessary to vent the air through the breather (2) placed at the end of the solenoid tube.

Mounting surface shown at paragraph 12.

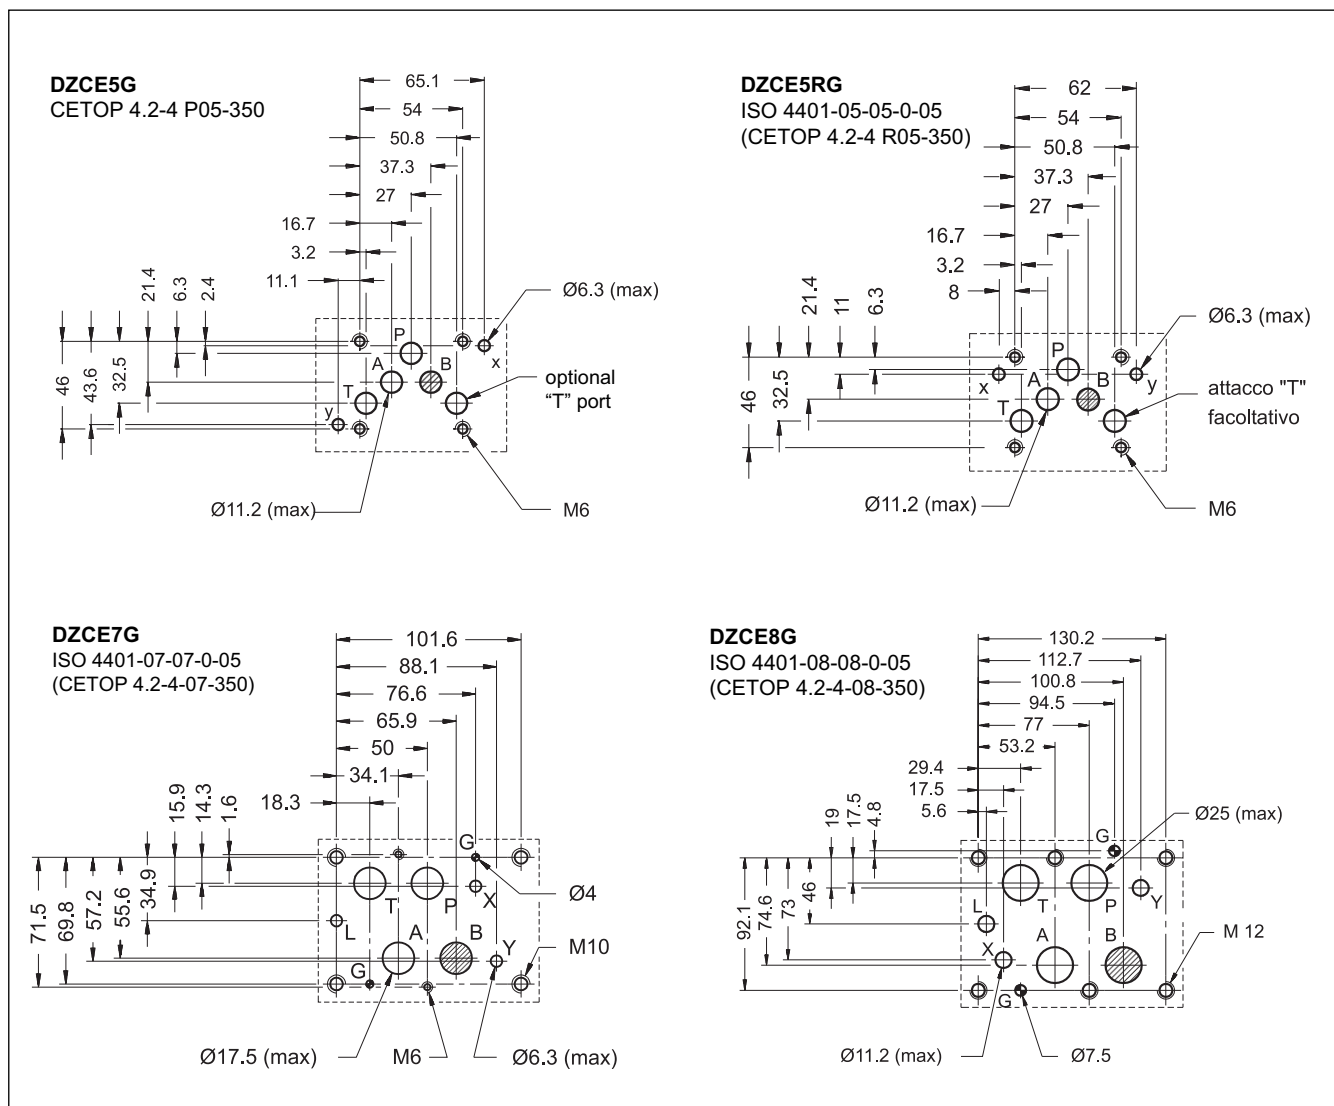

Valve fastening: N. 6 bolts SHC M12x60 - ISO 4762

Tightening torque: 69 Nm (bolts A 8.8)

Thread of mounting holes: M12x20

1	Mounting surface with sealing rings: N. 4 OR type 3118 (29.82x2.62) - 90 Shore N: 2 OR type 3081 (20.24x2.62) - 90 Shore
2	Breather (Allen key 4)
3	Main connection
4	Adjustment seal, set in factory. It is recommended not to unscrew the nut.
5	Pressure gauge port 1/4 BSP"
6	Mating electrical connector to be ordered separately. See at section 15

12 - MOUNTING SURFACES

13 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

14 - INSTALLATION

We recommend to install the valves either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in paragraph 5.

Ensure that there is no air in the hydraulic circuit. In particular applications, can be necessary to vent the air entrapped in the solenoid tube, by using the appropriate drain screw in the solenoid tube.

Ensure the solenoid tube is always filled with oil. At the end of the operation, make sure of having correctly replaced the drain screw.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the controlled pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

15 - ACCESSORIES

(to be ordered separately)

15.1 Mating connector

These valves have a plug for 7-pin mating connector, that is placed on the box of the integral motion control.

So as to avoid electromagnetic troubles and comply with the electromagnetic compatibility regulation EMC, it is recommended the use of a metal connector.

If a plastic connector is used, make sure that the protection characteristics IP and EMC of the valve are guaranteed.

Duplomatic offers a metal cable connector type MIL-C-5015-G (EN 175201-804).

name: **EX7S/L/10** code **3890000003**

15.2 - Connection cables size

Power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm²

Signal: 0,50 mm²

A suitable cable would have 7 isolated conductors, a separate screen for the signal wires and an overall screen.

15.3 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, see catalogue 89850.

(CETOP 4.5.2-2-03-250)

NOTE: The RPCED1 mounting interface, with ISO 6263-03 holes, must not have P and T ports or must have the 0113388 subplate (to be ordered separately).

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control cards)

Maximum operating pressure	bar	250
Minimum Δp between A and B port		10
Maximum controlled flow	l/min	1,5 - 4 - 8 - 16 - 25
Min. controlled flow (for 1 and 4 l/min. reg.)		0,025
Maximum free-reverse flow		40
Step response	see paragraph 7	
Hysteresis (with PWM 100 Hz)	% of p nom	< 6%
Repeatability	% of p nom	< $\pm 2,5\%$
Electrical characteristic	see paragraph 6	
Ambient temperature range	°C	-20 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13 (class 17/15/12 for flows < 0,5 l/min)	
Recommended viscosity	cSt	25
Mass	kg	1,5

OPERATING PRINCIPLE

- The RPCED1 valve is a two-way flow control valve with pressure and thermal compensation, electric proportional control, and mounting interface in compliance with ISO 6263 standards.
- It is normally used for flow rate control in hydraulic circuit branches or for speed control of hydraulic actuators.
- Flow rate can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units to exploit valve performance to the full (see par. 10).
- It is available in five flow rate control ranges up to 25 l/min.

HYDRAULIC SYMBOLS

RPCED1

SERIES 52

1 - IDENTIFICATION CODE

R	P	C	E	D	1	-	/	C	/	52	-	24	/	
Compensated flow control valve				Electric proportional control				Open loop control				Size: ISO 6263-03		
Maximum controlled flow:				Seal: omit for mineral oils V = viton for special fluids				Nominal solenoid voltage 24 V DC				Series No. (from 50 to 59 sizes and mounting dimensions remain unchanged)		
1 = 1,5 l/min				8 = 8 l/min				25 = 25 l/min				Built-in check valve		
4 = 4 l/min				16 = 16 l/min										

2 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical curves for flow rate A → B according to the current supplied to the solenoid for controlled flow rate of: 1 - 4 - 8 - 16 - 25 l/min.

FLOW CONTROL $Q=f(I)$

Pressure drop with free flow B → A
through check valve.

3 - PRESSURE COMPENSATION

The valves are equipped with two restrictors in series. The first one is an opening which can be adjusted by the proportional solenoid; the second, controlled by the pressure upstream and downstream of the first restrictor ensures constant pressure drop across the adjustable restrictor. In these conditions, the set flow rate value is maintained constant within a tolerance limit of $\pm 2\%$ of the full scale flow rate for maximum pressure variation between the valve inlet and outlet chambers.

4 - THERMAL COMPENSATION

Thermal compensation of the valve is obtained by adopting the principle of restricted fluid passage, so that the fluid is not influenced significantly by variations in oil viscosity.

For controlled flow rates of lower than 0.5 l/min and with a temperature change of 30°C, flow rate varies by approx. 13% of the set value. For higher flow rates and with the same temperature change the flow rate variation is <4% of the set flow rate.

5 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

6 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	24
RESISTANCE (AT 20°C)	Ω	17.6
MAXIMUM CURRENT	A	0.86
DUTY CYCLE		100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU	
CLASS OF PROTECTION Atmospheric agents (IEC EN 60529)	IP65	

7 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical response times with valve flow rate of 16 l/min and with input pressure of 100 bar.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%	25→75%	75→25%
Step response [ms]	60	80	50	70

8 - INSTALLATION

RPCED1 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

Recommended viscosity	cSt	25
Mass	kg	1,5

OPERATING PRINCIPLE

- RPCED1-*/T3 is a three-way flow control valve, pressure and temperature compensated with electric proportional control and mounting interface in compliance with ISO 6263 standards.
- This valve controls the flow to the circuit, by dumping the exceeding oil flow to the tank.
- Flow rate can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units to exploit valve performance to the full (see par. 10).
- It is available in five flow rate control ranges up to 25 l/min.

HYDRAULIC SYMBOL

RPCED1-*/T3

SERIES 52

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical curves for flow rate A→B according to the current supplied to the solenoid for controlled flow rate of: 1 - 4 - 8 - 16 - 25 l/min.

FLOW CONTROL $Q = f(I)$

PRESSURE DROP $\Delta p = f(Q)$

Pressure drop with flow A → T through the compensator.

3 - PRESSURE COMPENSATION

The valves are equipped with two restrictors. The first is an opening which can be adjusted by the proportional solenoid; the second, controlled by the pressure upstream and downstream of the first restrictor ensures constant pressure drop across the adjustable restrictor. In these conditions, the set flow rate value is maintained constant within a tolerance limit of $\pm 2\%$ of the set flow rate for maximum pressure variation between the valve inlet and outlet chambers.

4 - THERMAL COMPENSATION

Thermal compensation of the valve is obtained by adopting the principle of restricted fluid passage, so that the fluid is not influenced significantly by variations in oil viscosity.

For controlled flow rates of lower than 0.5 l/min and with a temperature change of 30°C, flow rate varies by approx. 13% of the set value. For higher flow rates and with the same temperature change the flow rate variation is <4% of the set flow rate.

5 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

6 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

Q max 80 l/min

OPERATING PRINCIPLE

- QDE* are compensated flow control valves with pressure compensation and proportional electric control, with mounting surface according to ISO 6263-03 and ISO 4401-05, supplied with 2 or 3 way design, depending on the use of port P.
- This valve is used for the flow control in branches of a hydraulic circuit or for the speed control of hydraulic cylinders.
- The valve can be controlled directly by a current control supply unit or by means of an electronic control unit, to exploit valve performance to the full (see paragraph 13).
- QDE* valves are available in two sizes, for 5 flow adjustment ranges of up to 80 l/min.
- The valve body is zinc-nickel coated.

PERFORMANCES

(values measured with viscosity of 36 cSt at 50°C with electronic control unit)

		QDE3				QDE5
Maximum operating pressure	bar	250				250
Controlled flow (Q_B)	l/min	14	20	30	40	80
Max input flow (Q_A) (3-way)	l/min	40	50	40	50	90
Spring setting in pressure compensator	bar	4	8	4	8	8
Minimum pressure drop A > B	bar	10	22	10	22	22
Hysteresis	% of Q_{max}	< 6 %				
Repeatability	% of Q_{max}	< $\pm 1,5$ %				< ± 2 %
Electrical characteristics		see paragraph 5				
Fluid temperature range	°C	-20 / +60				
Fluid temperature range	°C	-20 / +80				
Fluid viscosity range	cSt	10 ÷ 400				
Fluid contamination degree		according to ISO 4406:1999 class 18/16/13

D12 = Nominal solenoid voltage 12V DC
D24 = Nominal solenoid voltage 24V DC

Seals:
N = NBR seals (**standard**)
V = FPM seals for special fluids

Series no. (from 10 to 19 sizes and mounting
dimensions remains unchanged)

NOTE: The zinc-nickel finishing on the valve body makes the valve suitable to ensure a salt spray resistance up to **240** hours.
(test operated according to EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).
For a salt spray resistance up to 600 hours order the high corrosion resistance version.

1.1 - QDE3: high corrosion resistance version

This version features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600** hours (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

The coil are specific for this version, featuring a zinc-nickel surface treatment. The boot manual override (CM) is installed as standard in order to protect the solenoid tube.

Follow the identification code below to order it:

Q	D	E	3	-		/	11		-			/		/	W7
---	---	---	---	---	--	---	----	--	---	--	--	---	--	---	----

CK1 = knob manual override

2 - CONFIGURATIONS AND MOUNTING INTERFACE

The function of two or three ways is obtained realizing the mounting interface according to ISO 6263-03 for QDE3 and ISO 4401-05 for QDE5, using the port P for three way configuration only. The port T will never be used.

To use the valve in two ways for QDE3 is also possible to interpose a subplate with plug (code 0113388 and 0530384) be ordered separately.

3 - CHARACTERISTIC CURVES QDE3

(obtained with viscosity of 36 cSt at 50°C)

3.1 - Two ways

Typical flow rate characteristics A → B for controlled flow rate:
14 - 20 - 30 - 40 l/min in function of the current supplied to the
solenoid (D24 version, maximum current 860 mA, PWM 100 Hz)

3.2 - Three ways

Typical flow rate characteristics A → B for controlled flow rate:
14 - 20 - 30 - 40 l/min in function of the current supplied to the
solenoid (D24 version, maximum current 860 mA, PWM 100 Hz)

Pressure drops with flow A → P.
Obtained with $Q_B = 0$ (no current)

4 - CHARACTERISTIC CURVES QDE5

(obtained with viscosity of 36 cSt a 50°C)

4.1 - Two ways

4.2 - Three ways

Pressure drops with flow A → P.
 Obtained with $Q_B = 0$ (no current)

5 - ELECTRICAL CHARACTERISTIC

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

DUTY CYCLE	100%

3	Coil removal space
4	Electric connector type EN 175301-803 (ex DIN 43650)
5	Connector removal space

9 - QDE5 OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

Fastening bolts: 4 bolts M6x40 - ISO 4762

Torque: 8 Nm (A8.8)

Threads of mounting holes: M6x10

1	Mounting surface with sealing rings: N. 5 OR type 2050 (12.42x1.78) - 90 Shore
2	Standard manual override, integrated in the solenoid tube
3	Coil removal space
4	Electric connector type EN 175301-803 (ex DIN 43650)
5	Connector removal space

10 - MANUAL OVERRIDE

Standard valves have the pin for the manual operation integrated in the solenoid tube. The operation of this override must be executed with a suitable tool, minding not to damage the sliding surface.

For QDE3 are available:

- **CM**: manual override boot protected (mandatory for WK1 coils).
- **CK1** version, knob.

For QDE5 only available:

- **CK** version, knob. When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening.

11 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

12 - INSTALLATION

QDE* valves can be installed in any position without impairing correct operation. Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols.

If minimum values are not observed fluid can easily leak between the valve and support surface.

QDE3K*

PROPORTIONAL FLOW CONTROL VALVE WITH COMPENSATION ATEX, IECEx, INMETRO SERIES 10

SUBPLATE MOUNTING ISO 6263-03

p max 250 bar
Q max 40 l/min

OPERATING PRINCIPLE

- QDE3K* are compensated flow control valves with pressure compensation and proportional electric control, with mounting surface according to ISO 6263-03, supplied with 2 or 3 way design, depending on the use of port P.
- These valves are used for the flow control, in branches of a hydraulic circuit or for the speed control of hydraulic cylinders.
- They are compliant with ATEX, IECEx and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- A low temperature version (up to -40 °C) is also available.
- The valve body is zinc-nickel coated.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

PERFORMANCES

(values measured with viscosity of 36 cSt at 50°C with electronic control unit)

Maximum operating pressure	bar	250					
Controlled flow (Q _B)	l/min	6	8,5	14	20	30	40

T03 = 1/2" NPT - ANSI B1.20.1
(ex ANSI B2.1)

side connection:

S01 = M20x1.5 - ISO 261

S02 = Gk 1/2 - UNI EN 10226-2
not available for INMETRO

S03 = 1/2" NPT - ANSI B1.20.1
(ex ANSI B2.1)

S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Nominal solenoid voltage:

D12 = 12V DC

D24 = 24V DC

Version with monobloc steel coil

Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.

On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

NOTE: The zinc-nickel standard finishing surface treatment is suitable to ensure a salt spray resistance up to 600 hours (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards)

1.1 - Names of valves per certification

	ATEX		IECEX		INMETRO	
for gases for dusts	KD2	II 2GD	KXD2	IECEX Gb IECEX Db	KBD2	INMETRO Gb INMETRO Db
for mines	KDM2	I M2	KXDM2	IECEX Mb	KBDM2	INMETRO Mb

NOTE: Refer to the technical data sheet 02 500 for marking, operating temperatures and available versions.

2 - CONFIGURATIONS AND MOUNTING INTERFACE

The function of two or three ways is obtained realizing the mounting interface according to ISO 6263-03, using the port P for three-ways configuration only. The port T will never be used.

To use the valve in two-ways mode is also possible interposing a subplate with plug (code 0113388 and 0530384), to be ordered separately.

3 - CHARACTERISTIC CURVES

(obtained with viscosity of 36 cSt at 50°C)

3.1 - Two ways

Typical flow rate characteristics A → B for controlled flow rate:
14 - 20 - 30 - 40 l/min in function of the current supplied to the solenoid (D24 version, maximum current 860 mA, PWM 100 Hz)

3.2 - Three ways

Typical flow rate characteristics A → B for controlled flow rate:
14 - 20 - 30 - 40 l/min in function of the current supplied to the solenoid (D24 version, maximum current 860 mA, PWM 100 Hz)

Pressure drops with flow A → P.
Obtained with $Q_B = 0$ (no current)

4 - STEP RESPONSE

(values measured with viscosity of 36 cSt at 50°C with electronic control unit)

Step response is the time taken for the valve to reach 90% of the set flow value following a step change of reference signal.

The table illustrates typical response times with $\Delta p = 8$ bar.

REFERENCE SIGNAL STEP	0 → 100%
Step response [ms]	< 70

5 - ELECTRICAL CHARACTERISTICS

(values $\pm 5\%$)

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (AT 20°C)	Ω	3,8	15,6
NOMINAL CURRENT	A	1,88	0,86

DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU
CLASS OF PROTECTION: Atmospheric agents Coil insulation (VDE 0580)	IP66/IP68 class H

5.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9 ± 6 Nm.

Electrical wiring must be done following in compliance with standards about protection against explosion hazards

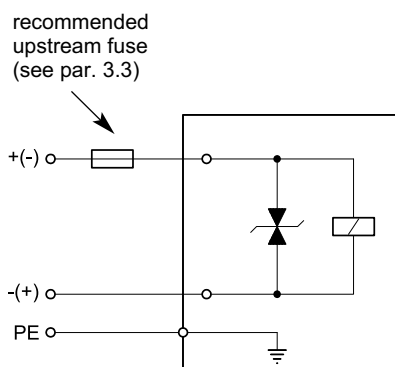

Characteristics of the cables connectable for wiring are indicated in the table below:

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals) or from - 40 °C to +110 °C (for valves with NL seals).

Cable glands (which must be ordered separately, see paragraph 19) allow to use cables with external diameter between 8 and 10 mm.

5.2 - Electrical diagrams

5.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max $3 \times I_n$ according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source. The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,88	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,86	1,25	- 49	

6 - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

QDE3K*-/10*-*K9T*/CM

QDE3K*-/10*-*K9S*/CM

Side port type	Dimension A
S01, S04	60.5
S02, S03	60

1	Mounting surface with sealing rings: 4 OR type 2037 (9.25x1.78) - 90 Shore
2	Explosion-proof coil
3	Minimum clear space required
4	Manual override, boot protected (standard for both N and V seals) for blind ring nut dimensions (standard for NL seals) see par. 9
5	Terminal for supplementary GND connection
6	Upper port for cable gland
7	Cable gland. To be ordered separately, see par. 10
8	Side port for cable gland

Valve fastening: 4 SHC screws ISO 4762 M5x30

Tightening torque: 5 Nm (A8.8 screws)

Threads of mounting holes: M5x10

7 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

8 - INSTALLATION

Installation must adhere to instructions reported in the *Use and Maintenance manual*, always attached to the valve. Unauthorized interventions can be harmful to people and goods because of the explosion hazards present in potentially explosive atmospheres.

The valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

9 - MANUAL OVERRIDES

9.1 - CB - Blind ring nut

The metal ring nut protects the solenoid tube from atmospheric agents and isolates the manual override from accidental operations. The ring nut is tightened on a threaded fastener that keeps the coil in its position even without the ring nut.

To access the manual override, loosen the ring nut and remove it; then reassemble hand tightening, until it stops.

Activate the manual override always and only with non-sparking tools suitable for use in potentially explosive atmospheres.

More information on safe use of explosion-proof components are provided in the instruction manual, always supplied with the valve.

CAUTION!: The manual override use doesn't allow any proportional regulation.

9.2 - CK1 - Knob manual override

Screwing the knob activates this manual override.

9.3 - CK2 - Push and twist manual override

Pressing and turning the knob activates this manual override.

9.3 - CS - Screw manual override

Metal ring nut provided with a M8 screw and a blocking locknut to allow the continuous mechanical operations.

10 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for Ø8÷10 mm cables);
- ATEX II 2GD, I M2; IECEX Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: -70 °C ÷ +220 °C
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: 20 ÷ 25 Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: 45 ÷ 50 Nm

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

1 - ATEX CLASSIFICATION AND TEMPERATURES

Diplomatic certifies the combination valve-coil for the valves suitable for application and installation in potentially explosive atmospheres, according to ATEX directive; the supply always includes the declaration of conformity to the directive and the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environments.

Coils assembled on these valves have been separately certified according to ATEX directive and so they are suitable for use in potentially explosive atmospheres.

1.1 - ATEX classification for valves

Type examination certificate: AR18ATEX055

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

ATEX II 2G ATEX II 2D	*KD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
ATEX I M2	*KDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

1.2 - ATEX marking for valves

valve code		N and V seals	NL seals
*KD2	for gas for dusts	II 2G IIC T4 Gb (-20°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-20°C Ta +80°C)	II 2G IIC T4 Gb (-40°C Ta +80°C) II 2D IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)

1.3 - ATEX classification of the coils

The coil of the explosion-proof valves is ATEX certified itself and as such is identified with its own tag, carries the relative ATEX marking. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

1.4 - ATEX marking on coils

for valve type *KD2	for gas	 II 2G Ex db IIC T4 Gb (-40°C Ta +80°C)

for valve type *KD2 /T5	for gas	 II 2G Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	 II 2D Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
for valve type *KDM2	mining	 I M2 Ex db I T150°C Mb IP66/IP68 (-40°C Ta +75°C)

1.5 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

The valves in group II can also be used for less limiting temperature classes (surface temperature allowed higher).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for

		of fluid				

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Diplomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

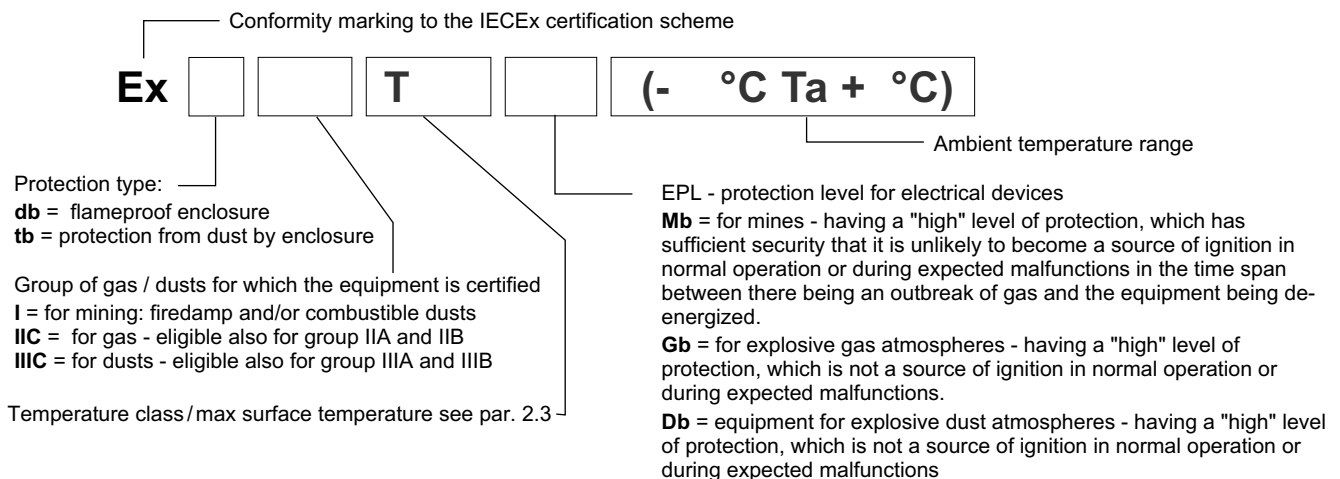

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
IECEx Gb IECEx Db	*KXD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas) T135°C (dusts)	T3, T2, T1 T200°C and higher
		of fluid				
	*KXD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas) T100°C (dusts)	T4, T3, T2, T1 T135°C and higher
		of fluid				
IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for

RPCER1

DIRECT OPERATED FLOW CONTROL VALVE WITH ELECTRIC PROPORTIONAL CONTROL AND POSITION FEEDBACK

SERIES 52

SUBPLATE MOUNTING ISO 6263-03

p max **250 bar**

Q max (see performances table)

MOUNTING INTERFACE

ISO 6263-03-03-0-97
(CETOP 4.5.2-2-03-250)

NOTE: the RPCER1 mounting interface, with holes according to ISO 6263-03, must not have P and T ports

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Maximum operating pressure	bar	250
Minimum Δp between A and B port		10
Maximum controlled flow	l/min	1,5 - 4 - 8 - 16 - 25
Min. controlled flow (for 1 and 4 l/min. reg.)		0,025
Maximum free-reverse flow		40
Step response	see paragraph 7	
Hysteresis	% of Q max	< 2,5%
Repeatability	% of Q max	< $\pm 1\%$
Electrical characteristic	see paragraph 6	
Ambient temperature range	°C	-10 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13 (class 17/15/12 for flows < 0,5 l/min)	
Recommended viscosity	cSt	25
Mass	kg	2,2

OPERATING PRINCIPLE

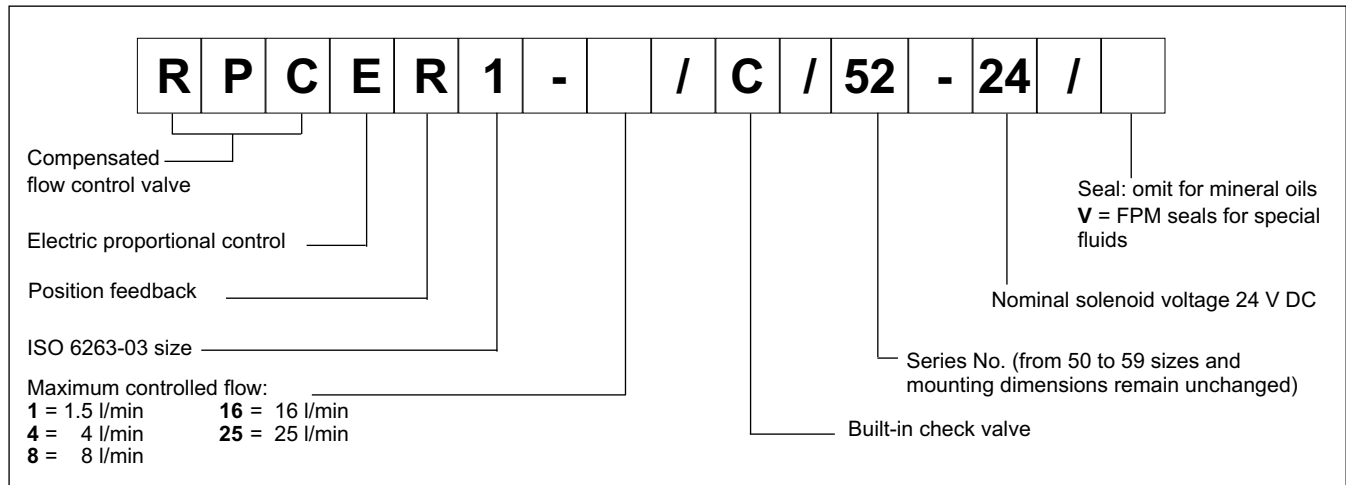

- RPCER1 is a pressure and temperature compensated two-way flow control valve, with electric proportional control and mounting interface according to ISO 6263 standards.
- The position feedback of the flow rate controlling throttle gives regulation conditions featuring highly reduced hysteresis and high repeatability.
- This valve controls the flow rate in a branch of the hydraulic circuit or the speed of hydraulic actuators.
- The flow rate can be modulated continuously in proportion to the reference signal coming from the electronic control unit.
- It is available in five flow rate control ranges up to 25 l/min.

HYDRAULIC SYMBOLS

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C and UEIK-11RSQ/52-24 card)

Typical curves for flow rate A → B according to the reference signal sent to the electronic control unit.

Pressure drop with free flow B → A through check valve.

3 - PRESSURE COMPENSATION

The valves are equipped with two restrictors in series. The first is an opening which can be adjusted by the proportional solenoid; the second, controlled by the pressure upstream and downstream of the first restrictor ensures constant pressure drop across the adjustable restrictor.

In these conditions, the set flow rate value is maintained constant within a tolerance limit of $\pm 2\%$ of the full scale flow rate for maximum pressure variation between the valve inlet and outlet chambers.

4 - THERMAL COMPENSATION

Thermal compensation of the valve is obtained by adopting the principle of restricted fluid passage, so that the fluid is not influenced significantly by variations in oil viscosity.

For controlled flow rates of lower than 0.5 l/min and with a temperature change of 30°C, flow rate varies by approx. 13% of the set value.

For higher flow rates and with the same temperature change the flow rate variation is <4% of the set flow rate.

5 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4.

For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

6 - ELECTRICAL CHARACTERISTICS

6.1 - Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to reduce friction to a minimum thereby reducing hysteresis.

The armature connected to the LVDT transducer core sends the position status to the electronic card.

NOMINAL VOLTAGE	V DC	24
RESISTANCE (at 20°C)	Ω	17.6
MAXIMUM CURRENT	A	0.86
DUTY CYCLE	100%	
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU	
CLASS OF PROTECTION Atmospheric agents (IEC EN 60529)	IP65	

6.2 - Position transducer

The RPCER1 valve has an LVDT type position transducer with amplified signal. This type of transducer allows a precise control of the restrictor and of the set flow rate, thus improving repeatability and hysteresis characteristics.

The transducer is fitted coaxially on the proportional solenoid and the connector features 360° positioning. The field-wireable mating connector is always included.

Use a screened cable to avoid interferences.

Technical specifications and connections are indicated here below.

The transducer is protected against polarity inversion on the power line.

transducer output at closed valve 6 V, at open valve 10 V

7 - STEP RESPONSE

(measured with mineral oil with viscosity of 36 cSt at 50°C with UEIK-11RSQ/52-24 card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical response times with valve flow rate of 16 l/min and with input pressure of 100 bar.

REFERENCE SIGNAL	0 → 100%	100 → 0%	25→100%	100→25%
Step response [ms]	180	150	150	120

8 - INSTALLATION

RPCER1 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and mounting surface.

9 - OVERALL AND MOUNTING DIMENSIONS

10 - ELECTRONIC CONTROL UNIT

RPCE2-*

PILOT OPERATED FLOW CONTROL VALVE WITH ELECTRIC PROPORTIONAL CONTROL SERIES 52

RPCE2- * two-way
RPCE2-70-T3 three-way

SUBPLATE MOUNTING
ISO 6263-06

p max **250 bar**
Q max (see performances table)

OPERATING PRINCIPLE

RPCE2-*

RPCE2-70-T3

- RPCE2-* valves are two-way or three-way flow control valves with pressure and thermal compensation and electric proportional control with mounting interface in compliance with ISO 6263 standards.
- These valves are normally used for flow rate control in hydraulic circuit branches and for speed control of hydraulic actuators.
- Flow rate can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units which enable optimal valve performance (see par. 10).
- The valves are available in three flow control ranges: two with progressive gain up to 72 l/min and the third with differential gain of 30 l/min.
- To ensure correct valve operation, maintain a minimum pilot control flow rate of 2 l/min and minimum pressure of 20 bar.
- Pilot control can be internal, with intake of oil from line E, or external from a line with 1/4" BSP connection on the pilot body.
- Drainage is always external and must be connected directly to the tank without backpressure by means of subplate connection Y (OR \varnothing 35) or by means of a line (1/4" BSP coupling) on the pilot body.
- The three-way version RPCE2-70-T3 allows flow control to the circuit by dumping the exceeding flow to the tank. Maximum pressure in the circuit is limited by means of a manual adjustment relief valve which operates on the compensator pilot.
- RPCE2-70-T3 valve is also available in M version, which allows, by means of an electric control, to unload the total flow with a minimum pressure drop.

HYDRAULIC SYMBOLS

Nominal solenoid voltage 24 V DC																	

2 - PERFORMANCES (obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Maximum working pressure	bar	250
Minimum Δp across E and U ports	bar	10
Piloting pressures:	min	20
	max	160 (NOTE 1)
Maximum controlled flow E→U (RPCE2-*)	l/min	30 - 37 - 72
Maximum controlled flow (RPCE2-70-T3)		80
Minimum controlled flow with P=100 bar (versions 35 and 70) (version 30G)		0,5
Maximum free reverse flow U→E		0,2
		60 (NOTE 2)
Step response	see paragraph 8	
Hysteresis (with PWM 100 Hz)	% of Q _{max}	< 8%
Repeatability	% of Q _{max}	< ±3%
Electrical features	see paragraph 7	
Ambient temperature range	°C	-10 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass:	RPCE2-*	RPCE2-70-T3
		RPCE2-70-T3M
	kg	7,2
		9

NOTE 1: Pilot must be external if the valve is used with line pressure over 160 bar.

NOTE 2: Maximum recommended flow U→E through the check valve (only for two-way version).

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

4.1 - 2-way valve

Typical flow control curves for flow rate E→U according to the current supplied to the solenoid.

The RPCE2-G version, featuring differential gain control, is particularly suitable for "FAST-SLOW" flow rate control as it ensures high sensitivity at low flow rates while enabling high flow rates for rapid actuator movement.

4.2 - 3-way valve

Typical flow control curves for flow rate E→T, according to the current supplied to the solenoid.

Pressure drops E→T
Curve obtained with unloading electrical control (RPCE2-70-T3M).

5 - PRESSURE COMPENSATION

The valves are equipped with two restrictors. The first is an opening which can be adjusted by the proportional solenoid; the second, controlled by the pressure upstream and downstream of the first restrictor ensures constant pressure drop across the adjustable restrictor. In these conditions, the set flow rate value is maintained constant within a tolerance range of $\pm 3\%$ of the set flow rate for maximum pressure variation between the valve inlet and outlet chambers.

6 - THERMAL COMPENSATION

A temperature-sensitive device installed on the flow control element corrects the position and maintains the set flow rate virtually unchanged, also in the case of fluid viscosity variation.

Flow rate variation remains within 2,5% of the set flow rate, for a fluid temperature variation of 10°C.

7 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	24
RESISTANCE (at 20°C)	Ω	16.6
MAXIMUM CURRENT	A	0.85
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30EU	
CLASS OF PROTECTION Atmospheric agents (IEC EN 60529) Coil insulation (VDE 0580) Impregnation	IP 65 class H class F	

8 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table shows typical response times measured with valves "S" (40 l/min) and with an input pressure of 100 bar.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	250	120

9 - INSTALLATION

RPCE2-* valves, both two-way or three-way versions, can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

SUBPLATE MOUNTING
ISO 6263-07

p max 250 bar
Q max (see performances table)

OPERATING PRINCIPLE

RPCE3-*

RPCE3-100-T3

- RPCE3-* valves are two-way or three-way flow control valves with pressure and thermal compensation and electric proportional control with mounting interface in compliance with ISO 6263 standards.
- These valves are normally used for flow rate control in hydraulic circuit branches and for speed control of hydraulic actuators.
- Flow rate can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units which enable optimal valve performance (see paragraph 10).
- The valves are available in two flow control ranges of 100 l/min, with progressive gain or with differential gain.
- To ensure correct valve operation, maintain a minimum pilot control flow rate of 2 l/min and minimum pressure of 20 bar.
- Pilot control can be internal, with intake of oil from line E, or external from a line with 1/4" BSP connection on the pilot body.
- Drainage is always external and must be connected directly to the tank without backpressure by means of subplate connection Y (OR Ø32) or by means of a line (1/4" BSP coupling) on the pilot body.
- The three-way version RPCE3-100-T3 allows flow control to the circuit by dumping the exceeding flow to the tank. Maximum pressure in the circuit is limited by means of a manual adjustment relief valve which operates on the compensator pilot.
- RPCE3-100-T3 valve is also available in /M version, which allows, by means of an electric control, to unload the total flow with a minimum pressure drop.

Repeatability	% of Q _{max}	< ±3%
Electrical features	see paragraph 7	
Ambient temperature range	°C	-10 / +50
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass: RPCE3-*	kg	10,8
RPCE3-100-T3 RPCE3-100-T3M		12,6

NOTE 1: Pilot must be external if the valve is used with line pressure over 160 bar.

NOTE 2: Maximum recommended flow U→E through the check valve (only for two-way version).

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

4.1 - 2-way valve

Typical flow control curves for flow rate E→U, according to the current supplied to the solenoid.

The RPCE3-100G version, featuring differential gain control, is particularly suitable for "FAST-SLOW" flow rate control as it ensures high sensitivity at low flow rates while enabling high flow rates for rapid actuator movement.

Pressure drops with free flow U→E through the check valve.

4.1 - 3-way valve

Typical flow control curves for flow rate E→U, according to the current supplied to the solenoid.

Pressure drops E→T (only for three-way versions)

Curve obtained with unloading electrical control (RPCE3-100-T3M).

5 - PRESSURE COMPENSATION

The valves are equipped with two restrictors. The first is an opening which can be adjusted by the proportional solenoid; the second, controlled by the pressure upstream and downstream of the first restrictor ensures constant pressure drop across the adjustable restrictor.

In these conditions, the set flow rate value is maintained constant within a tolerance range of $\pm 3\%$ of the set flow rate for maximum pressure variation between the valve inlet and outlet chambers.

6 - THERMAL COMPENSATION

A temperature-sensitive device installed on the flow control element corrects the position and maintains the set flow rate virtually unchanged, also in the case of fluid viscosity variation.

Flow rate variation remains within 2,5% of the set flow rate, for a fluid temperature variation of 10°C .

7 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	24
RESISTANCE (AT 20°C)	Ω	16.6
MAXIMUM CURRENT	A	0.85
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU	
CLASS OF PROTECTION Atmospheric agents (IEC EN 60529)	IP 65	

8 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table shows typical response times measured with valves "S" (150 l/min) and with an input pressure of 100 bar.

REFERENCE SIGNAL STEP	0 \rightarrow 100%	100 \rightarrow 0%
Step response [ms]	250	120

9 - INSTALLATION

The RPCE3 valve, both two-way or three-way versions, can be installed in any position without impairing correct operation. Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

10 - ELECTRONIC CONTROL UNITS

EDC-111	for solenoid 24V DC	plug version	see cat. 89 120

OPERATING PRINCIPLE

- The DSE3 valve is a proportional directional valve, direct operated, with ports in compliance with ISO 4401-03 standards.
- It is suitable for directional and speed control of hydraulic actuators.
- Valve opening and hence flow rate can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or combined with an external electronic card to maximize the valve performances (see par. 12).
- Several manual overrides are available.

HYDRAULIC SYMBOLS (typical)

1 - IDENTIFICATION CODE

D	S	E	3	-				/	11	-			/		
---	---	---	---	---	--	--	--	---	----	---	--	--	---	--	--

Direct operated directional control valve

Electric proportional control

Size ISO 4401-03

Spool type:

SA = 1 solenoid on A side
SB = 1 solenoid on B side

Series No. _____
 (from 10 to 19 sizes and mounting dimensions remain unchanged)

Option:
/ W7 = Zinc-nickel surface treatment (see **NOTE**)
 Omit if not required

Option: manual override (see at par. 8)

Coil electrical connection:
K1 = plug for connector type EN 175301-803 (ex DIN 43650) (**standard**)
K7 = plug for connector type DEUTSCH DT04-2P male

D12 = Nominal solenoid voltage 12V DC
D24 = Nominal solenoid voltage 24V DC

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

NOTE: The standard valve is supplied with surface treatment of phosphating black. The zinc-nickel finishing on the valve body makes the valve suitable to ensure a salt spray resistance up to **240** hours. For a salt spray resistance up to **600** hours refer to **paragraph 9**. (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

2 - CONFIGURATIONS

Valve configuration depends on the combination of the following elements:
 number of proportional solenoids, spool type, nominal flow rate.

2 solenoids configuration:
 3 positions with spring centreing

"SA" configuration: 1 solenoid on side A.
 2 positions (central + external) with spring centreing

"SB" configuration: 1 solenoid on side B.
 2 positions (central + external) with spring centreing

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

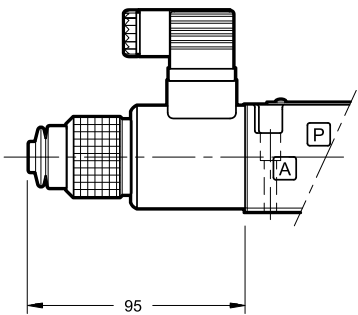

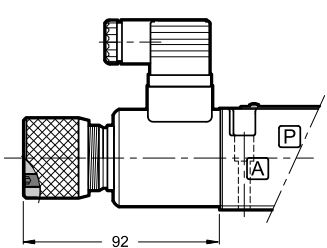

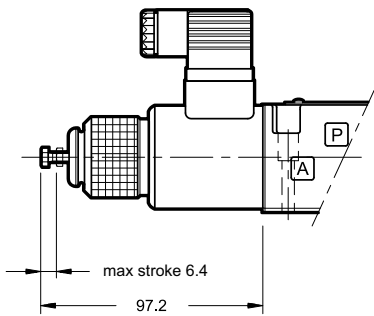

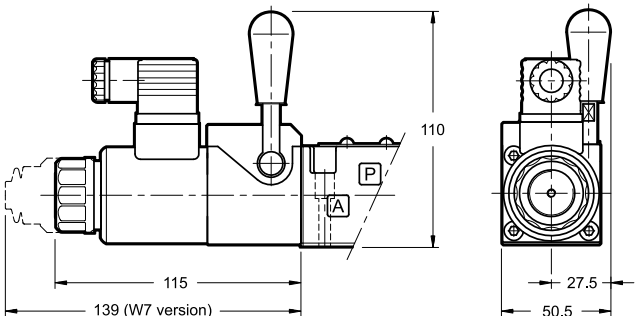

1	Mounting surface with sealing rings: 4 OR type 2037 (9.25 x 1.78) - 90 shore
2	Standard manual override, integrated in the solenoid tube
3	Coil removal space
4	Electric connector type EN 175301-803 (ex DIN 43650)
5	Connector removal space

8 - MANUAL OVERRIDE

These valves have solenoids whose pin for manual operation is integrated in the tube. Actuate this override by pushing it with a suitable tool, minding not to damage the sliding surface.

Four different manual override versions are available upon request:

- **CM** version, manual override boot protected.
- **CK** version, knob. When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening.
- **CS** version, with metal ring nut provided with a M4 screw and a locknut.
- **CH** version, lever manual override. The lever device is always placed at the A side of the valve.

<p style="text-align: center;">CM Version</p>  <p>Code: 3803210003</p>	<p style="text-align: center;">CK Version</p>  <p>Allen key for set screw: 3 mm Code: 3803210005</p>
<p style="text-align: center;">CS Version</p>  <p>Code: 3803210004</p>	<p style="text-align: center;">CH Version</p> 

9 - HIGH IP AND CORROSION RESISTANCE VERSION

---	---	---	---	---	--	---	----	---	--	---	--	---	----

Choices as in standard identification code

DC power supply

D12 = 12 V

D24 = 24 V

Coil electrical connection

WK1 = plug for connector type DIN 43650

WK7 = plug DEUTSCH DT04-2P, for male connector type DEUTSCH DT06-2S.

Manual override:

CM = manual override, boot protected (**standard**)

CS = screw override

CH = lever manual override

CK = knob manual override

9.1 - Corrosion resistance

This version features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600** hours (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

The boot protected manual override is fitted as standard in order to protect the solenoid tube. See the dimensions of the CM manual override in par. 8.

9.2 - Coils

The coils feature a zinc-nickel surface treatment. The electrical characteristics do not change compared to the standard version: see table in par. 4

9.3 - Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree correctly connected and installed.

electric connection	electric connection protection	whole valve protection
WK1 EN 175301-803 (ex DIN 43650)	IP66	IP66
WK7 DEUTSCH DT04 male	IP66/IP68/IP69 IP69K*	IP66/IP68/IP69 IP69K*

(*) The IP69K protection degree is not taken into account in IEC 60529 but it is included in ISO 20653.

NOTE: As regards the liquid ingress protection (second digit), there are three means of protection.

Codes from 1 to 6 are related to water jets.

Rates 7 and 8 are related to immersion.

Rate 9 is reserved for high pressure and temperature water jets.

This means that IPX6 covers all the lower steps, rate IPX8 covers IPX7 but not IPX6 and lower, instead IPX9 does not cover any of them.

Whether a device meets two types of protection requirements it must be indicated by listing both the tests separated by a slash.

(E.g. a marking of an equipment covered both by temporary immersion and water jets is IP66/IP68).

10 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids like HL or HM type, according to ISO 6743-4. With this kind of fluids, use NBR seals type (code N). For HFDR fluids type (phosphate esters) use FPM seals (code V). For use with other kind of fluids such as HFA, HFB, HFC please consult our technical department.

Operation with fluid temperature exceeding 80°C causes premature deterioration of the quality of the fluid and seals. The physical and chemical properties of the fluid must be maintained.

11 - INSTALLATION

DSE3 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

code **WK1** (W7 version only)

connection for DEUTSCH DT06-2S male connector
code **K7**

connection for DEUTSCH DT06-2S male connector
code **WK7** (W7 version only)

7 - OVERALL AND MOUNTING DIMENSIONS

8 - MANUAL OVERRIDE

These valves have solenoids whose pin for manual operation is integrated in the tube. Actuate this override by pushing it with a suitable tool, minding not to damage the sliding surface.

Three different manual override version are available upon request:

- **CM** version, manual override boot protected.
- **CK1** version, turning knob override.
- **CS** version, with metal ring nut provided with a M8 screw and a blocking locknut to allow the continuous mechanical operations.

CM Version - Code: 3401150006

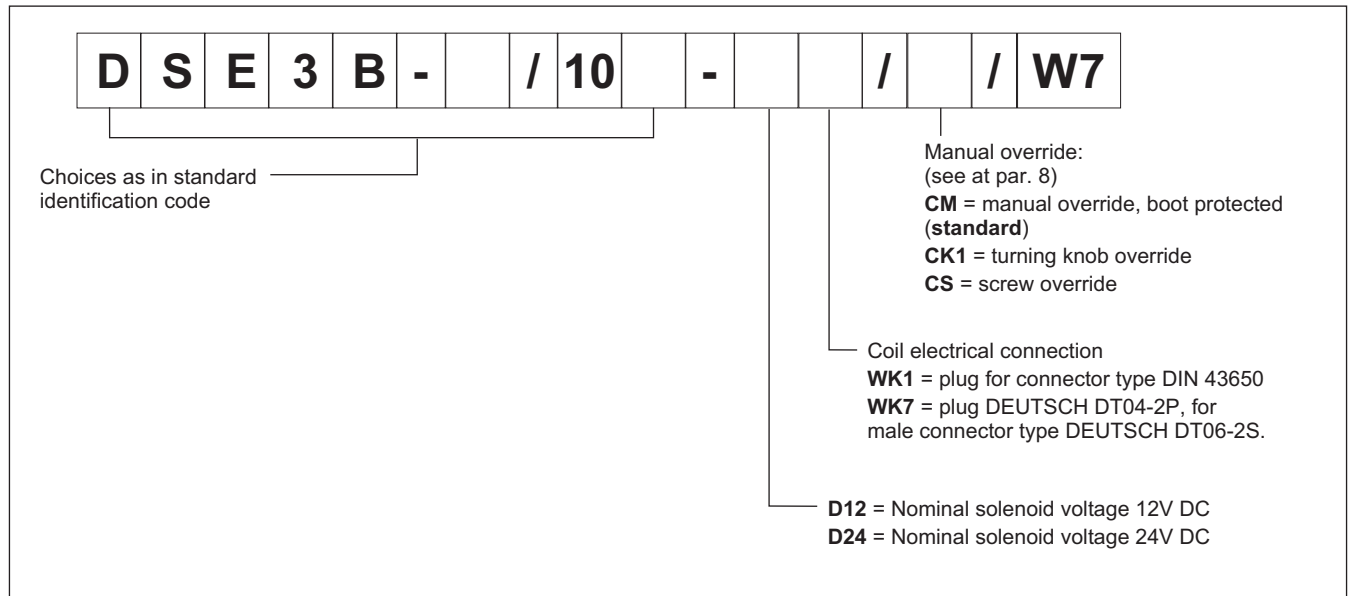

CK1 Version - Code: 3401150021

CS Version - Code: 3803210006

9 - HIGH IP AND CORROSION RESISTANCE VERSION

9.1 - Corrosion resistance

This version features the zinc-nickel coating on all exposed metal parts of the valve, making it resistant to exposure to the salt spray for **600** hours (test performed according to UNI EN ISO 9227 and assessment test performed according to UNI EN ISO 10289).

The boot protected manual override is fitted as standard in order to protect the solenoid tube. See the dimensions of the CM manual override in par. 8.

9.2 - Coils

The coils feature a zinc-nickel surface treatment. The electrical characteristics do not change compared to the standard version: see table in par. 4

9.3 - Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP degree correctly connected and installed.

electric connection	electric connection protection	whole valve protection
WK1 EN 175301-803 (ex DIN 43650)	IP66	IP66
WK7 DEUTSCH DT04 male	IP66/IP68/IP69 IP69K*	IP66/IP68/IP69 IP69K*

(*) The IP69K protection degree is not taken into account in IEC 60529 but it is included in ISO 20653.

NOTE: As regards the liquid ingress protection (second digit), there are three means of protection.

Codes from 1 to 6 are related to water jets.

Rates 7 and 8 are related to immersion.

Rate 9 is reserved for high pressure and temperature water jets.

This means that IPX6 covers all the lower steps, rate IPX8 covers IPX7 but not IPX6 and lower, instead IPX9 does not cover any of them.

Whether a device meets two types of protection requirements it must be indicated by listing both the tests separated by a slash.

(E.g. a marking of an equipment covered both by temporary immersion and water jets is IP66/IP68).

10 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids like HL or HM type, according to ISO 6743-4. With this kind of fluids, use NBR seals type (code N). For HFDR fluids type (phosphate esters) use FPM seals (code V). For use with other kind of fluids such as HFA, HFB, HFC please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

11 - INSTALLATION

DSE3B valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a lapped surface with planarity and roughness equal to or better than those indicated in the symbol.

If minimum values of planarity or smoothness are not observed, fluid leakages between valve and mounting surface can easily occur.

(see catalogue 51 000)

Type PMMD-AI3G ports on rear (3/8" BSP threaded)
Type PMMD-AL3G side ports (3/8" BSP threaded)

DSE3G*

DIRECTIONAL VALVE WITH PROPORTIONAL CONTROL AND DIGITAL INTEGRATED ELECTRONICS

SUBPLATE MOUNTING ISO 4401-03

p max 350 bar

Q max 40 l/min

MOUNTING INTERFACE

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

Max operating pressure: - P - A - B ports - T port	bar	350 210
Nominal flow with Δp 10 bar P-T	l/min	1 - 4 - 8 - 16 - 26
Response times	see paragraph 6	
Hysteresis	% of Q max	< 3%
Repeatability	% of Q max	< $\pm 1\%$
Electrical characteristics	see paragraphs 3 and 4	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	according to ISO 4406:1999 class 18/16/13	
Recommended viscosity	cSt	25
Mass: single solenoid valve double solenoid valve	kg	1.9 2.4

OPERATING PRINCIPLE

HYDRAULIC SYMBOLS (typical)

1 - IDENTIFICATION CODES AND CONFIGURATION

1.1 - Standard electronics

D	S	E	3	G	-				/ 31	-	K11	
----------	----------	----------	----------	----------	----------	--	--	--	-------------	----------	------------	--

Direct operated directional control valve

Electric proportional control

Size ISO 4401-03

Standard electronics for open loop

Spool type: _____
C = closed centres
CZ = with software overstep of the overlap
A = open centres

Nominal flow rate (see par. 1.2) _____

Solenoid position (omit for 2 solenoids configuration): _____
SA = 1 solenoid on side A

Pin C function:
A = external enable
B = internal enable
C = 0V monitor

Connection: 6 pin + PE

Reference signal:
E0 = voltage $\pm 10V$ **E1** = current $4 \div 20 mA$

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Series No. (the overall and mounting dimensions remain unchanged from 30 to 39)

1.2 - Configurations

Valve configuration depends on the combination of the following elements:
number of proportional solenoids, spool type, rated flow.

Configuration 2 solenoids :
3 positions with spring centreing

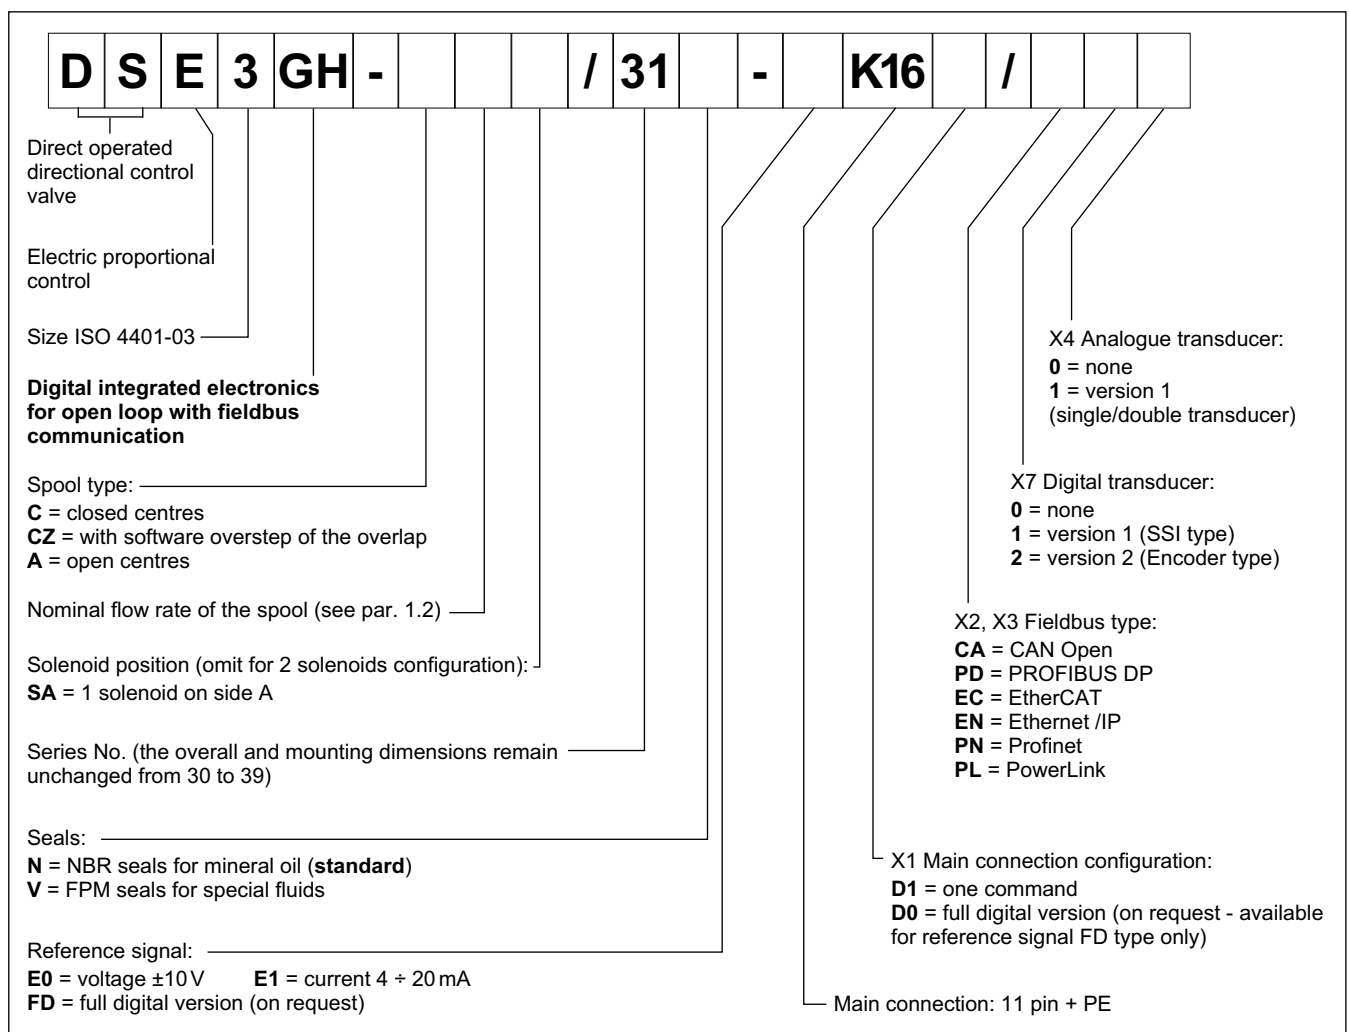

Configuration 1 solenoid on side A "**SA**":
2 positions (central + external) with spring centreing

*	Controlled flow with $\Delta p 10$ bar P-T
01	1 l/min
04	4 l/min
08	8 l/min
16	16 l/min
16/08	16 (P-A) / 08 (B-T) l/min
26	26 l/min
26/13	26 (P-A) / 13 (B-T) l/min

1.3 - Compact electronics

1.4 - Electronics with fieldbus communication

2 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	3
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

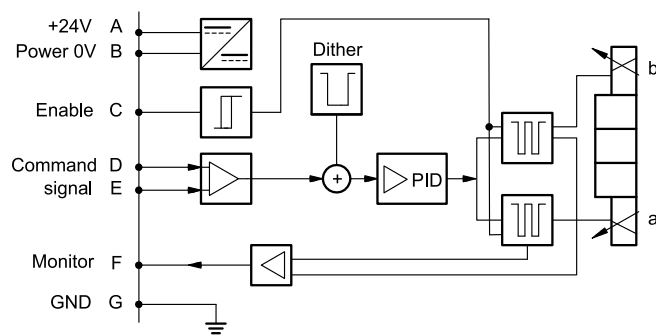

3 - DSE3G - STANDARD ELECTRONICS

3.1 - Electrical characteristics

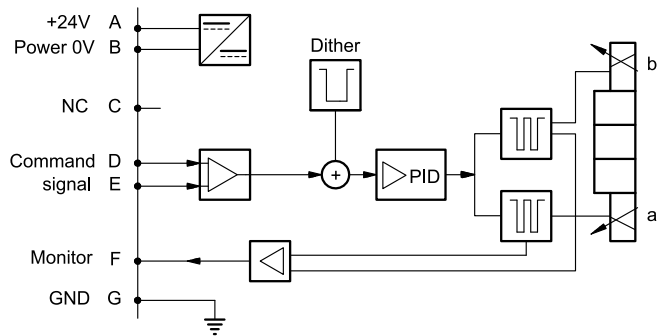

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

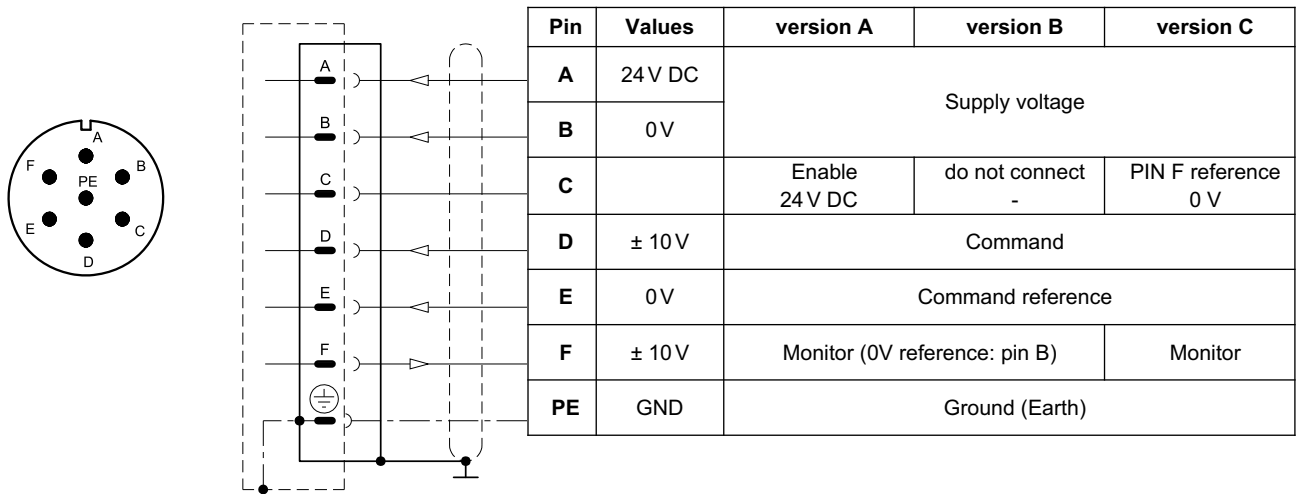

VERSION C - 0V Monitor

3.3 - Versions with voltage command (E0)

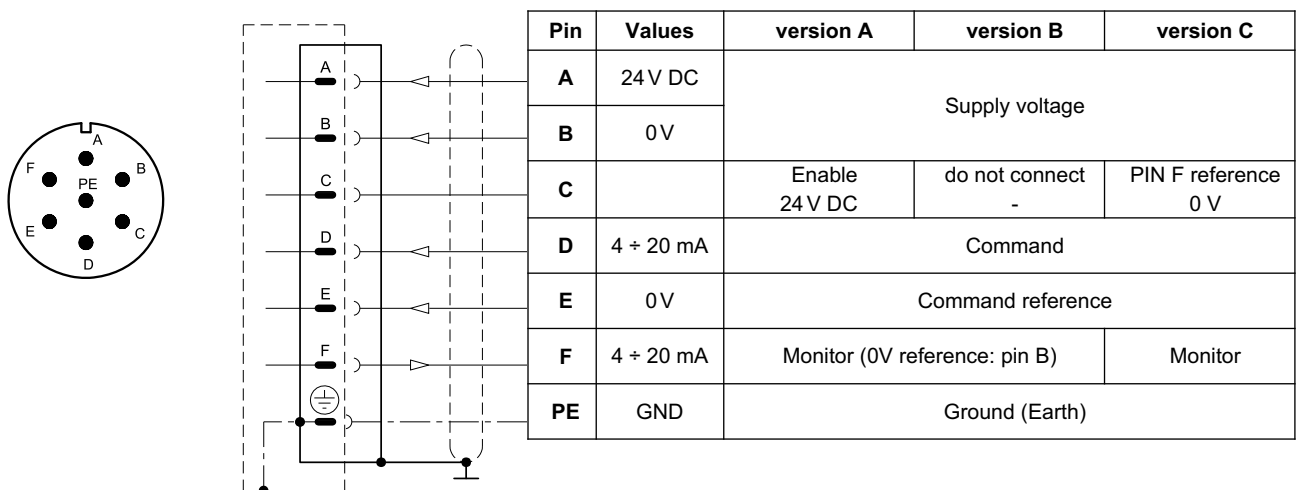

The reference signal is between -10V and +10V on double solenoid valve, and 0 + 10V on single solenoid valve SA. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

3.4 - Versions with current command (E1)

The reference signal is supplied in current $4 \div 20$ mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient restoring the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4 - DSE3GL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

4.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	$0 \div 5$ (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
IO-Link communication (IOL): Data rate	kBaud	IO-Link Port Class B 230,4
Can Open communication (CA): Data rate	kbit	$10 \div 1000$
Connection		5-pin M12 code A (IEC 61076-2-101)

4.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$\pm 10 \text{ V}$	Command
3	0V	Command reference
4	$0 \div 5 \text{ V}$	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$4 \div 20 \text{ mA}$	Command
3	0V	Command reference
4	$4 \div 20 \text{ mA}$	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

5 - DSE3GH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 3.3 and 3.4.

5.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

5.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24 V DC	Enable
4	$\pm 10 \text{ V}$ (E0) $4 \div 20$ (E1)	Command
5	0 V	Command reference signal
6	$\pm 10 \text{ V}$ (E0) $4 \div 20$ (E1)	Monitor (0V reference pin 10)
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V reference pin 2)
12	GND	Ground (Earth)

D0: full digital

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24 V DC	Enable
4	NC	do not connect
5	NC	do not connect
6	NC	do not connect
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V ref. pin 2)
12	GND	Ground (Earth)

5.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

5.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

5.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5 V	Termination supply signal
2	PB_A	Bus line (high)
3	0 V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5 V	Termination supply signal
2	PB_A	Bus line (high)
3	0 V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

5.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

NOTE: Shield connection on connector housing is recommended.

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

6 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and $p = 140$ bar)

Typical flow rate curves at constant Δp related to the reference signal and measured for the available spools. The Δp values are measured between P and T valve ports.

Curves obtained after linearization of the characteristic curve in factory, through the digital amplifier. The linearization of the curve is performed with a constant Δp of 5 bar and by setting the value of flow start at 20% of the reference signal.

SPOOL TYPE C01/A01

SPOOL TYPE C04/A04

SPOOL TYPE C08/A08

SPOOL TYPE C16/A16

SPOOL TYPE C26/A26

7 - RESPONSE TIMES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

8 - DSE3G - OVERALL AND MOUNTING DIMENSIONS

DSE3G-*/K11

dimensions in mm

DSE3G-*/SA/K11

Fastening bolts: 4 bolts M5x30 - ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Coil removal space (solenoid B only)
3	Manual override by pin embedded in the solenoid tube
4	Main connection 6 pin + PE
5	Mating connector 6 poles + PE , female type MIL-5015-G To be ordered separately. See catalogue 89 000

9 - DSE3GL - OVERALL AND MOUNTING DIMENSIONS

DSE3GL-*/K12

DSE3GL-*/SA/K12

Fastening bolts: 4 bolts M5x30- ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Coil removal space
3	Standard manual override embedded in the solenoid tube
4	Connection M12 A 5 pin
5	L1 LED
6	L2 LED
7	Mating connector M12 5 poles - code A, female To be ordered separately. See catalogue 89 000

10 - DSE3GH - OVERALL AND MOUNTING DIMENSIONS

11 - MANUAL OVERRIDE

These valves have solenoids whose pin for manual operation is integrated in the tube. Actuate this override by pushing it with a suitable tool, minding not to damage the sliding surface.

Three other types of manual overrides can fit the DSE3GL valve:

- **CM** version, manual override boot protected
- **CK1** version, turning knob override.
- **CS** version, with metal ring nut provided with a M8 screw and locknut.

12 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

13 - INSTALLATION

DSE3G* valves can be installed in any position without impairing correct operation. Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a lapped surface with planarity and roughness equal to or better than those indicated in the drawing.

If minimum values are not observed, fluid can easily leak between the valve and the mounting interface.

14 - ACCESSORIES

(to be ordered separately)

14.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

14.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

14.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

14.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, see catalogue 89 850.

15 - SUBPLATES

(see catalogue 51 000)

PMMD-AI3G rear ports
PMMD-AL3G side ports
Ports dimensions: P, T, A, B: 3/8" BSP

DSE3J*

DIRECTIONAL VALVE WITH PROPORTIONAL CONTROL, FEEDBACK AND INTEGRATED ELECTRONICS

SUBPLATE MOUNTING ISO 4401-03

p max 350 bar

Q max 80 l/min

MOUNTING INTERFACE

OPERATING PRINCIPLE

PERFORMANCES

(Mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

Max operating pressure: P - A - B ports T port	bar	350 210

HYDRAULIC SYMBOLS (typical)

1 - IDENTIFICATION CODE

1.1 - Standard electronics

D	S	E	3	J	-					/ 31	-		K11	
----------	----------	----------	----------	----------	----------	--	--	--	--	-------------	----------	--	------------	--

Direct operated directional control valve

Electric proportional control

Size ISO 4401-03

Standard electronics for closed loop

Spool type:
C = closed centres
A = open centres
Z = zero overlap

Nominal flow rate of the spool (see chart par. 1.2)

FS = Fail safe option. (Omit if not required). Available for Z spools only.

Pin C function:
A = external enable
B = internal enable
C = 0V monitor

Connection 6 pin + PE

Reference signal:
E0 = voltage ± 10 V
E1 = current 4 ± 20 mA

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Series No. (the overall and mounting dimensions remain unchanged from 30 to 39)

Solenoid position (omit for 2 solenoids configuration):
SA = 1 solenoid on side A

1.2 - Configurations

Valve configuration depends on the combination of the following elements: number of proportional solenoids, spool type, rated flow.

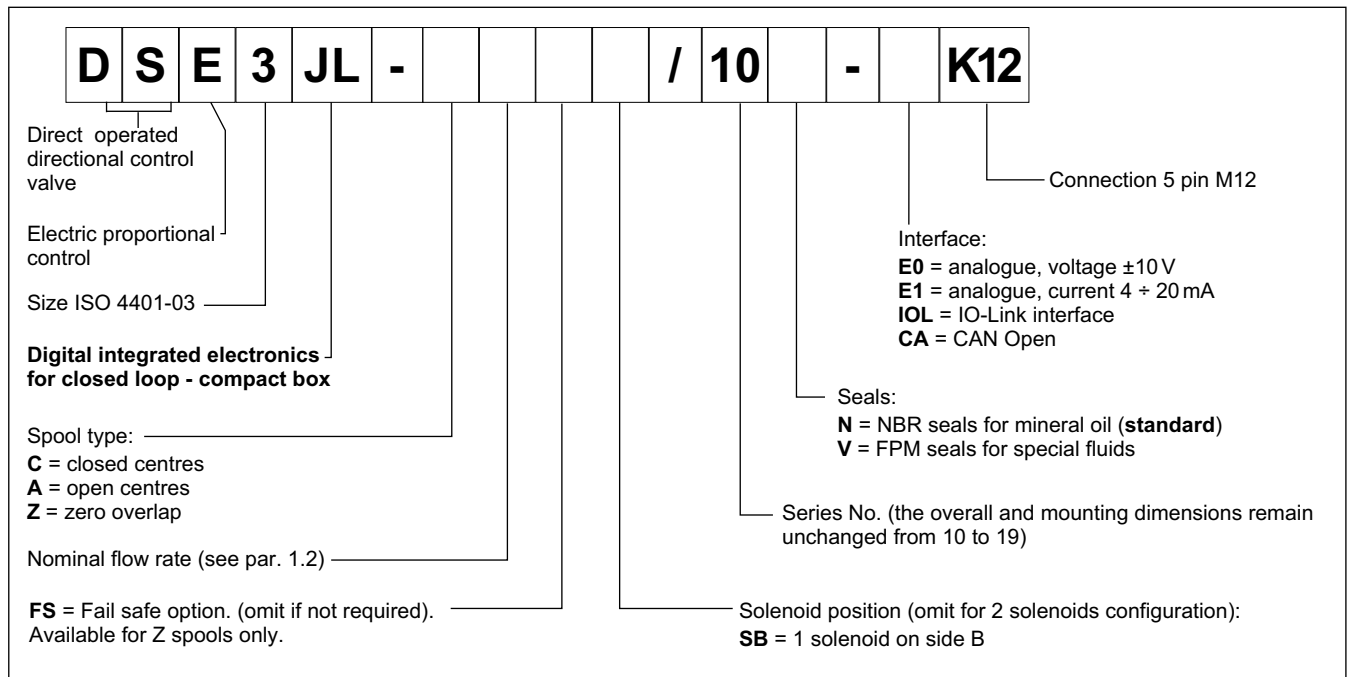

Configuration 2 solenoids :
3 positions with spring centering

Configuration 1 solenoid on side A "**SA**":
2 positions (central + external) with spring centering (for DSE3J and DSE3JH only)

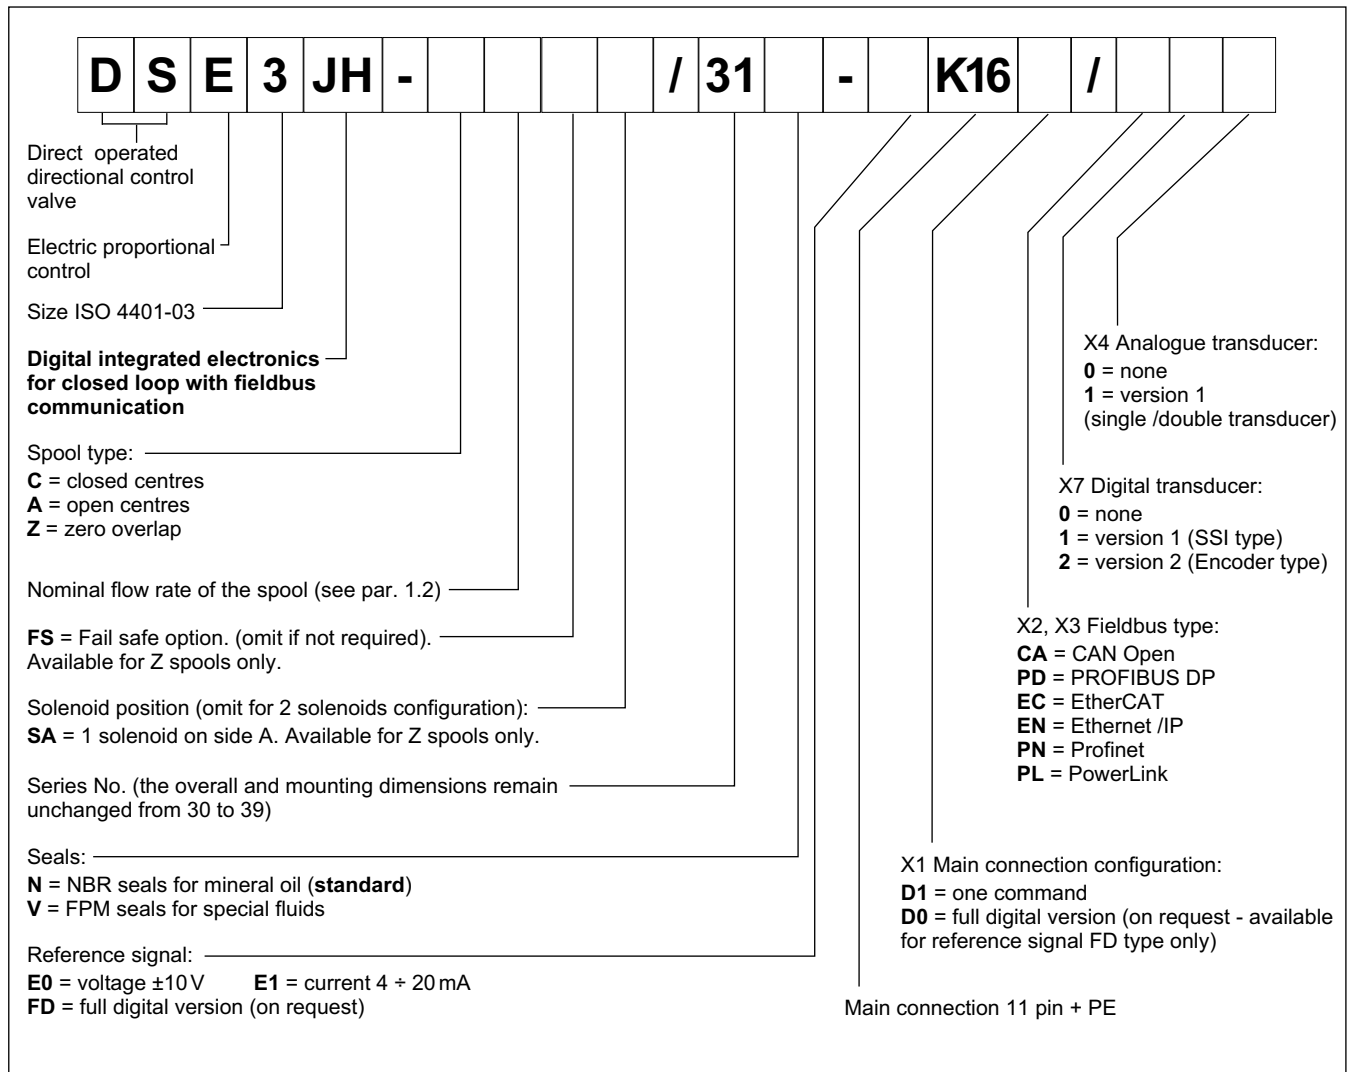

Configuration 1 solenoid on side B "**SB**":
2 positions (central + external) with spring centering (for DSE3JL only)

*	Controlled flow with $\Delta p 10$ bar P-T
01	1 l/min
04	4 l/min
12	12 l/min
18	18 l/min (spool type C only)
30	30 l/min
30/15	30 (P-A) / 15 (P-B) l/min

1.3 - Compact electronics

1.4 - Electronics with fieldbus communication

2 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	3
Managed breakdowns		Overload and electronics overheating, LVDT sensor error, cable breakdown, supply voltage failure
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

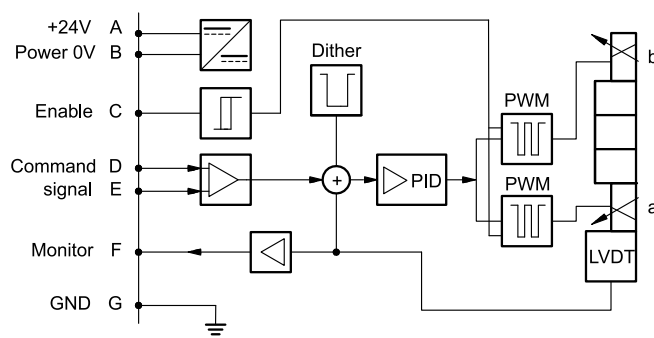

3 - DSE3J - STANDARD ELECTRONICS

3.1 - Electrical characteristics

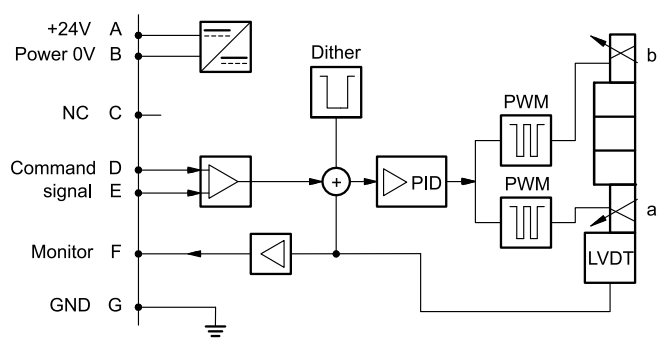

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

VERSION C - 0V Monitor

3.3 - Versions with voltage command (E0)

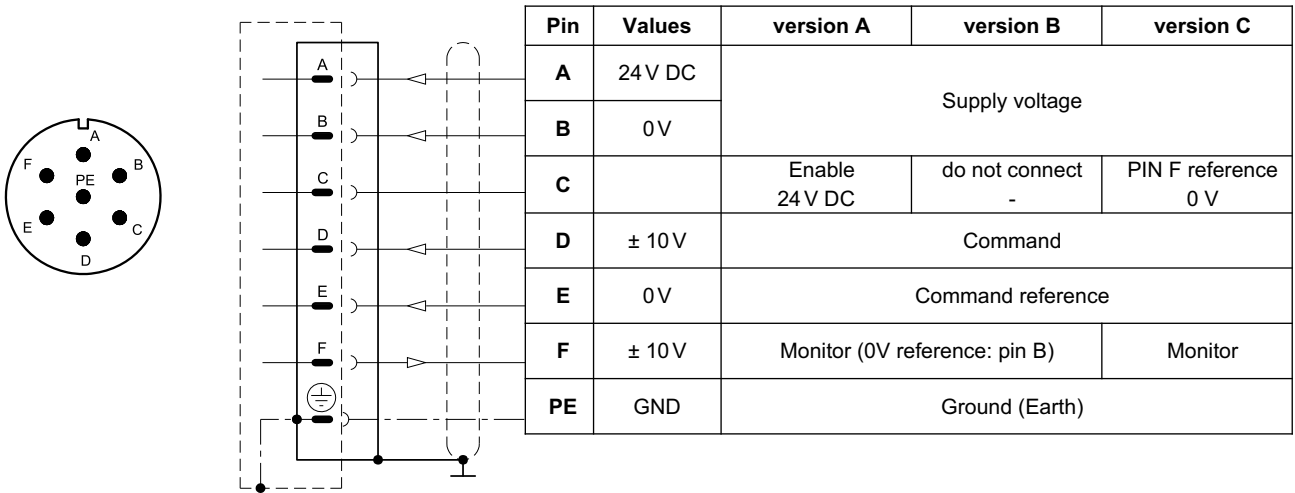

The reference signal is between -10V and +10V on double solenoid valve, and 0 ÷ +10V on single solenoid valve SA. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

COMMAND	-10V	0V	+10V
MONITOR	-10V	0V	+10V

+10V	0V
+10V	0V

0V	+10V
0V	+10V

3.4 - Versions with current command (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

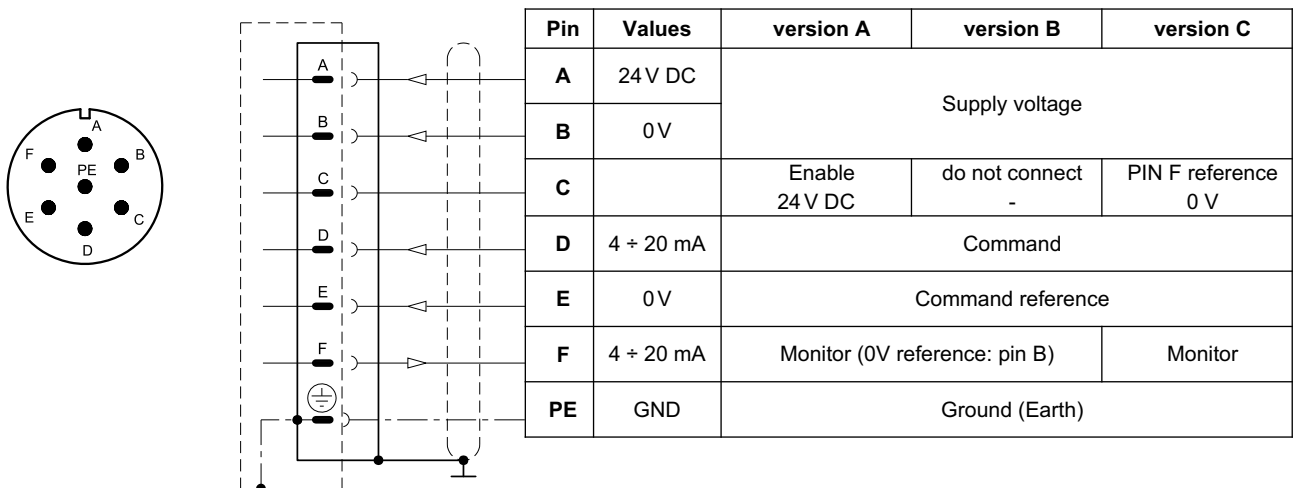

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

COMMAND	4 mA	12 mA	20 mA
MONITOR	4 mA	12 mA	20 mA

20 mA	4 mA
20 mA	4 mA

4 mA	12 mA
4 mA	12 mA

4 - DSE3JL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cable is limited to 20 metres.

4.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal:	voltage (E0) current (E1)	V DC mA	$0 \div 5$ (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
IO-Link communication (IOL): Data rate		kBaud	IO-Link Port Class B 230,4
Can Open communication (CA): Data rate		kbit	$10 \div 1000$
Data register (IOL and CA versions only)			solenoid voltage supply, solenoid faults (shortcircuit, bad config, internal), box temperature, switch-on time, vibrations
Connection			5-pin M12 code A (IEC 61076-2-101)

4.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$\pm 10 \text{ V}$	Command
3	0 V	Command reference
4	$0 \div 5 \text{ V}$	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$4 \div 20 \text{ mA}$	Command
3	0 V	Command reference
4	$4 \div 20 \text{ mA}$	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0 V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0 V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

5 - DSE3JH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 3.3 and 3.4.

5.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

5.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function

NOTE: Shield connection on connector housing is recommended.

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

6 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and with digital integrated electronics)

Typical flow rate curves related to the reference signal and measured for the available spools. The Δp values are measured between P and T valve ports.

7 - RESPONSE TIMES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and 140 bar Δp P→T)

8 - DSE3J - OVERALL AND MOUNTING DIMENSIONS

DSE3J-*/SA/K11

Valve fastening: 4 SHC screws M5x30 - ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Coil removal space (solenoid B only)
3	Main connection 6 pin + PE
4	Mating connector 6 poles + PE, female type MIL-5015-G To be ordered separately. See catalogue 89 000
5	Adjustment sealing performed at factory. Do not disassemble the transducer.

9 - DSE3JL - OVERALL AND MOUNTING DIMENSIONS

10 - DSE3JH - OVERALL AND MOUNTING DIMENSIONS

11 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

12 - INSTALLATION

DSE3J valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

13 - ACCESSORIES

(to be ordered separately)

13.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

13.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

13.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

13.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connections. See catalogue 89 850.

14 - SUBPLATES

Typical flow rate curves at constant Δp related to the reference signal and measured for the available spools. The Δp values measured between P and T valve ports.

C08 / A08

C16 / A16

C26 / A26

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

5 - ELECTRICAL CHARACTERISTICS

5.1 - Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to reduce friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube and secured by means of a lock nut. Only the coil on side B can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12
RESISTANCE (AT 20°C)	Ω	3.66
MAXIMUM CURRENT	A	1.88
DUTY CYCLE		100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU	
CLASS OF PROTECTION Atmospheric agents (IEC EN 60529)	IP 65	

5.2 - Position transducer

The DSE3F valve has an LVDT type position transducer with amplified signal. This type of transducer allows a precise control of the spool stroke and hence of the set flow rate, improving repeatability and hysteresis characteristics.

The transducer is fitted coaxially on the proportional solenoid and the connector features 360° positioning. The field-wireable mating connector is always included.

Use a screened cable to avoid interferences.

Technical specifications and wiring are indicated here below.

The transducer is protected against polarity inversion on the power line.

6 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical response times with the C16 spool and with $\Delta p = 30$ bar P-T.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	30	25

7 - OVERALL AND MOUNTING DIMENSIONS

Fastening bolts: 4 bolts M5x30 - ISO 4762

Torque: 5 Nm (A8.8)

Threads of mounting holes: M5x10

1	Mounting surface with sealing rings: 4 OR type 2037 (9.25 x 1.78) - 90 shore
2	Manual override by pin
3	Main electrical connector EN 175301-803 (ex DIN 43650)
4	Electrical connector 4 pin EC4S/M12S/10 code 3491001002 for position transducer (included)
5	Coil removal space
6	Removal space of the main electrical connector

8 - INSTALLATION

DSE3F valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and mounting surface.

9 - ELECTRONIC CONTROL UNITS

DSE5

DIRECTIONAL VALVE WITH PROPORTIONAL CONTROL

SERIES 10

SUBPLATE MOUNTING ISO 4401-05

p max 320 bar

Q max 90 l/min

MOUNTING INTERFACE

OPERATING PRINCIPLE

- The DSE5 valve is a directly operated directional control valve with electric proportional control and with ports in compliance with ISO 4401 standards.
- It is used for directional and speed control of the hydraulic actuators.
- Valve opening and hence flow rate can be modulated continuously in proportion to the current supplied to the solenoid.
- The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units to exploit valve performance to the full (see paragraph 11).
- Other two versions with external subplate drain port are available (see paragraph 9).

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Maximum operating pressure: - P - A - B ports - T port : standard version version with Y port	bar	320 210 320
Maximum flow with Δp 10 bar P-T	l/min	30 - 60
Step response	see paragraph 6

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Typical constant flow rate control curves at Δp according to current supply to solenoid (D24 version, maximum current 1600 mA), measured for the various spools types available.

The reference Δp values are measured between ports P and T on the valve.

SPOOL TYPE C30

SPOOL TYPE C60

SPOOL TYPE A30

SPOOL TYPE A60

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

5 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut.

It can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	VDC	12	24
RESISTANCE (at 20°C)	Ω	3 - 3.4	8.65
MAXIMUM CURRENT	A	2.6	1.6
DUTY CYCLE	100%		
ELECTROMAGNETIC COMPATIBILITY (EMC)	according to 2014/30/EU		
CLASS OF PROTECTION atmospheric agents (IEC 60529) coil insulation (VDE 0580) Impregnation	IP 65 class H class F		

6 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set position value following a step change of reference signal.

The table shows typical response times tested with spool type C60 and $\Delta p = 20$ bar P-T.

REFERENCE SIGNAL STEP	0→100%	100%→0
Step response [ms]	50	40

7 - INSTALLATION

DSE5 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

8 - OVERALL AND MOUNTING DIMENSIONS

9 - VERSIONS WITH EXTERNAL DRAIN PORT

9.1 - Identification Code

These versions allow the operation with pressures up to 320 bar on T port of the valve .

The additional drain port is connected with the solenoid chamber: in this way the tubes are not stressed by the pressure operating on the T port of the valve.

9.2 - Y Version

The drain port Y is realized on the valve mounting surface in compliance with ISO 4401-05-05-0-05 standard.

There is no X port.

9.3 - L version

It consists of a drain port on the mounting surface of the valve according to ISO 4401-05-06-0-05 standard

10 - MANUAL OVERRIDE

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

The following manual override is available upon request:

- **CK** version, knob. When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening.

Mass: single solenoid valve double solenoid valve	kg	5,1 6,6

OPERATING PRINCIPLE

- The DSE5G is a direct operated directional valve with integrated electric proportional control and mounting interface in compliance with ISO 4401 standards.
- It is used for control the positioning and the speed of hydraulic actuators.
- Valves are available with command signal in voltage or current, and on-board electronics with internal enable, external enable or 0V monitor on pin C.
- A solenoid current monitoring signal is available.

— The valve is easy to install. The driver directly manages digital settings. In the event of special applications, you can customize settings using the optional kit (see par. 11.3).

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

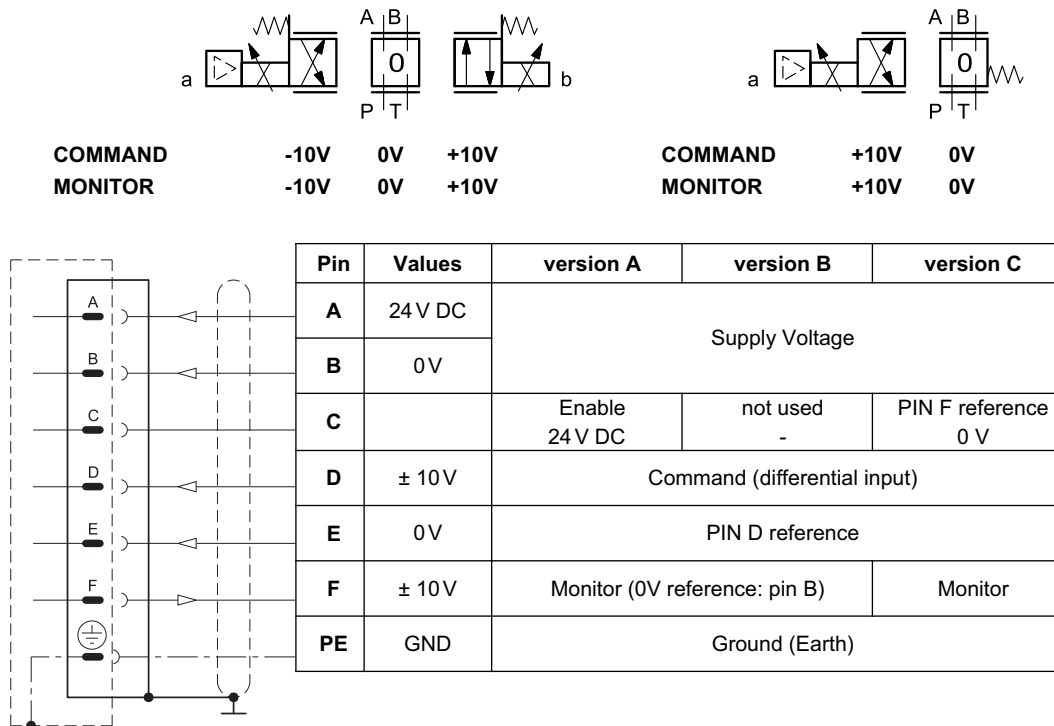

VERSION C - 0V Monitor

4 - VERSIONS WITH VOLTAGE COMMAND (E0)

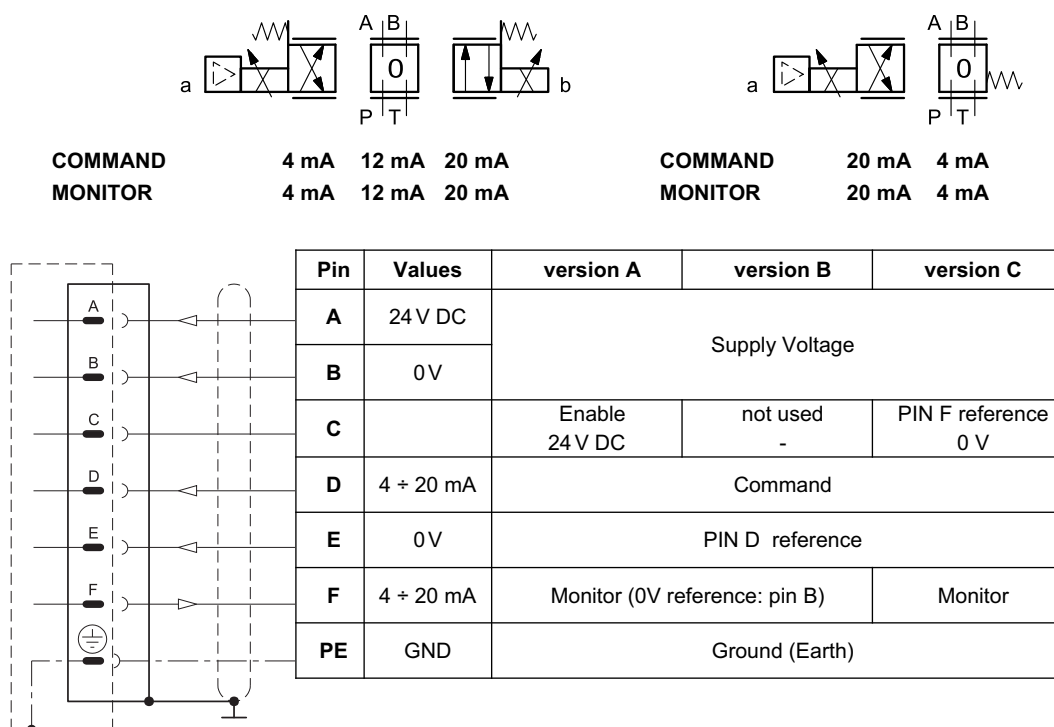

The reference signal is between -10V and +10V on double solenoid valves, and 0 ÷ 10V on single solenoid valves SA. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5 - VERSIONS WITH CURRENT COMMAND (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

6 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and $p = 140$ bar)

Typical flow rate curves at constant Δp related to the reference signal and measured for the available spools.

The curves are obtained with a constant meter-in with Δp of 5 bar and by setting the value of flow start at 20% of the reference signal.

NOTE: for spools with overlap jump (Z), please refer to the characteristic curves of spools C type, considering that the starting flow rate value is approx. 150 mV.

SPOOL TYPE C30

9 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

10 - INSTALLATION

DSE5G valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

11 - ACCESSORIES

(to be ordered separately)

11.1 - Mating connector

These valves have a plug for 7-pin mating connector, that is placed on the box of the integral motion control.

So as to avoid electromagnetic troubles and comply with the electromagnetic compatibility regulation EMC, it is recommended the use of a metal connector.

If a plastic connector is used, make sure that the protection characteristics IP and EMC of the valve are guaranteed.

Duplomatic offers a metal cable connector type MIL-C-5015-G (EN 175201-804).

name: **EX7S/L/10** code **3890000003**

11.2 - Connection cables size

Power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm²

Signal: 0,50 mm²

A suitable cable would have 7 isolated conductors, a separate screen for the signal wires and an overall screen.

11.3 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, see catalogue 89850.

Direct operated directional control valve

Electric proportional control

Size ISO 4401-05

Digital integrated electronics for valves with feedback

Spool type:
C = closed centre
A = open centre
Z = zero overlap
RC = regenerative closed centre

Nominal flow rate of the spool (see par. 2)

FS = Fail safe option (omit if not required). Available on spools type Z only.

Pin C function:
A = external enable
B = internal enable
C = 0V monitor

Main connector 6 pin + PE

Reference signal:
E0 = voltage $\pm 10V$
E1 = current $4 \div 20mA$

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Series N. (the overall and mounting dimensions remain unchanged from 30 to 39)

Solenoid position (omit for 2 solenoids configuration):
SA = 1 solenoid on side A

2 - CONFIGURATIONS

The valve configuration depends on the combination of the following elements:
number of proportional solenoids, spool type, rated flow.

Configuration 2 solenoids :
3 positions with spring centering

Configuration 1 solenoid on side A "SA":
2 positions (central + external) with spring centering

*	Controlled flow with Δp 10 bar P-T
50	50 l/min
75	75 l/min
70/35	70 (P-A) / 35 (P-B) l/min

*	Controlled flow with Δp 5 bar
75/45	75 (P-A, A-T) / 45 (B-P) l/min

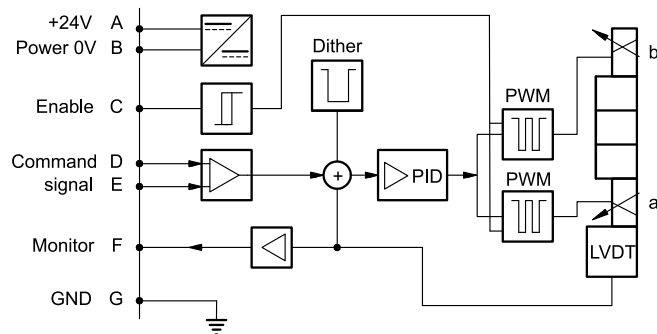

3 - ELECTRICAL CHARACTERISTICS

3.1 - Electrical on board electronics

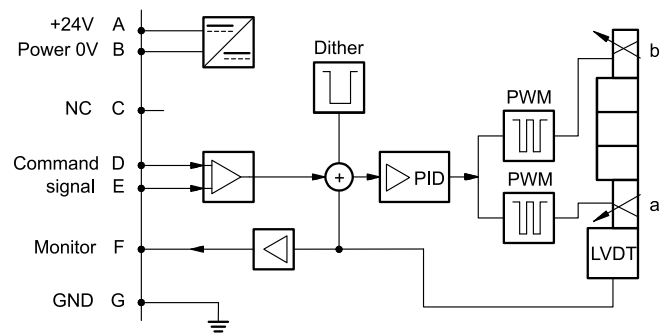

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	40
Maximum solenoid current	A	2.8
Fuse protection, external		3A
Command signals: voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i > 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signals: voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Managed breakdowns		Overload and electronics overheating, LVDT sensor error, cable breakdown, supply voltage failure
Communication		LIN-bus Interface (with the optional kit)
Connection		7 - pin MIL-C-5015-G (DIN-EN 175201-804)
Electromagnetic compatibility (EMC) emissions EN 61000-6-4 immunity EN 61000-6-2		According to 2014/30/EU standards

3.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

VERSION C - 0V Monitor

4 - VERSIONS WITH VOLTAGE COMMAND (E0)

The reference signal is between -10V and +10V on double solenoid valves, and 0 ÷ 10V on single solenoid valves SA. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

Pin	Values	version A	version B	version C
A	24 V DC	Supply Voltage		
B	0 V			
C		Enable 24 V DC	not used -	PIN F reference 0 V
D	± 10 V	Command (differential input)		
E	0 V	PIN D reference		
F	± 10 V	Monitor (0V reference: pin B)		Monitor
PE	GND	Ground (Earth)		

5 - VERSIONS WITH CURRENT COMMAND (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower ,the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

Pin	Values	version A	version B	version C
A	24 V DC	Supply Voltage		
B	0 V			
C		Enable 24 V DC	not used -	PIN F reference 0 V
D	4 ÷ 20 mA	Command		
E	0 V	PIN D reference		
F	4 ÷ 20 mA	Monitor (0V reference: pin B)		Monitor
PE	GND	Ground (Earth)		

6 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and $p = 140$ bar)

Typical flow rate curves related to the reference signal and measured for the available spools. The Δp values are measured between P and T valve ports.

7 - RESPONSE TIMES

(obtained with mineral oil with viscosity of 36 cSt at 50°C 140 bar Δp P→T)

8 - OVERALL AND MOUNTING DIMENSIONS

1	Mounting surface with sealing rings: 5 OR type 2050 (12.42x1.78) 90 Shore
2	Main connection
3	Coil removal space (solenoid B only)
4	Mating connector. To be ordered separately. See paragraph 11
5	Adjustment sealing performed at factory. Do not disassemble the transducer.

Fastening bolts: 4 SHC bolts M6x40 - ISO 4762
Torque: 8 Nm (A8.8)
Threads of mounting holes: M6x10

9 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

10 - INSTALLATION

DSE5J valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

11 - ACCESSORIES

(to be ordered separately)

11.1 Mating connector

These valves have a plug for 7-pin mating connector, that is placed on the box of the integral motion control.

So as to avoid electromagnetic troubles and comply with the electromagnetic compatibility regulation EMC, it is recommended the use of a metal connector.

If a plastic connector is used, make sure that the protection characteristics IP and EMC of the valve are guaranteed.

Duplomatic can provide a metal cable connector type MIL-C-5015-G (EN 175201-804).

name: **EX7S/L/10** code **3890000003**

11.2 - Connection cables size

Power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm²

Signal: 0,50 mm²

A suitable cable would have 7 isolated conductors, a separate screen for the signal wires and an overall screen.

11.3 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, see catalogue 89850.

12 - SUBPLATES

(see catalogue 51 000)

PMD4-AI4G rear ports 3/4" BSP
PMD4-AL4G side ports 1/2" BSP

DSPE*

PILOT OPERATED DIRECTIONAL VALVE WITH PROPORTIONAL CONTROL SERIES 11

DSPE5 CETOP P05
DSPE5R ISO 4401-05
DSPE7 ISO 4401-07
DSPE8 ISO 4401-08
DSPE10 ISO 4401-10

p max (see performances table)

Q max (see performances table)

OPERATING PRINCIPLE

- The DSPE* are pilot operated directional control valves with electric proportional control and mounting interface in compliance with ISO 4401 standards.
- The valve opening (and hence the flow rate) can be modulated continuously in proportion to the current supplied to the proportional solenoids of the pilot valve.
- They can be controlled directly by a current control supply unit or by means of the relative electronic control units to exploit valve performance to the full (see par. 16).
- They are available in CETOP P05, ISO 4401-05, ISO 4401-07, ISO 4401-08 and ISO 4401-10 sizes. Each size can be supplied with different controlled flow rates, up to 1600 l/min.

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

		DSPE5 DSPE5R	DSPE7	DSPE8	DSPE10

Pilot operated directional control valve

Electric proportional control

Nominal size:
5 = CETOP P05 (**NOTE**)
5R = ISO 4401-05
7 = ISO 4401-07
8 = ISO 4401-08
10 = ISO 4401-10

Spool type:
C = closed centres
A = open centres
RC = regenerative closed centres
RA = regenerative open centres

Spool nominal flow rate (see table par. 2)

Configurations for single solenoid version (omit for double solenoid version):
SA = 1 solenoid for cross configuration
SB = 1 solenoid for parallel configuration

Manual override: (see par. 7)

Coil electrical connection: for connector type EN 175301-803 (ex DIN 43650)
D12 = voltage 12V DC
D24 = voltage 24V DC

Drainage: **I** = internal
E = external

Piloting: **I** = internal
E = external
Z = internal piloting with 30 bar fixed adj. pressure reducing valve (see par. 6)

Seals:
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Series No. (the overall and mounting dimensions remain unchanged from 10 to 19)

NOTE: This version is interchangeable with the model E4E Diplomatic

2 - AVAILABLE CONFIGURATIONS

The valve configuration depends on the combination of the following elements:
 number of proportional solenoids, spool type, rated flow.

Configuration 2 solenoids:

3 positions with spring centering

1 solenoid for cross configuration "SA":

2 positions (central + external) with spring centering

1 solenoid for parallel configuration "SB":

2 positions (central + external) with spring centering

valve type	*	nominal flow rate with Δp 10 bar P-T
DSPE5	80	80 l/min
DSPE5R	80/40	80 (P-A) / 40 (B-T) l/min
DSPE7	100	100 l/min
	150	150 l/min
	150/75	150 (P-A) / 75 (B-T) l/min
DSPE8	200	200 l/min
	300	300 l/min
	300/150	300 (P-A) / 150 (B-T) l/min
DSPE10	350	350 l/min
	500	500 l/min
	500/250	500 (P-A) / 250 (B-T) l/min

valve type	*	nominal flow rate with Δp 10 bar P-T
DSPE7	150/75	150 (P-A) / 75 (B-T) l/min
DSPE8	300/150	300 (P-A) / 150 (B-T) l/min
DSPE10	500/250	500 (P-A) / 250 (B-T) l/min

3 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Typical flow rate control curves at constant Δp according to the current supply to the solenoid, measured for the available spool types.

The reference Δp values are measured between valve ports P and T.

3.1 - Characteristic curves DSPE5 e DSPE5R

SPOOL C80 - A80

3.2 - Characteristic curves DSPE7

SPOOL C100 - A100

SPOOL C150 - A150

3.3 - Characteristic curves DSPE8

3.4 - Characteristic curves DSPE10

4 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut.

It can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C)	Ω	3.66	17.6
NOMINAL CURRENT	A	1.88	0.86
DUTY CYCLE		100%	
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
CLASS OF PROTECTION atmospheric agents (CEI EN 60529) coil insulation (VDE 0580) Impregnation	IP 65 class H class F		

5 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table shows the typical step response tested with static pressure 100 bar.

REFERENCE SIGNAL	0 → 100%	100 → 0%
	Step response [ms]	
DSPE5 / DSPE5R	50	40
DSPE7	80	50
DSPE8	100	70
DSPE10	200	120

6 - HYDRAULIC CHARACTERISTICS

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

		DSPE5 DSPE5R	DSPE7	DSPE8	DSPE10
Max flow rate	l/min	180	450	800	1600
Piloting flow requested with operation 0 → 100%	l/min	3	5	9	13
Piloting volume requested with operation 0 → 100%	cm ³	1,7	3,2	9,1	21,6

PRESSURES (bar)	MIN	MAX
Piloting pressure on X port	30	210 (NOTE)
Pressure on T port with internal drain	—	10
Pressure on T port with external drain	—	250

NOTE: if the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure.

Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered (piloting type: Z, see par. 1 and 12).

6.1 - Pilot and drain

DSPE* valves are available with pilot and drain both internal and external. The version with external drain allows a higher back pressure on the unloading. The version with external pilot with reduced pressure must be used when higher pressures are needed.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

X: plug M5x6 for external pilot
Y: plug M5x6 for external drain

X: plug M6x8 for external pilot
Y: plug M6x8 for external drain

7 - MANUAL OVERRIDE

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

Three different manual override version are available upon request:

- **CM** version, manual override belt protected
- **CS** version, with metal ring nut provided with a M4 screw and a blocking locknut to allow the continuous mechanical operations.
- **CK** version, knob. When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening.

NOTE: The manual override use doesn't allow any proportional regulation; in fact, using this kind of override the main stage spool opens completely and the valve will behave as an on-off valve.

8 - OVERALL AND MOUNTING DIMENSIONS DSPE5 AND DSPE5R

dimensions in mm

NOTE: for overall dimensions with Z option
(fixed adjustment pressure reducing valve) see par.12.
- Mounting surface at par. 13.

Valve fastening: N. 4 SHC screws M6x35 - ISO 4762

Tightening torque: 8 Nm (A 8.8 bolts)

Thread of mounting holes: M6x10

1	Mounting surface with sealing rings: N. 5 OR type 2050 (12.42x1.78) - 90 Shore N. 2 OR type 2037 (9.25x1.78) - 90 Shore

3	Connector removal space
4	Standard manual override embedded in the solenoid tube
5	Coil removal space
6	N. 2 M12 holes for eyebolts lifting

12 - OVERALL AND MOUNTING DIMENSIONS DSPE*-*/11*-Z*/*

DSPE5

CETOP 4.2-4 P05-350

Technical drawing of the DSPE5 hydraulic manifold. The drawing shows a top view with dimensions in millimeters. The manifold has a rectangular body with a central block of ports. Dimensions include: 65.1 (total width), 54 (port spacing), 50.8 (port spacing), 37.3 (port spacing), 27 (port spacing), 16.7 (port spacing), 3.2 (port spacing), 11.1 (port spacing), 21.4 (port spacing), 6.3 (port spacing), 2.4 (port spacing), 46 (total height), 43.6 (port spacing), 32.5 (port spacing), 11.1 (port spacing), 16.7 (port spacing), 3.2 (port spacing), 11.1 (port spacing), 21.4 (port spacing), 6.3 (port spacing), 2.4 (port spacing). The central block contains ports labeled P, A, B, X, Y, T, and an Optional "T" port. The central block is dimensioned as Ø 6.3 (max) and Ø 11.2 (max). The manifold is mounted on M6.

DSPE5R

ISO 4401-05-05-0-05
(CETOP 4.2-4 R05-350)

Technical drawing of the DSPE5R hydraulic manifold. The drawing shows a top view with dimensions in millimeters. The manifold has a rectangular body with a central block of ports. Dimensions include: 62 (total width), 54 (port spacing), 50.8 (port spacing), 37.3 (port spacing), 27 (port spacing), 16.7 (port spacing), 3.2 (port spacing), 8 (port spacing), 21.4 (port spacing), 11 (port spacing), 6.3 (port spacing), 46 (total height), 32.5 (port spacing), 11.1 (port spacing), 16.7 (port spacing), 3.2 (port spacing), 8 (port spacing), 21.4 (port spacing), 11 (port spacing), 6.3 (port spacing). The central block contains ports labeled P, A, B, X, Y, T, and an Optional "T" port. The central block is dimensioned as Ø 6.3 (max) and Ø 11.2 (max). The manifold is mounted on M6.

DSPE7

ISO 4401-07-07-0-05
(CETOP 4.2-4-07-350)

Technical drawing of the DSPE7 hydraulic manifold. The drawing shows a top view with dimensions in millimeters. The manifold has a rectangular body with a central block of ports. Dimensions include: 101.6 (total width), 88.1 (port spacing), 76.6 (port spacing), 65.9 (port spacing), 50 (port spacing), 34.1 (port spacing), 18.3 (port spacing), 15.9 (port spacing), 14.3 (port spacing), 1.6 (port spacing), 71.5 (total height), 69.8 (port spacing), 57.2 (port spacing), 55.6 (port spacing), 34.9 (port spacing), 18.3 (port spacing), 15.9 (port spacing), 14.3 (port spacing), 1.6 (port spacing). The central block contains ports labeled G, T, P, X, A, B, Y, L, and an Optional "T" port. The central block is dimensioned as Ø 4, Ø 17.5 (max), M6, and Ø 6.3 (max). The manifold is mounted on M10.

DSPE8

ISO 4401-08-08-0-05
(CETOP 4.2-4-08-350)

Technical drawing of the DSPE8 hydraulic manifold. The drawing shows a top view with dimensions in millimeters. The manifold has a rectangular body with a central block of ports. Dimensions include: 130.2 (total width), 112.7 (port spacing), 100.8 (port spacing), 94.5 (port spacing), 77 (port spacing), 53.2 (port spacing), 29.4 (port spacing), 17.5 (port spacing), 4.8 (port spacing), 5.6 (port spacing), 19 (port spacing), 17.5 (port spacing), 4.8 (port spacing), 5.6 (port spacing), 92.1 (total height), 74.6 (port spacing), 73 (port spacing), 46 (port spacing), 19 (port spacing), 17.5 (port spacing), 4.8 (port spacing), 5.6 (port spacing). The central block contains ports labeled G, T, P, X, A, B, Y, L, and an Optional "T" port. The central block is dimensioned as Ø 25 (max), M12, Ø 11.2 (max), and Ø 7.5.

DSPE10

ISO 4401-10-09-0-05
(CETOP 4.2-4-10-350)

Technical drawing of the DSPE10 hydraulic manifold. The drawing shows a top view with dimensions in millimeters. The manifold has a rectangular body with a central block of ports. Dimensions include: 190.5 (total width), 168.3 (port spacing), 147.6 (port spacing), 138.6 (port spacing), 114.3 (port spacing), 82.5 (port spacing), 76.2 (port spacing), 41.3 (port spacing), 44.5 (port spacing), 35 (port spacing), 158.8 (total height), 130.2 (port spacing), 123.8 (port spacing), 41.3 (port spacing), 44.5 (port spacing), 35 (port spacing). The central block contains ports labeled G, T, P, X, A, B, Y, L, and an Optional "T" port. The central block is dimensioned as Ø 11.2 (max), Ø 7.5, and Ø 32 (max). The manifold is mounted on M20.

14 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

15 - INSTALLATION

The DSPE* valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

DSPE*G*

PROPORTIONAL DIRECTIONAL VALVES, PILOT OPERATED WITH INTEGRATED ELECTRONICS

SUBPLATE MOUNTING

DSPE5G*	CETOP P05
DSPE5RG*	ISO 4401-05
DSPE7G*	ISO 4401-07
DSPE8G*	ISO 4401-08
DSPE10G*	ISO 4401-10
DSPE11G*	ISO 4401-10 oversize ports

OPERATING PRINCIPLE

- The DSPE*G* are proportional directional control valves, pilot operated, with integrated electronics and with mounting interface in compliance with ISO 4401 standards.
- They control direction and flow of the fluid.
- The valves are available with different types of electronics, with analogue or fieldbus interfaces.
- The valves are easy to install. The driver directly manages digital settings.

HYDRAULIC SYMBOL (typical)

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

		DSPE5G* DSPE5RG*	DSPE7G*	DSPE8G*	DSPE10G*	DSPE11G*
Max operating pressure: P - A - B ports T port	bar	350 see paragraph 10				
Max flowrate	l/min	180	450	800	1600	2800
Hysteresis	% Q max	< 2 %				
Repeatability	% Q max	< ± 1%				
Electrical characteristics		see paragraph 4				
Ambient temperature range	°C	-20 / +60				
Fluid temperature range	°C	-20 / +80				
Fluid viscosity range	cSt	10 ÷ 400				
Fluid contamination degree		According to ISO 4406:1999 class 18/16/13				
Recommended viscosity	cSt	25

4 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	3
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

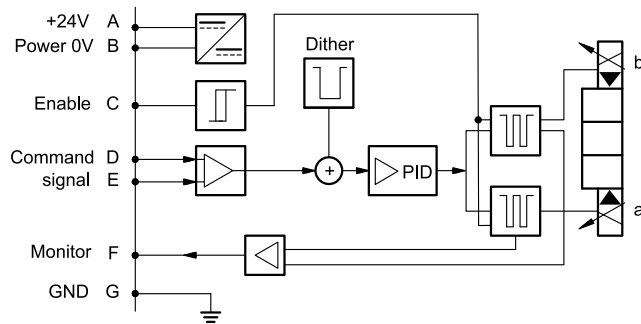

5 - DSPE*G - STANDARD ELECTRONICS

5.1 - Electrical characteristics

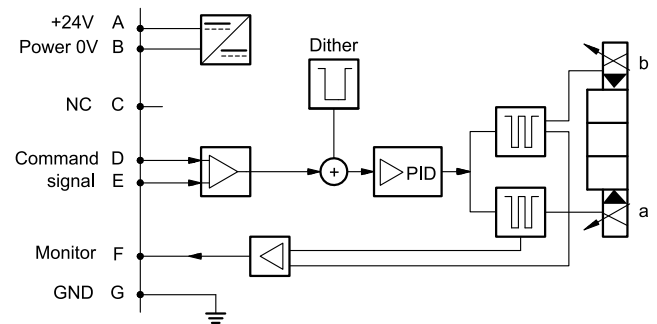

Command signal: voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic		LIN-bus Interface (by means of the optional kit)
Connection		6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

5.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

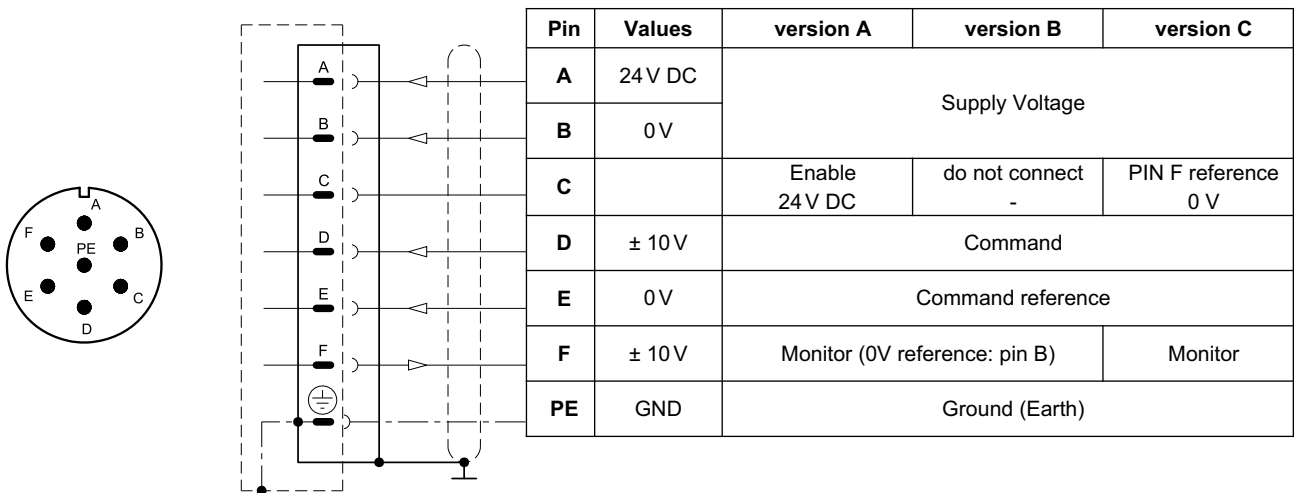

VERSION C - 0V Monitor

5.3 - Versions with voltage command (E0)

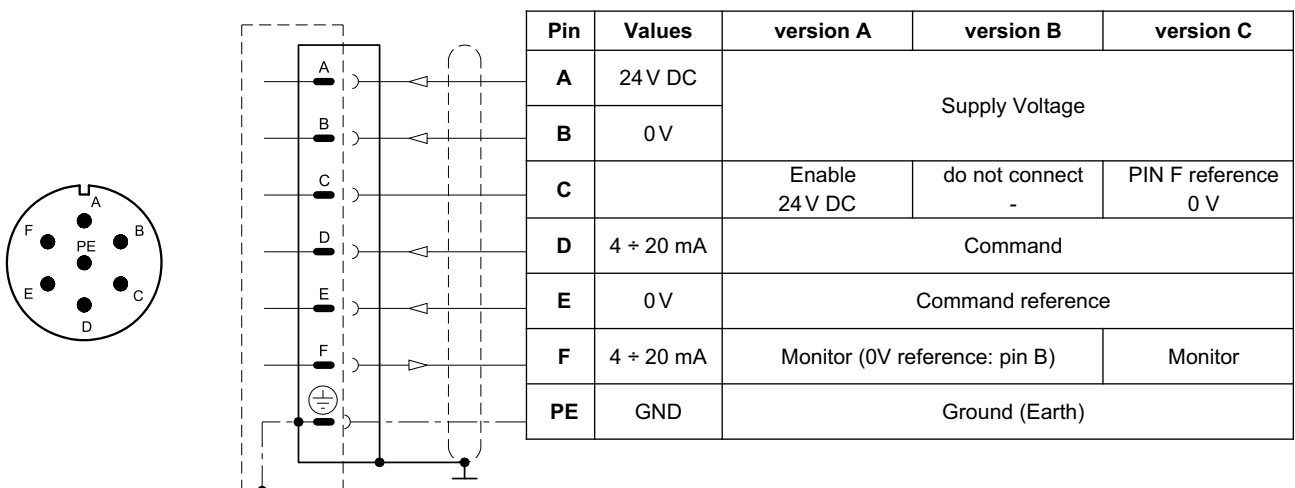

The reference signal is between -10V and +10V on double solenoid valves, and 0 ÷ +10V on single solenoid valves. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5.4 - Versions with current command (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

6 - DSPE*GL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

6.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	$0 \div 5$ (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
IO-Link communication (IOL):	Data rate	kBaud	IO-Link Port Class B 230,4
Can Open communication (CA):	Data rate	kbit	$10 \div 1000$
Connection			5-pin M12 code A (IEC 61076-2-101)

6.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$\pm 10 \text{ V}$	Command
3	0 V	Command reference
4	$0 \div 5 \text{ V}$	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$4 \div 20 \text{ mA}$	Command
3	0 V	Command reference
4	$4 \div 20 \text{ mA}$	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0 V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0 V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

7 - DSPE*GH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 5.3 and 5.4.

7.1 - Electrical characteristics

Command signal: voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic		via Bus register
Communication interface standards CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection		11 pin + PE (DIN 43651)

7.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	$\pm 10 \text{ V (E0)}$ $4 \div 20 \text{ (E1)}$	Command
5	0 V	Command reference signal
6	$\pm 10 \text{ V (E0)}$ $4 \div 20 \text{ (E1)}$	Monitor (0V reference pin 10)
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V reference pin 2)
12	GND	Ground (Earth)

D0: full digital

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	NC	do not connect
5	NC	do not connect
6	NC	do not connect
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V ref. pin 2)
12	GND	Ground (Earth)

7.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

7.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

7.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5V	Termination supply signal
2	PB_A	Bus line (high)
3	0V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5V	Termination supply signal
2	PB_A	Bus line (high)
3	0V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

7.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

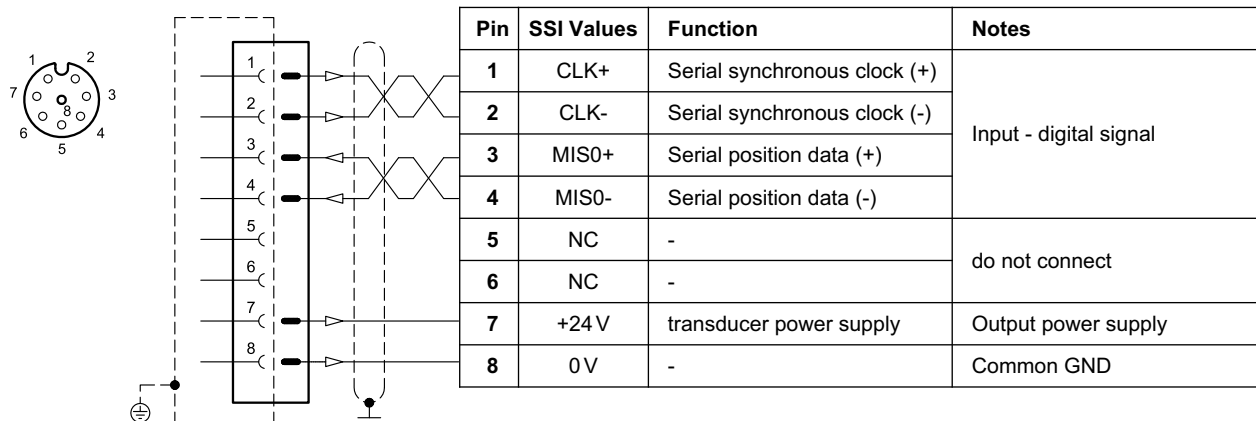

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

NOTE: Shield connection on connector housing is recommended.

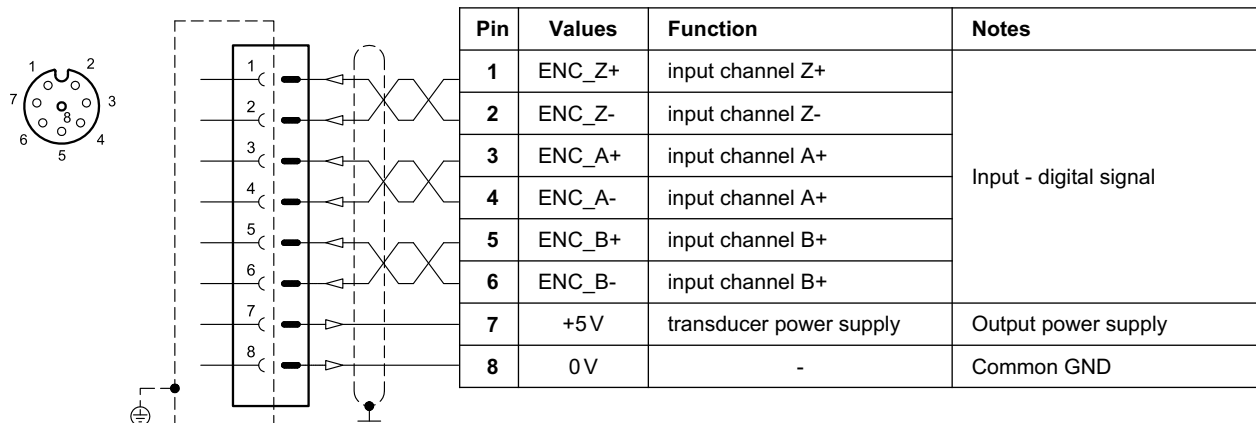

7.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

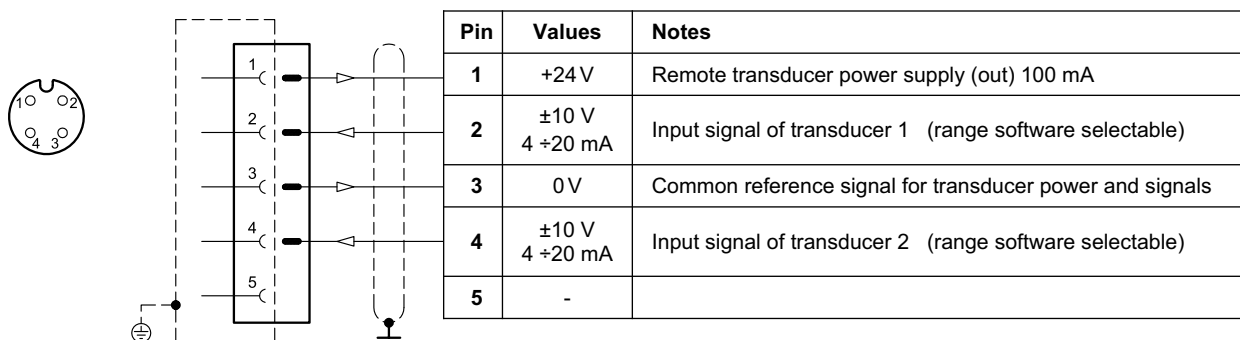

7.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

8 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and $p = 140$ bar)

Typical flow rate curves at constant Δp related to the reference signal and measured for the available spools. The Δp values are measured between P and T valve ports.

The adjustment of the curve is performed with a constant Δp of 30 bar by setting the value of flow start at 20% of the reference signal.

8.1 - Characteristic curves DSPE5G* and DSPE5RG*

6.2 - Characteristic curves DSPE7G*

6.3 - Curve Characteristic DSPE8G*

8.4 - Characteristic curves DSPE10G*

8.5 - Characteristic curves DSPE11G*

9 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and static pressure = 100 bar)

10 - HYDRAULIC CHARACTERISTICS

(with mineral oil with viscosity of 36 cSt at 50°C and static pressure = 100 bar)

FLOWRATES		DSPE5G* DSPE5RG*	DSPE7G*	DSPE8G*	DSPE10G*	DSPE11G*
Max flow rate	l/min	180	450	800	1600	2800
Piloting flow requested with operation 0 → 100%	l/min	3.5	4.1	9.2	13.7	13.7
Piloting volume requested with operation 0 → 100%	cm ³	1.7	3.2	9.1	21.6	21.6

PRESSURES (bar)	MIN	MAX
Pilot pressure on X port	30	210 (NOTE)
Pressure on T port with internal drain	—	10
Pressure on T port with external drain	—	250

NOTE: if the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure.

Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered (piloting type: Z, see section 1).

10.1 - Pilot and drain

The DSPE*G* valves are available with pilot and drain both internal and external. The version with external drain allows a higher back pressure on the discharge line.

TYPE OF VALVE	Plug assembly	
	X	Y
IE INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

DSPE5G* / DSPE5RG*

X: plug M5x6 for external pilot
Y: plug M5x6 for external drain

DSPE7G*

DSPE8G*

X: plug M6x8 for external pilot
Y: plug M6x8 for external drain

DSPE10G*/DSPE11G*

11 - MANUAL OVERRIDE

These valves have solenoids whose pin for manual operation is integrated in the tube. Actuate this override by pushing it with a suitable tool, minding not to damage the sliding surface.

Two other types of manual overrides can fit the DSPE*GL valve:

- **CM** version, manual override boot protected
- **CS** version, with metal ring nut provided with a M4 screw and a blocking locknut.

CM Version

Code: 3803210003

CS Version

Code: 3803210004

12 - OVERALL AND MOUNTING DIMENSIONS DSPE5G*

dimensions in mm

DSPE5GL

DSPE5GH

NOTES:

See mounting surface at section 17.

1	Mounting surface with sealing rings: 5 OR type 2050 (12.42x1.78) - 90 Shore 2 OR type 2037 (9.25x1.78) - 90 Shore
2	Main connection 6 pin + PE
3	Manual override embedded in the solenoid tube
4	Coil removal space
5	Mating connector. To be ordered separately. See catalogue 89 000

Valve fastening:
4 SHC ISO 4762 screws M6x35

Tightening torque: 8 Nm (A8.8 screws)

Threads of mounting holes: M6x10

18 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

19 - INSTALLATION

The valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

20 - ACCESSORIES

(to be ordered separately)

20.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

20.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

20.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

20.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connections. See catalogue 89 850.

21 - SUBPLATES

(see catalogue 51 000)

No subplates are available for DSPE5RG*, DSPE10G* and DSPE11G*.

DSPE*J*

PROPORTIONAL DIRECTIONAL VALVE PILOT OPERATED WITH FEEDBACK AND INTEGRATED ELECTRONICS

SUBPLATE MOUNTING

DSPE5J*	CETOP P05
DSPE5RJ*	ISO 4401-05
DSPE7J*	ISO 4401-07
DSPE8J*	ISO 4401-08
DSPE10J*	ISO 4401-10
DSPE11J*	ISO 4401-10 oversize ports

OPERATING PRINCIPLE

- The DSPE*J* are proportional directional valve operated with feedback and integrated electronics and with mounting interface in compliance with ISO 4401 standards.
- They are controlled directly by the integrated electronics. Transducer and digital card allow a fine control of the spool position, reducing both hysteresis and response times and optimizing the valve performance.
- The valves are available with different types of electronics, with analogue or fieldbus interfaces.
- The valves are easy to install. The driver directly manages digital settings.

HYDRAULIC SYMBOL (typical)

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

4 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	3
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

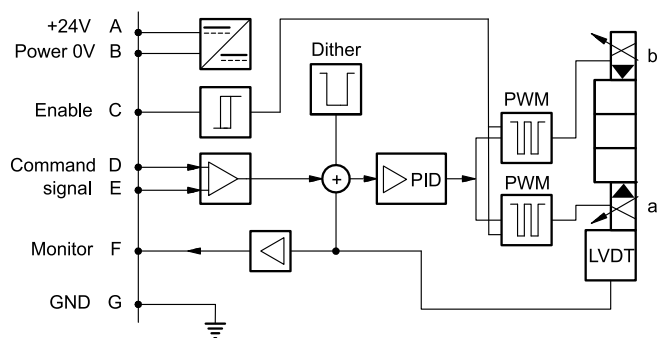

5 - DSPE*J* - STANDARD ELECTRONICS

5.1 - Electrical characteristics

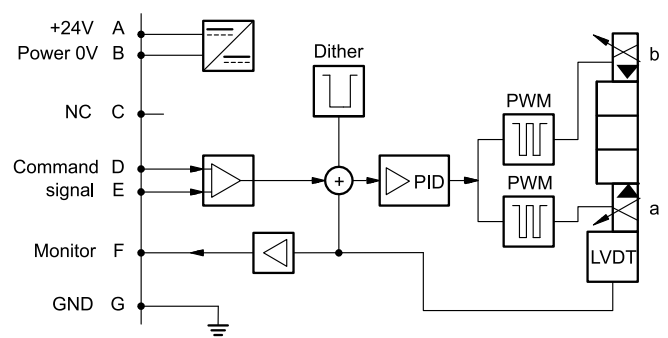

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11\text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58\text{ }\Omega$)
Monitor signal (main spool position):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1\text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500\text{ }\Omega$)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

5.2 - On-board electronics diagrams

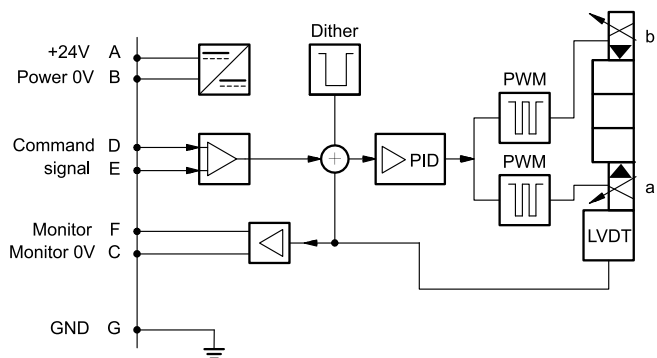

VERSION A - External Enable

VERSION B - Internal Enable

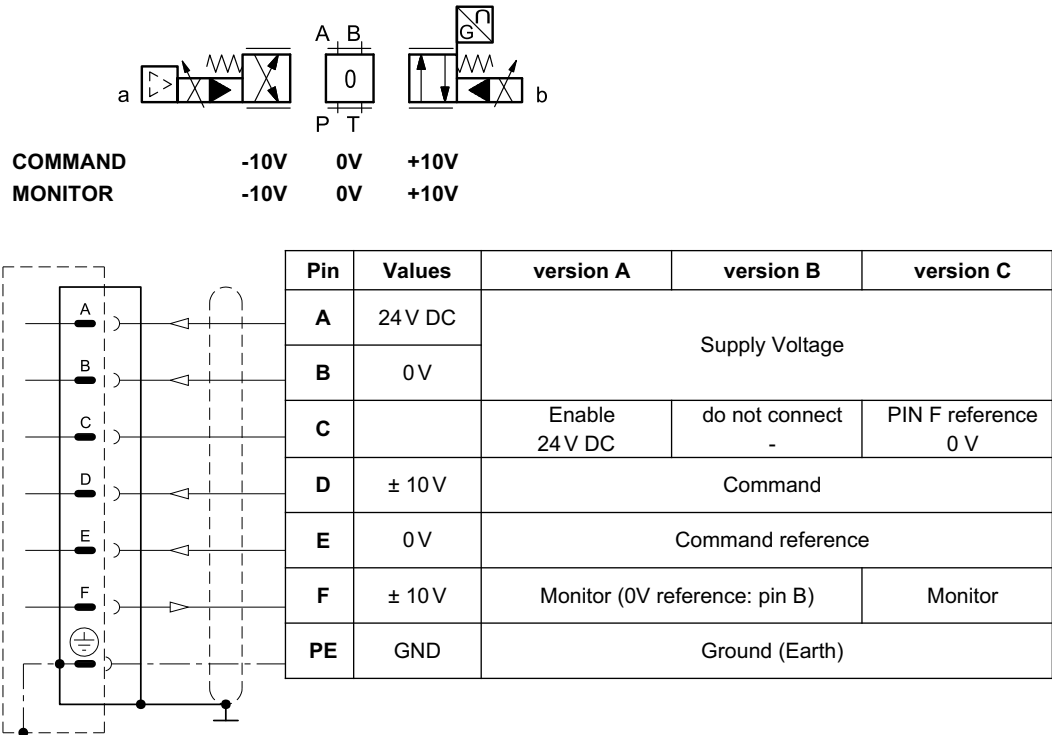

VERSION C - 0V Monitor

5.3 - Versions with voltage command (E0)

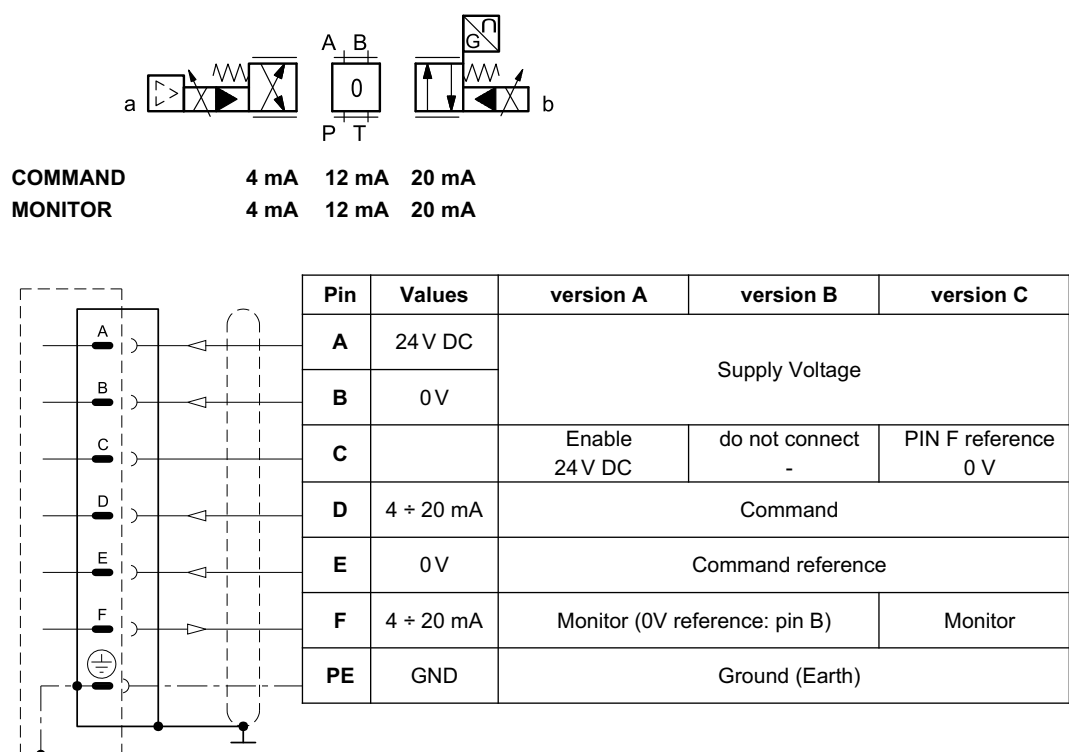

The reference signal is between -10V and +10V.. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5.4 - Versions with current command (E1)

The reference signal is supplied in current 4 ± 20 mA. If the current for command is lower the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

6 - DSPE*JL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

6.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	$0 \div 5$ (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
IO-Link communication (IOL):	Data rate	kBaud	IO-Link Port Class B 230,4
Can Open communication (CA):	Data rate	kbit	$10 \div 1000$
Connection			5-pin M12 code A (IEC 61076-2-101)

6.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$\pm 10 \text{ V}$	Command
3	0 V	Command reference
4	$0 \div 5 \text{ V}$	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$4 \div 20 \text{ mA}$	Command
3	0 V	Command reference
4	$4 \div 20 \text{ mA}$	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0 V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0 V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

7 - DSPE*JH - FIELDBUS ELECTRONICS

The 11 + PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 5.3 and 5.4.

7.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (main spool position):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

7.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	$\pm 10 \text{ V (E0)}$ $4 \div 20 \text{ (E1)}$	Command

12	GND	Ground (Earth)

7.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

7.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

7.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5V	Termination supply signal
2	PB_A	Bus line (high)
3	0V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5V	Termination supply signal
2	PB_A	Bus line (high)
3	0V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

7.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

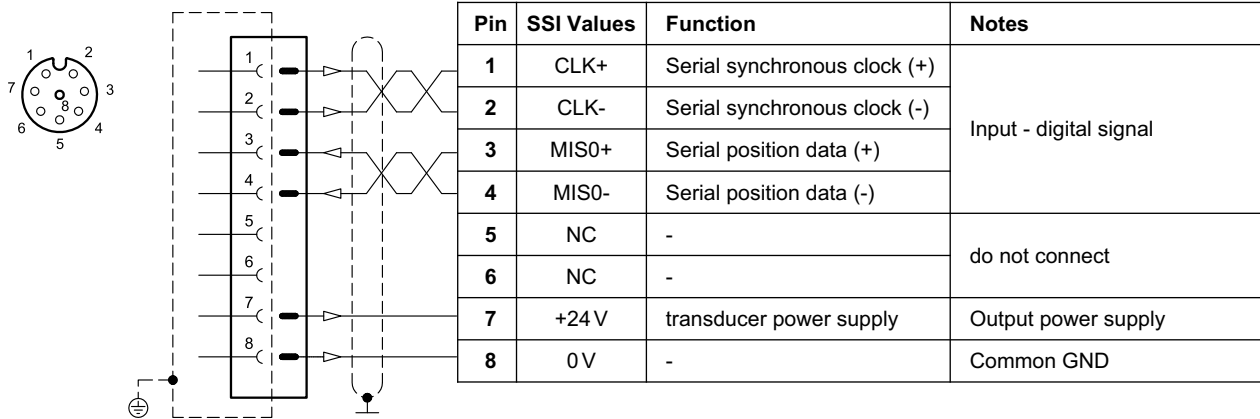

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

NOTE: Shield connection on connector housing is recommended.

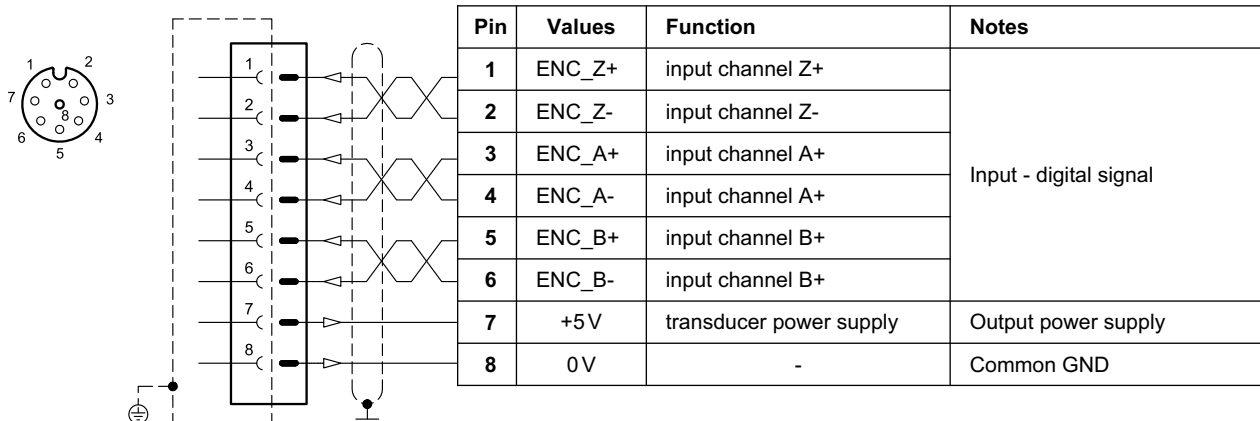

7.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

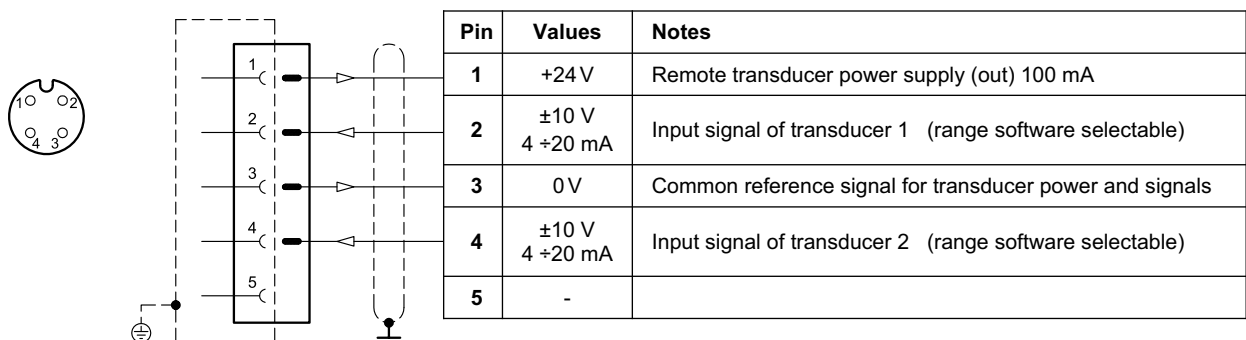

7.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

8 - CHARACTERISTIC CURVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and $p = 140$ bar)

Typical flow rate curves at constant Δp related to the reference signal and measured for the available spools. The Δp values are measured between P and T valve ports.

8.1 - Characteristic curves DSPE5J* and DSPE5RJ*

8.2 - Characteristic curves DSPE7J*

8.3 - Characteristic curves DSPE8J*

8.4 - Characteristic curves DSPE10J*

8.5 - Characteristic curves DSPE11J*

9 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and static pressure 100 bar)

10 - HYDRAULIC CHARACTERISTICS

(with mineral oil with viscosity of 36 cSt at 50°C)

FLOWRATES		DSPE5J* DSPE5RJ*	DSPE7J*	DSPE8J*	DSPE10J*	DSPE11J*
Max flow rate	l/min	180	450	800	1600	2800
Piloting flow requested with operation 0 → 100%	l/min	3.5	6.4	15.3	13.7	13.7
Piloting volume requested with operation 0 → 100%	cm ³	1.7	3.2	9.2	21.6	21.6

PRESSURES (bar)	MIN	MAX
Piloting pressure on X port	30	210 (NOTE)
Pressure on T port with internal drain	—	10
Pressure on T port with external drain	—	250

NOTE: if the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure.

Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered (piloting type: Z, see section 1).

10.1 - Pilot and drain

The DSPE*J* valves are available with pilot and drain both internal and external. The version with external drain allows a higher back pressure on the discharge line.

TYPE OF VALVE	Plug assembly	
	X	Y
IE INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

DSPE5J* / DSPE5RJ*

X: plug M5x6 for external pilot
Y: plug M5x6 for external drain

DSPE7J*

DSPE8J*

X: plug M6x8 for external pilot
Y: plug M6x8 for external drain

DSPE10J* / DSPE11J*

17 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

18 - INSTALLATION

The valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

19 - ACCESSORIES

(to be ordered separately)

19.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

19.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

19.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

19.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connections. See catalogue 89 850.

20 - SUBPLATES

(see catalogue 51 000)

No subplates are available for DSPE5RJ*, DSPE10J* and DSPE11J*.

DDPE*J*

PROPORTIONAL DIRECTIONAL CONTROL VALVE, PILOT OPERATED, WITH FEEDBACK AND INTEGRATED ELECTRONICS

SUBPLATE MOUNTING

DDPE5RJ*	ISO 4401-05
DDPE7J*	ISO 4401-07
DDPE8J*	ISO 4401-08
DDPE10J*	ISO 4401-10
DDPE11J*	ISO 4401-10 oversize ports

OPERATING PRINCIPLE

- The DDPE*J* are proportional directional control valves, pilot-operated, with closed-loop position control of the main stage, with digital integrated electronics and with mounting interface in compliance with ISO 4401 standards.
- They are controlled directly by an integrated digital amplifier. Transducer and digital card allow a fine control of the positioning of the spool, reducing hysteresis and response times.
- They are available with different types of electronics, with analogue or fieldbus interfaces.
- A monitoring signal of the main spool position is available.
- The valves are easy to install. The driver manages digital settings directly.

HYDRAULIC SYMBOL (typical)

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and p = 140 bar)

dimensions in mm

1	Connection 6 pin + PE
2	Connection M12 5 pin, code A, male
X1	Main connection 11 pin + PE
X2	Fieldbus communication (IN)
X3	Fieldbus communication (OUT)
X4	Connection for analogue transducer
X7	Connection for digital transducer

NOTE 1: Depending on the chosen version, X4 and X7 connections may not be present. Please refer to sections 5, 6 and 7 for connections descriptions and pinouts.

NOTE 2: Related mating connectors have to be ordered separately. See catalogue 89 000.

3 - AVAILABLE CONFIGURATIONS

The valve configuration depends on the combination of spool type and rated flow.

3 positions with spring centring

valve type	*	Nominal flow with Δp 10 bar P-T
DDPE5RJ	100	100 l/min
DDPE7J	120	120 l/min
	220	220 l/min
DDPE8J	250	250 l/min
	400	400 l/min
DDPE10J	800	800 l/min
DDPE11J	1000	1000 l/min

regenerative differential spool

The R1C spool is specific for regenerative circuits made with external check valve.

valve type	*	Nominal flow with Δp 10 bar P-T
DDPE7J	220	220 l/min

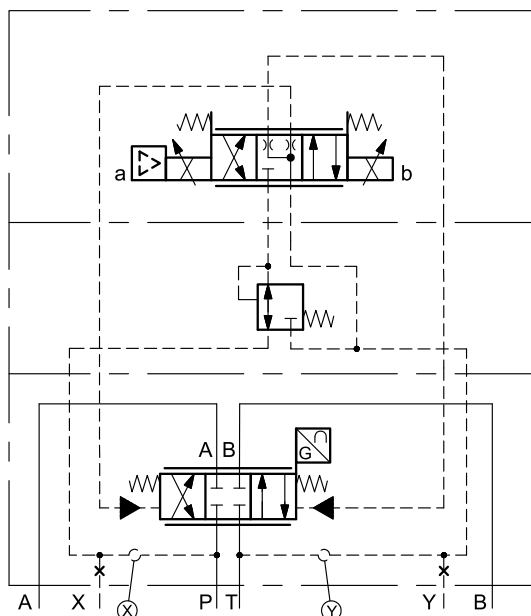

progressive differential spool

The X1A spool is specific for alternate p/Q control, typical of plastic injection cycles.

valve type	*	Nominal flow with Δp 10 bar P-T
DDPE7J	220	220 l/min

detailed symbol (spool type C)

4 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	25
Maximum solenoid current	A	1.88
Fuse protection, external	A	3
Managed breakdowns		Overload and electronics overheating, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

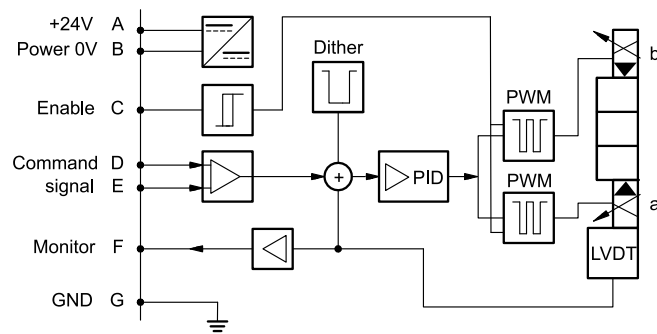

5 - DDPE*J - STANDARD ELECTRONICS

5.1 - Electrical characteristics

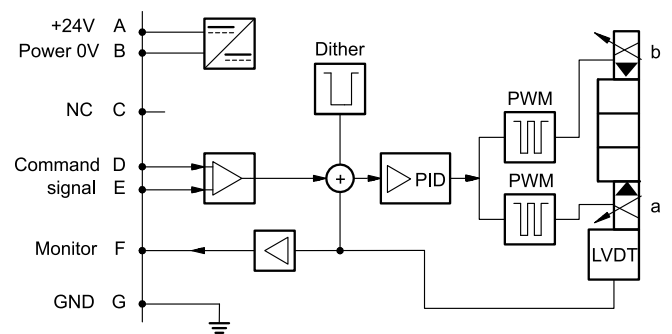

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

5.2 - On-board electronics diagrams

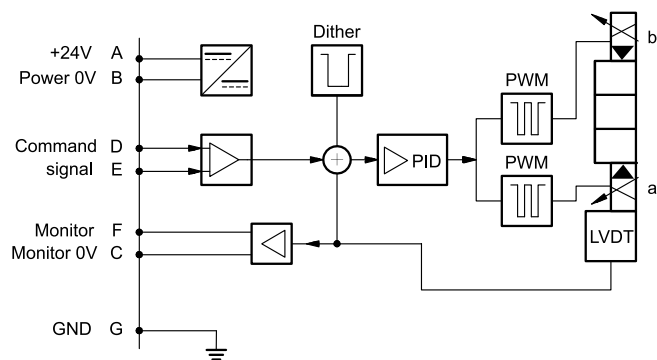

VERSION A - External Enable

VERSION B - Internal Enable

VERSION C - 0V Monitor

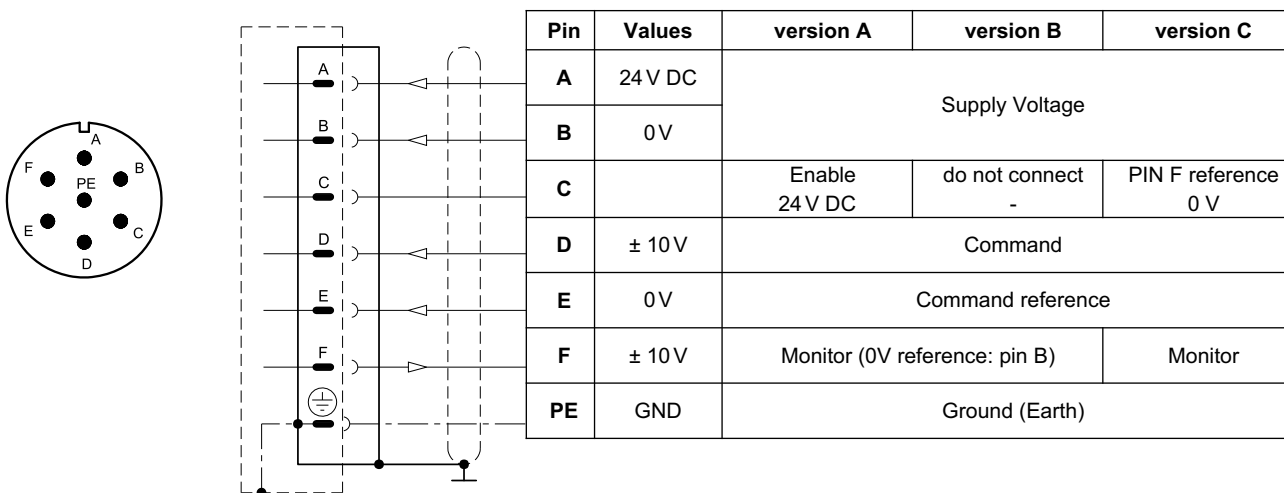

5.3 - Versions with voltage command (E0)

The reference signal is between -10V and +10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

COMMAND	-10V	0V	+10V
MONITOR	-10V	0V	+10V

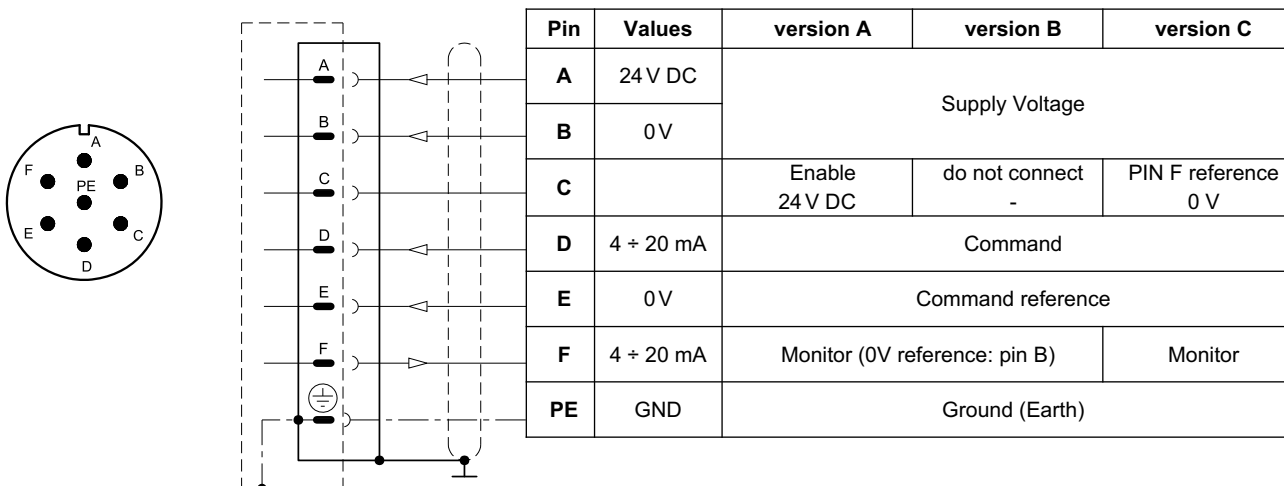

5.4 - Versions with current command (E1)

The reference signal is supplied in current 4 ± 20 mA. If the current for command is lower the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

COMMAND	4 mA	12 mA	20 mA
MONITOR	4 mA	12 mA	20 mA

6 - DDPE*JL - COMPACT ELECTRONICS

In versions 'IOL' and 'CA' pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops. In IO-Link networks, the length of the connecting cables is limited to 20 metres.

6.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal :	voltage (E0) current (E1)	V DC mA	$0 \div 5$ (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
IO-Link communication (IOL): Data rate		kBaud	IO-Link Port Class B 230.4
Can Open communication (CA): Data rate		kbit	$10 \div 1000$
Data register (IOL and CA versions only)			solenoid voltage supply, solenoid faults (shortcircuit, bad config, internal), box temperature, switch-on time, vibrations)
Connection			5-pin M12 code A (IEC 61076-2-101)

6.2 - Pin tables

'E0' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$\pm 10 \text{ V}$	Command
3	0V	Command reference
4	$0 \div 5 \text{ V}$	Monitor (0V reference: pin 5)

'E1' connection

Pin	Values	Function
2	24 V DC	Supply voltage (solenoid and logic)
5	0 V	
1	$4 \div 20 \text{ mA}$	Command
3	0V	Command reference
4	$4 \div 20 \text{ mA}$	Monitor (0V reference: pin 5)

'IOL' connection

Pin	Values	Function
2	2L+ 24 V DC	Supply of the power stage
5	2L- 0 V (GND)	Internal galvanic isolation from PIN 3
1	1L+ +24 V DC	IO-Link supply voltage
3	1L- 0V (GND)	
4	C/Q	IO-Link Communication

'CA' connection

Pin	Values	Function
1	CAN_SH	Shield
2	24 V DC	Supply voltage
3	0V (GND)	
4	CAN H	Bus line (high)
5	CAN_L	Bus line (low)

7 - DDPE*JH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the basic electronics. Please refer to pictures in par. 5.3 and 5.4.

7.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

7.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	$\pm 10 \text{ V (E0)}$ $4 \div 20 \text{ (E1)}$	Command
5	0 V	Command reference signal
6	$\pm 10 \text{ V (E0)}$ $4 \div 20 \text{ (E1)}$	Monitor (0V reference pin 10)
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V reference pin 2)
12	GND	Ground (Earth)

D0: full digital

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	NC	do not connect
5	NC	do not connect
6	NC	do not connect
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V ref. pin 2)
12	GND	Ground (Earth)

7.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

7.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero for data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

7.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5V	Termination signal supply
2	PB_A	Bus line (high)
3	0V	Signal zero for data line and termination
4	PB_B	Bus line (low)
5	SHIELD	

7.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

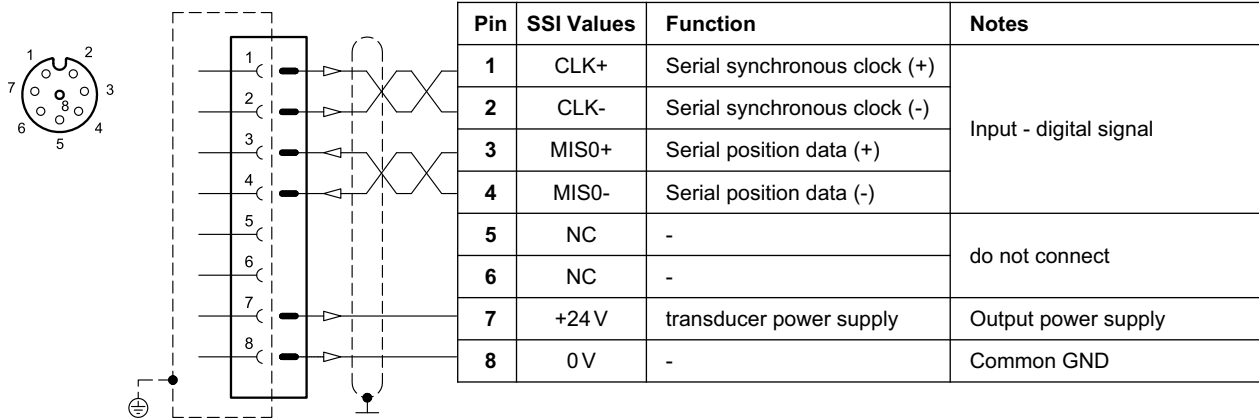

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

NOTE: Shield connection on connector housing is recommended.

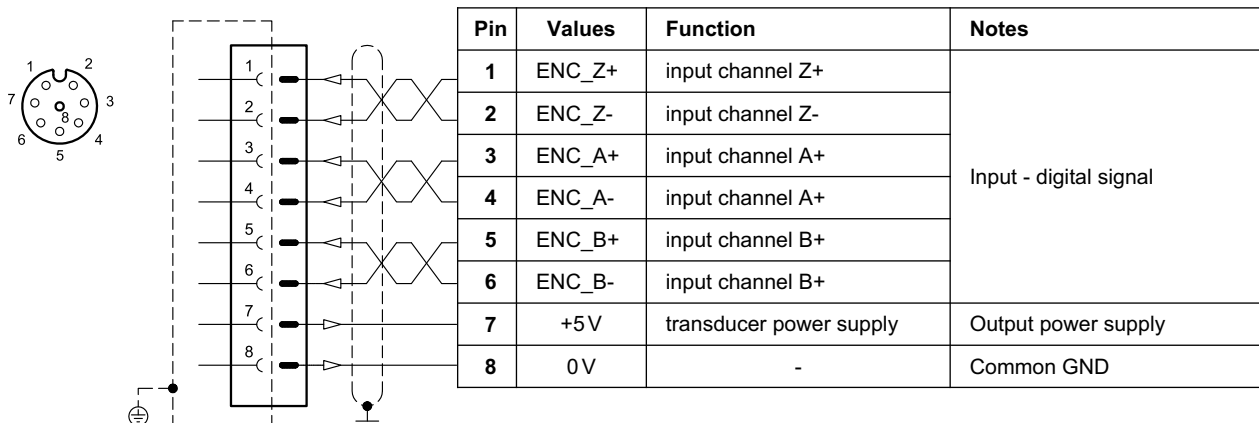

7.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

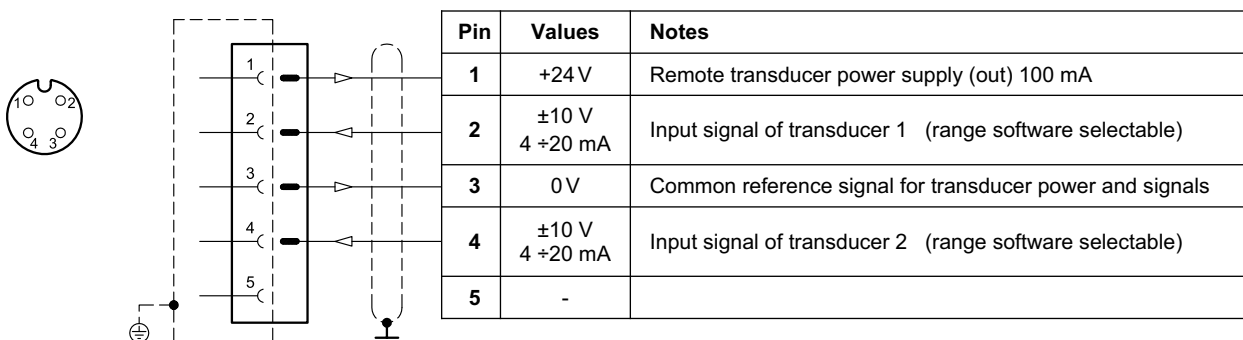

7.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

8 - CHARACTERISTIC CURVES

(with mineral oil with viscosity of 36 cSt at 50°C)

Typical flow rate curves at constant Δp related to the reference signal and measured for the available spools.

The Δp values are measured per land: $\Delta p = 5 \text{ bar}$ ($\Delta p \text{ P} \rightarrow \text{T} = 10 \text{ bar}$).

8.1 - Characteristic curves DDPE5RJ *

SPOOL C100 / A100

8.2 - Characteristic curves DDPE7J*

SPOOL C120 / A120

SPOOL C220 / A220

SPOOL R1C220

SPOOL X1A220

8.3 - Characteristic curves DDPE8J*

SPOOL C250 / A250

SPOOL C400 / A400

8.4 - Characteristic curves DDPE10J*

SPOOL C800 / A800

8.5 - Characteristic curves DDPE11J*

SPOOL C1000 / A1000

9 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and static pressure 100 bar)

10 - HYDRAULIC CHARACTERISTICS

(with mineral oil with viscosity of 36 cSt at 50°C)

		DDPE5RJ*	DDPE7J*	DDPE8J*	DDPE10J*	DDPE11J*
Max flow rate	l/min	180	450	900	1600	3500
Piloting flow requested with operation 0 → 100%	l/min	7	13	28	35	35
Piloting volume requested with operation 0 → 100%	cm ³	1.7	3.2	10	22	22

10.1 - Pilot supply and drain

The DDPE*J* valves are available with internal or external pilot supply and are always equipped with a 30 bar pressure reducing valve. Drain can be internal or external. The version with external drain allows a higher back pressure on the T line.

PRESSURES (bar)

Pressure	MIN	MAX
Pilot pressure on X port	30 (NOTE)	350
Pressure on T port with internal drain	-	10
Pressure on T port with external drain	-	250

NOTE: The valve works well also with inlet pressure, starting from 10 bar. Low pressure affects response times, that will be slower.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

DDPE5RJ*

Y: plug M5x6 for external drain

DDPE7J*

DDPE8J*

DDPE10J*/DDPE11J*

Y: plug M6x8 for external drain

16 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

17 - INSTALLATION

The valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

18 - ACCESSORIES

(to be ordered separately)

18.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

18.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

18.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

18.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connections. See catalogue 89 850.

19 - SUBPLATES

(see catalogue 51 000)

No subplates are available for DDPE5RJ*, DDPE10J* and DDPE11J*.

DS(P)E*K*

EXPLOSION-PROOF PROPORTIONAL DIRECTIONAL VALVES ATEX, IECEx, INMETRO

DSE3K* ISO 4401-03

DSPE5K* CETOP P05

DSPE5RK* ISO 4401-05

DSPE7K* ISO 4401-07

DSPE8K* ISO 4401-08

DSPE10K* ISO 4401-10

OPERATING PRINCIPLE

- These explosion proof directional valves are available in size ISO 4401-03 for direct operated type. Pilot operated valves are available in CETOP P05, ISO 4401-05, ISO 4401-07, ISO 4401-08 and ISO 4401-10 sizes.
- They are compliant with ATEX, IECEx and INMETRO requirements and are suitable for use in potentially explosive atmospheres, for surface plants or mines.
- A low temperature version (up to -40 °C) is also available.
- The valves can be controlled directly by a current power supply or by means of an electronic control unit, to exploit valve performance to the full (see par. 20).
- The DSE3K* valves are supplied with a finishing surface treatment (zinc-nickel) suitable to ensure a salt spray resistance up to 600 hours; for DSPE*K* valves, this finishing is available upon request.
- **Details for classification, operating temperatures and electrical characteristics are in the technical data sheet 02 500 'Explosion proof classification'.**

PERFORMANCES (obtained with viscosity of 36 cSt at 50°C and electronic control card)		DSE3K*	DSPE5K* DSPE5RK*	DSPE7K*	DSPE8K*	DSPE10K*

----------	----------	----------	----------	----------	--	--	-------------	----------	-----------	----------	--

Direct operated solenoid valve

Electric proportional control

Size: ISO 4401-03

Explosion-proof certification: **See table 1.1**

Spool type: _____
C = closed centers
A = open centers

Spool nominal flow rate (see table par. 1.2)

Solenoid position _____
(omit for double solenoid version):
SA = 1 solenoid for cross configuration
SB = 1 solenoid for parallel configuration

Series No.: _____
(the overall and mounting dimensions do not change from 10 to 19)

Seals: _____
For temperature range -20 / +80 °C
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids
For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Option: **/T5**
version in T5 temperature class.
Omit if not required.

Manual override:
CM = boot protected **standard for both N and V seals**
not available for NL seals
CB = blind ring nut **standard for NL seals**
available upon request for both N and V seals
CK = knob manual override
CH = lever manual override.
Dimensions for CB and CH at par. 18

Connection type for cable gland
upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2
not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1
(ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2
not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1
(ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Nominal solenoid voltage:
D12 = 12V DC
D24 = 24V DC

Version with monobloc steel coil

Standard coils are made from zinc-nickel steel and with anodized aluminium junction box.

On request, monobloc coils **MD24K9S01** are available completely made from steel, with zinc-nickel treatment (power supply voltage D24 and cable gland connection type S01). Other variants for voltage and cable gland connection are available, always on request.

NOTE: The zinc-nickel standard finishing surface treatment is suitable to ensure a salt spray resistance up to 600 hours (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards)

1.1 - Names of valves per certification

	ATEX		IECEX		INMETRO	
for gases for dusts	KD2	II 2GD	KXD2	IECEX Gb IECEX Db	KBD2	INMETRO Gb INMETRO Db

NOTE: Refer to the technical data sheet 02 500 for marking, operating temperatures and available versions.

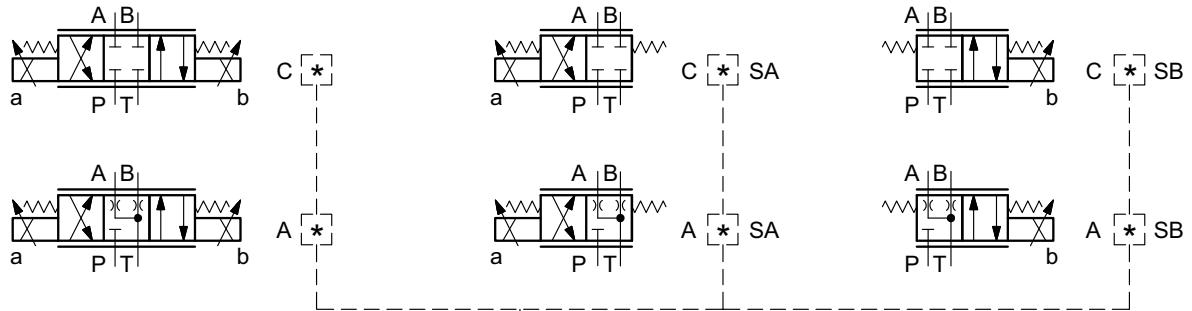

1.2 - Available configurations

Valve configuration depends on the combination of the following elements:
number of proportional solenoids, spool type, nominal flow rate.

2 solenoids configuration:
3 positions with spring centering

“SA” configuration: 1 solenoid on side A.
2 positions (central + external) with
spring centering

“SB” configuration: 1 solenoid on side B.
2 positions (central + external) with
spring centering

*	Nominal flow with $\Delta p 10 \text{ bar } P \rightarrow T$
01	1 l/min
04	4 l/min
08	8 l/min
16	16 l/min
16/08	16 (P→A) / 08 (B→T) l/min
26	26 l/min
26/13	26 (P→A) / 13 (B→T) l/min

2 - CHARACTERISTIC CURVES OF DIRECT OPERATED VALVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Typical flow control characteristics, according to current supply to the solenoid.
The reference Δp values are measured between ports P and T on the valve.

NOMINAL CURRENT	A	1,88	0,86

DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU
CLASS OF PROTECTION: Atmospheric agents Coil insulation (VDE 0580)	IP66/IP68 class H

3.1 - Wiring

In order to realise the electrical connection of the coil, it is necessary to access the terminal block (1) unscrewing the 4 screws (2) that fasten the cover (3) with the box (4) that contains the terminal block.

The electrical connection is polarity-independent.

By doing electrical connection it is important to connect also the grounding point (5) in the terminal block box (M4 screws), through suitable conductors with the general grounding line of the system.

On the external body of the coil there is a grounding point (6) (M4 screw) that allow to ensure equipotentiality between the valve and the general grounding line of the system; connecting this point the regulation of the EN 13463-1 standard, that impose to verify the equipotentiality of the elements included in a potentially explosive environment (the maximum resistance between the elements must be 100 Ω), is guaranteed.

At the end of the electrical wiring, it is necessary to reassemble the cover (3) on the box (4), checking the correct positioning of the seal located in the cover seat and fastening the 4 M5 screws with a torque of 4.9 ± 6 Nm.

Electrical wiring must be done following in compliance with standards about protection against explosion hazards

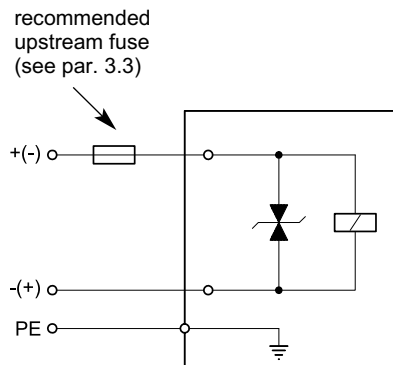

Characteristics of the cables connectable for wiring are indicated in the table below:

Function	Cable section
Operating voltage cables connection	max 2.5 mm ²
Connection for internal grounding point	max 2.5 mm ²
Connection for external equipotential grounding point	max 6 mm ²

Cables for wiring must be non-armoured cables, with external covering sheath and must be suitable for use in environments with temperatures from - 20 °C to +110 °C (for valves either with N or V seals) or from - 40 °C to +110 °C (for valves with NL seals).

Cable glands (which must be ordered separately, see paragraph 19) allow to use cables with external diameter between 8 and 10 mm.

3.2 - Electrical diagrams

3.3 - Overcurrent fuse and switch-off voltage peak

Upstream of each valve, an appropriate fuse (max $3 \times I_n$ according to IEC 60127) or a protective motor switch with short-circuit and thermal instantaneous tripping, as short-circuit protection, must be connected. The cut-off power of the fuse must correspond or exceed the short circuit current of the supply source. The fuse or the protective motor must be placed outside the dangerous area or they must be protected with an explosion-proof covering.

In order to safeguard the electronic device to which the valve is connected, there is a protection circuit in the coil, that reduces voltage peaks, which can occur when inductances are switched off.

The table shows the type of fuse recommended according to the nominal voltage of the valve and to the value of the voltage peaks reduction.

Coil type	Nominal voltage [V]	Rated current [A]	Recommended pre-fuse characteristics medium time-lag according to DIN 41571 [A]	Maximum voltage value upon switch off [V]	Suppressor circuit
D12	12	1,88	2,5	- 49	Transient voltage suppressor bidirectional
D24	24	0,86	1,25	- 49

Size:
5 = CETOP P05
5R = ISO 4401-05
7 = ISO 4401-07
8 = ISO 4401-08
10 = ISO 4401-10

Explosion-proof certification:
See table 1.1

Spool type:
C = closed centres
A = open centres
RC = regenerative closed centres
RA = regenerative open centres

Spool nominal flow rate (see table par. 5.1)

Configurations for single solenoid version (omit for double solenoid version):
SA = 1 solenoid for cross configuration
SB = 1 solenoid for parallel configuration

Series No.: (the overall and mounting dimensions remain unchanged from 10 to 19)

Seals:
For temperature range -20 / +80 °C
N = NBR seals for mineral oil (standard)
V = FPM seals for special fluids
For temperature range -40 / +80 °C
NL = seal for low temperatures (for mineral oil)

Piloting:
I = internal
E = external
Z = internal piloting with 30 bar fixed adjustment pressure reducing valve

Drainage:
I = internal
E = external

Option: surface treatment not standard. Omit if not required (see NOTE)

Option: /T5 version in T5 temperature class. Omit if not required.

Manual override:
CM = boot protected **standard for both N and V seals** not available for NL seals
CB = blind ring nut **standard for NL seals** available upon request for both N and V seals see dimensions at paragraph 18

Connection type for cable gland upper connection:
T01 = M20x1.5 - ISO 261
T02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
T03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
side connection:
S01 = M20x1.5 - ISO 261
S02 = Gk 1/2 - UNI EN 10226-2 not available for INMETRO
S03 = 1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1)
S04 = M16x1.5 - ISO 261

Coil electrical connection: junction box

Nominal solenoid voltage:
D12 = 12V DC
D24 = 24V DC

A version with monobloc coils made of steel is available. Please refer to details in page 2.

NOTE: the valves are supplied with standard surface treatment of phosphating black for the main body and zinc-nickel for the pilot body. Upon request we can supply these valves with full zinc-nickel surface treatment, suitable to ensure a salt spray resistance up to 600 h (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards). For full zinc-nickel surface treatment add /W7 at the end of the identification code.

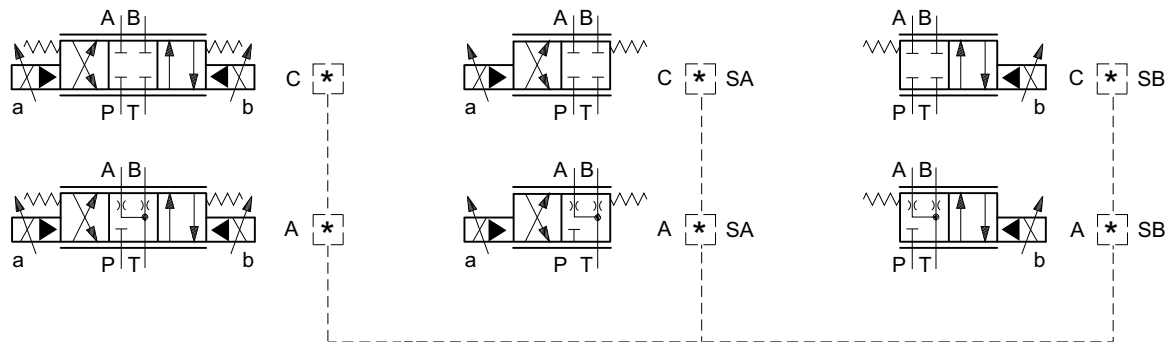

5.1 - Configurations

The valve configuration depends on the combination of the following elements: number of proportional solenoids, spool type, rated flow.

Configuration 2 solenoids:
3 positions with spring centering

1 solenoid for cross configuration "SA":
2 positions (central + external)
with spring centering

1 solenoid for parallel configuration "SB":
2 positions (central + external)
with spring centering

valve type	*	nominal flow rate with Δp 10 bar P-T
DSPE5K* DSPE5RK*	80	80 l/min
	80/40	80 (P-A) / 40 (B-T) l/min
DSPE7K*	100	100 l/min
	150	150 l/min
	150/75	150 (P-A) / 75 (B-T) l/min
DSPE8K*	200	200 l/min
	300	300 l/min
	300/150	300 (P-A) / 150 (B-T) l/min
DSPE10K*	350	350 l/min
	500	500 l/min
	500/250	500 (P-A) / 250 (B-T) l/min

valve type	*	nominal flow rate with Δp 10 bar P-T
DSPE7K*	150/75	150 (P-A) / 75 (B-T) l/min
DSPE8K*	300/150	300 (P-A) / 150 (B-T) l/min
DSPE10K*	500/250	500 (P-A) / 250 (B-T) l/min

6 - CHARACTERISTIC CURVES OF PILOT OPERATED SOLENOID VALVES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Typical flow rate control curves at constant Δp according to current supply to the solenoid, measured for the available spool types.

The reference Δp values are measured between valve ports P and T.

6.1 - Characteristic curves DSPE5K* and DSPE5RK

6.2 - Characteristic curves DSPE7K*

6.3 - Characteristic curves DSPE8K*

6.4 - Characteristic curves DSPE10K*

7 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table shows the typical step response tested with static pressure 100 bar.

REFERENCE SIGNAL	0 → 100%	100 → 0%
	Step response [ms]	
DSE3K*	50	40
DSPE5K* and DSPE5RK*	50	40
DSPE7K*	80	50
DSPE8K*	100	70
DSPE10K*	200	120

8 - HYDRAULICS CHARACTERISTICS

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

FLOWS		DSPE5K* DSPE5RK*	DSPE7K*	DSPE8K*	DSPE10K*
Max flow rate	l/min	180	450	800	1600
Piloting flow requested with operation 0 → 100%	l/min	3	5	9	13
Piloting volume requested with operation 0 → 100%	cm ³	1,7	3,2	9,1	21,6

PRESSURES	MIN	MAX
Piloting pressure on X port	30	210 (NOTE)
Pressure on T port with internal drain	—	10
Pressure on T port with external drain	—	250

NOTE: if the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure. Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered.

Add the letter **Z** to the identification code to order this option (see par. 5). Consider that, by adding the pressure reducing valve, the overall dimensions increase 40 mm in height.

9 - PILOTING AND DRAINAGE

DSPE*K* valves are available with piloting and drainage, both internal and external. The version with external drainage allows for a higher back pressure on the outlet.

TYPE OF VALVE		Plug assembly	
		X	Y
IE	INTERNAL PILOT AND EXTERNAL DRAIN	NO	YES
II	INTERNAL PILOT AND INTERNAL DRAIN	NO	NO
EE	EXTERNAL PILOT AND EXTERNAL DRAIN	YES	YES
EI	EXTERNAL PILOT AND INTERNAL DRAIN	YES	NO

DSPE10K*
ISO 4401-10-09-0-05
(CETOP 4.2-4-10-350)

16 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

17 - INSTALLATION

Installation must adhere to instructions reported in the *Use and Maintenance manual*, always attached to the valve. Unauthorized interventions can be harmful to people and goods because of the explosion hazards present in potentially explosive atmospheres.

The valves can be installed in any position without impairing correct operation.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

18 - MANUAL OVERRIDES

18.1 - CB - Blind ring nut

The metal ring nut protects the solenoid tube from atmospheric agents and isolates the manual override from accidental operations. The ring nut is tightened on a threaded fastener that keeps the coil in its position even without the ring nut.

To access the manual override loose the ring nut and remove it; then reassemble hand tightening, until it stops.

Activate the manual override always and only with non-sparking tools suitable for use in potentially explosive atmospheres.

More information on safe use of explosion-proof components are provided in the instruction manual, always supplied with the valve.

CAUTION!: The manual override doesn't allow any proportional regulation; indeed using this kind of override, the main stage spool will open completely and the whole inlet pressure will pass through A or B line.

18.2 - CK Knob manual override

When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening. Available for DC valves only.

Spanner: 3 mm

18.3 - CH - Lever manual override

The seals choice leads the type of the standard ring nut to be mounted. The lever device is always placed at valve side A.

19 - CABLE GLANDS

Cable glands must be ordered separately; Duplomatic offers some types of cable glands with the following features:

- version for non-armoured cable, external seal on the cable (suitable for $\varnothing 8 \div 10$ mm cables);
- ATEX II 2GD, I M2; IECEx Gb, Db, Mb; INMETRO Gb, Db, Mb certified
- cable gland material: nickel brass
- rubber tip material: silicone
- ambient temperature range: $-70\text{ }^{\circ}\text{C} \div +220\text{ }^{\circ}\text{C}$
- protection degree: IP66/IP68

To order the desired cable glands, specify description, code and quantity.

Description: CGK2/NB-01/10

Code: 3908108001

M20x1.5 - ISO 261 male thread, suitable for coils with T01 and S01 connections. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: $45 \div 50$ Nm

Description: CGK2/NB-02/10

Code: 3908108002

Gk 1/2 - UNI EN 10226-2 male thread, suitable for coils with T02 and S02 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: $20 \div 25$ Nm

Description: CGK2/NB-03/10

Code: 3908108003

1/2" NPT - ANSI B1.20.1 (ex ANSI B2.1), suitable for coils with T03 and S03 connections. The customer must apply LOCTITE® 243™ threadlocker or similar between the cable gland connection thread and the coil in order to ensure IP66/IP68 protection degree.

Tightening torque: $20 \div 25$ Nm

Description: CGK2/NB-04/10

Code: 3908108004

M16x1.5 - ISO 261 male thread, suitable for coils with S04 connection. It is supplied equipped with copper washer, that must be assembled between the cable gland and the coil, so as to ensure IP66/IP68 protection degree.

Tightening torque: $45 \div 50$ Nm

GENERAL INFO

This informative technical datasheet displays information about **classification and marking** of Duplomatic explosion-proof valves range.

Duplomatic MS offers valves with the following certifications:

ATEX	II 2G	II 2D	I M2
IECEX	Gb	Db	Mb
INMETRO	Gb	Db	Mb

Instructions for use and maintenance can be found in the related manuals, always supplied together with valves.

1 - ATEX CLASSIFICATION AND TEMPERATURES

Diplomatic certifies the combination valve-coil for the valves suitable for application and installation in potentially explosive atmospheres, according to ATEX directive; the supply always includes the declaration of conformity to the directive and the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environments.

Coils assembled on these valves have been separately certified according to ATEX directive and so they are suitable for use in potentially explosive atmospheres.

1.1 - ATEX classification for valves

Type examination certificate: AR18ATEX055

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

ATEX II 2G ATEX II 2D	*KD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
ATEX I M2	*KDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

1.2 - ATEX marking for valves

valve code		N and V seals	NL seals
*KD2	for gas for dusts	 II 2G IIC T4 Gb (-20°C Ta +80°C)  II 2D IIIC T154°C Db IP66/IP68 (-20°C Ta +80°C)	 II 2G IIC T4 Gb (-40°C Ta +80°C)  II 2D IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KD2 /T5	for gas for dusts	 II 2G IIC T5 Gb (-20°C Ta +55°C)  II 2D IIIC T129°C Db IP66/IP68 (-20°C Ta +55°C)	 II 2G IIC T5 Gb (-40°C Ta +55°C)  II 2D IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KDM2	mining	 I M2 I T150°C Mb IP66/68 (-20°C Ta +75°C)	 I M2 I T150°C Mb IP66/68 (-40°C Ta +75°C)

2 - IECEx CLASSIFICATION AND TEMPERATURES

The IECEx certification requires the classification of the electrical equipment only.

Dipomatic supplies valves with IECEx certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

2.1 - IECEx classification

Certificate of conformity (CoC): IECEx TUN 15.0028X

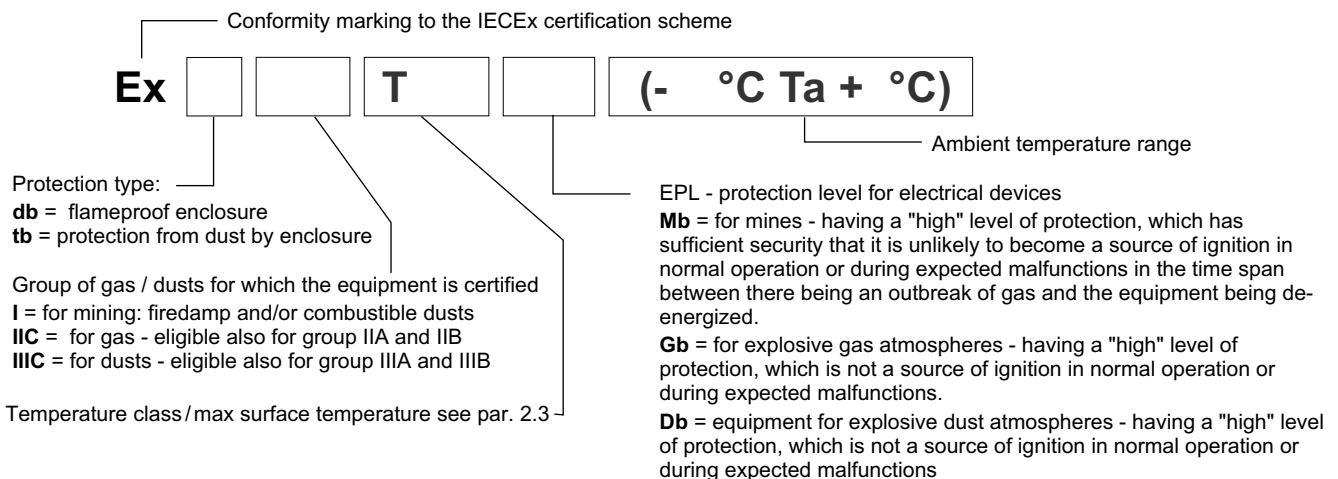

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

IECEx Gb IECEx Db	*KXD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
IECEx Mb	*KXDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

2.2 - IECEx marking

There is a plate with the IECEx mark on each coil.

*KXD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T135°C Db (-40°C Ta +80°C)
*KXD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T100°C Db (-40°C Ta +55°C)
*KDM2 valves	mining	Ex db I Mb (-40°C Ta +80°C)

2.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
IECEx Gb IECEx Db	*KXD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas) T135°C (dusts)	T3, T2, T1 T200°C and higher
		of fluid				
	*KXD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas) T100°C (dusts)	T4, T3, T2, T1 T135°C and higher
		of fluid				
IECEx Mb	*KXDM2	of ambient	-20 / +80 °C	-40 / +80 °C	-	-
		of fluid				

3 - INMETRO CLASSIFICATION AND TEMPERATURES

The INMETRO certification requires the classification of the electrical equipment only.

Duplomatic supplies valves with INMETRO certified coils, suitable for application and installation in potentially explosive atmospheres. The mechanical construction of the coil housing is made in order to ensure its resistance to possible internal explosion and to avoid any explosion propagation to the outside environment, matching an "Ex db" type protection (explosion-proof coil).

Moreover, the solenoid is designed to maintain its surface temperature below the limits specified to the relevant class.

The supply always includes the operating and maintenance manual, that contains all the information needed for a correct use of the valve in potentially explosive environment.

3.1 - INMETRO classification

Certificate of conformity: DNV 15.0094 X

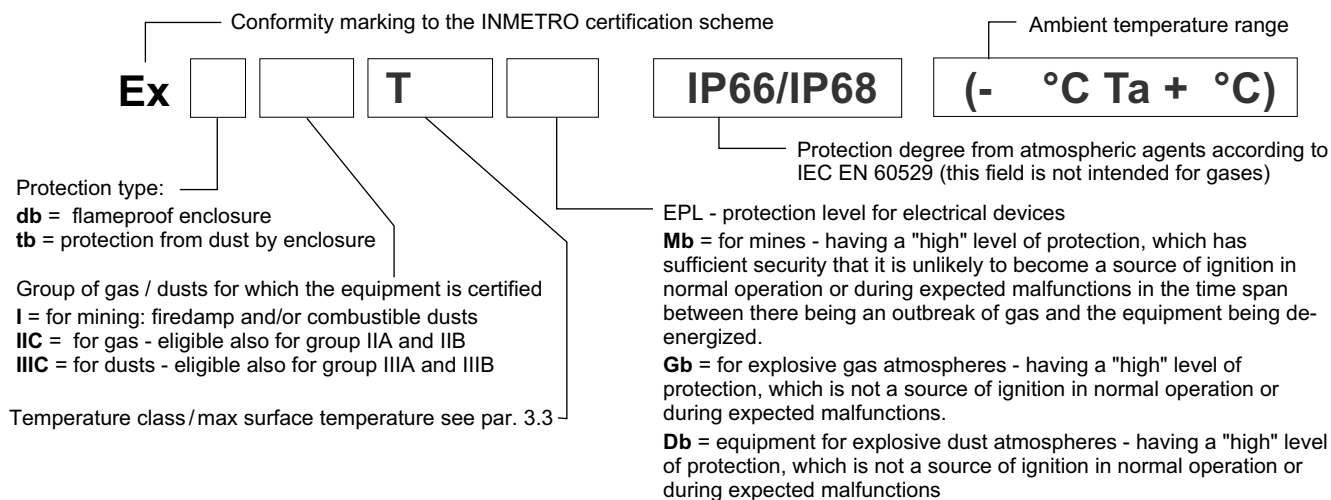

The valves are suitable for applications and installations in potentially explosive atmospheres that fall within:

INMETRO Gb INMETRO Db	*KBD2	equipment intended for use in areas in which explosive atmospheres caused by gases, vapours, mists or air/dust mixtures are likely to occur occasionally.
INMETRO Mb	*KBDM2	equipment intended for use in underground parts of mines as well as those parts of surface installations of such mines likely to be endangered by firedamp and/or combustible dust. This equipment is intended to be de-energised in the event of an explosive atmosphere.

3.2 - INMETRO marking

There is a plate with the INMETRO mark on each coil.

*KBD2 valves	for gas	Ex db IIC T4 Gb (-40°C Ta +80°C)
	for dusts	Ex tb IIIC T154°C Db IP66/IP68 (-40°C Ta +80°C)
*KBD2 /T5 valves	for gas	Ex db IIC T5 Gb (-40°C Ta +55°C)
	for dusts	Ex tb IIIC T129°C Db IP66/IP68 (-40°C Ta +55°C)
*KBDM2 valves	mining	Ex db I T150° Mb IP66/IP68 (-40°C Ta +75°C)

3.3 - Operating temperatures

These valves are classified according to their maximum surface temperature (EN 13463-1), which must be lower than the ignition temperature of the gases, vapors and dusts for which the area in which they will be used is classified.

Valves for surface plants can also be used for less limiting temperature classes (higher surface temperature allowed).

		temperature range	N and V seals	NL seals	Temperature class	eligible also for
INMETRO Gb INMETRO Db	*KBD2	of ambient	-20 / +80 °C	-40 / +80 °C	T4 (gas)	T3, T2, T1 T200°C and higher
		of fluid			T154°C (dusts)	
	*KBD2 /T5	of ambient	-20 / +55 °C	-40 / +55 °C	T5 (gas)	T4, T3, T2, T1 T135°C and higher
		of fluid			T129°C (dusts)	
INMETRO Mb	*KBDM2	of ambient	-20 / +75 °C	-40 / +75 °C	T150°C	-

DXJ3

ELECTRO-HYDRAULIC SERVOVALVE WITH INTEGRATED ELECTRONICS SERIES 10

SUBPLATE MOUNTING ISO 4401-03

p max **350** bar

Q max (see performances table)

MOUNTING SURFACE

OPERATING PRINCIPLE

— The DXJ3 valve is a four-way servo-proportional valve where the spool moves inside a sleeve. This valve has a direct drive with a linear force motor resulting in high dynamic performances which are independent of system pressure. The spool position is controlled by a linear transducer (LVDT) with closed loop which ensures high precision and repeatability.

PERFORMANCES (with mineral oil of viscosity 36 cSt at 50°C)

Maximum operating pressure Ports P - A - B Port T	bar	350 50
Rated flow Q nom (with Δp 70 bar P - T)	l/min	5 - 10 - 20 - 40
Null leakage flow (with $p = 140$ bar)	l/min	$\leq 3\%$ of Q nom
Hysteresis	% In	$< 0,2$
Threshold	% In	$< 0,1$
Thermal drift (with $\Delta T = 50^\circ\text{C}$)	% In	$< 1,5$
Response time	ms	≤ 12
Vibration on the three axes	g	30
Electric features	see paragraph 3	
Protection degree according IEC EN 60529	IP65	
Ambient temperature range	$^\circ\text{C}$	-20 / +60
Fluid temperature range	$^\circ\text{C}$	-20 / +80
Fluid viscosity range	cSt	5 ÷ 400
Fluid contamination degree	according to ISO 4406:1999 class 17/15/12 (16/14/11 for longer life)	
Recommended viscosity	cSt	25
Mass	kg	2,5

— It is available in four different flow rate control ranges up to 40 l/min, with spools with zero overlap and a mounting surface in compliance with ISO 4401 standards.

— The valve is featured by integrated electronic based on SMD technology which ensures standard regulations and simplifies the electric wiring. The unit does not require any adjustment other than the possible electronic regulation of the zero.

— Suitable for control applications with closed loop of position, velocity and pressure. With a loss of power or with a zero reference signal, the spool goes automatically at rest-position. In this position the valve has a minimum leakage, depending on the operating pressure (see the performances table).

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

D	X	J	3	-	D	0	L	/	10	/	E0	K11
Servo-proportional valve with bushing spool		Integrated electronics and position feedback		Rated size ISO 4401-03		Symmetric spool		Spool with zero overlap		Spool with a linear flow rate curve		
										6 + PE pole connector		
										Reference signal: $\pm 10V$ (other signals available on request)		
										Seals: N = NBR seals for mineral oil (standard) V = FPM seals for special fluids		
										Series No. (from 10 to 19 sizes and mounting dimensions remain unchanged)		
										Rated flow (with $p = 70$ bar P - T) 05 = 5 l/min 20 = 20 l/min 10 = 10 l/min 40 = 40 l/min		

2 - CHARACTERISTIC CURVES (obtained with mineral oil with viscosity of 36 cSt at 50°C)

REFERENCE / FLOW RATE CURVE

Typical flow rate curves at constant $\Delta p = 70$ bar P-T according to the reference signal.

NOTE: with positive reference signal connected to pin D the valve regulates P - A / B - T.

FLOW RATE CURVE ACCORDING TO ΔP

The diagram states the maximum valve controlled flow rate according to the pressure drop between the P and T ports.

PRESSURE GAIN

The diagram shows the valve pressure gain, expressed as % of the ratio between the port pressure variation in A or B (Δp_{AB}) and the P system pressure, according to the reference signal. In practice, the pressure gain states the valve reaction towards external disturbances aimed at changing the actuator position.

3 - ELECTRICAL FEATURES

CONNECTION WIRING

Pin	Values	Function	NOTES
A	24 VDC	Supply	From 19 to 32 VDC $I_{A\text{ MAX}} = 1,2\text{ A}$
B	0 V	Signal ground	0 V
C	----	Not used	----
D	$\pm 10\text{ V}$	Input rated command	$R_e = 10\text{ k}\Omega$ (see NOTE 1)
E	0 V	Input rated command	----
F	$4 \div 20\text{ mA}$	Spool position	$R_L = \text{from } 300 \text{ to } 500\ \Omega$ (see NOTE 2)
PE	----	Protective earth	----

NOTE 1: The input stage is a differential amplifier. With positive reference signal connected to pin D, valve opening P - A e B - T is achieved. With a zero reference signal the spool is in centred position. The spool stroke is proportional to $U_D - U_E$. If only one command signal is available (single-end), pin E must be connected to pin B (0V ground).

NOTE 2: The spool position value can be measured at pin F (see diagram right). The position signal output goes from 4 to 20 mA. The centered position is at 12 mA, while 20 mA corresponds to 100% valve opening P - A and B - T. This monitoring allows to detect a cable break when $I_F = 0V$.

General requirements:

- External fuse = 1,6 A
- Minimum cross-section of all leads $\approx 0,75\text{ mm}^2$
- When making electric connections to the valve (shield, protective earth) appropriate measures must be taken to ensure that locally different earth potentials do not results in excessive ground currents.
- The differential and the spool position signal lines must be connected to the mating connector housing at valve side and to the 0V (signal ground) at cabinet side.
- EMC:** meets the requirements of EN 55011:1998, class B, and the immunity regulation according to EN 61000-6-2:1998

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

5 - INSTALLATION

The DXJ3 valve can be installed in any position without impairing its correct operation.

The valve is fixed by means of screws on a flat surface with planarity between 0,01 mm over 100 mm and roughness $R_a < 0,8 \mu\text{m}$. If the minimum values are not observed, the fluid can easily leak between the valve and the mounting surface. While mounting pay attention to the environment and valve cleanliness.

6 - OVERALL AND MOUNTING DIMENSIONS

OPERATING PRINCIPLE

- 
- The DXE3J valve is a four-way (3 + fail-safe position) servo-proportional valve where the spool moves inside a sleeve. It is operated by a proportional solenoid highly dynamic, which achieves high performance and it not requires pilot pressure. The spool position is controlled by a linear transducer (LVDT) in closed loop which ensures high precision and repeatability.
 - It is available in six different flow ranges up to 40 l/min, with spools with zero overlap.
 - A version for potentially explosive atmospheres according to ATEX 2014/34/EU II 3GD is available.
 - The valve is featured by integral electronic based on SMD technology which ensures standard regulations and simplifies the electric wiring. The unit doesn't require any adjustment other than the possible electronic regulation of the zero.
 - Two types of integrated electronics are available, with analogue or fieldbus interfaces.
 - Suitable for control applications with closed loop of position, velocity and pressure. With a power down or without the enable input, the spool moves itself at fail-safe position.

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

1.1 - Standard electronics

D	X	E	3	J	-	LZ	/	31	-	K11
---	---	---	---	---	---	----	---	----	---	-----

Servo-proportional valve with spool in sleeve

Electric proportional control

Size ISO 4401-03

Standard electronics for closed loop

K3 = Version for potentially explosive atmospheres compliant with ATEX 2014/34/EU II 3GD (par. 2). Omit if not required.

Spool with linear flowrate curve and zero overlap, low leakage

Rated flow (with $\Delta p = 70$ bar P - T)

01 = 1 l/min	10 = 10 l/min
02 = 2 l/min	20 = 20 l/min
05 = 5 l/min	40 = 40 l/min

Fail safe type

F1 = closed centre
F3 = float
FC = cross centre

Pin C function:

40	■	■	■

■ available - not available

FAIL SAFE POSITION

When a power failure occurs, the electronics de-energizes the solenoid and the spool will take the fail safe position by spring return.

1.3 - Electronics with fieldbus communication

2 - ATEX 2014/34/EU RATED VERSION

Valves suitable for use in potentially explosive atmospheres certified according to ATEX 2014/34/EU classified under ATEX II 3GD are now available.

The electrical and technical characteristics and dimensions of ATEX certified valves are identical to those of standard valves.

The supply is always delivered together with the ATEX declaration of conformity and the operating and maintenance user manual, where are described all the information for the proper use of valves in potentially explosive atmospheres.

TYPE EXAMINATION CERTIFICATE N°: **AR20ATEX046**

2.1 - Identification code

To order the ATEX-rated version, simply insert letters K3 in the initial part of the identification code. The description becomes DXE3JK3. Please use the identification code shown at par. 1.1 to order.

Example:

- DXE3JK3-LZ40F1/31N-E0K11A

2.2 - Classification

The valves DXE3JK3 are ATEX marked as below:

MARKING FOR GASES, VAPOURS AND MISTS:

II 3G Ex ec IIC T4 Gc

EX: Specific marking of explosion protection as ATEX 2014/34/EU directive and related technical specification requests

II: Group II for surface plants

3: Category 3 normal protection, eligible for zone 2

G: for use in areas in which explosive atmospheres caused by gases, vapours, mists

Ex ec: "ec" protection type, increased safety

IIC: Gas group

(automatically eligible for group IIA and IIB)

T4: Temperature class (max surface temperature)

Gc: Protection level for electrical devices (EPL)

Equipment for explosive gas atmospheres, having an "enhanced" level of protection, which is not a source of ignition in normal operation and which may have some additional protection to ensure that it remains inactive as an ignition source in the case of regular expected occurrences.

MARKING FOR DUSTS:

II 3D Ex tc IIIC T135°C Dc

EX: Specific marking of explosion protection as ATEX 2014/34/EU directive and related technical specification requests

II: Group II for surface plants

3: Category 3 normal protection, eligible for zone 22

D: for use in areas in which explosive atmospheres are caused by explosive dusts

Ex tc: "tc" protection type, protected by enclosures

IIIC: Dusts group

(automatically eligible for group IIIA and IIIB)

T135°C: Temperature class (max surface temperature)

Dc: Protection level for electrical devices (EPL)

Equipment for explosive dust atmospheres, having an "enhanced" level of protection, which is not a source of ignition in normal operation and which may have some additional protection to ensure that it remains inactive as an ignition source in the case of regular expected occurrences.

2.3 - IP protection degree

The IP protection degree of the valve is IP66/IP68 according to IEC EN 60529.

NOTE: the test carried out to reach IP68 is: duration 1 h, depth 1 m.

The IP degree is guaranteed only with mating connector of equivalent IP degree, installed and tightened correctly.

2.4 - Operating temperatures

The operating ambient temperature must be between -20°C and +60 °C.

The fluid temperature must be between -20°C and +80°C.

The valves are T4 (T135° C) class temperature classified, so they are eligible for operation also at higher class temperature (T3, T2, T1 (T200° C)).

2.5 - Connectors

The connector is not supplied with the valve, but can be ordered separately. **The connector must be suitable for the intended conditions of use.**

Duplomatic can provide 7-pin connectors to wire, metal type, suitable for use with DXE3JK3 valves (see catalogue 89 000, connectors type EX7S).

2.6 - Grounding points

The ATEX certified valves are supplied with a grounding point with M4 screw.

The grounding point must always be wired with the general earthing system by means of a suitable conductive line.

3 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to IEC EN 60529		IP66/IP68 (NOTE)
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	35
Maximum solenoid current	A	2.6
Fuse protection, external	A	(fast), max current 4A
Managed breakdowns		Overload and electronics overheating, LVDT sensor error, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

NOTE: The IP degree is guaranteed only with mating connector of equivalent IP degree, installed and tightened correctly. The test carried out to reach IP68 is: duration 1 h, depth 1 m

4 - DXE3J - STANDARD ELECTRONICS

4.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic		LIN-bus Interface (by means of the optional kit)
Connection		6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

4.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

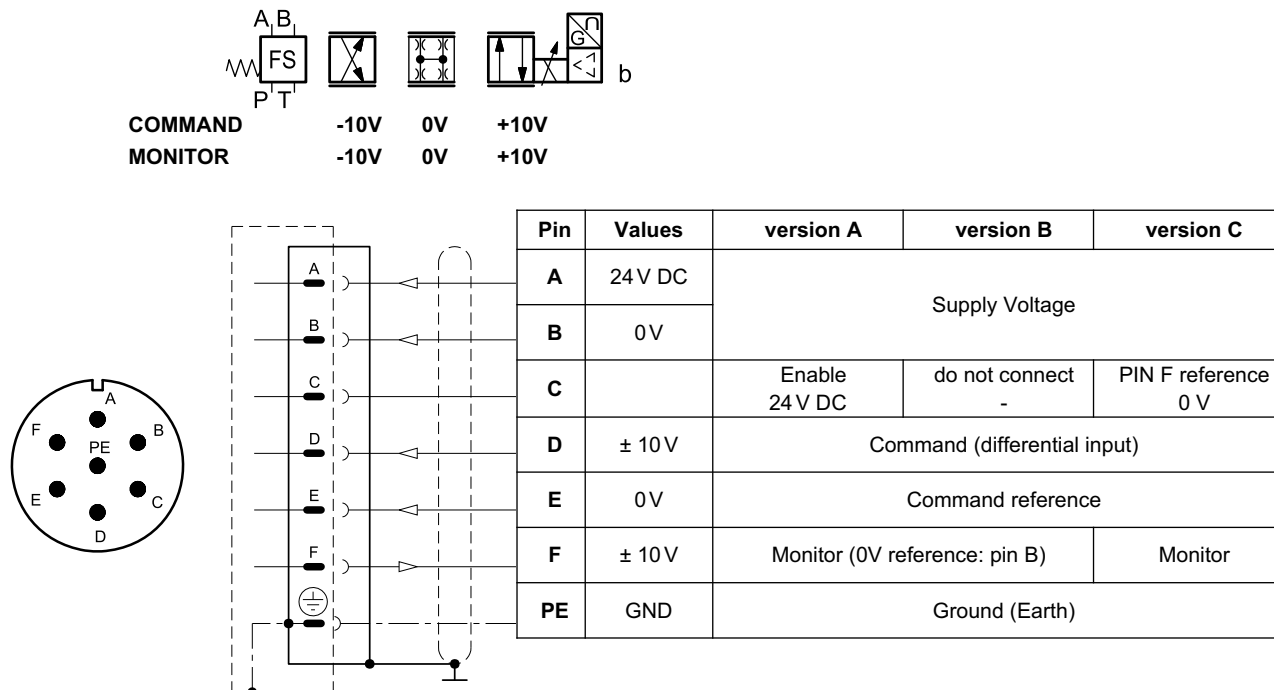

VERSION C - 0V Monitor

4.3 - Version with voltage command (E0)

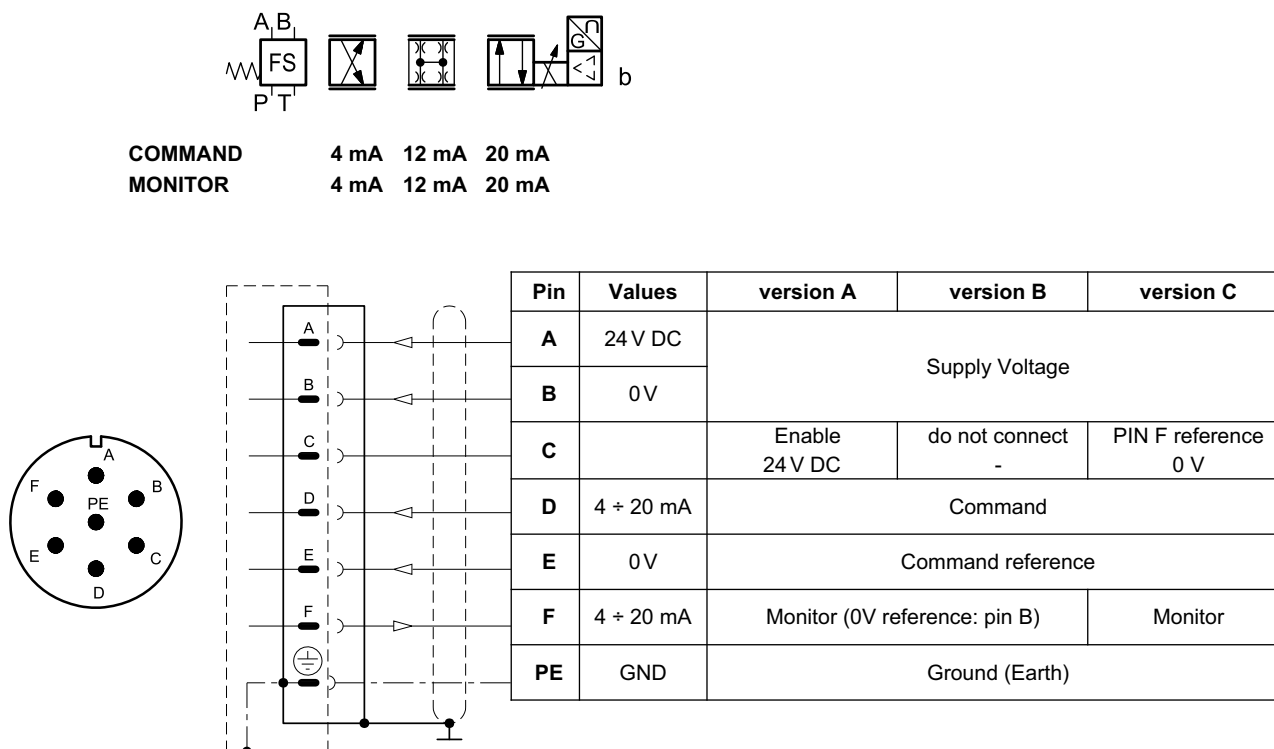

The reference signal must be between -10V and +10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4.4 - Versions with current command (E1)

The reference signal is supplied in current $4 \div 20$ mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5 - DXE3JH - FIELDBUS ELECTRONICS

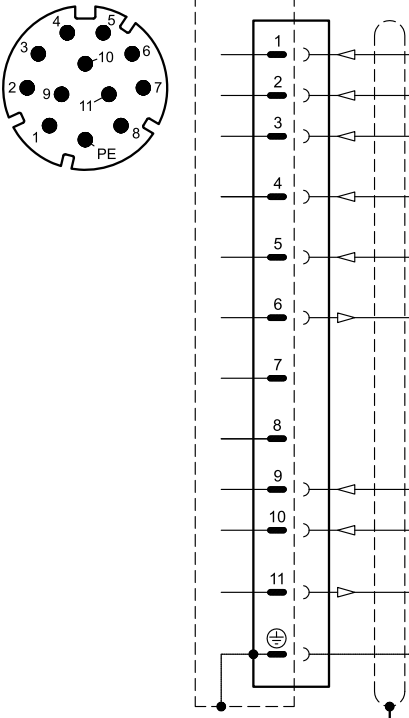

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 4.3 and 4.4.

5.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

5.2 - X1 Main connection pin table

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	$\pm 10 \text{ V (E0)}$ $4 \div 20 \text{ (E1)}$	Command
5	0 V	Command reference signal

5.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

5.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

6 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical flow rate curves at constant $\Delta p = 70$ bar P-T according to the reference signal.

NOTE: with positive reference signal connected to pin D the valve regulates P - A / B - T.

The diagram states the maximum valve controlled flow rate according to the pressure drop between the P and T ports.

The diagram shows the valve pressure gain, expressed as % of the ratio between the port pressure variation in A or B (Δp_{AB}) and the P system pressure, according to the reference signal. In practice, the pressure gain states the valve reaction towards external disturbances aimed at changing the actuator position.

FREQUENCY RESPONSE

7 - DXE3J - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

Fastening bolts: 4 SHC screws M5x30

Torque: 5 Nm $\pm 10\%$ (A8.8)

Threads of mounting holes: M5x10

NOTE: The valve is filled with mineral oil during testing, therefore the breather should not be used without specific authorization. Breaking the seals can cause the loss of the guarantee.

1	Valve body with mounting surface sealing rings: N. 4 OR type 2037 (9.25x1.78) 90 Shore
2	Control solenoid with built-in position transducer
3	Main connection
4	Mating connector 6 poles + PE, female type MIL-5015-G To be ordered separately. See catalogue 89 000
5	Air breather. Sealed at the factory (NOTE)
6	DXE3JK3 only: grounding point

3	Mating connector 11 poles + PE To be ordered separately. See catalogue 89 000
4	Mating connectors for fieldbus communication and signals To be ordered separately. See catalogue 89 000
5	Air breather. Sealed at the factory (NOTE 2)

NOTE 1: Depending on the chosen version, X4 and X7 connections may not be present.
Please refer to section 5 for connection descriptions and pinout.

NOTE 2: The valve is filled with mineral oil during testing, therefore the breather should not be used without specific authorization. Breaking the seals can cause the loss of the guarantee.

Fastening bolts: 4 SHC screws M5x30

Torque: 5 Nm \pm 10% (A8.8)

Threads of mounting holes: M5x10

9 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

10 - INSTALLATION

The valves can be installed in any position without impairing correct operation. Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols.

If minimum values are not observed, fluid can easily leaks between the valve and support surface.

Take care to the cleanliness of the mounting surfaces and surrounding environment upon installation.

11 - ACCESSORIES

(to be ordered separately)

11.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

We recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

11.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

11.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm²

Cross section for signals (command, monitor):

- 0,50 mm²

11.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic. See catalogue 89 850.

12 - SUBPLATES

DXJ5

ELECTRO-HYDRAULIC SERVOVALVE WITH INTEGRATED ELECTRONICS SERIES 10

SUBPLATE MOUNTING ISO 4401-05

p max **350** bar

Q max (see performances table)

MOUNTING SURFACE

OPERATING PRINCIPLE

— The DXJ5 is a four-way servo-proportional valve where the spool moves inside a sleeve. This valve has a direct drive with a linear force motor resulting in high dynamic performances independent of system pressure. A linear transducer (LVDT) with closed loop controls the spool position, ensuring high precision and repeatability.

PERFORMANCES (with mineral oil of viscosity 36 cSt at 50°C)

Maximum operating pressure Ports P - A - B Port T	bar	350 50
Rated flow Q nom (with Δp 70 bar P - T)	l/min	60 ÷ 100
Null leakage flow (with p=140 bar)	l/min	≤ 3% of Q nom
Hysteresis	% In	< 0,2
Threshold	% In	< 0,1
Thermal drift (with ΔT = 50°C)	% In	< 1,5
Response time	ms	≤ 20
Vibration on the three axes	g	30
Electric features	see paragraph 3	
Protection degree according IEC EN 60529	IP65	
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	5 ÷ 400
Fluid contamination degree	according to ISO 4406:1999 class 17/15/12 (16/14/11 for longer life)	
Recommended viscosity	cSt	25
Mass	kg	6,3

— It is available in four different flow rate control ranges up to 100 l/min, with spools with zero overlap and a ISO 4401 mounting surface.

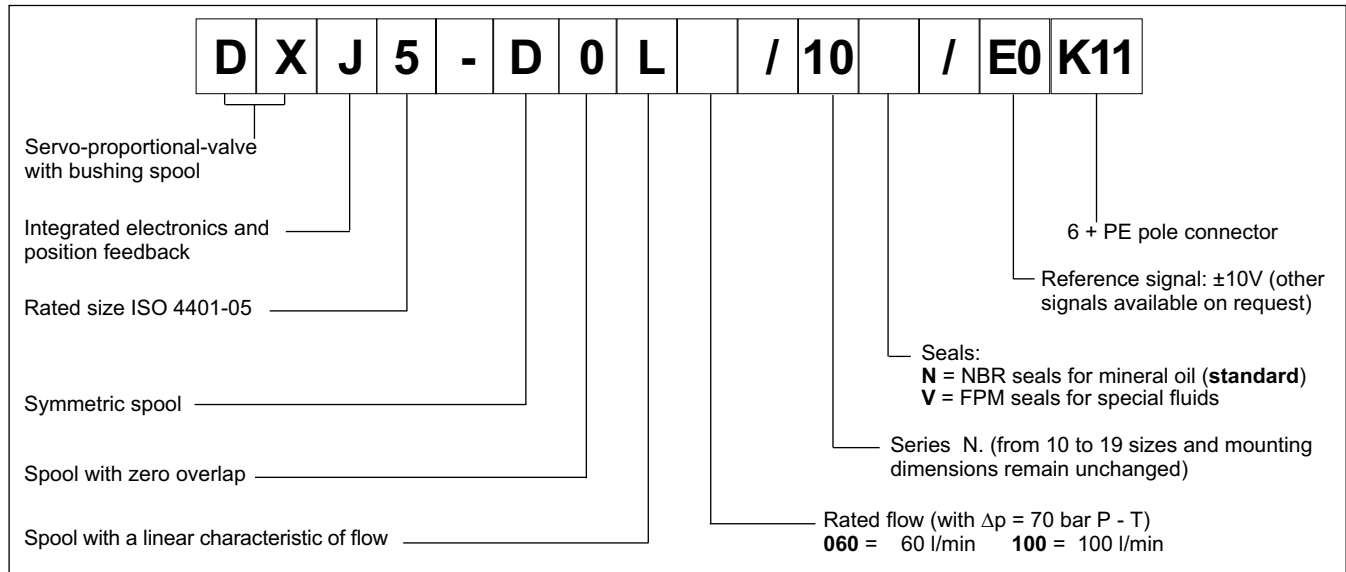

— The valve is featured by integrated electronic based on SMD technology which ensures standard regulations and simplifies the electric wiring. The unit does not require any adjustment other than the possible electronic regulation of the zero.

— Suitable for control applications with closed loop of position, velocity and pressure. With a loss of power or with a zero reference signal, the spool goes automatically at rest-position. In this position the valve has a minimum leakage, depending on the operating pressure (see the performances table).

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES (obtained with mineral oil with viscosity of 36 cSt at 50°C)

Typical flow rate curves at constant $\Delta p = 70$ bar P-T according to the reference signal.

NOTE: with positive reference signal connected to pin D the valve regulates P - A / B - T.

The diagram states the maximum valve controlled flow rate according to the pressure drop between the P and T ports.

The diagram on the left shows the valve pressure gain, expressed as % of the ratio between the port pressure variation in A or B (Δp_{AB}) and the P system pressure, according to the reference signal. Practically, the pressure gain states the valve reaction towards external disturbances aimed at changing the actuator position.

STEP RESPONSE

FREQUENCY RESPONSE

3 - ELECTRICAL FEATURES

CONNECTION WIRING

Pin	Values	Function	NOTES
A	24 VDC	Supply	From 19 to 32 VDC $I_{A \text{ MAX.}} = 2,2 \text{ A}$
B	0 V	Signal ground	0 V
C	----	Not used	----
D	$\pm 10 \text{ V}$	Input rated command	$R_e = 10 \text{ k}\Omega$ (see NOTE 1)
E	0 V	Input rated command	----
F	$4 \div 20 \text{ mA}$	Spool position	$R_L = \text{from } 300 \text{ to } 500 \Omega$ (see NOTE 2)
PE	----	Protective earth	----

NOTE 1: The input stage is a differential amplifier. With positive reference signal connected to pin D, valve opening P - A e B - T is achieved. With a zero reference signal the spool is in centred position. The spool stroke is proportional to $U_D - U_E$. If only one command signal is available (single-end), pin E must be connected to pin B (0V ground).

NOTE 2: The spool position value can be measured at pin F (see diagram right). The position signal output goes from 4 to 20 mA. The centered position is at 12 mA, while 20 mA, corresponds to 100% valve opening P - A and B - T. This monitoring allows to detect a cable break when $I_F = 0\text{V}$.

General requirements:

- External fuse = 2,5 A
- Minimum cross-section of all leads $\approx 0,75 \text{ mm}^2$
- When making electric connections to the valve (shield, protective earth) appropriate measures must be taken to ensure that locally different earth potentials do not results in excessive ground currents.
- The differential and the spool position signal lines must be connected to the mating connector housing at valve side and to the 0V (signal ground) at cabinet side.
- **EMC:** meets the requirements of EN 55011:1998, class B, and the immunity regulation according to EN 61000-6-2:1998

4 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

5 - INSTALLATION

The DXJ5 valve can be installed in any position without impairing its correct operation. The valve is fixed by means of screws on a flat surface with planarity between 0,01 mm over 100 mm and roughness $R_a < 0,8 \mu\text{m}$. If the minimum values are not observed, the fluid can easily leak between the valve and the mounting surface. While mounting pay attention to the environment and valve cleanliness.

OPERATING PRINCIPLE

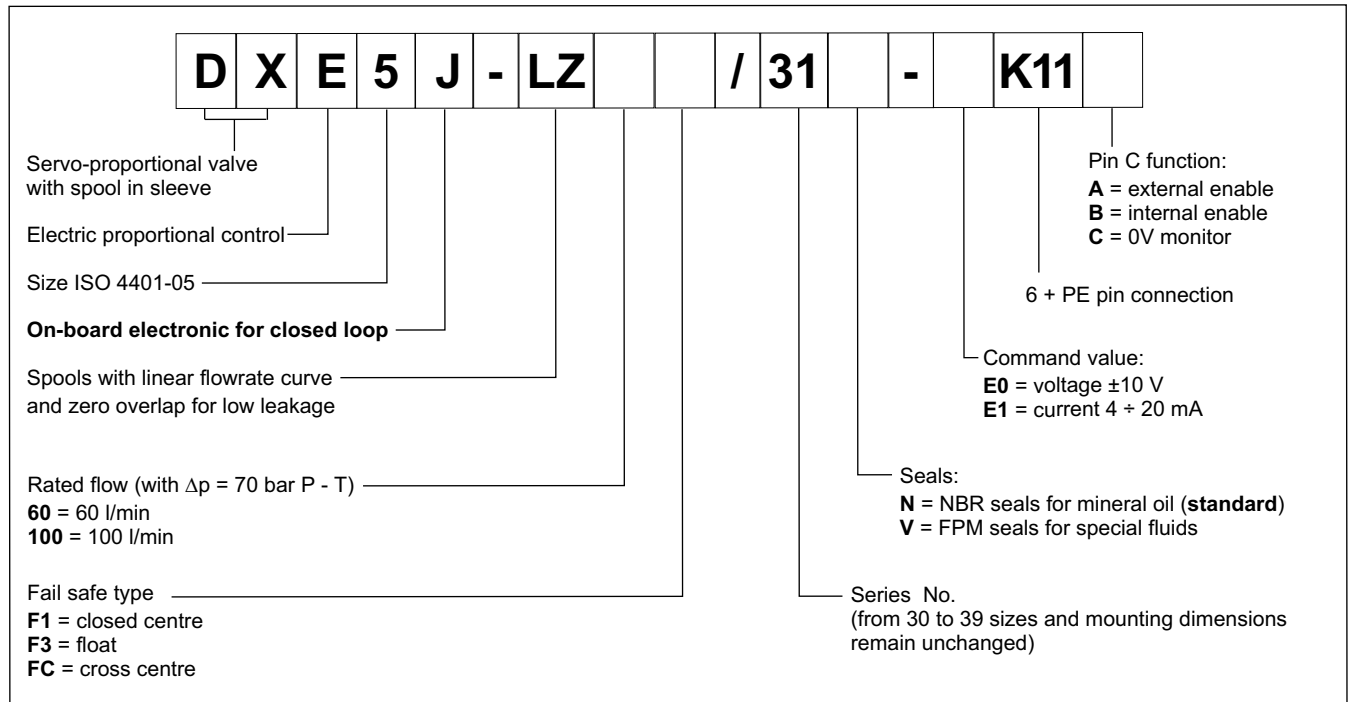

- 
- The DXE5J valve is a four-way (3 + fail-safe position) servo-proportional valve where the spool moves inside a sleeve. It is operated by a proportional solenoid highly dynamic, which achieves high performance and not requires pilot pressure. The spool position is controlled by a linear transducer (LVDT) in closed loop, which ensures high precision and repeatability.
 - It is available with two flow ranges up to 100 l/min with spools with zero overlap.
 - The valve is featured by integral electronic based on SMD technology which ensures standard regulations and simplifies the electric wiring. The unit does not require any adjustment other than the possible electronic regulation of the zero.
 - Suitable for control applications with closed loop of position, velocity and pressure. If the valve is not powered or is without the enable input (Version A only), the spool moves automatically at fail-safe position.

3 - DXE5J - STANDARD ELECTRONICS

3.1 - Electrical characteristics

Command signal: voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid): voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic		LIN-bus Interface (by means of the optional kit)
Connection		6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

3.2 - On-board electronics diagrams

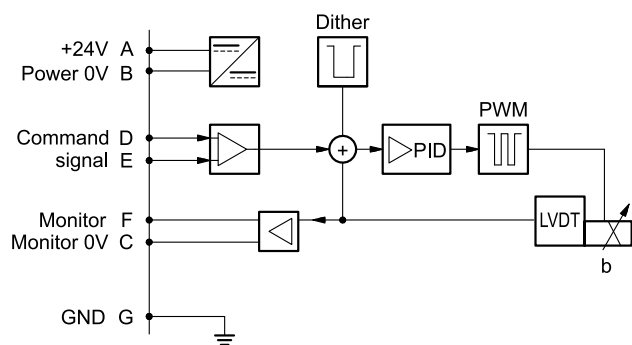

VERSION A - External Enable

VERSION B - Internal Enable

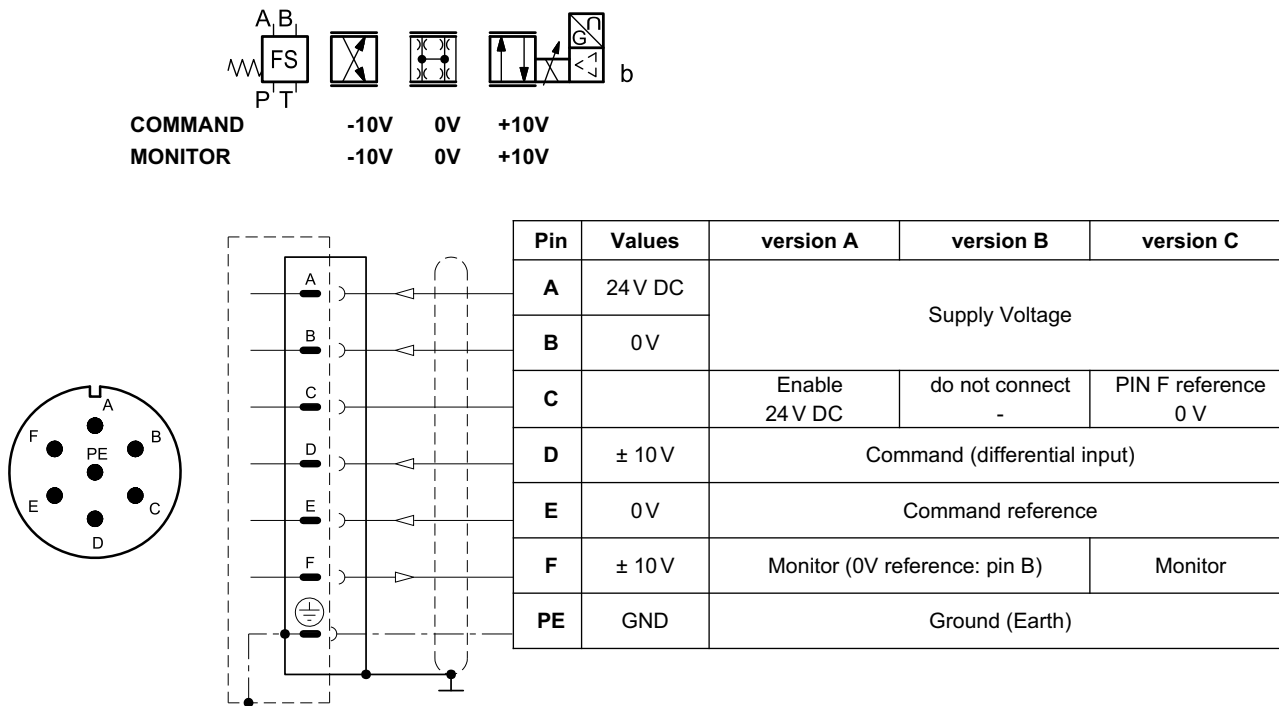

VERSION C - 0V Monitor

3.3 - Versions with voltage COMMAND (E0)

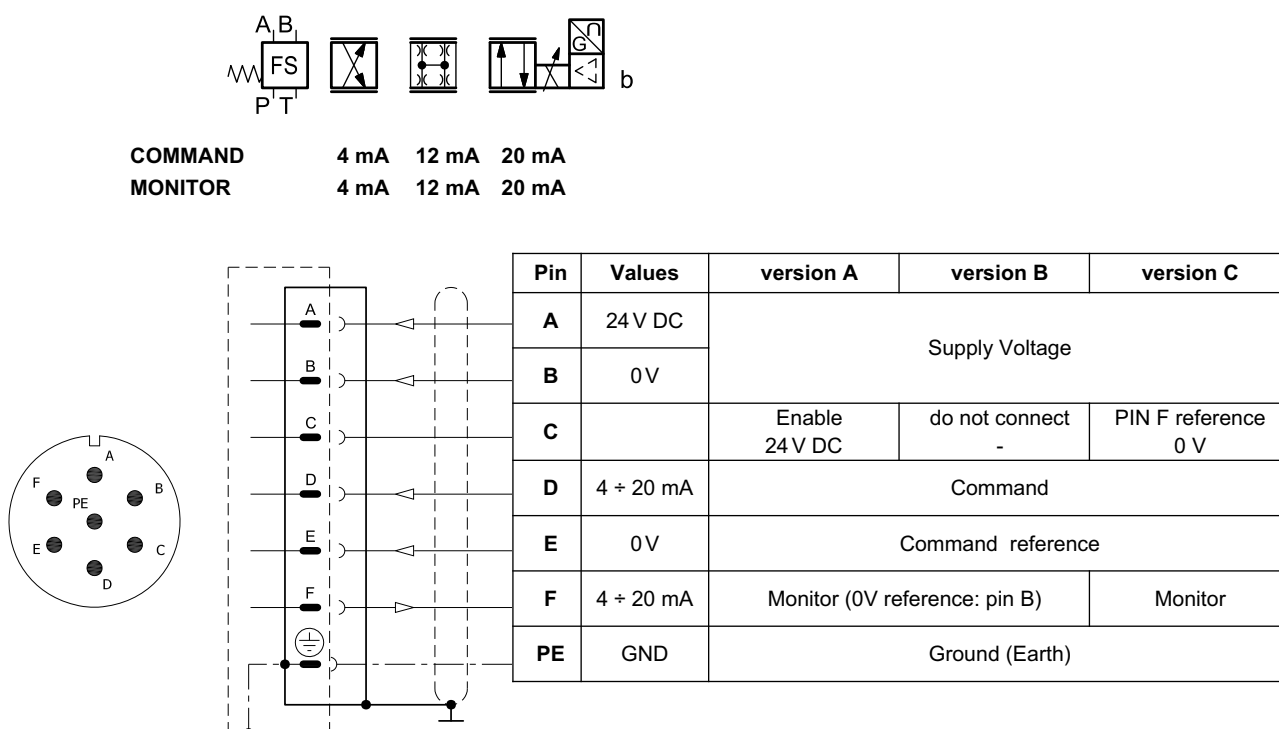

The reference signal must be between -10V and +10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

3.4 - Versions with CURRENT COMMAND (E1)

The reference signal is supplied in current $4 \div 20$ mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4 - DXE5JH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 3.3 and 3.4.

4.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register

NOTE 1: Depending on the chosen version, X4 and X7 connections may not be present.
Please refer to section 5 for connection descriptions and pinout.

NOTE 2: The valve is filled with mineral oil during testing, therefore the breather should not be used without specific authorization. Breaking the seals can cause the loss of the guarantee.

Fastening bolts: 4 bolts M6x40 - ISO 4762

Torque: 8 Nm \pm 10% (A8.8)

Threading holes: M6x10

8 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

9 - INSTALLATION

The valves can be installed in any position without impairing correct operation. Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols.

If minimum values are not observed, fluid can easily leaks between the valve and support surface.

Take care to the cleanliness of the mounting surfaces and surrounding environment upon installation.

10 - ACCESSORIES

(to be ordered separately)

10.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

10.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

10.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

10.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic, available for valves with K11 and K16 connections. See catalogue 89 850.

----------	----------	----------	----------	-----------	---	---	-----------	---	---	------------	---	--	--	--	--	--	--

Proportional directional valve with high-response pilot

Nominal size: _____
5R = ISO 4401-05
7 = ISO 4401-07
8 = ISO 4401-08
10 = ISO 4401-10
11 = ISO 4401-10 with oversize ports

Digital integrated electronics for closed loop with fieldbus communication

Spool type: _____
C = closed centre
A = open centre
Z = zero overlap
 See par. 2 for operation and available flow rates.

Series No. _____
 (from 30 to 39 sizes and mounting dimensions remain unchanged)

Seals: _____
N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Drainage: _____
I = internal
E = external

Piloting: _____
I = internal
E = external

Option:
/ W7 = Zinc-nickel surface treatment
 Omit if not required.
 (see par. 1.2)

X4 Analogue transducer:
0 = none
1 = version 1
 (single /double transducer)

X7 Digital transducer:
0 = none
1 = version 1 (SSI type)
2 = version 2 (Encoder type)

X2, X3 Fieldbus type:
CA = CAN Open
PD = PROFIBUS DP
EC = EtherCAT
EN = Ethernet /IP
PN = Profinet
PL = PowerLink

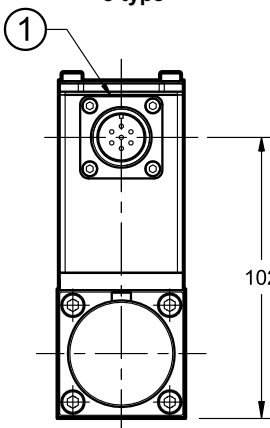

X1 Main connection configuration:
D1 = one command
D0 = full digital version (on request - available for reference signal FD type only)

Main connection 11 pin + PE

Reference signal:
E0 = voltage $\pm 10V$
E1 = current $4 \div 20 mA$
FD = full digital version (on request)

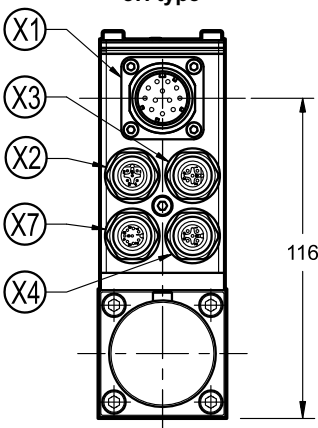

2 - COMPARISON AMONG INTEGRATED ELECTRONICS

J type

102

JH type

116

NOTE 1: Depending on the chosen version, X4 and X7 connections may not be present. Please refer to sections 5, 6 and 7 for connections descriptions and pinouts.

NOTE 2: Related mating connectors have to be ordered separately. See catalogue 89 000.

dimensions in mm

1	Connection 6 pin + PE
X1	Main connection 11 pin + PE
X2	Fieldbus communication (IN)
X3	Fieldbus communication (OUT)
X4	Connection for analogue transducer
X7	Connection for digital transducer

3 - AVAILABLE CONFIGURATIONS

The valve configuration depends on the combination of spool type and rated flow.

3 positions with spring centering

valve type	*	Controlled flow with Δp 10 bar P-T
DXRE5RJ	100	100 l/min
DXRE7J	120	120 l/min
	220	220 l/min
DXRE8J	250	250 l/min
	400	400 l/min
DXRE10J	800	800 l/min
DXRE11J	1000	1000 l/min

OFFSET POSITION for Z SPOOLS

After electrical switch-off or Enable signal switch-off (version K11A) the main spool moves to springs offset position, with limited opening (1%... 6% of main spool stroke in direction P-B / A-T)

detailed symbol (spool Z)

4 - ELECTRONICS COMMON DATA

Duty cycle		100% (continuous operation)
Protection class according to EN 60529		IP65 / IP67
Supply voltage	V DC	24 (from 19 to 30 VDC), ripple max 3 Vpp
Power consumption	VA	35
Maximum solenoid current	A	2.6
Fuse protection, external	A	(fast), max current 4A
Managed breakdowns		Overload and electronics overheating, LVDT sensor error, cable breakdown, supply voltage failures
Electromagnetic compatibility (EMC) emissions EN 61000-6-4, immunity EN 61000-6-2		According to 2014/30/EU standards

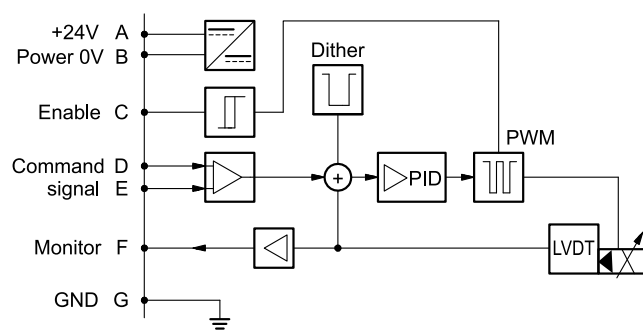

5 - DXRE*J - STANDARD ELECTRONICS

5.1 - Electrical characteristics

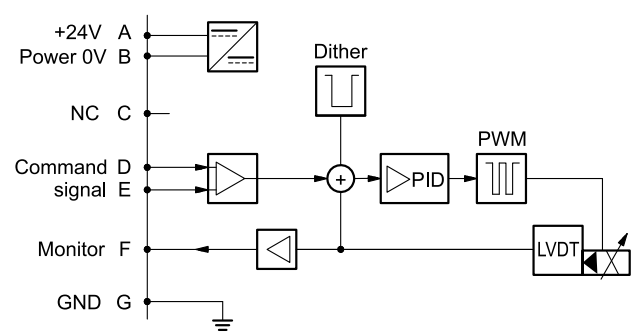

Command signal:	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

5.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

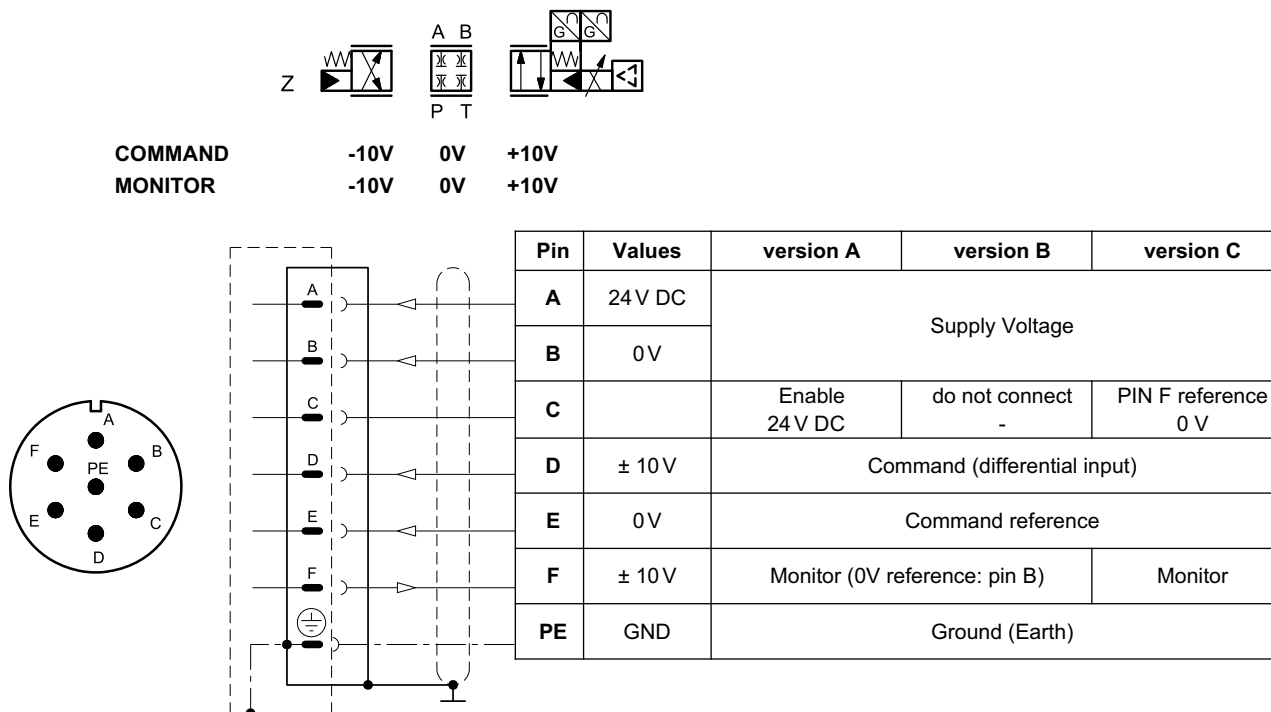

VERSION C - 0V Monitor

5.3 - Version with voltage command (E0)

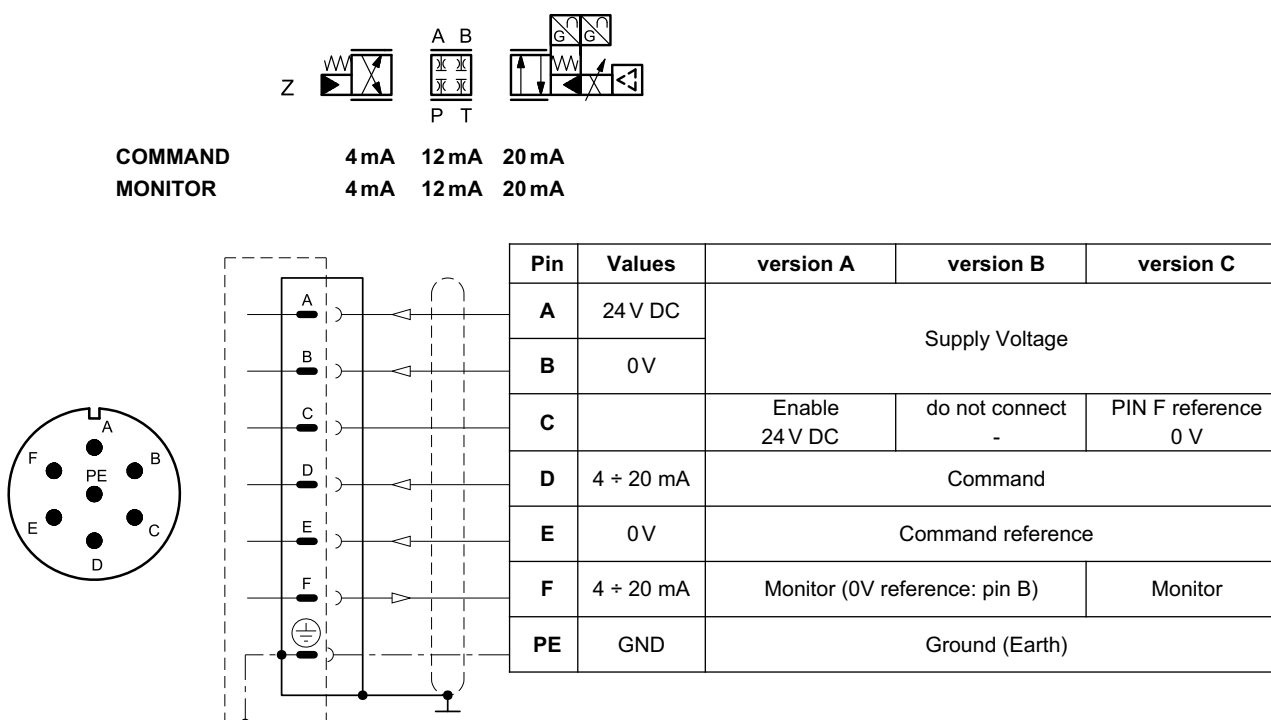

The reference signal must be between -10V and +10V. The monitor feature of versions B and C becomes available with a delay of 0.5 sec from the power-on of the card.

5.4 - Version with current command (E1)

The reference signal is supplied in current $4 \div 20$ mA. If the current for command is lower than 4 mA the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0.5 sec from the power-on of the card.

6 - DXRE*JH - FIELDBUS ELECTRONICS

The 11+ PE pin connection allows separate supply voltage for electronics and solenoids.

Command - valve position schemes as for the standard electronics. Please refer to pictures in par. 5.3 and 5.4.

6.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1) digital (FD)	V DC mA	± 10 (Impedance $R_i = 11 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_i = 58 \text{ }\Omega$) via fieldbus
Monitor signal (current to solenoid):	voltage (E0) current (E1)	V DC mA	± 10 (Impedance $R_o > 1 \text{ k}\Omega$) $4 \div 20$ (Impedance $R_o = 500 \text{ }\Omega$)
Communication / diagnostic			via Bus register
Communication interface standards	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		EN 50325-4 + DS408 EN 50170-2 / IEC 61158 IEC 61158
Communication physical layer	CAN Open PROFIBUS DP EtherCAT, Ethernet /IP, Profinet, PowerLink		optical insulated CAN ISO 11898 optical insulated RS485 fast ethernet, insulated 100 Base TX
Power connection			11 pin + PE (DIN 43651)

6.2 - X1 Main connection pin table

D1: one command

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	$\pm 10 \text{ V}$ (E0) $4 \div 20$ (E1)	Command
5	0 V	Command reference signal
6	$\pm 10 \text{ V}$ (E0) $4 \div 20$ (E1)	Monitor (0V reference pin 10)
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V reference pin 2)
12	GND	Ground (Earth)

D0: full digital

Pin	Values	Function
1	24 V DC	Main supply voltage
2	0 V	
3	24V DC	Enable
4	NC	do not connect
5	NC	do not connect
6	NC	do not connect
7	NC	do not connect
8	NC	do not connect
9	24 V DC	Logic and control supply
10	0 V	
11	24 V DC	Fault (0V DC) or normal working (24V DC) (0V ref. pin 2)
12	GND	Ground (Earth)

6.3 - FIELDBUS connections

Please wire following guidelines provided by the relative standards communication protocol.

6.3.1 - Communication connection CA (CAN Open)

X2 (IN) connection: M12 A 5 pin female

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

X3 (OUT) connection: M12 A 5 pin male

Pin	Values	Function
1	CAN_SH	Shield
2	NC	Do not connect
3	GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

6.3.2 - Communication connection PD (PROFIBUS DP)

X2 (IN) connection: M12 B 5 pin male (IN)

Pin	Values	Function
1	+5 V	Termination supply signal
2	PB_A	Bus line (high)
3	0 V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

X3 (OUT) connection: M12 B 5 pin female

Pin	Values	Function
1	+5 V	Termination supply signal
2	PB_A	Bus line (high)
3	0 V	Data line and termination signal 0
4	PB_B	Bus line (low)
5	SHIELD	

6.3.3 - Communication connections: EC (EtherCat), EN (Ethernet/IP), PN (PROFINET), PL (POWERLINK)

X2 (IN) connection: M12 D 4 pin female

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

X3 (OUT) connection: M12 D 4 pin female

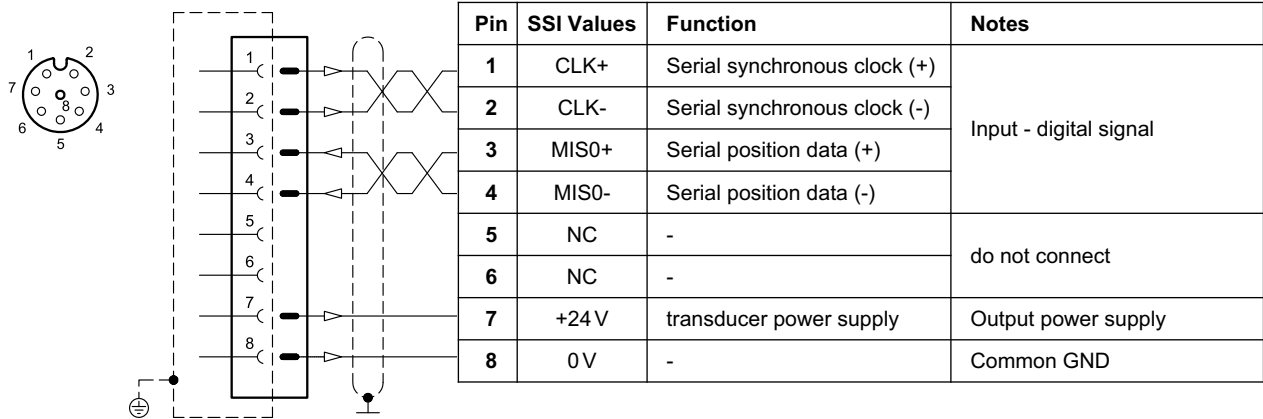

Pin	Values	Function
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
HOUSING	shield	

NOTE: Shield connection on connector housing is recommended.

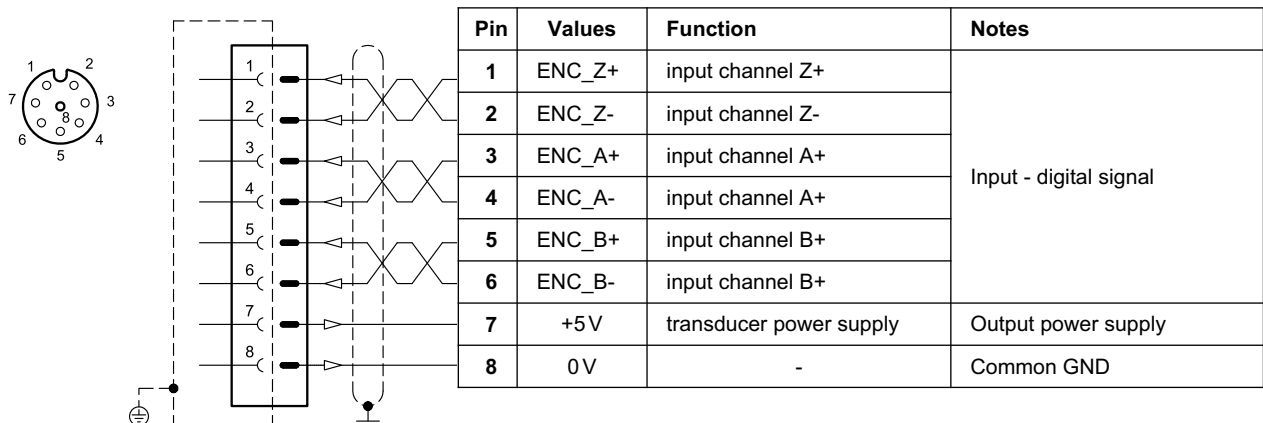

6.4 - Digital transducer connection

X7 connection: M12 A 8 pin female

VERSION 1: SSI type

VERSION 2: ENCODER type

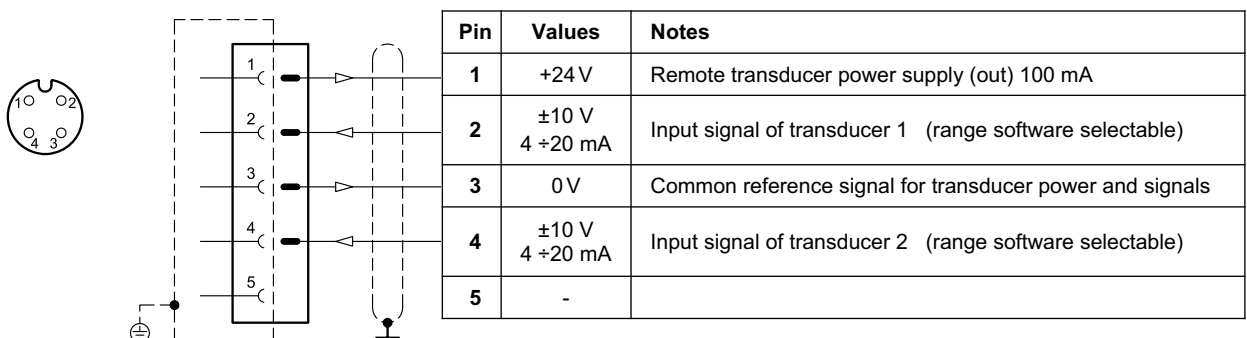

6.5 - Analogue transducer connection

X4 connection: M12 A 4 pin female

VERSION 1: single / double transducer

(single or double is a software-selectable option)

7 - CHARACTERISTIC CURVES

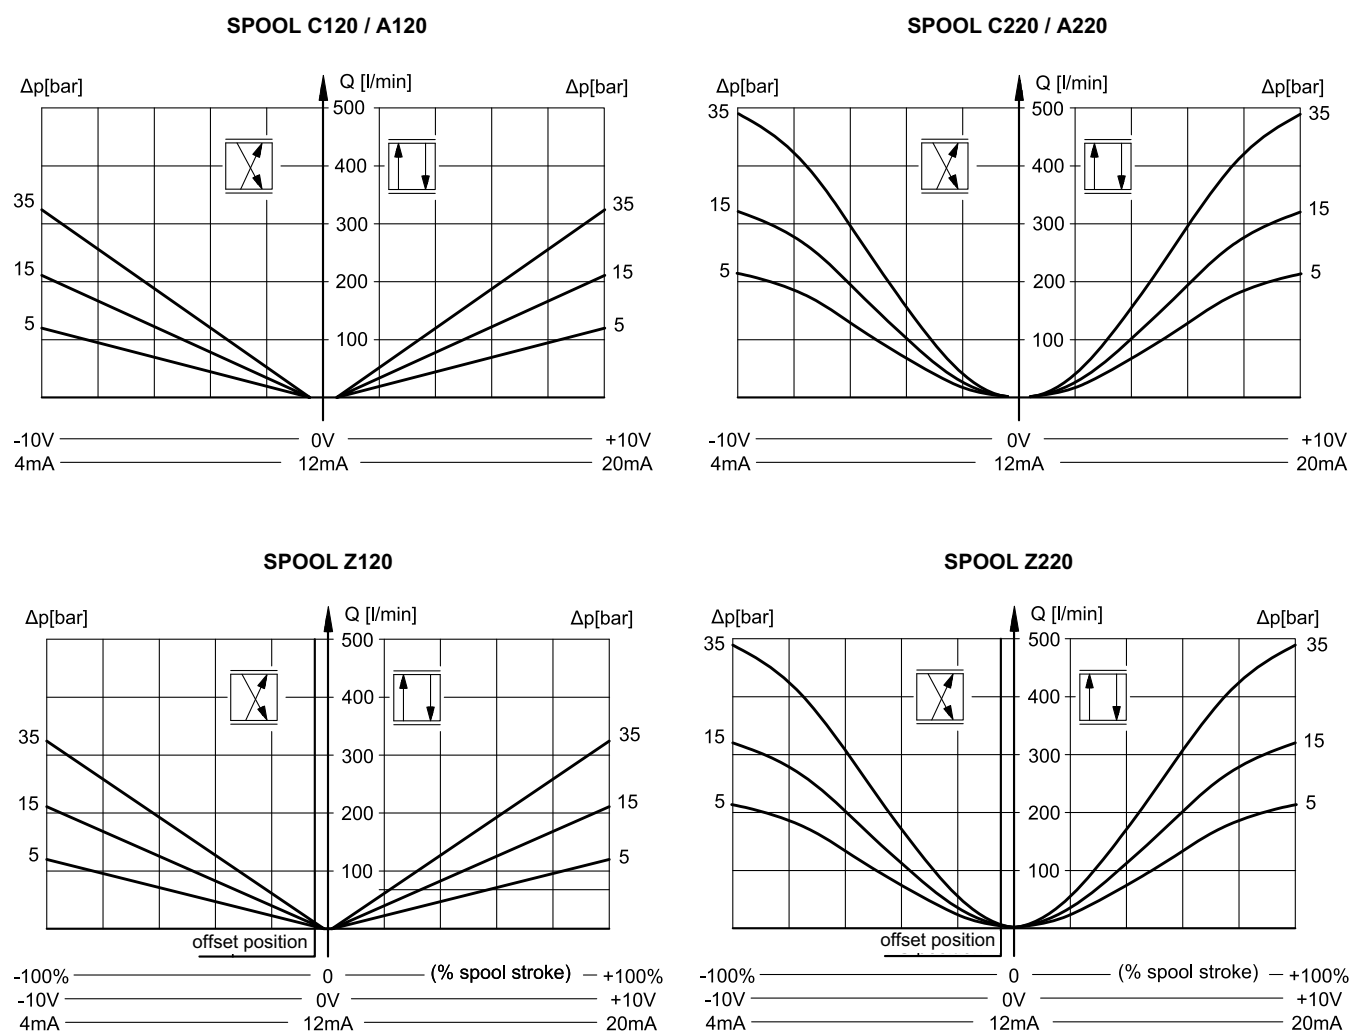

(with mineral oil with viscosity of 36 cSt at 50°C)

Typical flow rate curves at constant Δp related to the reference signal and measured for the available spools.
The Δp values are measured per land.

7.1 - Characteristic curves DXRE5RJ

7.2 - Characteristic curves DXRE7J

7.3 - Characteristic curves DXRE8J

15 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

16 - INSTALLATION

The valves can be installed in any position without impairing correct operation. Make sure the hydraulic circuit is free of air.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

Take care to the cleanliness of the mounting surfaces and surrounding environment upon installation.

17 - ACCESSORIES

(to be ordered separately)

17.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

We recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

17.2 - Mating connectors for fieldbus communication and for sensors.

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

17.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm²

Cross section for signals (command, monitor):

- 0,50 mm²

17.4 - Kit for start-up LINPC-USB

Device for service start-up and diagnostic. See catalogue 89 850.

18 - SUBPLATES

(see catalogue 51 000)

Subplates are not available for DXRE5RJ, DXRE10J and DXRE11J.

	DXRE7J	DXRE8J

CONNECTORS AND CABLES SETS

FOR VALVES WITH INTEGRATED ELECTRONICS

MATING CONNECTORS FOR MAIN CONNECTION

1 - FOR K11 CONNECTION - 6 PIN+PE

name: EX7S/L/10 **code: 3890000003**

metal connector 6-poles + PE, female, IP67

standard: MIL-C-5015-G (EN 175201-804)

suitable cables: Ø11 mm; up to 20 metres length

wire sizes: cross section 1 mm²

contacts: either solders or crimp

shield arranged: yes

name: EX7S/L/10/4015 **code: 3890000012**

metal connector 6-poles + PE, female, IP67

standard: MIL-C-5015-G (EN 175201-804)

suitable cables: Ø18 mm, up to 40 metres length

conductor size: from 0.75 to 1.5 mm²

contacts: crimp contacts (included)

shield arranged: yes

2 - FOR K12 CONNECTION - M12 5 PIN

name: EC5S/M12L/10 **code: 3491001001**

M12 connector, 5-poles, code A, female, IP65/67

glass filled plastic

standard: IEC 61076-2-101

suitable cables: Ø9 mm, up to 20 metres length

conductor size: 0.75 mm²

contacts: screw contacts

shield: yes

3 - FOR K16 CONNECTION - 11 PIN+PE

name: EX12S/L/10 **code: 3890000004**

Metal connector 11 poles + PE, shielded

standard: DIN 43651 (EN 175201-804)

suitable cables: Ø15 mm up to 10 metres length

conductor size: max 0.5 mm²

contacts: crimp contacts

4 - MATING CONNECTORS FOR FIELDBUS COMMUNICATION

We offer metal connectors IEC 61076-2-101, shielded, with screw connection, IP 67

4.1 - CANopen®

name: EX5P/M12AL/10 **code 3890000008**
connector M12 A 5 pin; external cable diameter 4 ± 6 mm
(X2) male

name: EX5S/M12AL/10 **code 3890000007**
connector M12 A 5 pin; external cable diameter 4 ± 6 mm
(X3) female

4.2 - Profibus

name: EX5S/M12BL/10 **code 3890000005**
connector M12 B 5 pin; external cable diameter 6.5 ± 8.5 mm
(X2) female

name: EX5P/M12BL/10 **code 3890000006**
connector M12 B 5 pin; external cable diameter 6.5 ± 8.5 mm
(X3) male

4.3 - EtherCAT, Ethernet/IP, Profinet, Powerlink

name: EX4P/M12DL/10 **code 3890000009**
connector M12 D 4 pin; external cable diameter 4 ± 6 mm
(X2, X3) male

5 - TRANSDUCER MATING CONNECTORS

name: EX8P/M12AL/10 **code 3890000011**
connector for digital sensor type SSI / Encoder M12 A 8 pin
external cable diameter 6 ± 8 mm
(X7) male

name: EX4P/M12AL/10 **code 3890000010**
connector for analogue sensor M12 A 4 pin
external cable diameter 4 ± 6 mm
(X4) male

6 - CABLES SETS

We can supply cable sets for fieldbus communication connections X3 to X2 and sensor cables for X7 and X4 ports on request.

All cables are PUR halogen-free.

These molded cables are equipped with 'speed connect' connectors that allow a smaller overall than conventional connectors.

6.1 - Fieldbus cables X3 to X2

Fieldbus type	Cable description
CANopen® code: 3890001001	Bus system cable, CANopen®, DeviceNet™, shielded. cable length: 0.5 m Plug straight M12 code A - Socket straight M12 code A IP65 / IP67 ambient temperature: -25 ÷ 90 °C
ProfiBus DP code: 3890001002	Bus system cable, PROFIBUS (12 Mbps), shielded cable length: 0.5 m Plug straight M12 code B - Socket straight M12 code B IP65 / IP67 ambient temperature: -25 ÷ 90 °C
Ethernet: EtherCAT Ethernet/IP Profinet Powerlink code: 3890001003	Network cable, Ethernet CAT5 (100 Mbps), shielded. cable length: 0.5 m Plug straight M12 code D - plug straight M12 code D, IP67 ambient temperature: -25 ÷ 85 °C

Circuit diagram

6.2 - Sensor / actuator cables

Sensor type	Cable description
Analogue (X4) code: 3890001004	Sensor/actuator cable cable length: 0.6 m Plug straight M12 code A - double socket straight M12 code A IP65 / IP67 ambient temperature: -25 ÷ 90 °C
Digital SSI / Encoder (X7) code: 3890001005	Sensor/actuator cable, shielded, cable length: 3 m Plug straight M12 code A - free cable end, unwired ambient temperature: -25 ÷ 90 °C

EDC-1

DIGITAL ELECTRONIC CONTROL UNIT FOR OPEN-LOOP SINGLE SOLENOID PROPORTIONAL VALVES SERIES 10

PLUG VERSION

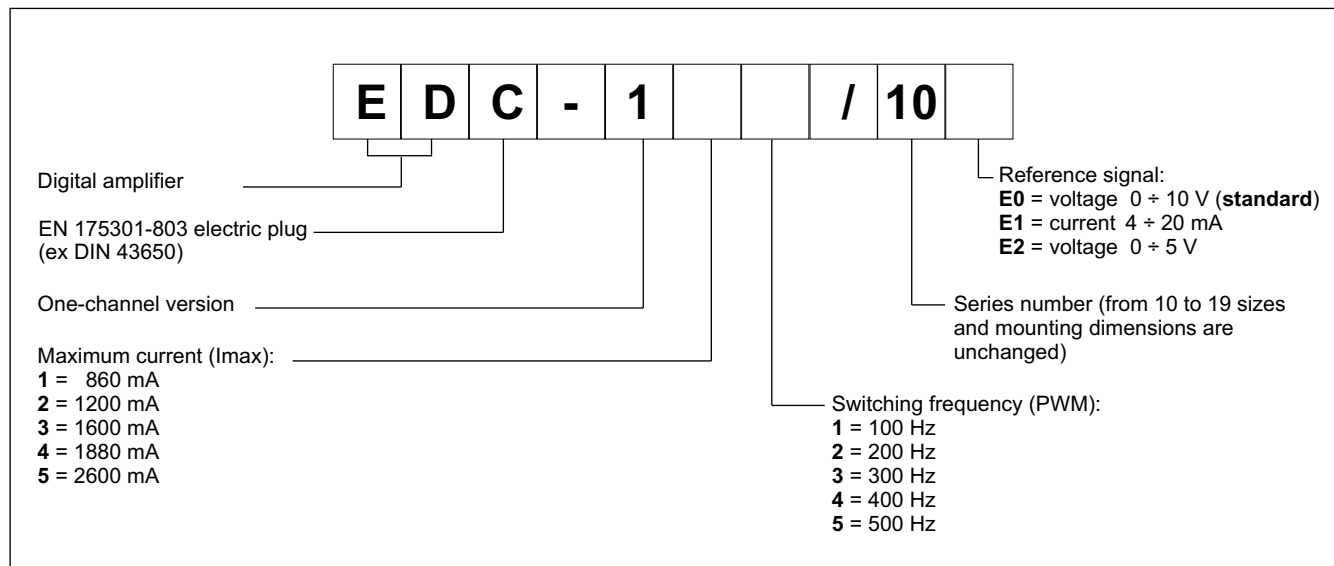

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	10 ÷ 30 - ripple included
Required power	W	min 20 - max 40 (see paragraph 2.1)
Output current	mA	min 800 - max 2600 (see paragraph 1)
Power supply electrical protections		overload over 33V polarity inversion
Output electrical protections		short-circuit
Analogue electrical protections		up to 30 V DC
Available reference signals (selectable from the jumper)	0 ÷ 10 V 0 ÷ 5 V 4 ÷ 20 mA	input impedance 100 kΩ input impedance 100 kΩ input impedance max 500 Ω
Connector type		EN 175301-803 (ex DIN 43650)
Electromagnetic compatibility (EMC): - EMISSIONS IEC EN 61000-6-4 - IMMUNITY IEC EN 61000-6-2		according to 2014/30/EU standards (see paragraph 5 - NOTE 1)
Protection to atmospheric agents (IEC EN 60529)		IP 65/67
Operating temperature range	°C	-20 / +70
Mass	kg	0,10

1 - IDENTIFICATION CODE

The EDC-1 connector is a digital amplifier controlling open loop proportional valves. The unit supplies a variable current proportionally to the reference signal and independently of temperature variations or load impedance, with a resolution of 1% on 2600 mA (the full scale value).

The PWM stage on the solenoid power supply makes it possible to reduce the valve hysteresis thus optimising control precision. The connector is customizable with different maximum current sizes and switching frequencies (PWM), optimized according to the valve to be controlled.

Setting is possible by buttons and display inside the case, or by a notebook with software EDCPC/10 via RS232 (see par. 6.2).

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The connector requires a power supply of 10 ÷ 30 V DC (terminals 1 and 2).

NOTE: The value of the power supply voltage on the connector must be higher than the rated working voltage of the solenoid to be controlled.

The power supply voltage must be rectified and filtered, with maximum admissible ripple within the above voltage range.

The power required by the connector depends on the power supply voltage and on the maximum value of the supplied current (it is determined by the card version). In general a conservative value of the required power can be considered as the product of $V \times I$.

Example: a connector with maximum current = 800 mA and power supply voltage of 24 V DC requires a power of about 20 W.

In case of a card with maximum current = 1600 mA and power supply voltage of 24 V DC the used power is equal to 38.5 W.

2.2 - Electrical protection

The connector is protected against overvoltage and polarity inversion.

A protection against any short circuit is foreseen on the output.

2.3 - Reference signal

The connector accepts voltage reference signals with 0 ÷ 10 V and 0 ÷ 5 V, in 4 ÷ 20 mA current, from an external generator (PLC, CNC) or external potentiometer.

See paragraph 7 for electric connections referring to the different connector versions.

3 - SIGNALS

3.1 - POWER ON (Power supply)

The lit display indicate that the connector is ON and with +24V DC.

4 - ADJUSTMENTS

There are two way adjustments: variables view and parameters editing. The first one enables the real-time monitoring of the control values, for both required and read current, on both channels. The second mode enables the view and the editing of the operating parameters.

4.1 - Variables overview

The card is switched on at the variables view mode, and it shows the first variable value, that is the U1 parameter (reference signal).

Pushing button (1) the current to solenoid (C1 parameter) is displayed. By means of (1) key, the different variables can be selected.

By briefly pressing the keys, switching from a variable to the next, the variable name appears for approximately one second.

Variables that can be selected are:

- U1:** Reference signal:
 0 + 10 V
 0 + 5 V
 4 + 20 mA (displayed as 2 + 10)
- C1:** current required according to the applied reference signal, expressed in ampere, ranging between 0 and 2.6 A

All the mentioned parameters can be viewed on the two digits display, located on the connector front panel.

The selected value has to be read as follows (example for EDC-15*/10E* card):

REFERENCE		DISPLAY U1		DISPLAY C1
(V)	(mA)	(V)		(Ampere)
0	4	0.0	2.0	40 (mA)
5	12	5.0	6.0	13 (A)
10	20	10.	10.	26 (A)

4.2 - Parameters editing

To access the parameter editing, press the key (2) for at least 3 seconds.

The first parameter displayed is G1. To modify it, press the key (1) for two seconds, until the display starts blinking. Use the key (2) to increase the value and the key (1) to decrease it. To save the new value, press both the keys. The display stops blinking.

Pressing the key (2) again is possible to scroll all the parameters. To modify another parameter, repeat the steps above-mentioned for the G1 parameter.

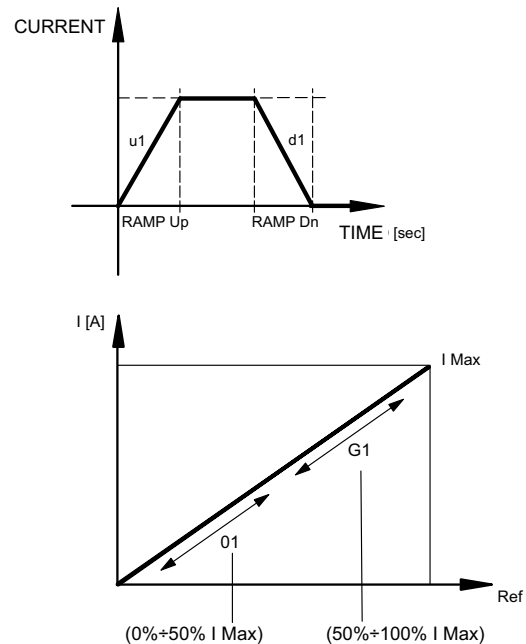

The parameters that can be selected are:

- G1:** "I Max" current, expressed in milliampere.
 It sets the maximum current to the solenoid, when the reference signal is at the maximum value of +10 V (or 20 mA). It is used to limit the maximum value of the hydraulic size controlled by the valve.
 Default value = I_{max}
 Range = 50 ÷ 100% of I_{max}
- o1:** "I Min" current, expressed in milliampere.
 It sets the offset current to the solenoid, when the reference signal exceeds the limit of 0,1 V (or 0,1 mA). It is used to null the insensitiveness area of the valve (dead band).
 Default value = 0%
 Range = 0 ÷ 50% of I_{max}
- u1:** "Ramp Up" increasing ramp time, expressed in seconds.
 It sets the current increasing time, for a variation from 0 to 100% of the input reference.
 It is used to slow down the valve response time in case of a sudden variation of the reference signal.
 Default value = 00 sec.
 Range = 00 ÷ 50 sec.
- d1:** "Ramp Dn" decreasing ramp time, expressed in seconds.
 It sets the current decreasing time, for a variation from 100% to 0 of the input reference. It is used to slow down the valve response time in case of a sudden variation of the reference signal.
 Default value = 00 sec.
 Range = 00 ÷ 50 sec.

Fr: PWM frequency, in Hertz.

It sets the PWM frequency, which is the pulsating frequency of the control current. The PWM decreasing improves the valve accuracy, decreasing the regulation stability. The PWM increase improves the regulation stability, causing a higher hysteresis.

Default value = PWM (according to version card)
 Range = 50 ÷ 500 Hz

4.3 - Error signal

- EE:** breakdown cable error on 4 + 20 mA signal (threshold 3 mA).
 Reset the alarm turning off the +24 V DC.

5 - INSTALLATION

The electronic unit with connector shape mounting is suitable for assembly directly on the 4-pin coil connection of the proportional valve to be energized.

NOTE 1 : To observe EMC requirements it's important that the control unit electrical connection is compliant with the wiring diagram of chapter 7.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electrical motors, inverters and electrical switches).

A complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

6 - START UP, CONTROL SETTINGS AND SIGNAL MEASUREMENT

6.1 - Set up

Settings can be changed by either acting on the (1) and (2) keys located on the card front panel, or using the EDCPC/10 software kit with converter and related cable.

6.2 - EDCPC/10 Software (code 3898301001)

The relevant hardware and software kit (to be ordered separately) allows to read the values and to set the connector easily.

It is necessary to connect the EDC-1 to the PC through a special cable (flat cable). The socket is located inside the EDC-1 connector, behind the protective cover.

The EDCPC/10 software is compliant with Microsoft Windows 2000, XP, Vista and Win 7 operating systems.

Digital amplifier
for rail mounting DIN EN 50022

For open loop

Versions:

1 = for single solenoid proportional valve
2 = for double solenoid proportional valve
3 = two channels for an independent control of two single solenoid valves

Max current (I Max):
(first channel for EDM - M3 version)

1 = 860 mA 3 = 1600 mA 5 = 2600 mA
2 = 1200 mA 4 = 1880 mA

Only for EDM-M3 version: omit for other versions

Max current (I Max) second channel:

1 = 860 mA 3 = 1600 mA
2 = 1200 mA 4 = 1880 mA

Pin 12 function:
Omit for IOL version
A = external enable on PIN 12
B = 24 V aux on PIN 12 (internal enable) (**standard**)

Reference signal:
E0 = voltage $\pm 10V$ (**standard**)
E1 = current $4 \div 20$ mA
IOL = IO-Link interface

Series N.
(from 30 to 39 sizes and mounting dimensions remain unchanged)

Only for EDM-M3 version: omit for other versions

Switching frequency (PWM) of the second channel:

1 = 100 Hz 3 = 300 Hz
2 = 200 Hz 4 = 400 Hz

Switching frequency (PWM):
(first channel for EDM-M3 version)

1 = 100 Hz 3 = 300 Hz
2 = 200 Hz 4 = 400 Hz

NOTE: other setting available upon request. Please contact our technical dept.

2 - FEATURES

Card with analogue reference signal: version A and version B

The versions differ for pin 12 function.

EDM-M*/30*-A is configured for external enable: the amplifier is powered but not operational, and will supply current to the valve only if an enabling signal received from the outside (PLC) is present. The enable signal is expected on pin 12.

This version offers faster response times as it eliminates initialization times at power up. The external enable can be deactivate by parameter.

On EDM-M*/30*-B the pin 12 duplicates the power supply signal $9 \div 36V$ from pin 1 so it operates as an auxiliary power supply.

The enable is internal. This is a non-editable and backward-compatible setting with 20 series.

Card with IOL interface

Reference signal and enabling are set via IO-Link. A redundant enable signal can be activated via software on pin 12.

Controller functions

Power amplifier with current controlled by analogue input signal for three different applications:

- M1: control of 1 single solenoid proportional valve (e.g. throttle, pressure, directional.)
- M2: control of 1 dual solenoid proportional valve (e.g. directional)
- M3: control of 2 single solenoid proportional valves, via 2 independent channels.
- The current to solenoid is closed loop controlled, so is independent from supply and solenoid resistance.
- Parameters programmable via software: ramps, PWM frequency, offset, gain, dither.

Adaptation of the valve characteristic curve

- Deadband compensation

Monitoring functions

- The output stage is monitored for cable breakdown, is short circuit proof and disables the power stage in case of an error
- Failure monitoring for current analogue inputs

Other characteristics

- Scaling of analogue inputs
 - Card configuration via software
 - Diagnostic
- additional for IOL version:
- Autorestore
 - Improved diagnostic available at PLC
 - Independent enabling / disabling for each channel in M3 version.

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 9 to 36 VDC (typical 24 V) of a power supply. This power supply must correspond to the current EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over-voltage protection (varistors or freewheeling diodes).

The power supply for the IOL card version must comply with IO-Link standards so the requested range for power supply is 19 to 30 V DC (24 V DC $\pm 10\%$).

It is recommended using a regulated power supply (linear or switching mode) for the card supply and for the sensors.

NOTE: The value of the power supply voltage on the card must not be lower than the rated working voltage of the solenoids to be controlled.

For EMC requirements the 0V DC of the power supply must be connected to GND on electrical cabinet.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The digital input must have a voltage from 12 to 24 V;

ON > 8 to U_b

OFF < 5V. Input resistance 17 kohm.

See block diagrams and wiring for connections.

3.4 - Digital Output PIN 9 - Card OK

This output permits to check the state of the card: when the card works normally, there is the same voltage as for the power supply on this pin, referred to the 0V, pin 2; when there is an anomaly, the control logic forbids the power output to the solenoids and switch this output to zero.

Max current 50 mA.

Low level < 2 V

High level > max U_b , where U_b = power supply

3.5 - Auxiliary voltages (for E0 and E1 versions)

PIN 13 - Voltage equals to +10 V - Max current 50 mA

PIN 14 - Voltage equals to -10 V - Max current 50 mA.

On EDM-M B version only:

PIN 12 - Voltage equals to power supply voltage (pin 1 - referred to pin 2) - Max current 100 mA

3.6 - Output value

The output value is current, maximum range 200 ÷ 4000 mA, according to the configuration of the card ordered.

All cables which lead outside must be screened.

3.7 - Reference signals

EDM-M* cards versions E0 and E1 accept voltage reference signals 0 ÷ 10 V and ± 10 V, current reference signal 4 ÷ 20 mA, coming from an external generator (PLC, CNC) or from an external potentiometer powered by the card itself.

The card EDM-M* IOL version accept a digital signal from PLC.

Reference value depends on the card version as stated in diagrams here below.

4 - EDM-M, DUPLOMATIC VALVES AND DEFAULT SETTINGS

EDM-M card is pre-set at factory. The following table shows the default settings of EDM-M standard versions and the current Duplomatic valves to be coupled with. Different settings are available upon request.

Curve adaption parameters (par. 8.4) permit to scale the current up to 120% of the nominal CURRENT value set.

Cards are tuned by the manufacturer to optimize the performance in accordance with the reference coil selected. Working conditions far from nominal settings could require advanced tuning. Apply for them at our technical dept.

NOTE about EDM-M3: Combinations shown here below are just few examples of possible matches. All combinations provided in the ordering code are possible.

5 - INSTALLATION

5.1 - Wires sizing

Suggested cable cross sections for solenoid supply are shown in the table below. However, the sizing has to ensure a voltage to the coil of not less than 90% of its nominal value.

The voltage drop through the card is 0.5 V.

Suggested cable cross sections for solenoid supply [mm²]

Card supply voltage	Coil type	Cable length		
		< 10 m	10 to 25 m	25 to 50 m
24V	860 mA - 24V	0.5	0.5	1
	1600 mA - 24V	0.5	1	2.5
	1880 mA - 12V	0.5	0.5	0.5
	2600 mA - 12V	0.5	0.5	0.5
12V	1880 mA - 12V	1	2.5	6 (NOTE)
	2600 mA - 12V	1.5	4	6

NOTE: in order to use a wire with a smaller cross section it is possible to increase the supply voltage.

Power supply cable must be tailored in accordance with the rules above, taking into account the number of coils connected.

- The 15-poles terminal strip accepts connection of a 1.5 mm² conductor with ferrule. Applications that require larger cross sections require mandatorily a junction box.
- We suggest a cross section of 0.25 mm², up to 10-meter length for signal cables.

As a general rule, the valve and the electronic card connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.2 - Card power consumption

The power required by the card depends on output current to be supplied (determined by the card version) and on the nominal voltage of the coil to be feed.

A conservative value of the required power can be considered as the product of V x I.

Examples:

- an EDM-M111 card with maximum current 860 mA coupled with a coil with nominal voltage 24V requires 20W power.
- an EDM-M35411 card with maximum current 4500 mA coupled with a coil with nominal voltage 12V requires 54W power.

The maximum power consumption of the card is 60 W.

6 - LED KEY

The card is equipped with LEDs on the front panel. L1 to L4 led are for a fast check of the card operation.

- ALL LEDS BLINKING: low voltage on power supply. This state is also showed when the USB communication is active but the card is not powered.
- GREEN led: power (ON: card powered, OFF no power supply)
- YELLOW led: functions as in tables below, according to the card version.

EDM-M1				
LED	ON (function ok)	FLASHING (failure)		OFF
		slow	fast	
L1	Reference	signal missing	-	-
L2	Solenoid	open coil	short circuit	not enabled NOTE 1
L3	not in use			
L4	Ready	-	-	fault NOTE 2

EDM-M2				
LED	ON (function ok)	FLASHING (failure)		OFF
		slow	fast	
L1	Reference	signal missing	-	-
L2	Solenoid 1	open coil	short circuit	not enabled NOTE 1
L3	Solenoid 2			
L4	Ready	-	-	fault NOTE 2

EDM-M3				
LED	ON (function ok)	FLASHING (failure)		OFF
		slow	fast	
L1	Reference 1	signal missing	-	-
L2	Solenoid 1	open coil	short circuit	not enabled NOTE 1
L3	Reference 2	signal missing	-	-
L4	Solenoid 2	open coil	short circuit	not enabled NOTE 1

L5 and L6 led are for the IO-Link communication (IOL version only).

LED	ON	FLASHING
L5	-	device linked to Master
L6	disconnected device	powered device, not connected to Master

NOTE 1: only for EDM-M*-A.

NOTE 2: with the diagnostics in AUTO mode, in the event of a 'open coil' error, the card attempts to reset cyclically so the LED flashes.

NOTE 3: if the channel has been disabled via software, the relative LEDs are disabled also.

7 - DEVICE SETUP

Please note that the USB port is not galvanically isolated.

The latest released version of EBC software can be downloaded from Diplomatic MS website.

The software is compatible with Microsoft OS Windows 7, 8 and 10.

Please refer to 89251 ETM Technical Manual.

7.1 - E0 and E1 versions

Card configuration occurs by EBC software from a PC or by EBC app. Cable connection with the card is always necessary.

All the ancillary equipment is available as a separate kit.

7.2 - IOL version

Card configuration must occur by the IO-link master, that stores the parameters set in the PLC. In the event of a reset or a card replacement the parameter set will be restored by the PLC. Please refer to the 89251 ETM Technical Manual for stored parameters list.

The setting of parameters not included in the 'stored parameter list' of the IO-link master is feasible using the EBC software, but this parameterization must be saved and kept separately because in the event of a parameter reset by the master it would be overwritten.

Configurations made by the EBC software are recommended only for special card upgrades (card firmware, etc..) or special needs.

7.3 - EDMPC/30 kit (code 3898201020)

The kit includes:

- USB communication cable
(micro USB-B male - USB A male),
length = 3 m
- USB key with software to be installed on a PC
- Adapter cable for OTG USB2.0 smartphone
(USB A female - USB Micro-B male)
- Adapter cable for OTG USB3.0 smartphone
(USB A female - USB-C male)

The applicable adapter cable depends on the device being in use.

7.4 - EBC app

The app requires Android devices that support OTG function (Usb On-The-Go), and can be downloaded from the Play Store.

On-line registration is required at first access. Once registered the app can even work off-line.

The EBC app allows diagnostic and configuration activities of USER level parameters. To apply changes requires a password.

8 - MAIN FEATURES

8.1 - Diagnostics

Activates / deactivates the error detection. Off is useful in troubleshooting tasks.

parameter DIAGNOSTICS (ENABLE | DISABLE | AUTO)
 default for EDM-M*/30*-A: ENABLE
 default for EDM-M*/30*-B: AUTO

8.3 - Input signal scaling

Set the coefficients for offset and gain of the input signal.

EDM-M1	EDM-M2	EDM-M3
SIGNAL_OFFSET	SIGNAL_OFFSET	SIGNAL1_OFFSET SIGNAL2_OFFSET
range: E0: -3 ... 3V default: 0.00	E1: -4 ... +4 mA	
SIGNAL_GAIN	SIGNAL_GAIN	SIGNAL1_GAIN SIGNAL2_GAIN
range: 0.40 ... 10.00 default: 1.00		

8.4 - Curve adaption

Deadband compensation and current input scaling are customizable. Values in percent.

EDM-M1	EDM-M2	EDM-M3
ADJ_MIN	ADJ_MIN_A ADJ_MIN_B	ADJ1_MIN ADJ2_MIN
range: 0 ... 50% default: according to the card version		
ADJ_MAX	ADJ_MAX_A ADJ_MAX_B	ADJ1_MAX ADJ2_MAX
range: ADJ_min ... 120% default: 100%		
ADJ_TRIGGER	ADJ_TRIGGER	ADJ1_TRIGGER ADJ2_TRIGGER
range: 0... 20% default: 1.5%		

8.5 - Ramps

Parameters for ramp up and ramp down can be set in milliseconds. A and B tag the quadrants. These values set the amount of time that the command signal will take to follow a step change in the reference signal 0 ÷ 100.

EDM-M1	EDM-M2	EDM-M3
RAMP_UP RAMP_DOWN	RAMP_UP_A RAMP_DOWN_A RAMP_UP_B RAMP_DOWN_B	RAMP1_UP RAMP1_DOWN RAMP2_UP RAMP2_DOWN
range: 0 ... 20000 ms default: 0		

8.6 - PWM

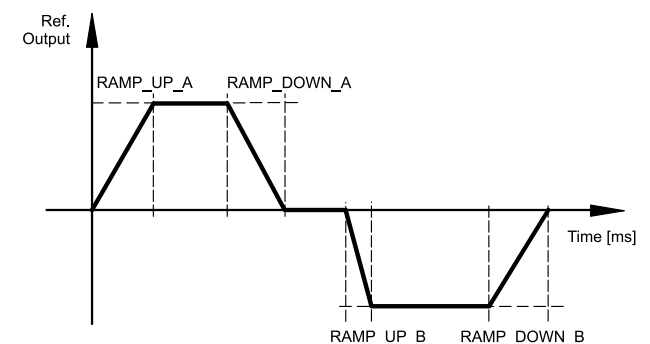

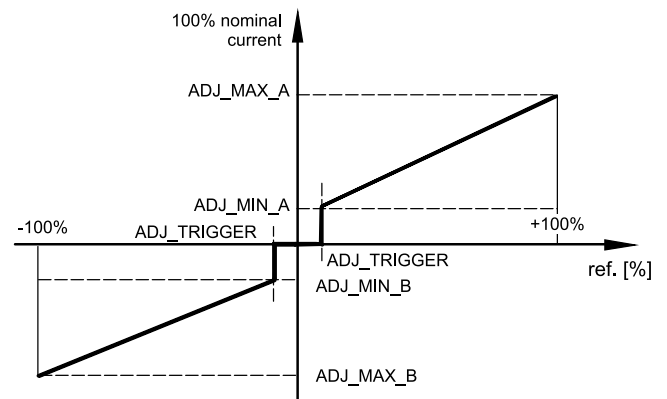

Pwm frequencies for current output.

EDM-M1	EDM-M2	EDM-M3
PWM	PWM	PWM1 PWM2
range: 70 ... 500 Hz default: preset value, according to the card version		

8.2 - Enable (version A only)

Activates / deactivates the external enable.
 parameter ENABLE (INT|EXT)
 default: EXT

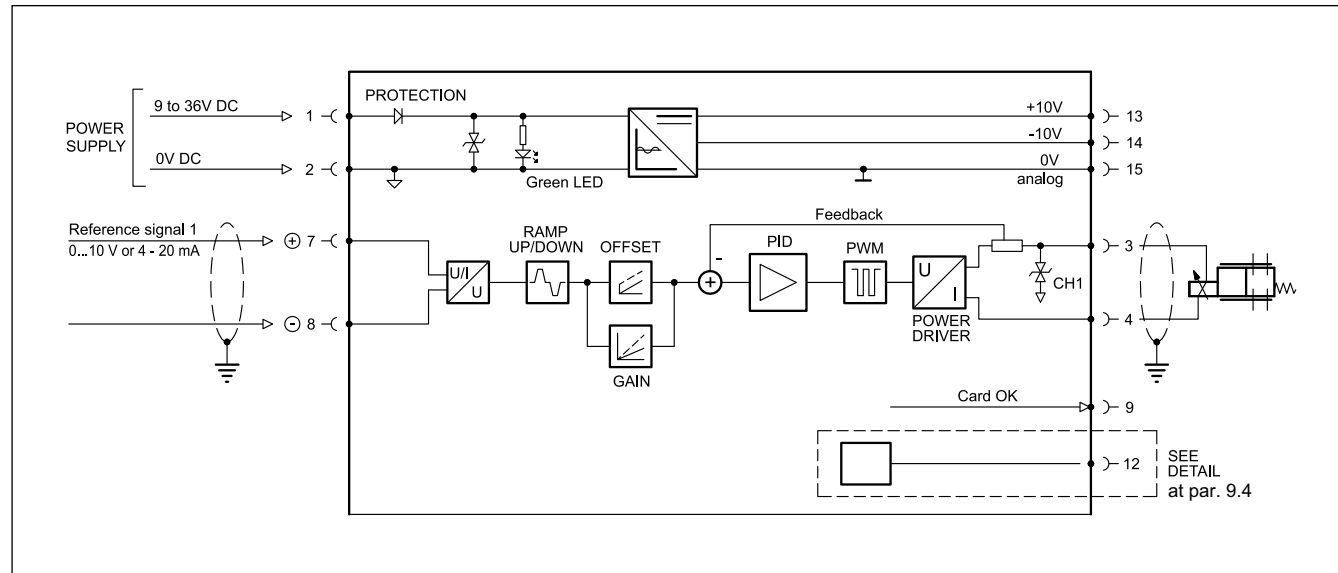

NOTE: if switched to INT, the PIN 12 still not used. No other function are possible on this PIN.

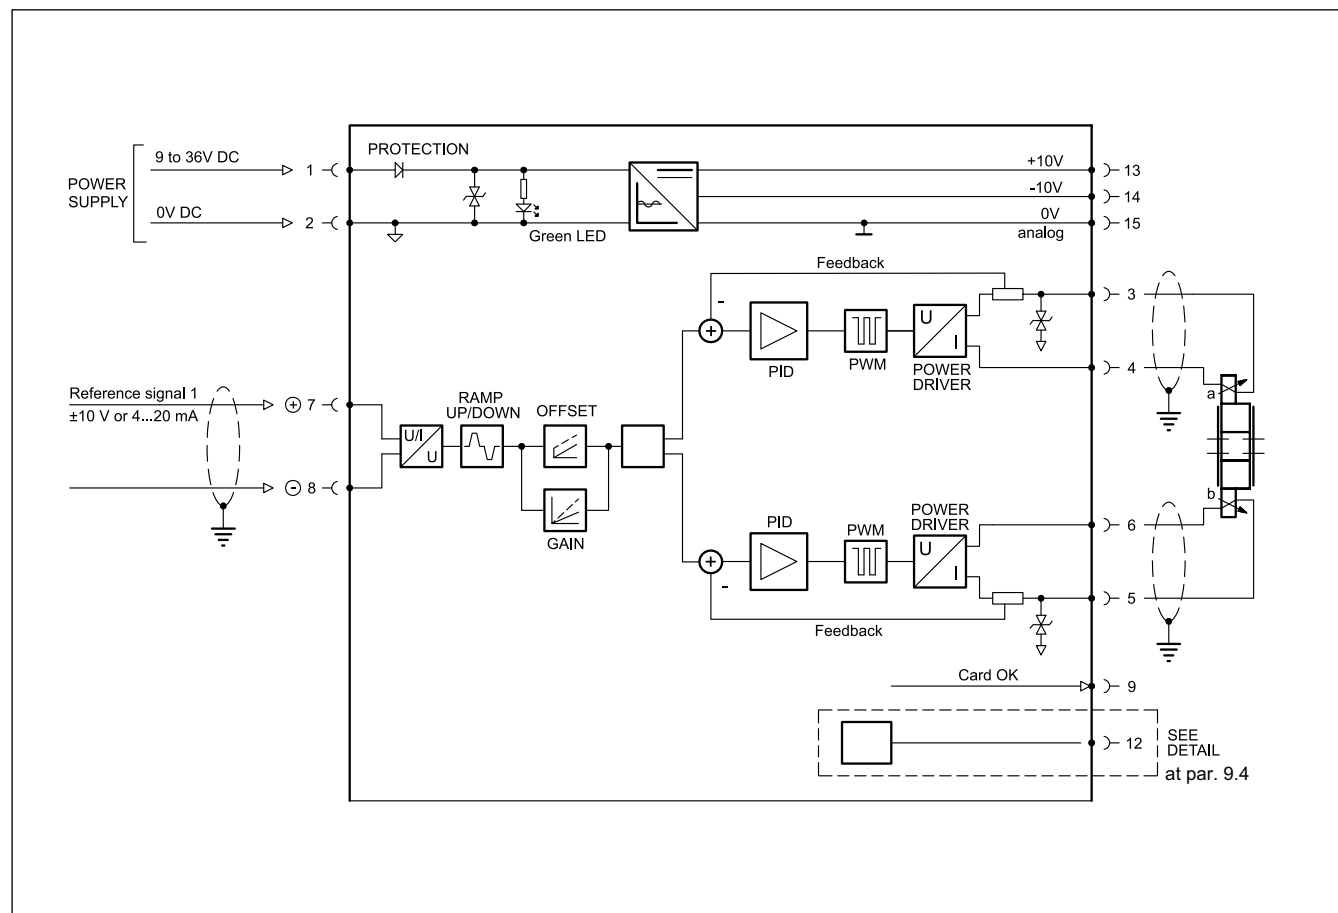

9 - BLOCK DIAGRAMS

The function of PIN 12 varies depending on the card version. Those with E0 or E1 type of reference signal can be either ENABLE input (A version) or an auxiliary voltage output (B version).

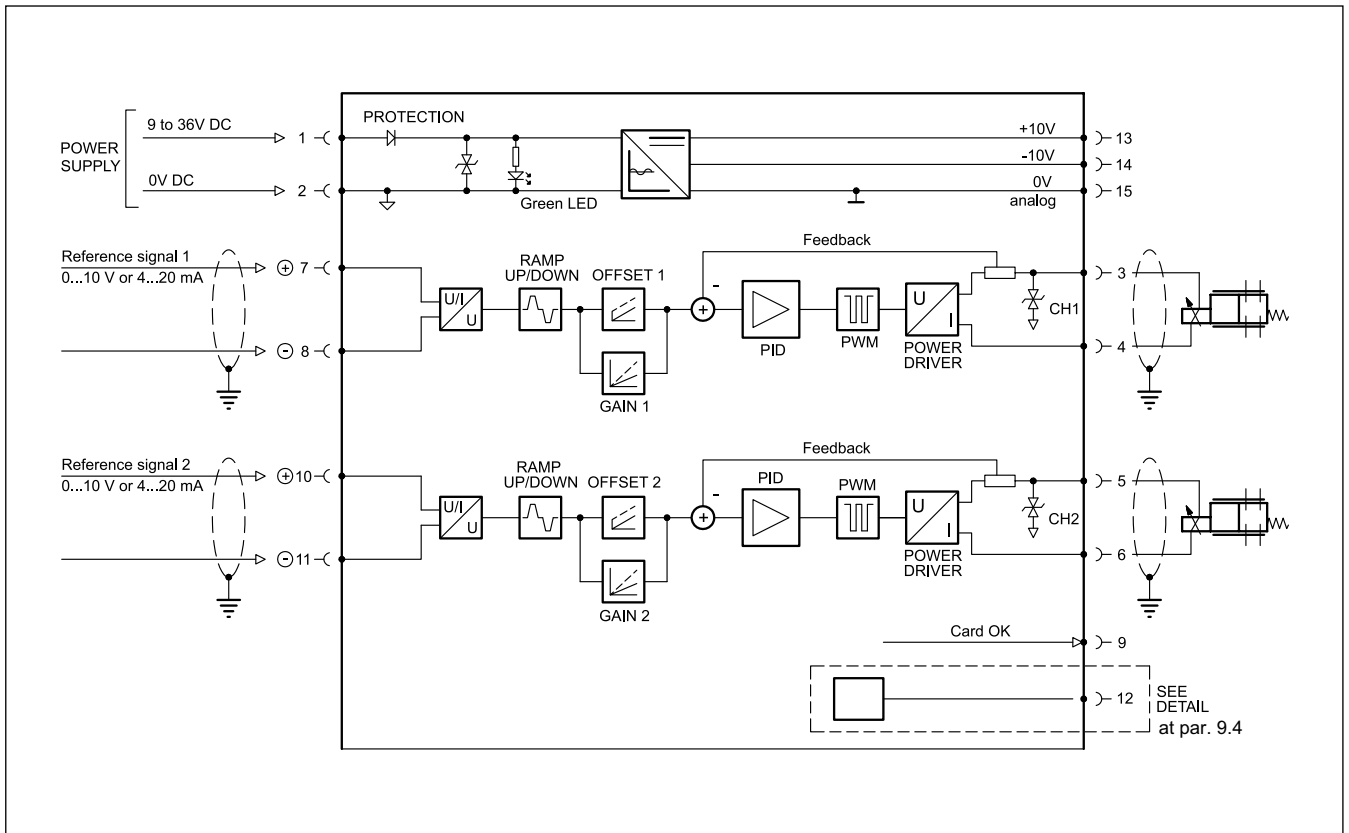

9.1 - EDM-M1 with reference signal type E0 or E1

9.2 - EDM-M2 with reference signal type E0 or E1

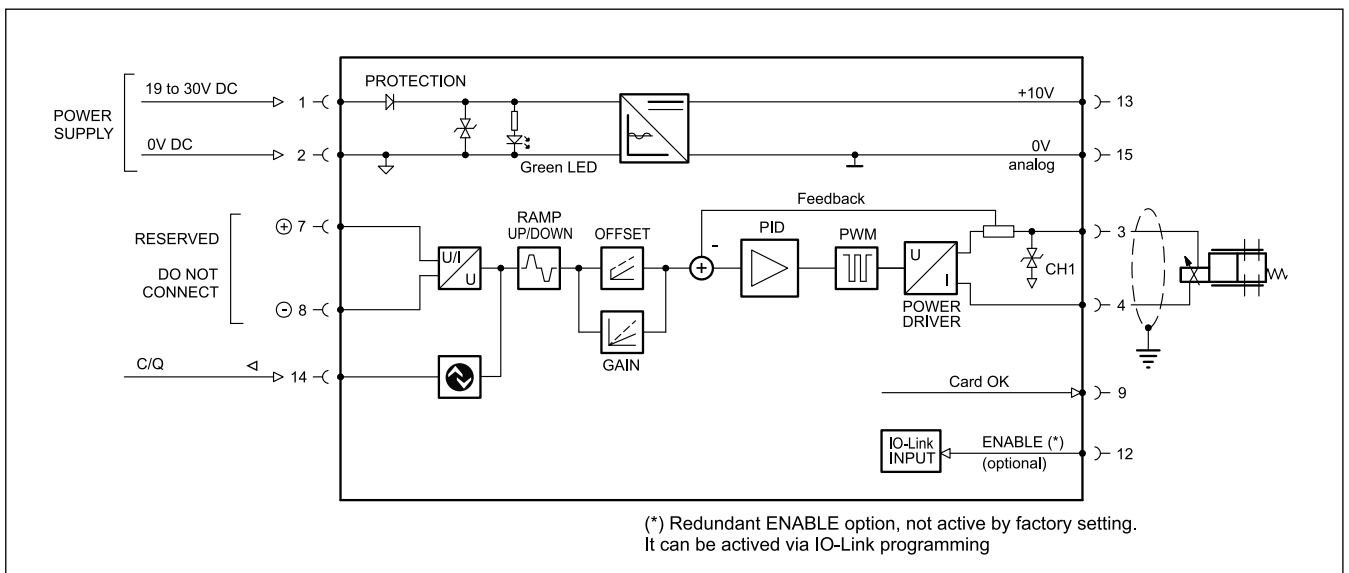

9.3 - EDM - M3 with reference signal type E0 or E1

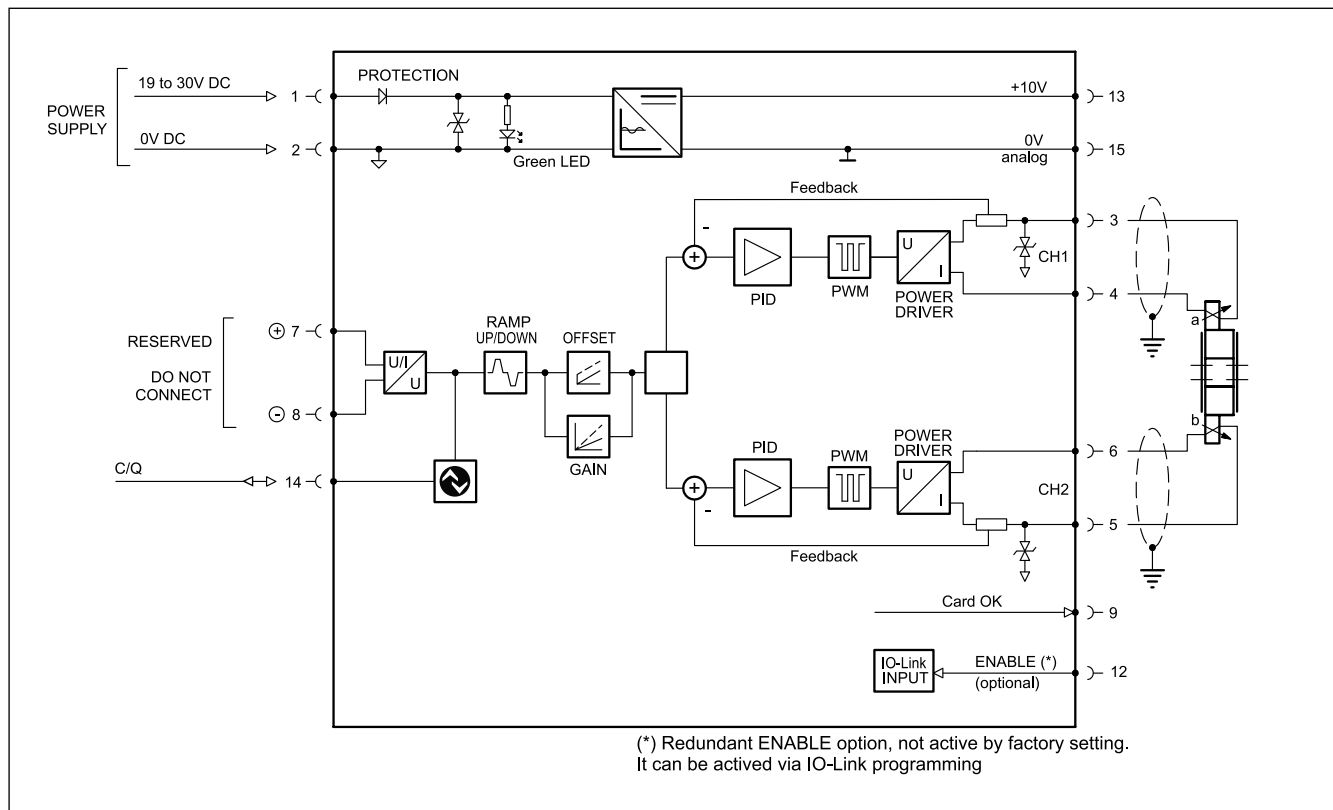

9.4 - Function of PIN 12 with reference signal type E0 or E1

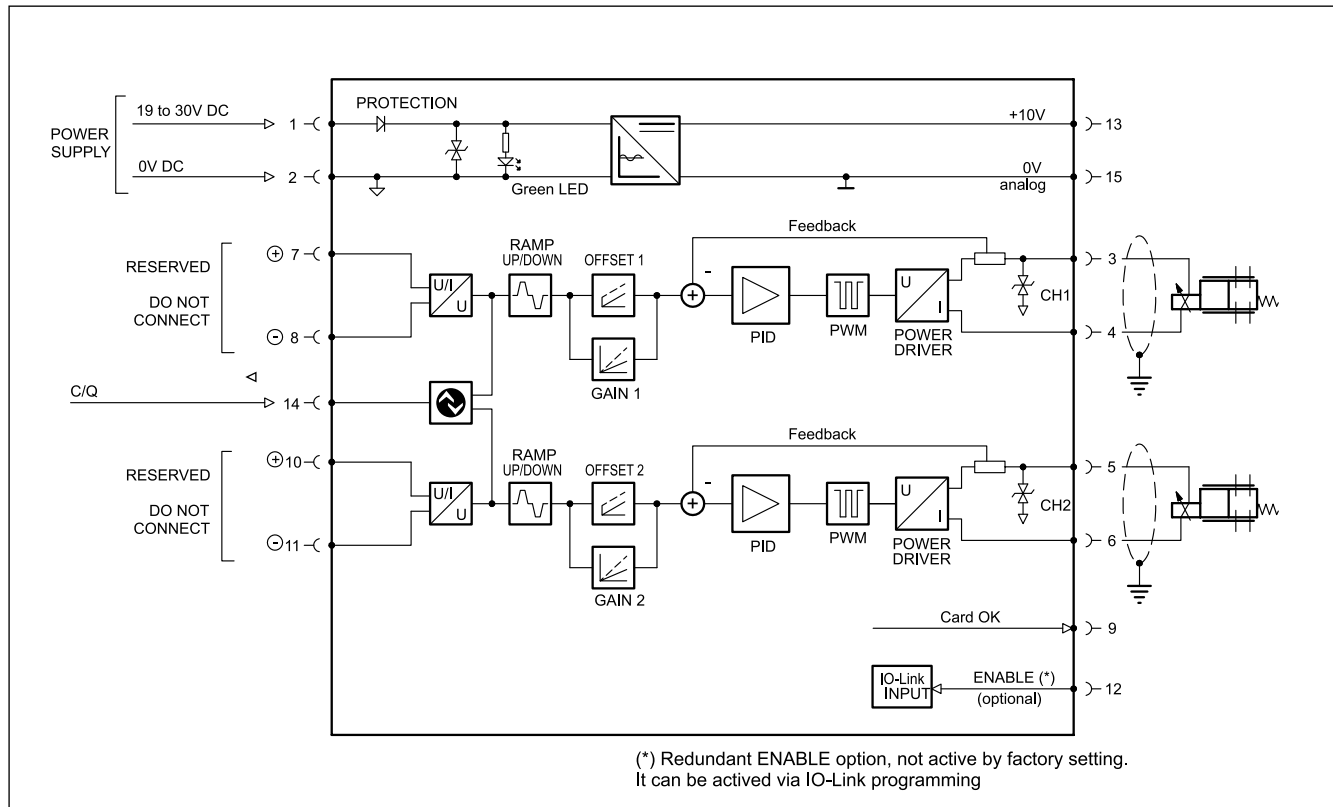

9.5 - EDM - M1 with reference signal type IOL

9.6 - EDM-M2 with reference signal type IOL

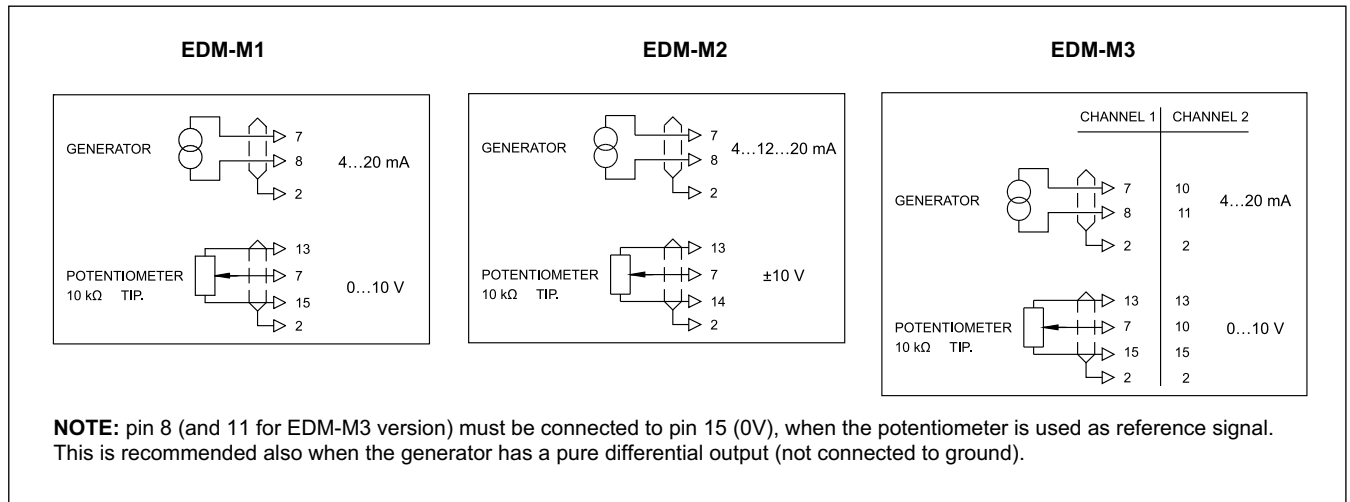

9.7 - EDM-M3 with reference signal type IOL

10 - WIRING

10.1 - with reference signal type E0 or E1

10.2 - with reference signal type IOL

Place the card in the control cabinet.

The card is not galvanically isolated.

The 0V power supply of the EDM-M* card must be connected to the same ground point of the PLC.

11 - OVERALL AND MOUNTING DIMENSIONS

dimensions in mm

1 - IDENTIFICATION CODE

2 - CHARACTERISTICS

Controller functions

Power amplifier with current controlled by analogue input signal for valves with feedback:

RPCER1: two-ports flow control valve, with pressure and temperature compensation - catalogue 82 250

DXE*F: continuous control valves, high response - catalogues 85 130 and 85 230

DSE*F: directional valve - catalogue 83 240 and 83 290

- The spool position closed loop controlled, so is independent from supply and solenoid resistance.
- Parameters programmable via software: ramps, offset, gain, dither.

Adaptation of the valve characteristic curve

- Deadband compensation
- Max pressure / flow value adjustment (DSE*F, RPCER1)

Monitoring functions

- The output stage is monitored for cable breakdown, is short circuit proof and disables the power stage in case of an error
- Failure monitoring for current analogue inputs

Other characteristics

- Scaling of analogue inputs
- Card configuration via software, through on-board micro USB port
- Diagnostic

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 24 VDC ($19 \div 30\text{ V}$) of a power supply. This power supply must correspond to the current EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over-voltage protection (varistors or freewheeling diodes).

It is recommended using a regulated power supply (linear or switching mode) for the card supply.

NOTE: The value of the power supply voltage on the card must not be lower than the rated working voltage of the solenoids to be controlled.

For EMC requirements the 0V DC of the power supply must be connected to GND on electrical cabinet.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The digital input must have a voltage from 12 to 24 V;

ON $> 8\text{ U}_b$

OFF $< 5V$. Input resistance 17 kohm.

See block diagrams and wiring for connections.

3.4 - Digital Output PIN 9 - Card OK

This output permits to check the state of the card: when the card works normally, there is the same voltage as for the power supply on this pin, referred to the 0V, pin 2; when there is an anomaly, the control logic forbids the power output to the solenoids and switch this output to zero.

Max current 50 mA.

Low level $< 2\text{ V}$

High level $> \max U_b$, where U_b = power supply

3.5 - Output values

Output values are in current, between $430 \div 4000\text{ mA}$, comprehensive of curve adaptation.

A feedback monitor signal is available on pin 14. All cables which lead outside must be screened.

3.6 - Reference signals

The card accepts voltage reference signals $0 \div 10$ V and ± 10 V, current reference signal $4 \div 20$ mA, coming from an external generator (PLC, CNC).

Reference value depends both on the card version and on the coupled valve, as stated in diagrams here below.

Card	Signal ref.	Valve
EDM-J1	$0 \div 10$	RPCER1
		DSE*F-*SA
	± 10	DXE*F
EDM-J2	± 10	DSE*F

3.7 - Monitor output

The spool position is monitored on pin 14. The monitor signal complies with the value of the reference signal, in voltage or in current.

4 - EDM-J*, DIPLOMATIC VALVES AND DEFAULT SETTINGS

These cards are set at factory depending on the ordering code you choose. Cards are tuned by the manufacturer to optimize the performance in accordance with the selected reference valve.

The RPCER1 and DSE3F valves do not require unique parameter sets and can be connected to any EDM-J * card for respectively RPCER1 or DSE3F. Working conditions far from the nominal settings may require advanced tuning. Please consult our Technical Dept.

DXE3F valves instead require a customized parameter set for each valve, identified by the serial number. The univocal parameter set is delivered together with the valve and must be loaded on the EDM-J card.

The serial number acknowledgement is expected during the parameter set uploading procedure.

5 - INSTALLATION

5.1 - Wires sizing

Suggested cable cross sections for solenoid supply are shown in the table below. However, the sizing has to ensure a voltage to the coil of not less than 90% of its nominal value.

Suggested cable cross sections for solenoid supply [mm²]

Valve	Coil type	Cable length		
		< 10 m	10 to 25 m	25 to 50 m
RPCER1	860 mA - 24V	0.5	0.75	1
DXE3F	2600 mA - 12V	0.75	1.5	2.5
DXE5F	3700 mA - 12V	1	1.5	2.5
DSE3F	1880 mA - 12V	0.5	1	2
DSE5F	2800 mA - 12V	0.75	1.5	2.5

Power supply cable must be tailored according to the rules above, taking into account the number of connected coils.

- We suggest a cross section of 0.25 mm², up to 50 meter length for signal cables.
- The 15-poles terminal strip accepts connection of a 1.5 mm² conductor with terminal ferrule. Applications that require larger cross sections require mandatorily a junction box.

As a general rule, the valve and the electronic card connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.2 - Card power consumption

The power required by the card depends on output current to be supplied (determined by the card version) and on the nominal voltage of the coil to be feed.

A conservative value of the required power can be considered as the product of $V \times I$.

Valve	Card power consumption [W]
RPCER1	25
DXE3F	33
DXE5F	46
DSE3F	25
DSE5F	26

6 - LED KEY

The card is equipped with LEDs on the front panel, for a fast check of the card operation.

- GREEN led: power (ON: card powered, OFF no power supply)
- YELLOW leds: functions as in table below.

LED	ON (function ok)	FLASHING (failure)		OFF
		slow	fast	
L1	Reference	out of range	-	-
L2	Solenoids	open coil	short circuit	-
L3	LVDT	out of range	-	-
L4	Ready	fault	-	missing external enable
L5	-	-	-	-
L6	-	-	-	-

- ALL LEDS BLINKING: low voltage on power supply.
This state is also showed when the USB communication is active but the card is not powered.

7 - DEVICE SETUP

Card configuration is possible only by EBC software version 3.2.0.8 or later, connecting the card to a PC by a standard cable type USB cable type A male - USB male micro B (not supplied).

Latest released version of EBC software can be downloaded from Duplomatic MS website, from the SOFTWARE DOWNLOAD page.

The EBC software is compatible with Microsoft OS Windows 7, 8 and 10.

Please refer to *89255 ETM Technical Manual for details.*

8 - MAIN FEATURES

8.1 - Diagnostics

Activates / deactivates the error detection. Deactivate the error detection can be useful during some troubleshooting tasks.

parameter DIAGNOSTICS (ENABLE | DISABLE | AUTO)

default for EDM-J*/30*-A: ENABLE

default for EDM-J*/30*-B: AUTO

8.2 - Enable (version A only)

Activates / deactivates the external enable.

parameter ENABLE (INT|EXT)

default: EXT

NOTE: if switched to INT, the PIN 12 still not used. No other function are possible on PIN 12.

8.3 - Input signal scaling

Set the coefficients for offset and gain of the input signal.

EDM-J1

SIGNAL_OFFSET

range: E0: -3 ... 3V
E1: -4 ... +4 mA
default: 0.00

SIGNAL_GAIN

range: 0.40 ... 10.00
default: 1.00

EDM-J2

SIGNAL_OFFSET

SIGNAL_GAIN

8.4 - Ramps

Parameters for ramp up and ramp down can be set in milliseconds. A and B tag the quadrants. These values set the amount of time that the command signal will take to follow a step change in the reference signal 0 ÷ 100.

EDM-J1

RAMP_UP

RAMP_DOWN

EDM-J2

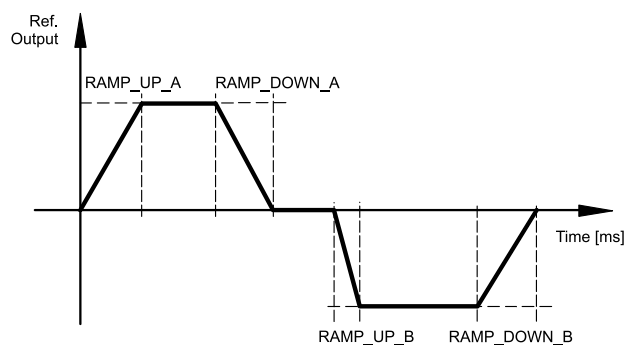

RAMP_UP_A

RAMP_DOWN_A

RAMP_UP_B

RAMP_DOWN_B

range: 0 ... 20000 ms
default: 0

8.5 - Curve optimization

Deadband compensation and current input scaling are customizable. Some parameters may appear as 'non-editable' by the user during the configuration of the card, because they are automatically set by the EBC configuration software depending on the type of valve.

Values in percent.

EDM-J1

ADJ_MIN

range: 0 ... 50% of the nominal current

default: according to the card version

ADJ_MAX

range: ADJ_min ... 120% of the nominal current

default: 100%

ADJ_TRIGGER

range: 0... 20%

default: 1.5%

EDM-J2

ADJ_MIN_A

ADJ_MIN_B

ADJ_MAX_A

ADJ_MAX_B

ADJ_TRIGGER

EDM-J1/*RPCER1

EDM-J1/*DXE*F

EDM-J2/*DSE*F

8.6 - Dither

Amplitude and frequency values for the dither are customizable.

amplitude range: 0...40% of nominal current

frequency range: 0... 500 Hz

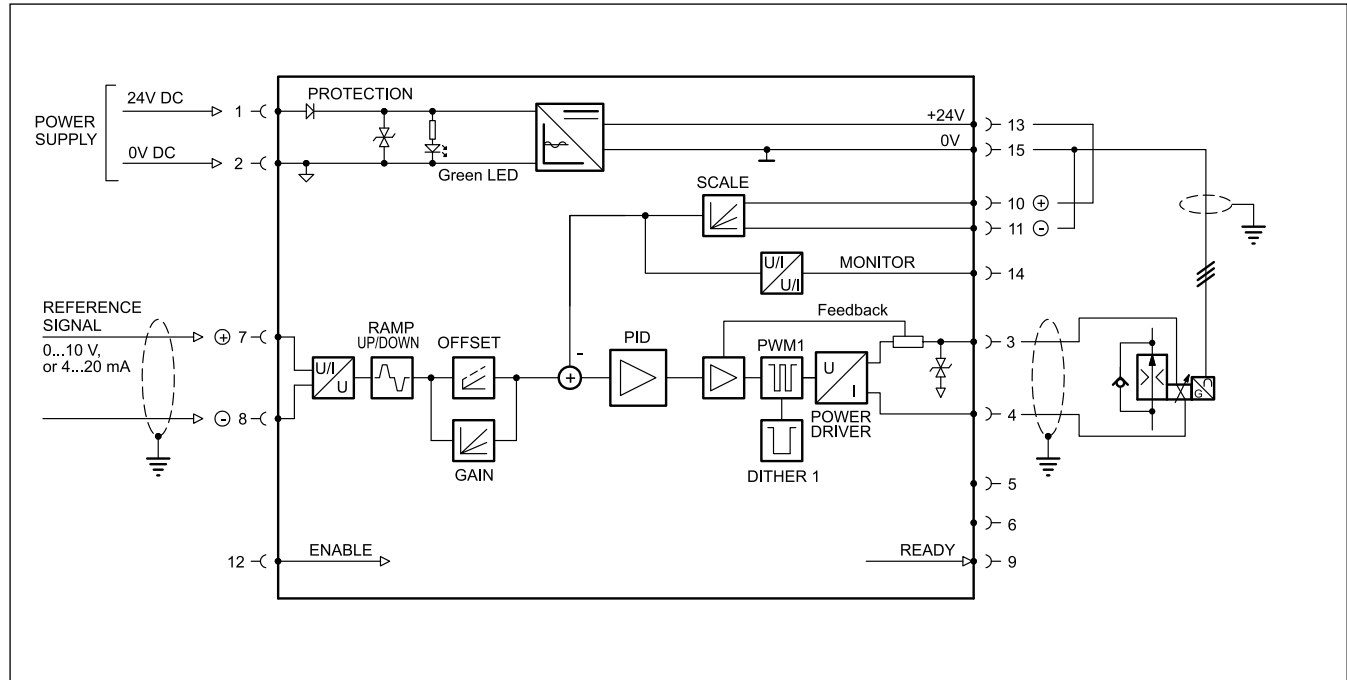

9 - CARDS BLOCK DIAGRAMS

The function of the PIN12 varies depending on the card version. It can be 'ENABLE input' (A version) or it can be 'not connected'.

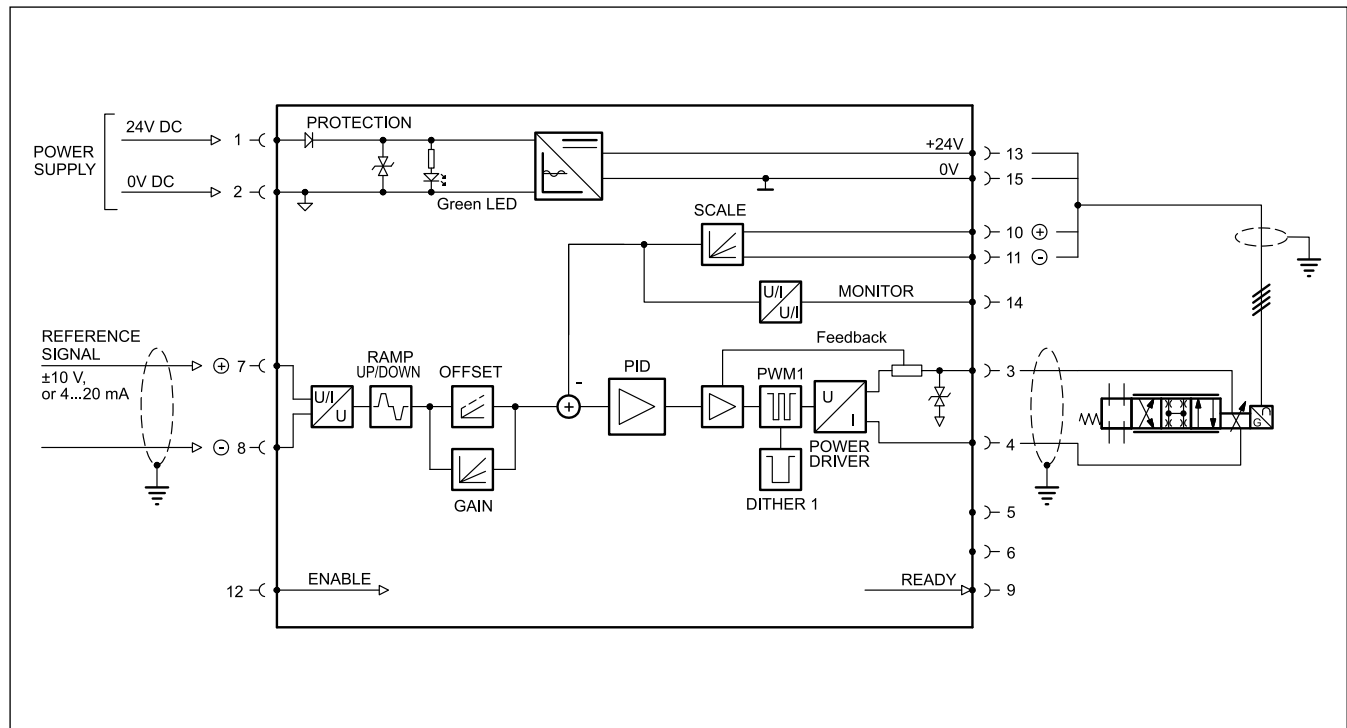

NOTES:

1. The shield of the cable must be connected on valve side (with valve body connected to GND)
2. 0 V DC of power supply must be connected on the star point GND in the electrical cabinet to observe EMC requirements,

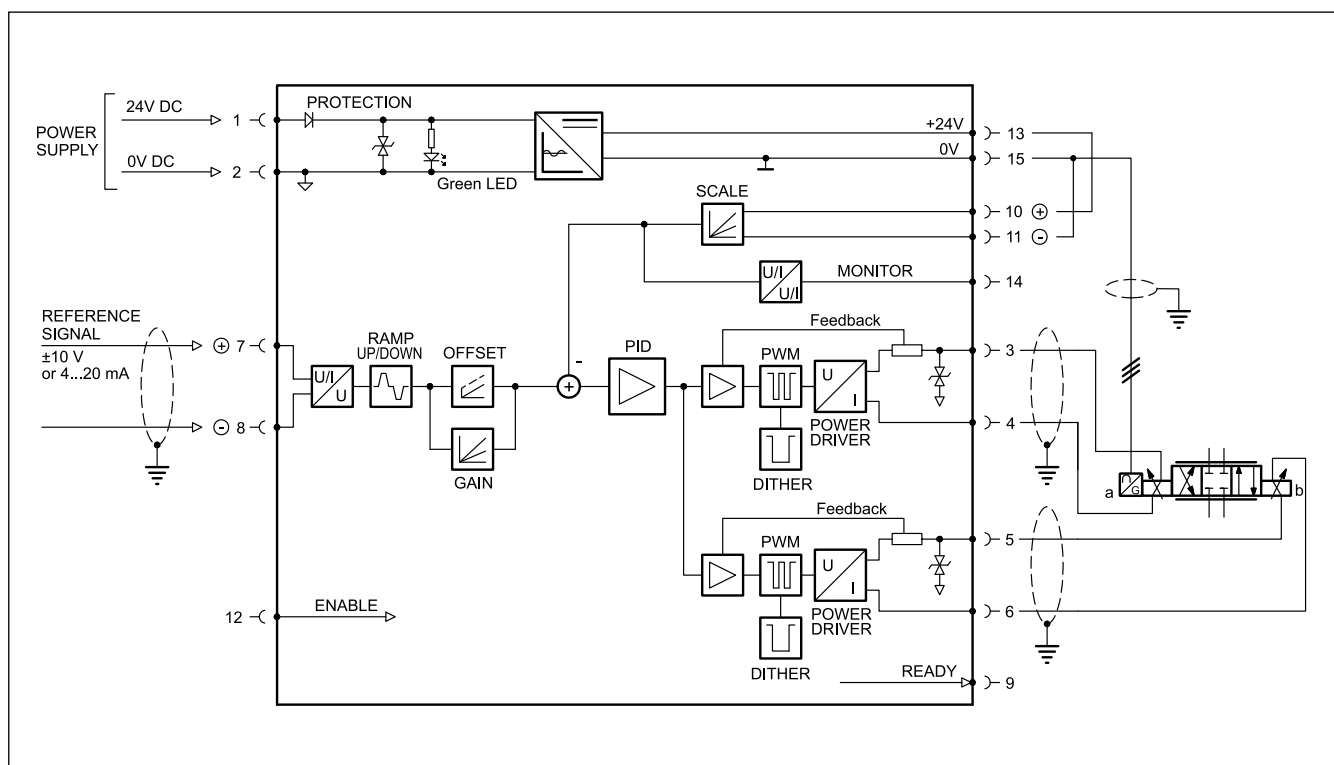

9.1 - EDM-J1 for RPCER1 and DSE3F-*SA

9.2 - EDM-J1 for DXE*F

9.3 - EDM-J2

UEIK-1*

ELECTRONIC CONTROL UNIT FOR OPEN LOOP SINGLE SOLENOID PROPORTIONAL VALVE

SERIES 51

EUROCARD TYPE

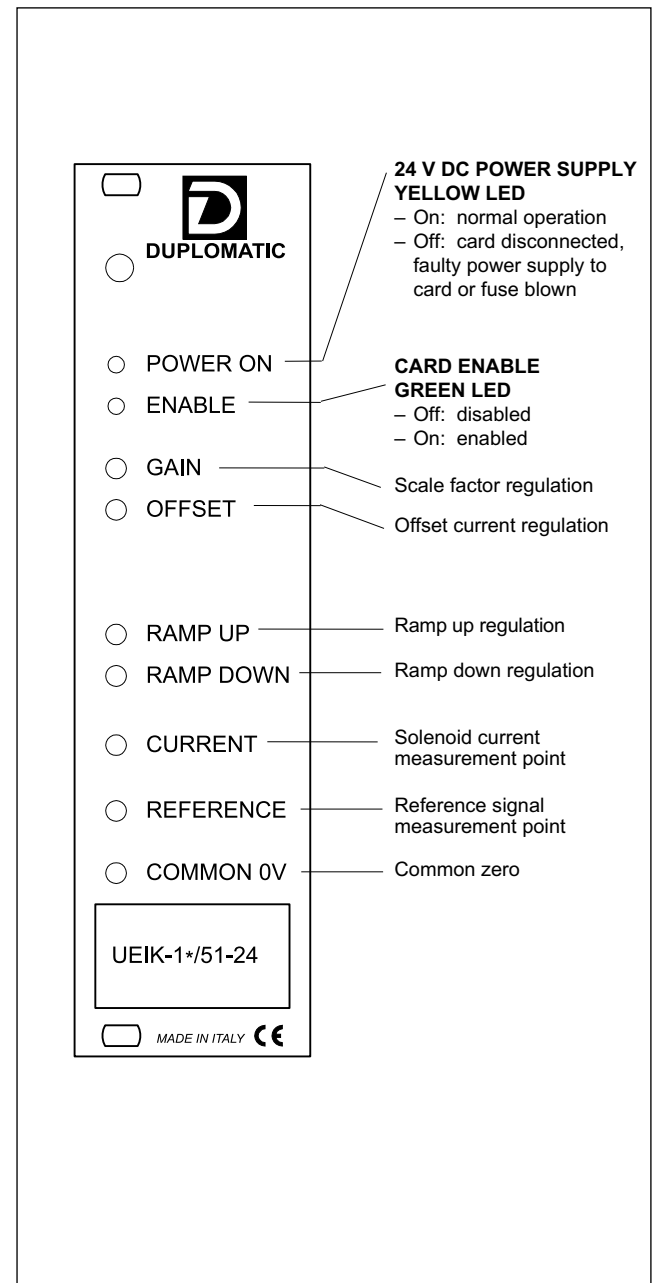

FUNCTIONAL BLOCK DIAGRAM

TECHNICAL CHARACTERISTICS

Power supply	V DC	22 ÷ 30 Ripple included
Required power	see paragraph 2.1	
Output current	vedi paragraph 3.3	
Power supply electrical protection	– overload – polarity inversion	
Reference signal: – Voltage – Current	V mA	0 ÷ 10 4 ÷ 20
Input reference signal impedance: – Voltage – Current	kohm ohm	10 250
Electromagnetic compatibility (EMC) (see par. 5 - NOTE 1)	in compliance with 2014/30/EU	
Card size	Eurocard 100x160x35	
Connector interface	DIN 41612-D 32 Male	
Operating temperature range	°C	0 ÷ 50
Mass	kg	0,20

FRONT PANEL

1 - IDENTIFICATION CODE

The UEIK-1* card is an electronic control unit Eurocard type for open loop single solenoid proportional valves.

The unit supplies a variable current in proportion to the reference signal and independently of temperature variations or load impedance.

The PWM stage on the solenoid power supply makes it possible to reduce valve hysteresis thus optimising control precision. The front panel is fitted with LEDs to indicate card functions and potentiometers to optimize control.

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The card requires a power supply of between 22 and 30 V DC (pin 2a/2c - 4a/4c) and a power of: 20 W (UEIK-11) - 29 W (UEIK-12).

Power supply voltage must be rectified and filtered, with maximum admissible ripple within the above voltage range.

2.2 - Electrical protection

The card is protected against overvoltage and polarity inversion.

A 2A fast-acting fuse is fitted for power circuit protection.

2.3 - Reference signal

The card accepts voltage reference signals (0 to +10V) or current reference signals (4-20 mA).

NOTE: If the signal is transmitted by potentiometer, please verify that this has a load of at least 200 Ω .

See par. 9 for electrical connections.

The diagram shows characteristics of current supplied according to the reference signal.

3 - SIGNALS AND ADJUSTMENTS

3.1 - POWER ON

The green LED indicates card power supply:

- ON - normal power supply
- OFF - no power supply, faulty power supply or blown fuse

3.2 - ENABLE

A 22 to 30 V DC enable command on pin 24c is required for card operation.

The condition of the card enable is shown by both a visible LED on the front panel and as a contact available for the user on pins 6a and 6c.

The green LED indicates:

- ON - card enabled
- OFF - card disabled or failed

3.3 - GAIN (Scale factor regulation)

The "GAIN" potentiometer enables regulation of the relation between the set reference value and maximum current supplied to the solenoid and therefore the hydraulic parameter controlled by the valve.

The maximum current of the card is limited to 1,0 A (UEIK-11) - 1,2 A (UEIK-12). See par. 6 for default values.

Rotate clockwise to increase current.

3.4 - OFFSET (Offset current regulation)

The "OFFSET" potentiometer enables regulation of the offset current of the valve. It is used to eliminate the insensitivity zone (dead zone) of the valve.

The regulation field is from 0 to 0,5 A (UEIK-11) - from 0 to 0,65 A (UEIK-12).

The offset current is activated when the reference signal exceeds the threshold of + 150 mV (or 4,25 mA).

The offset is not active and only the polarization current equal to 25 mA is present beneath this threshold.

NOTE: The variation of the set value of the offset current causes a corresponding variation of the scale factor value.

Rotate clockwise to increase current.

3.5 - RAMP UP / RAMP DOWN (Ramp regulation)

"RAMP UP" and "RAMP DOWN" potentiometers, in a range from 0,03 to 7 sec, regulate the time required to reach the supplied current according to a step change of the reference signal up or down.

By this way it is possible to control the valve response time, adjusting it to the requirements of the hydraulic circuit and of the machine cycle.

Ramps can be inhibited by transmitting a 22 to 30 V DC exclusion command to pin 16a. In this case, the ramp residual time is 10 ms.

Rotate clockwise to increase ramp time.

4 - SIGNAL MEASUREMENT

4.1 - CURRENT (Solenoid current measurement point)

Enables voltage reading of current supplied to the solenoid.

Reading conversion: 1V DC = 1A (UEIK-11)
0,82V DC = 1A (UEIK-12).

4.2 - Reference (Reference signal measurement point)

Enables reading in voltage of reference signal sent to the card.

Reading is direct, but of opposite sign, with voltage reference while current conversion is: 4 mA = 0 V
20 mA = - 10V.

5 - INSTALLATION

The card is suitable for assembly on a rack or a card holder with interface for connector types DIN 41612 - size D - 32 pole.

It is recommended to use cable sections of 1 to 2,5 mm², depending on their length, for power supply and solenoid connections. For other connections it is recommended to use cables with a screened sheath connected to earth only on the card side.

NOTE 1: To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram of par. 9.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

A complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

6 - DEFAULT CONDITIONS

The electronic unit is supplied factory set.

The setting conditions are:

- “GAIN” regulation: +10 V (or 20 mA) reference signal corresponding to a current supply of 0,7 A to the solenoid.
- “OFFSET” regulation: zero
- “RAMP UP” and “RAMP DOWN” regulation: minimum
- position SW1 on V
- position SW2 on S
- position SW3 on AA
- switching frequency (PWM) = 200 Hz (UEIK-11)
100Hz (UEIK-12).

7 - START-UP AND CONTROL SETTINGS

If required, it is possible to change the settings as follows:

a) OFFSET CURRENT ADJUSTMENT

- Set “GAIN” potentiometer to minimum.
- Enter reference signal at maximum value (+10V or 20 mA).
- Set the “OFFSET” potentiometer so that the valve is positioned at the start of the work zone.

b) SCALE FACTOR ADJUSTMENT

- Enter the reference signal at maximum value (+10V or 20 mA).
- Set “GAIN” potentiometer so that the controlled hydraulic parameter reaches the maximum required value.

NOTE: The maximum current value must be compatible with the maximum current prescribed by the technical table of the connected proportional valve.

c) RAMP REGULATION

- Regulate the “RAMP UP” and “RAMP DOWN” potentiometers to obtain gradual valve operation required with a reference signal variation.

8 - CARD CIRCUIT SETTINGS

The overall and mounting dimensions diagram in par. 10 shows three switch banks: SW 1 - SW 2 - SW 3 which enable the card to be set up as required.

NOTE: Each modification to switch settings must be carried out with the card disconnected from the power supply. The individual switches inside each bank must all be set in the same position.

SELECTION OF VOLTAGE OR CURRENT REFERENCE SIGNAL (SW 1 bank comprising three individual switches)

- select V for voltage reference signal
- select I for current reference signal.

SELECTION OF SINGLE ENDED OR DIFFERENTIAL REFERENCE SIGNAL (SW 2 bank comprising one individual switch)

- select S for single ended reference signal.

This condition is obligatory in case where the reference signal is generated with an external potentiometer fed by the card itself.

- select D for differential reference signal.

This condition is preferable in case where the reference signal comes from a PLC or CNC analogic outlet.

NOTE: The SW 3 bank, comprising two individual switches, must always be set at AA as per standard default conditions.

SWITCHING FREQUENCY ADJUSTMENT

It is possible to change the switching frequency (PWM) by acting on the trimmer PT7 (see par. 10).

The setting range is from 80 to 370 Hz.

An appropriate switching frequency adjustment allows reduction of the valve hysteresis value.

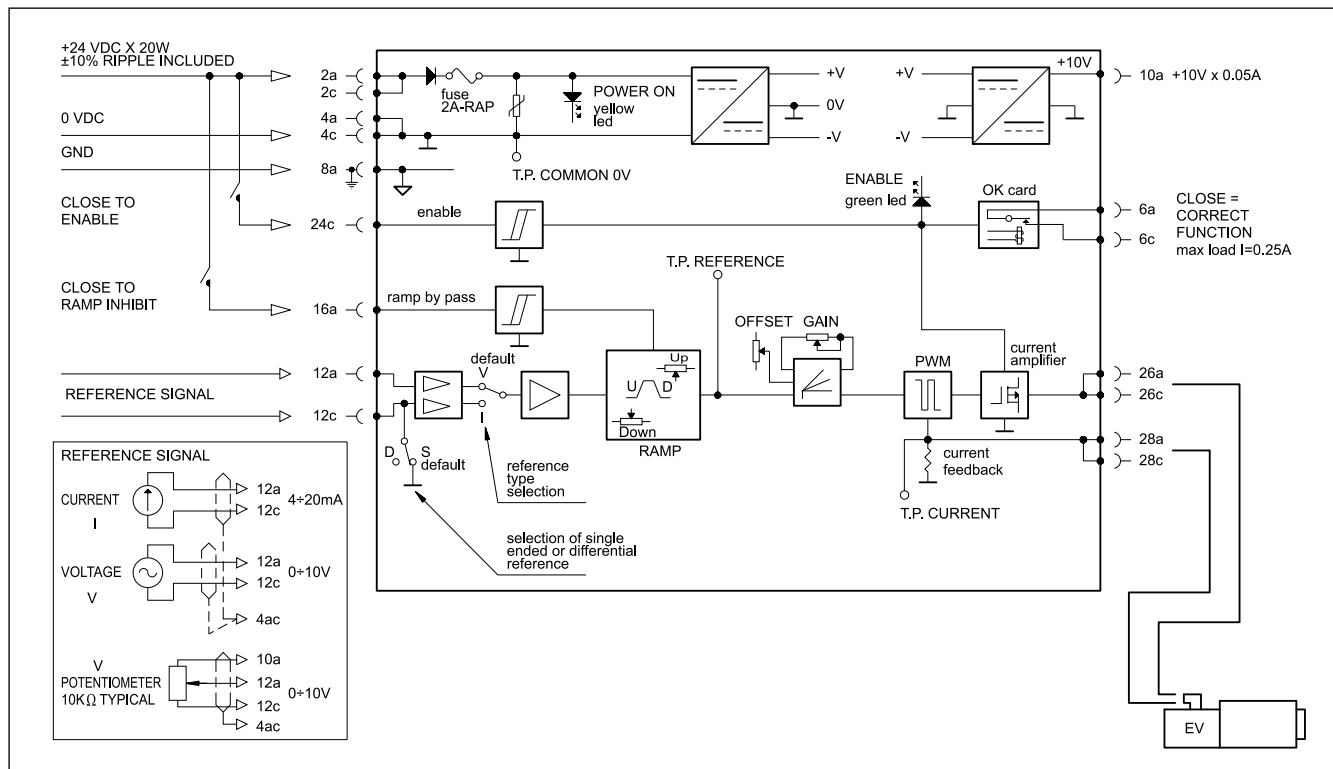

Clockwise rotation to increase the frequency.

Connector interface	DIN 41612-D 32 Male	
Operating temperature range	°C	0 ÷ 50
Mass	kg	0,20

EUROCARD TYPE

FRONT PANEL

1 - IDENTIFICATION CODE

The UEIK-11RS*/52 card is an electronic control unit Eurocard type for closed loop control of single solenoid proportional valves with positional feedback control.

The card controls the position of the valve spool according to the reference input signal enabling linear regulation and reduced hysteresis.

The front panel is fitted with LEDs to indicate card functions and potentiometers to optimise control.

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The card requires a power supply of 22-30 V DC and $20 \div 45$ W (pin 2a/2c - 4a/4c).

Power supply voltage must be rectified and filtered, with maximum admissible ripple within the above voltage range.

2.2 - Electrical protection

The card is protected against overvoltage and polarity inversion.

A 3,15A fast-acting fuse is fitted for power circuit protection.

2.3 - Reference signal

The card accepts voltage reference signals ($0 \div 10$ V) or current signals ($4 \div 20$ mA).

NOTE: If the signal is transmitted by potentiometer, please verify that this has a load of at least 200 Ω .

See par. 9 for electrical connections.

The diagram shows characteristics of valve spool position according to the reference signal.

3 - SIGNALS AND ADJUSTMENT

3.1 - FAULT

The red LED indicates operation of the position transducer:

OFF - normal operation

ON - transducer fault or electrical connection failure.

In this case the current supply to the solenoid is shut off and the valve is set at the rest position, the ENABLE LED switches off and the OK card relay contact opens (6a - 6c pin).

3.2 - POWER ON

The yellow LED indicates card power supply:

ON - normal power supply

OFF - no power supply, faulty power supply or blown fuse

3.3 - ENABLE

From 22 to 30 V DC (pin 24c) enable command is required for card operation.

The condition of the card enable is shown by both a visible LED on the front panel and as a contact available for the user on pins 6a and 6c.

The green LED indicates:

ON - card enabled

OFF - card disabled

3.4 - GAIN (Scale factor regulation)

The "GAIN" potentiometer enables regulation of the relation between the set reference value and maximum current supplied to the solenoid and therefore the hydraulic parameter controlled by the valve.

The maximum current of the card is limited to 1A for RSQ version and to 1,8A for RSD version. See par. 6 for default values.

Rotate clockwise to increase current.

3.5 - OFFSET (Offset current regulation)

The "OFFSET" potentiometer enables regulation of the offset current of the valve. It is used to eliminate the insensitivity zone (dead zone) of the valve.

The regulation field is from 0 to 0,5 A for RSQ version and from 0 to 0,9 A for RSD version.

The offset current is activated when the reference signal exceeds the threshold of + 150 mV (or 4,25 mA).

The offset is not active and only the polarization current equal to 25 mA is present beneath this threshold.

NOTE: The variation of the set value of the offset current causes a corresponding variation of the scale factor value.

Rotate clockwise to increase current.

3.6 - RAMP UP / RAMP DOWN (Ramp regulation)

"RAMP UP" and "RAMP DOWN" potentiometers, in a range from 0,03 to 7 sec, regulates the time required to achieve the supplied current according to a step change of the reference signal up or down.

It is possible, in this way, to control the valve response time, adjusting it to the requirements of the hydraulic circuit and the machine cycle.

Ramps can be inhibited by transmitting a 22 to 30 V DC exclusion command to pin 16a. In this case, the ramp residual time is 10 ms.

Rotate clockwise to increase ramp time.

4 - SIGNAL MEASUREMENT

4.1 - CURRENT (Solenoid current measurement point)

Enables voltage reading of current supplied to the solenoid.

Reading conversion: 1V DC = 1A.

4.2 - REFERENCE (Reference signal measurement point)

Enables reading of reference signal sent to the card.

Reading is direct, but of opposite sign, with voltage reference while current conversion is: 4 mA = 0V 20 mA = -10V.

4.3 - TRANSDUCER (Transducer signal measurement point)

Enables voltage reading of the valve spool position (0 / -5V).

5 - INSTALLATION

The card is designed for assembly on a rack or a card holder with interface for connector types DIN 41612 - size D - 32 pole.

It is recommended to use cable sections of 1 to 2,5 mm², depending on their length, for power supply and solenoid connections. For other connections it is recommended to use cables with a screened sheath connected to earth only on the card side.

NOTE 1: To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram of par. 9.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

In environments that are critical from the electromagnetic interference point of view, a complete protection of the connection wires can be requested.

6 - DEFAULT CONDITIONS

The electronic control unit is supplied factory-set.

Standard settings are:

- "GAIN" regulation: +10V (or 20 mA) reference signal corresponding to maximum valve opening (transducer = -5V). In open loop "GAIN" regulation corresponds to a current supply of 1 A for RSQ version and 1,8 A for RSD version, to the solenoid with maximum reference signal.
- "OFFSET" regulation: zero
- "RAMP UP" and "RAMP DOWN" regulation: minimum
- position SW1 on V
- position SW2 on S
- position SW3 on AC
- position S1 on N
- switching frequency (PWM) = 230 Hz

7 - START-UP AND CONTROL SETTINGS

If required, settings can be adjusted as follows:

a) OFFSET CURRENT REGULATION

- Set "GAIN" potentiometer to minimum.
- Enter reference signal at maximum value (+10V or 20 mA).
- Set the "OFFSET" potentiometer so that the valve is positioned at the start of the work zone.

b) SCALE FACTOR REGULATION

- Enter the reference signal at maximum value (+10V or 20 mA).
- Set "GAIN" potentiometer so that the controlled hydraulic parameter reaches the maximum required value.

c) RAMP REGULATION

- Regulate the "RAMP UP" and "RAMP DOWN" potentiometers to obtain the gradual valve operation required with a reference signal variation.

8 - CARD CIRCUIT SETTINGS

The overall and mounting dimension diagram in par. 10 shows four switch banks: SW 1 - SW 2 - SW 3 and S1 which enable the card to be set up as required.

NOTE: Each modification to switch settings must be carried out with the card disconnected from the power supply. The individual switches inside each bank must all be set in the same position.

SELECTION OF VOLTAGE OR CURRENT REFERENCE SIGNAL (SW 1 bank comprising three individual switches)

- select V for voltage signal
- select I for current signal.

SELECTION OF SINGLE ENDED OR DIFFERENTIAL REFERENCE SIGNAL

(SW 2 bank comprising one individual switch)

- select S for single ended reference signal. This condition is obligatory in the case where the reference signal is generated with an external potentiometer fed by the card itself.
- select D for differential reference signal. This condition is preferable in the case where the reference signal comes from a PLC or CNC analogic outlet.

OPEN OR CLOSED LOOP SELECTION

(SW 3 bank comprising two individual switches)

- select AC for closed loop
- select AA for open loop.

TRANSDUCER POLARITY SELECTION

(SW 1 bank comprising one individual switch)

- select N for direct operated valve types DSE3F - RPCER1/52
- select D for piloted valves.

NOTE: In the event of transducer malfunction, AA can be selected to proceed with open loop operation. In this case, the ENABLE LED illuminates and the OK relay card contacts close and the FAULT LED remains lit to indicate alarm status.

SWITCHING FREQUENCY ADJUSTMENT

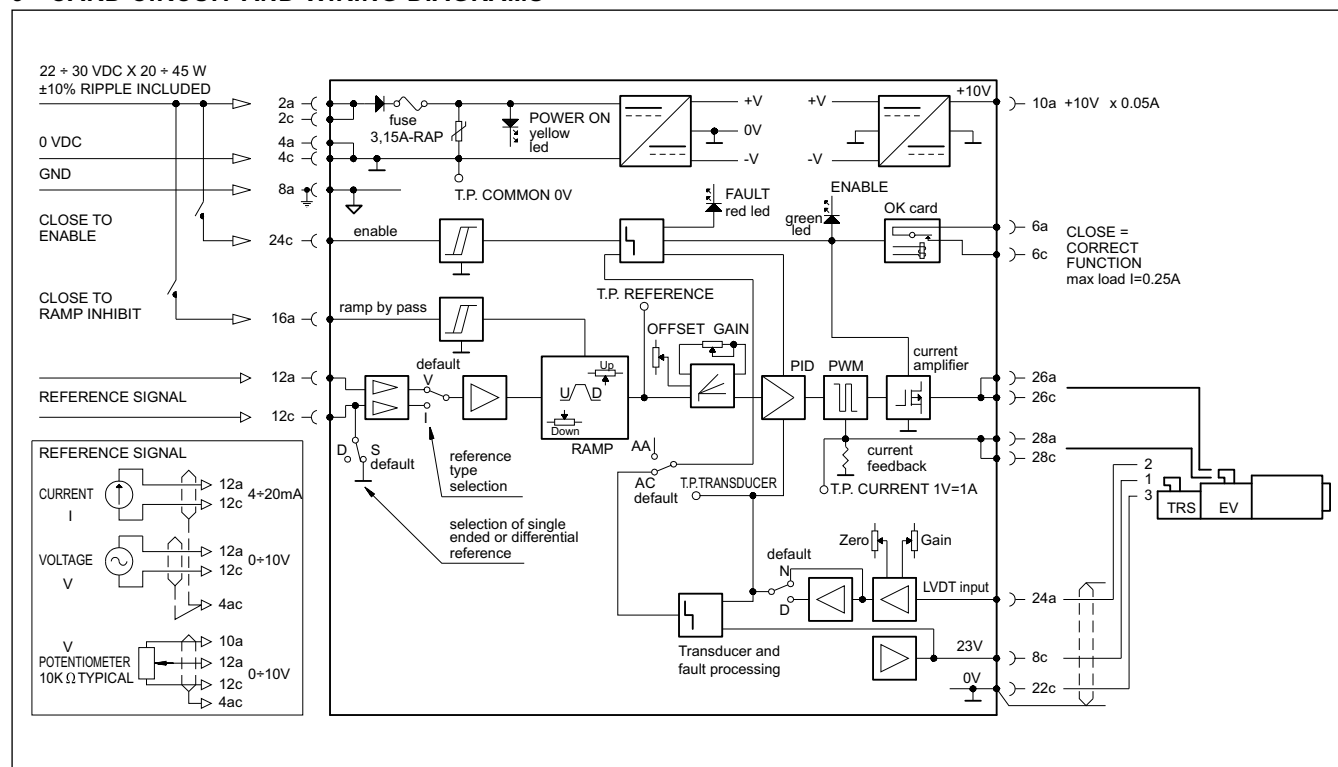

It is possible to change the switching frequency (PWM) by acting on the trimmer PT7 (see par. 10).

The setting range is from 80 to 1600 Hz.

An appropriate switching frequency adjustment allows reduction of the valve hysteresis value.

Clockwise rotation to increase the frequency.

Connector interface	DIN 41612-D 32 Male	
Operating temperature range	°C	0 ÷ 50
Mass	kg	0,27

FRONT PANEL

1 - IDENTIFICATION CODE

The UEIK-2* card is an electronic control unit Eurocard type for open loop of double solenoid proportional valves.

The unit supplies a variable current in proportion to the input reference signal and independently of temperature variations or load impedance.

The PWM stage on the solenoid power supply makes it possible to reduce valve hysteresis thus optimising control precision. The front panel is fitted with LEDs to indicate card functions and potentiometers to optimize control.

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The card requires a power supply of between 22 and 30 V DC (pin 2a/2c - 4a/4c) and 20 W (UEIK-21) - 29 W (UEIK-22).

Power supply voltage must be rectified and filtered, with maximum admissible ripple within the above voltage range.

2.2 - Electrical protection

The card is protected against overvoltage and polarity inversion.

A 2A fast-acting fuse is fitted for power circuit protection.

2.3 - Reference signal

The card accepts voltage reference signals ($\pm 10V$) or current reference signals ($4 \div 20$ mA).

NOTE: If the signal is transmitted by potentiometer, please verify that this has a load of at least 200 Ω .

See paragraph 9 for electrical connections.

The diagram shows characteristics of current supplied according to the reference signal.

3 - SIGNALS AND ADJUSTMENT

3.1 - POWER ON

The yellow LED indicates card power supply:

ON - normal power supply

OFF - no power supply, faulty power supply or blown fuse

3.2 - ENABLE

A 22 to 30 V DC on pin 24c enable command is required for card operation.

The condition of the enable card is shown by both a visible LED on the front panel and as a contact available for the user on pins 6a and 6c.

The green LED indicates:

ON - card enabled

OFF - card disabled or failed

3.3 - GAIN A / GAIN B

(Scale factor regulation of solenoids A and B)

"GAIN A" and "GAIN B" potentiometers enable regulation of the ratio between the set reference value and current supplied to solenoids A and B respectively. This enables independent regulation of the controlled parameter in the two valve hydraulic configurations.

The maximum current of the card is limited to 1,0A (UEIK-21) - 1,2A (UEIK-22). See par. 6 for default values.

Rotate clockwise to increase current.

3.4 - OFFSET A / OFFSET B

(Polarization current regulation of solenoids A and B)

"OFFSET A" and "OFFSET B" potentiometers enable regulation of the offset current of the valve solenoids A and B respectively. They are used to eliminate the valve insensitivity zone (dead zone) in the two valve hydraulic figures.

The regulation range is from 0 to 0,5A (UEIK-21) - from 0 to 0,65A (UEIK-22).

The offset current is activated when the reference signal exceeds the threshold of ± 150 mV.

The offset is not active and only the polarization current equal to 25 mA is present beneath this threshold.

NOTE: The variation of the set value of the offset current causes a corresponding variation of the scale factor value.

Rotate clockwise to increase current.

3.5 - RAMP UP / RAMP DOWN (Ramp regulation)

"RAMP UP" and "RAMP DOWN" potentiometers, in a range from 0,03 to 7 sec., regulate the time taken to achieve the current for a step change of the reference signal up or down. They are independently adjusted and serve both solenoids.

This makes it possible to smooth valve response and adapt it to the requirements of the hydraulic system and the machine cycle.

Rotate clockwise to increase ramp time.

Ramps can be inhibited by transmitting a 22 to 30 V DC command to pin 16a. In this case, the ramp residual time is 10 ms.

4 - SIGNAL MEASUREMENT

4.1 - CURRENT A / CURRENT B

(Current measurement points of solenoids A and B)

Measurement points for voltage readings of current supplied to solenoids A and B. Reading conversion is 1V DC = 1A (UEIK-21) and 0,82V DC = 1A (UEIK-22).

4.2 - REFERENCE (Reference signal measurement point)

Enables reading in voltage of reference signal sent to the card.

Reading is direct, but of opposite sign, with voltage reference while current conversion is: 4 mA = +10V 20 mA = -10V.

5 - INSTALLATION

The card is suitable for assembly on a rack or a card holder with interface for connector types DIN 41612 - size D - 32 pole.

It is recommended to use cable sections of 1 to 2,5 mm², in function with their length, for power supply and solenoid connections. For other connections, it is recommended to use cables with a screened sheath connected to earth only on the card side.

NOTE 1

To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram of par. 6.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

In environments that are critical from the electromagnetic interference point of view, a complete protection of the connection wires can be requested.

6 - DEFAULT CONDITIONS

The electronic control unit is supplied factory-set.

Standard settings are:

- "GAIN A" regulation: +10V (or 20 mA) reference signal corresponding to a current supply of 0,82 A to solenoid A.
- "GAIN B" regulation: -10V (or 4 mA) reference signal corresponding to a current supply of 0,82 A to solenoid B.
- "OFFSET A" or "OFFSET B" regulation: zero
- "RAMP UP" and "RAMP DOWN" regulation: minimum
- position SW1 on V
- position SW2 on S
- position SW3 on AA
- switching frequency (PWM) = 200Hz (UEIK-21)
100Hz (UEIK-22)

7 - START-UP AND FRONTAL SETTINGS

If required, settings can be adjusted as follows:

a) OFFSET CURRENT REGULATION

(Note: the same procedure applies to channels A and B on the card)

- Set "GAIN A" or "GAIN B" potentiometer to minimum.
- Enter reference signal at maximum value:
 - +10V (or 20 mA) for solenoid A
 - 10V (or 4 mA) for solenoid B.
- Regulate "OFFSET A" or "OFFSET B" potentiometer so that the valve is positioned at the start of the relative hydraulic configuration work zone.

b) SCALE FACTOR REGULATION

(NOTE: the same procedure applies to channels A and B on the card)

- Enter the reference signal at maximum value
 - +10V (or 20 mA) for solenoid A
 - 10V (or 4 mA) for solenoid B.
- Adjust "GAIN A" and "GAIN B" potentiometers until the size controlled in the relative hydraulic configuration reaches the maximum required value.

NOTE: The maximum current value must be compatible with the maximum current prescribed by the technical table of the connected proportional valve.

c) RAMP REGULATION

- Regulate the "RAMP UP" and "RAMP DOWN" potentiometers to obtain the required valve smoothness of movement with a reference variation.

8 - CARD CIRCUIT SETTINGS

The overall dimension diagram in par. 10 shows three switch banks: SW 1 - SW 2 - SW 3 which enable card set up as required.

NOTE: Each modification to switch settings must be carried out with the card disconnected from the power supply. The individual switches inside each bank must all be set in the same position.

SELECTION OF VOLTAGE OR CURRENT REFERENCE SIGNAL (SW 1 bank comprising three individual switches)

- select V for voltage reference signal
- select I for current reference signal.

SELECTION OF SINGLE ENDED OR DIFFERENTIAL REFERENCE SIGNAL (SW 2 bank comprising one individual switch)

- select S for single ended reference signal. This condition is obligatory in the case that the reference signal is generated with an external potentiometer fed by the card itself.
- select D for differential reference signal. This signal is preferable in the case that the reference signal comes from a PLC or CNC analogic outlet.

NOTE: The SW 3 bank, comprising two individual switches, must always be set at AA as per standard supply conditions.

SWITCHING FREQUENCY ADJUSTMENT

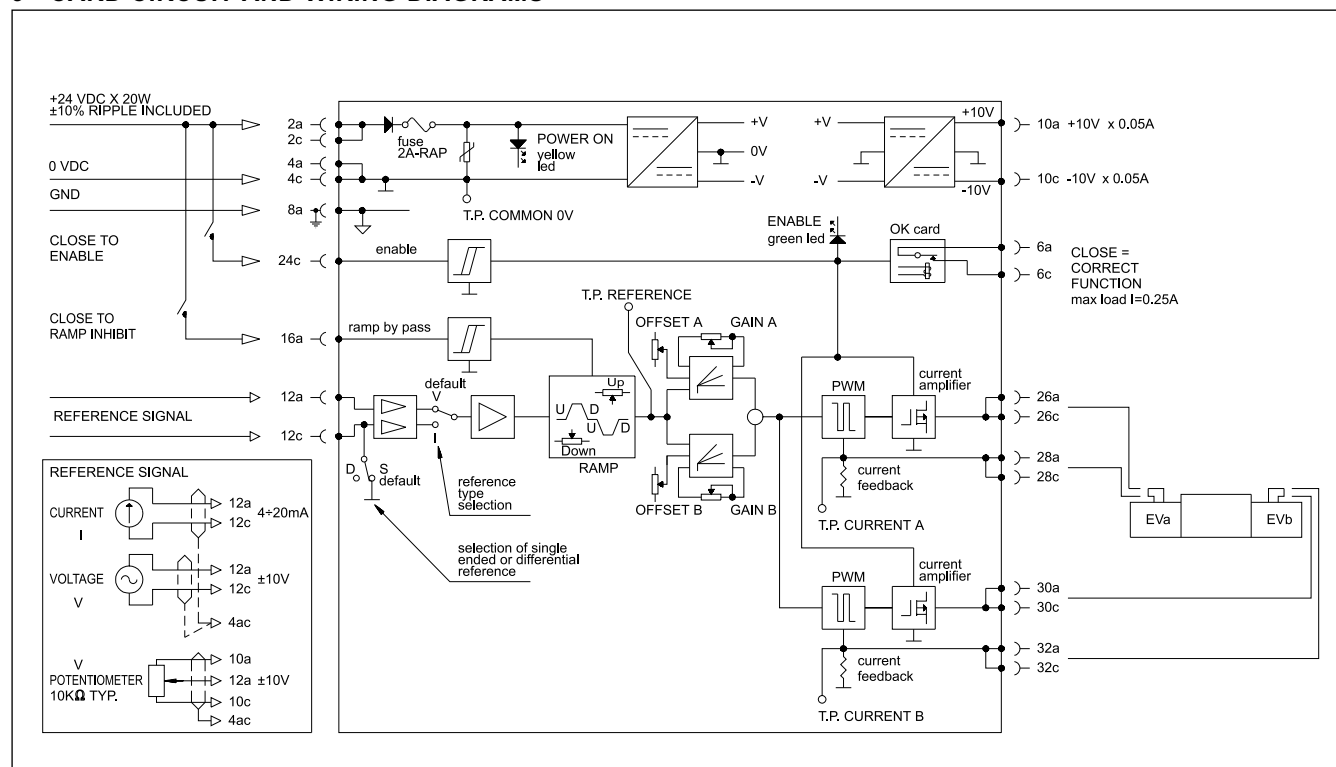

It is possible to change the switching frequency (PWM) by acting on the trimmer PT7 (see par. 10).

The setting range is from 80 to 370 Hz.

An appropriate switching frequency adjustment allows reduction of the valve hysteresis value.

Clockwise rotation to increase the frequency.

Connector interface	DIN 41612-D 32 Male	
Operating temperature range	°C	0 ÷ 50
Mass	kg	0,27

FRONT PANEL

1 - IDENTIFICATION CODE

The UEIK-21RS card is an electronic control unit Eurocard type for closed loop control of double solenoid proportional valves with positional feedback control.

The unit controls the position of the valve spool according to the reference input signal ensuring linear regulation with minimum hysteresis.

The front panel is fitted with LEDs to indicate card functions and potentiometers to optimise performance.

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The card requires a power supply of 22-30 V DC and 45 W (pin 2a/2c - 4a/4c).

Power supply voltage must be rectified and filtered, with maximum admissible ripple within the above voltage range.

2.2 - Electrical protection

The card is protected against overvoltage and polarity inversion.

A 3,15A fast-acting fuse is fitted for power circuit protection.

2.3 - Reference signal

The card accepts voltage reference signals ($\pm 10V$) or current reference signals ($4 \div 20$ mA).

N.B: If the signal is transmitted by potentiometer, please verify that this has a load of at least 200 Ω .

See par. 9 for electrical connections.

The diagram shows valve spool position characteristics according to the reference signal.

3 - SIGNALS AND ADJUSTMENT

3.1 - FAULT (Fault signal)

The red LED indicates operation of the positional transducer:

OFF - normal operation

ON - transducer fault or power supply failure. In the event of a FAULT, current to the solenoid is shut off and the valve is set at the hydraulic rest configuration, the ENABLE LED switches off and the OK card relay contact opens (6a and 6c pins).

3.2 - POWER ON

The yellow LED indicates card power supply:

ON - normal power supply

OFF - no power supply, faulty power supply or blown fuse

3.3 - ENABLE

A 22 to 30 V DC on pin 24c enable command is required for card operation.

The condition of the enable card is shown by both a visible LED on the front panel and as a contact available for the user on pins 6a and 6c.

The green LED indicates:

ON - card enabled

OFF - card disabled or failed

3.4 - GAIN A / GAIN B

(Scale factor regulation of solenoids A and B)

"GAIN A" and "GAIN B" potentiometers enable regulation of the ratio between the set reference value and the valve spool position in the two hydraulic configurations controlled by solenoids A and B.

The maximum current of the card is limited to 1,8 A.

See par. 6 for default values.

Rotate clockwise to increase current.

3.5 - OFFSET A / OFFSET B

(Offset current regulation of solenoids A and B)

"OFFSET A" and "OFFSET B" potentiometers enable regulation of the offset current of the solenoids A and B respectively with reference signal set at zero. They are used to eliminate the valve insensitivity zone (dead zone).

The regulation range is from 0 to 0,9 A.

The offset current is activated when the reference signal exceeds the threshold of ± 150 mV.

The offset is not active and only the polarization current equal to 25 mA is present beneath this threshold.

NOTE: The variation of the set value of the offset current causes a corresponding variation of the scale factor value.

Rotate clockwise to increase current.

3.6 - RAMP UP / RAMP DOWN (Ramp regulation)

"RAMP UP" and "RAMP DOWN" potentiometers, in a range from 0,03 to 7 sec., regulate the time taken to achieve the current for a step change of the reference signal up or down. They are independently adjusted and serve both solenoids.

This makes it possible to smooth valve response and adapt it to the requirements of the hydraulic system and the machine cycle.

Rotate clockwise to increase ramp time.

Ramps can be inhibited by transmitting a 22 to 30 V DC command to pin 16a. In this case, the ramp residual time is 10 ms.

4 - SIGNAL MEASUREMENT

4.1 - CURRENT A / CURRENT B

(Current measurement points of solenoids A and B)

Measurement points for voltage readings of current supplied to solenoids A and B. Reading conversion is 1V DC = 1A.

4.2 - REFERENCE (Reference signal measurement point)

Enables reading in voltage of reference signal sent to the card.

Reading is direct, but of opposite sign, with voltage reference while current conversion is: 4 mA = +10V 20 mA = -10V.

4.3 - TRANSDUCER (Transducer signal measurement point)

Enables voltage reading of the valve spool position ($\pm 4,8V$ - tolerance +200 mV).

5 - INSTALLATION

The card is suitable for assembly on a rack or a card holder with interface for connector types DIN 41612 - size D - 32 pole.

It is recommended to use cable sections of 1 to 2,5 mm², in function with their length, for power supply and solenoid connections. For other connections, it is recommended to use cables with a screened sheath connected to earth only on the card side.

NOTE 1: To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the connection scheme of par. 9.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

In environments that are critical from the electromagnetic interference point of view, a complete protection of the connection wires can be requested.

6 - DEFAULT CONDITIONS

The electronic control unit is supplied factory-set. Standard settings are:

- "GAIN A" regulation: +10V (or 20 mA) reference signal corresponding to maximum valve opening in the hydraulic configuration controlled by solenoid A (transducer = -5V) .
- "GAIN B" regulation: -10V (or 4 mA) reference signal corresponding to maximum valve opening in the hydraulic configuration controlled by solenoid B (transducer = +5V).

In open loop "GAIN A" and "GAIN B" regulations correspond to a current supply of 1,8 A to A and B solenoids with maximum reference signal.

- "OFFSET A" or "OFFSET B" regulation: zero
- "RAMP UP" and "RAMP DOWN" regulation: minimum
- position SW1 on V
- position SW2 on S
- position SW3 on AC
- position S1 on N
- switching frequency (PWM) = 300 Hz

7 - START-UP AND CONTROL SETTINGS

a) OFFSET CURRENT REGULATION

(Note: the same procedure applies to channels A and B on the card)

- Set "GAIN A" and "GAIN B" potentiometers to minimum.
- Enter reference signal at maximum value:
 - +10V (or 20 mA) for solenoid A
 - 10V (or 4 mA) for solenoid B.
- Regulate "OFFSET A" and "OFFSET B" potentiometers so that the valve is positioned at the start of the corresponding hydraulic configuration work zone.

b) SCALE FACTOR REGULATION

(Note: the same procedure applies to channels A and B on the card)

- Enter the reference signal at maximum value
 - +10V (or 20 mA) for solenoid A
 - 10V (or 4 mA) for solenoid B.
- Set "GAIN A" and "GAIN B" potentiometers so that the controlled parameter in the relative hydraulic configuration reaches the maximum required value.

c) RAMP REGULATION

- Regulate the "RAMP UP" and "RAMP DOWN" potentiometers to obtain the required valve smoothness of movement with a reference position.

8 - CARD CIRCUIT SETTINGS

The overall dimension diagram in par. 10 shows four switch banks: SW 1 - SW 2 - SW 3 and S1 which enable card set up as required.

NOTE: Each modification to switch settings must be carried out with the card disconnected from the power supply. The individual switches inside each bank must all be set in the same direction.

SELECTION OF VOLTAGE OR CURRENT REFERENCE SIGNAL (SW 1 bank comprising three individual switches)

- select V for voltage signal
- select I for current signal.

SELECTION OF SINGLE ENDED OR DIFFERENTIAL REFERENCE SIGNAL

(SW 2 bank comprising one individual switch)

- select S for single ended reference signal. This condition is obligatory in the case that the reference signal is generated with an external potentiometer fed by the card itself.
- select D for differential reference signal. This signal is preferable in the case that the reference signal comes from a PLC or CNC analogic outlet.

OPEN OR CLOSED LOOP SELECTION

(SW 3 bank comprising two individual switches)

- select AC for closed loop
- select AA for open loop.

TRANSDUCER POLARITY SELECTION

(SW 1 bank comprising one individual switch)

- select N for direct operated valve types DSE3F
- select D for piloted valves.

NOTE: In the event of transducer malfunction, AA can be selected to proceed with open loop operation. In this case, the ENABLE LED illuminates and the OK relay card contacts close and the FAULT LED remains lit to indicate alarm status.

SWITCHING FREQUENCY ADJUSTMENT

It is possible to change the switching frequency (PWM) by acting on the trimmer PT7 (see par. 10). The setting range is from 80 to 1600 Hz.

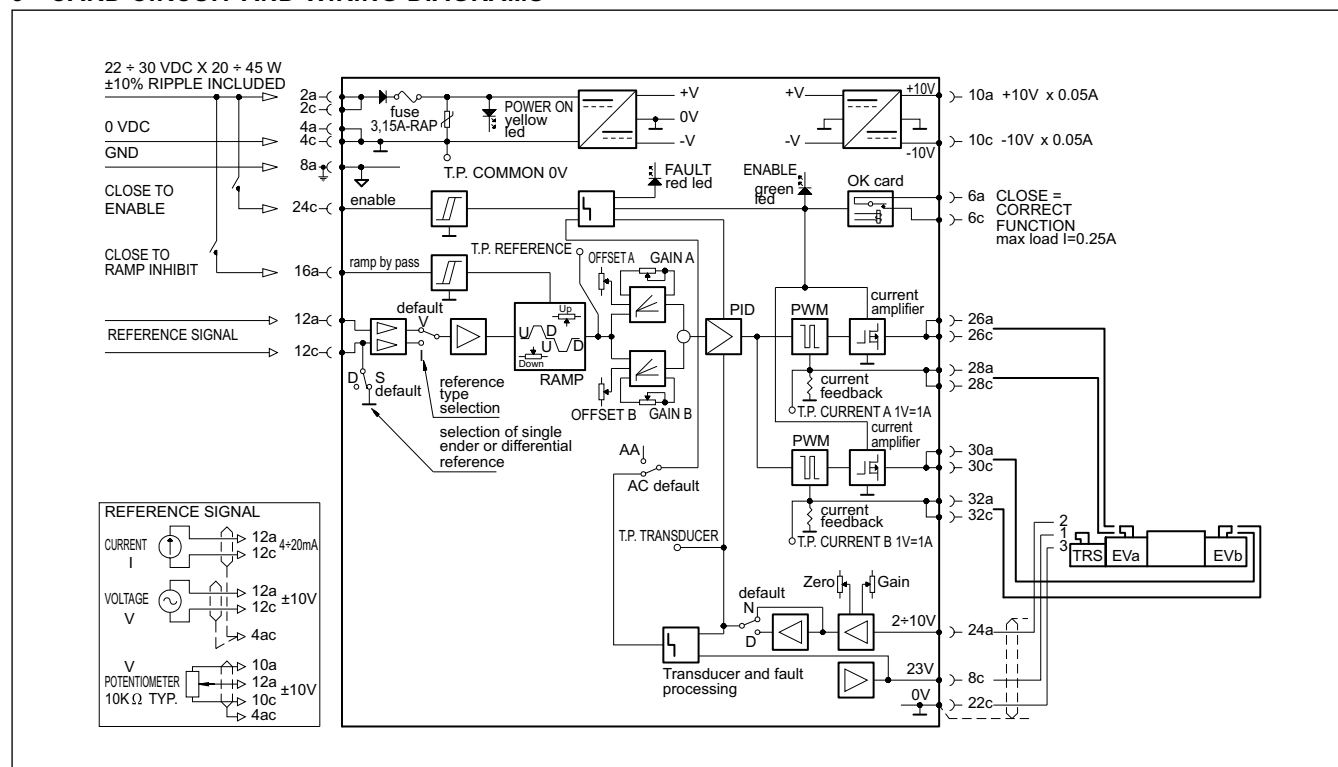

An appropriate switching frequency adjustment allows reduction of the valve hysteresis value. Clockwise rotation to increase the frequency.

Connector interface	DIN 41612-D 32 Male	
Operating temperature range	°C	0 ÷ 50
Mass	kg	0,3

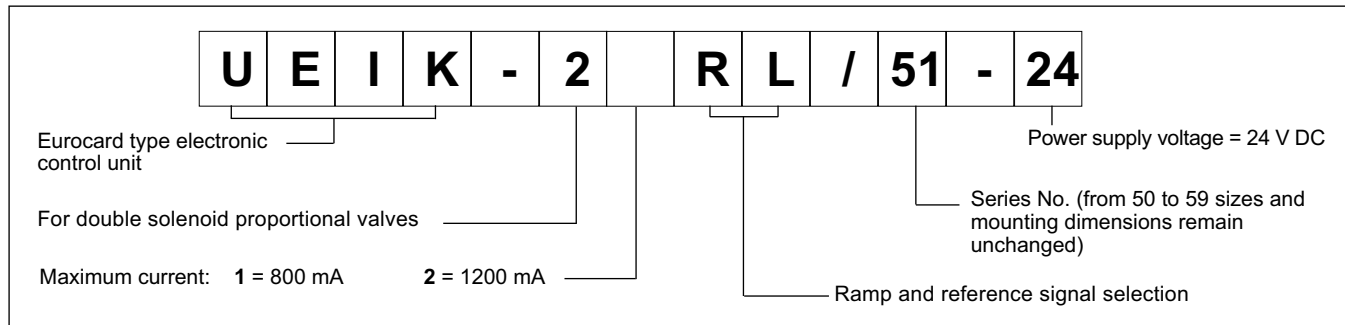

EUROCARD TYPE

FRONT PANEL

1 - IDENTIFICATION CODE

The UEIK-2*RL card is an electronic control unit in Eurocard format for open loop control of double solenoid proportional valves, with selection in sequence of four different reference and ramp time regulation signals.

The unit is suitable for management of "fast-slow" work cycles.

The front panel is fitted with LEDs to indicate card functions and potentiometers to optimise performance.

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Electric power supply

The card requires a power supply of between 22 and 30 V DC (pin 2a/2c - 4a/4c) and 20 W (UEIK21-RL) - 29 W (UEIK-22-RL).

Power supply voltage must be rectified and filtered, with maximum admissible ripple within the above voltage range.

2.2 - Electrical protection

The card is protected against overvoltage and polarity inversion.

A 2A fast-acting fuse is fitted for power circuit protection.

3 - SIGNALS AND ADJUSTMENT

3.1 - POWER ON

The yellow LED indicates card power supply:

ON - normal power supply

OFF - no power supply, faulty power supply or blown fuse

3.2 - ENABLE

A 22 to 30 V DC on pin 24c enable command is required for card operation.

The condition of the enable card is shown by both a visible LED on the front panel and as a contact available for the user on pins 6a and 6c.

The green LED indicates:

ON - card enabled

OFF - card disabled or failed

3.3 - OFFSET A / OFFSET B

(Polarization current regulation of solenoids A and B)

"OFFSET A" and "OFFSET B" potentiometers enable regulation of the polarization current of the solenoids A and B respectively. They are used to eliminate the valve insensitivity zone (dead zone) in the two valve hydraulic configurations.

The regulation field is up between 0 and 0,5 A (UEIK-21-RL) and between 0 and 0,65 A (UEIK-22-RL).

The default value is zero.

The offset current is activated when the reference signal exceeds the threshold of ± 150 mV.

The offset is not active and only the polarization current equal to 25 mA is present beneath this threshold.

NOTE: The variation of the set value of the offset current causes a corresponding variation of the scale factor value.

Rotate clockwise to increase current.

3.4 - REF (Reference signal regulation)

The card enables settings by means of multi-turn potentiometers on the front panel (indicated by "REF") of four different reference signal values (one per channel).

Solenoid A is controlled with positive reference of $0 \div +10$ V, and solenoid B is controlled with negative reference signal of $0 \div -10$ V.

Maximum output current, corresponding to the maximum potentiometers regulation, is limited to 1 A. See par. 6 for default settings.

Rotate clockwise to increase the reference signal by absolute values. See par. 9 for electrical connections.

One of the four channels can be selected automatically by transmitting a +24 V DC command to pin 18c (channel 1) - 18a (channel 2) - 20c (channel 3) - 20a (channel 4).

To obtain correct signal switching and continuous regulation with the selection of channels from 1 to 4, select the new channel before deactivating the previous one. A yellow LED illuminates on the front panel in correspondence to the channel selected.

NOTE: The system manages reference signals and ramp values of the channel with the highest selected number. To enable channel selection in reverse order (4 to 1) all previous channels must be deactivated.

3.5 - RAMP (Ramp regulation)

A "RAMP" potentiometer is associated with each of the channels to enable regulation of the time required to reach the current supplied according to the selected reference signal.

The regulation range is from 0,03 to 7 sec.

This makes it possible to smooth valve response and adapt it to the requirements of the hydraulic system and the machine cycle.

The "ZERO RAMP" potentiometer enables regulation of the valve deactivation time (current=0) when all channels are switched off.

Rotate clockwise to increase ramp time.

Ramps can be inhibited by transmitting a 22 to 30 V DC exclusion command to pin 16a. In this case, the ramp residual time is 10 ms.

4 - SIGNAL MEASUREMENT

4.1 - CURRENT A / CURRENT B

(Current measurement points of solenoids A and B)

Measurement points for voltage readings of current supplied to solenoids A and B.

Reading conversion is 1V DC = 1A (UEIK-21-RL) and

0,82 V DC = 1A (UEIK-22-RL).

4.2 - REFERENCE (Reference signal measurement point)

Enables reading of reference signal related to the selected channel, in voltage, but of the opposite sign.

5 - INSTALLATION

The card is suitable for assembly on a rack or a card holder with interface for connector types DIN 41612 - size D - 32 pole.

It is recommended to use cable sections of 1 to 2,5 mm², in function with their length, for power supply and solenoid connections. For other connections, it is advisable to use cables with a screened sheath connected to earth only on the card side.

NOTE 1

To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram of par. 9.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

In environments that are critical from the electromagnetic interference point of view, a complete protection of the connection wires can be requested.

6 - DEFAULT CONDITIONS

The electronic control unit is supplied factory-set.

Standard settings are:

- "OFFSET" regulation: zero
- "REF" regulation: corresponding to 0,82A to A and B solenoids
- "RAMP" regulation: minimum
- position SW1 on V
- position SW2 on S
- position SW3 on AA
- switching frequency (PWM) = 200Hz (UEIK-21-RL) - 100Hz (UEIK-22-RL)

7 - START-UP AND FRONTAL SETTINGS

Settings can be modified and references can be regulated according to specific work cycles as follows:

a) OFFSET CURRENT REGULATION

- Select one of the channels connected to positive reference +10V (pin 10a).
- Regulate the relative potentiometer "REF" at a value between 200 and 300 mV (for reference signal see par. 4.2)
- Regulate the "OFFSET A" potentiometer so that the valve is positioned at the start of the work zone controlled by solenoid "A".

Repeat the procedure by selecting a channel connected to the negative reference -10V (pin 10c) and regulate the "OFFSET B" potentiometer.

b) REFERENCE REGULATION

- Select a channel and regulate the relative "REF" potentiometer to obtain the required actuator speed.
- Repeat the procedure for all four channels to obtain the required speed cycle.

c) RAMP REGULATION

- Regulate the four "RAMP" potentiometers to obtain the required regulation smoothness during passage from one channel to another.
- Regulate the "ZERO RAMP" potentiometer to obtain regulation smoothness when all four channels are deactivated.

8 - CARD CIRCUIT SETTINGS

The overall dimension diagram in par. 10 shows three switch banks: SW 1 - SW 2 - SW 3 which enable card set up as required.

NOTE: Each modification to switch settings must be carried out with the card disconnected from the power supply. The individual switches inside each bank must all be set in the same position.

SELECTION OF SINGLE ENDED OR DIFFERENTIAL REFERENCE SIGNAL (SW 2 bank comprising one individual switch)

- select S for single ended. This condition is obligatory in the case that the reference signal is generated with the four potentiometers inside the card.
- by selecting D (differential), it is possible to add an external reference signal that can control the valve during the manual cycle.

- **SW 1 bank (comprising three individual switches) must always be set on V, as per standard supply conditions.**
- **SW 3 bank (comprising two individual switches) must always be set on AA, as per standard supply conditions.**

SWITCHING FREQUENCY ADJUSTMENT

It is possible to change the switching frequency (PWM) by acting on the trimmer PT7 (see par. 10).

The setting range is from 80 to 370 Hz.

An appropriate switching frequency adjustment allows reduction of the valve hysteresis value.

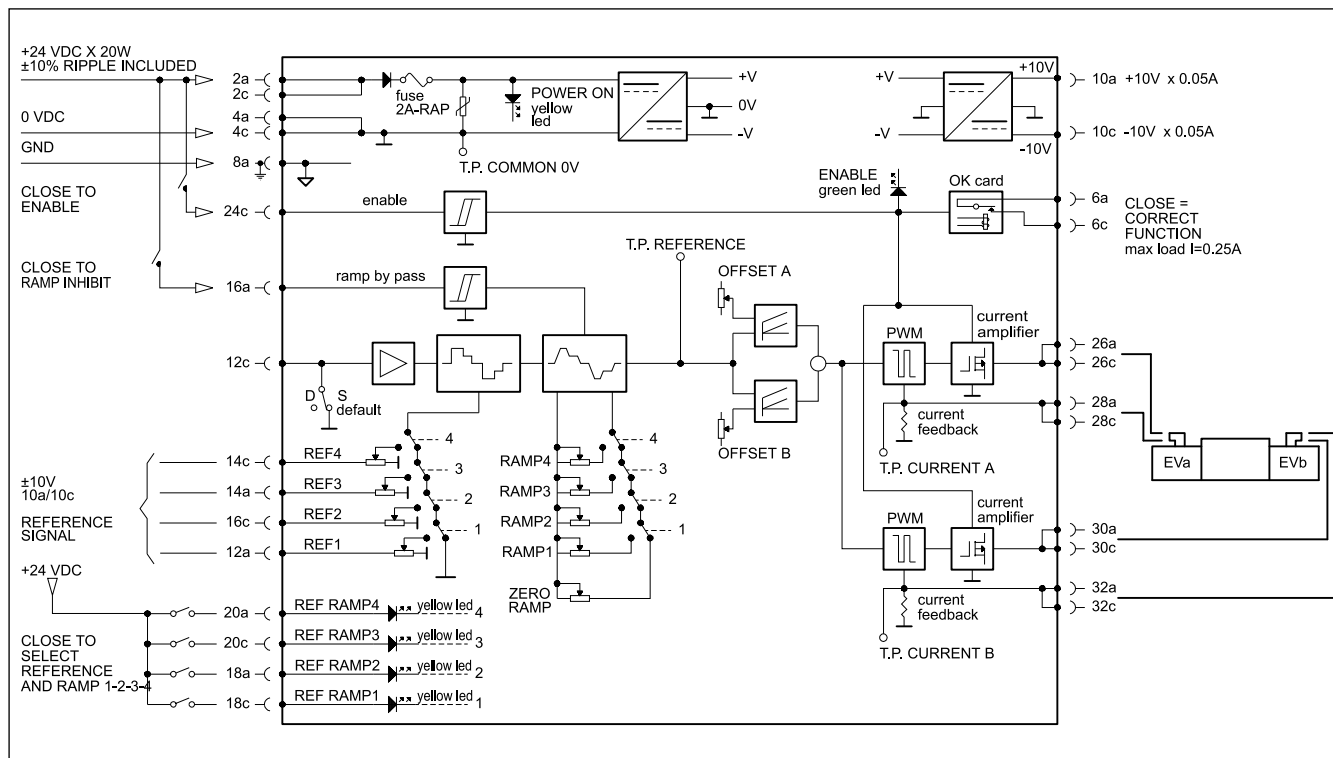

Clockwise rotation to increase the frequency.

ANALOGUE POSITIONING CARD FOR STROKE CONTROL IN CLOSED LOOP SYSTEMS WITH ANALOGUE FEEDBACK SERIES 20

**RAIL MOUNTING TYPE:
DIN EN 50022**

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	12 ÷ 30 ripple included
Fuse, external:		1A medium time lag
Current consumption:	mA	100
Command position	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Position accuracy	%	0,003 incl. Oversampling
Command speed	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 90 kΩ)
Feedback value	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Output values	V mA	2x 0 ÷ 10 (max load 10mA 2 kΩ) 4 ÷ 20 (max load 390 Ω)
Sample time	ms	1
Interface		USB-B 2.0
Electromagnetic compatibility (EMC) 2014/30/EU		Immunity EN 61000-6-2: 8/2005 Emissions EN 61000-6-4: 6/2007; A1:2011
Housing material		thermoplastic polyamide PA6.6 - combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 23(w)
Connections		USB-B (2.0) - 4x poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Stroke positioning control in closed loop system
- Fine positioning - an accuracy of approx. 0.01% of the sensor stroke can be achieved
- 2 different operating modes:
 - SDD – Stroke Depending Deceleration - time-optimal positioning structure with very high stability
 - NC – Numerically Controlled - To follow the position profile
- Gain adjustment made via software
- PT1 filter to stabilize the control behaviour
- Emergency function (EOUT)
- Analogue signal command
- Analogue feedback input
- Velocity limited internally or by analogue input
- Simple and intuitive scaling of the sensor

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics
- Drift compensation

Monitoring functions

- In-position error
- Cable break for feedback sensor and command signal
- 2 Digital output to read the status

Other characteristics

- Current or voltage output to be set via software
- Card configuration via software, through on-board USB port

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 12 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - External command position

The card accepts an analogue input signal. The command value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.5 - External command speed

The card accepts an analogue input signal. The command speed can be 0 ÷ 10 V (RI = 90 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.6 - Feedback value

The card accepts analogue feedback input. The feedback value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.7 - Analogue output values

Output values can be in voltage or current, to be configured via software (parameter SIGNAL:U). The same parameter defines the polarity also.

Voltage: ± 10 V Differential output
(0 ÷ 10 V at PIN 15 and 0 ÷ 10 V at PIN 16).

Current: 4 ÷ 20 mA (PIN 15 to PIN 12).

All analogue output have to be wired with screened cables.

3.8 - Digital Output

Two digital output are available, INPOS and READY, that are displayed via LEDs on the front panel.

Low level < 2 V High Level > 12 V (max 50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output.
General operability, ENABLE is active and there is no sensor error (by use of 4÷20 mA sensors). This output corresponds with the green LED.
- PIN 2** STATUS output.
Monitoring of the control error (INPOS). Depending on the INPOS command, the status output will be deactivated, if the position difference is greater than the adjusted window.
The output is only active if START = ON.
- PIN 5** HAND- input
Hand mode (START = OFF), driving with the programmed velocity. After deactivation the actual value is taken over as command position.
- PIN 6** HAND+ input:
Hand mode (START = OFF), driving with the programmed velocity. After deactivation the actual value is taken over as command position.
- PIN 7** START (RUN) input:
The positioning controller is active; the external analogue command position is taken over as command value. If the input is switched off during movement, the command position is set to the actual position plus a defined emergency deceleration stroke.
- PIN 8** ENABLE input:
This digital input signal initializes the application. The analogue output is active and the READY signal indicates that all components are working correctly. Target position is set to actual position and the drive is closed loop controlled.

ANALOGUE INPUT

- PIN 9/10** External command speed (V),
range 0 ÷ 100 % corresponds to 0 ÷ 10 V or 4 ÷ 20 mA
- PIN 11/13** Command position (W),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 11/14** Actual (feedback) value (X),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

ANALOGUE OUTPUT voltage

- PIN 16/15** Differential output (U)
± 100% corresponds to ± 10V differential voltage

current

- PIN 12/15** ±100% corresponds to 4 ÷ 20 mA

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

The system can be controlled in open loop, moving up and down the servo-cylinder with commands HAND+ and HAND- to facilitate the adjustment of the card and its calibration. With these functions the setting-up and the adjustments become easy.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Duplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7 and 8.

WARNING! For card series 20, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameter setting can be done at *standard* level, easier, or *expert*, where a greater number of parameters is displayed and can be customized.

For a complete list of the parameters and their settings please refer to the Technical Manual 89410 ETM.

7 - MAIN FEATURES

7.1 - Sequence of the positioning

The positioning process will be controlled by switching inputs. After enabling (ENABLE input), the command position is set to the actual position of the sensor and the axis is in closed loop position control mode.

The READY output indicates a general ready to operate.

The axis can be driven in manual mode with the digital inputs HAND+ or HAND- , at programmed velocity.

When the manual mode are switched off, the command position is set to the actual position and the system is in closed loop position control mode.

With START input, the analogue command input is active and new command positions will be taken over. The axis is immediately driving to this new position and indicates on the InPos Output when the axis reaches the position. This output is active as long as the axis is within the InPos window or the START input is active.

The operating mode can be:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error.

The actuator position is measured by an analogue transducer and compared with a specified target position. The target position is adjusted with an external potentiometer or preset by an analogue input from an external controller (PLC). It's possible to define the axis speed also by an external command speed.

The positioning accuracy will almost be limited by the resolution of the transducer, and by the right size of the hydraulic valve. Therefore, the correct valve selection is the most important point. Additionally, two clashing requirements (short positioning time and high accuracy) have to be considered in the system design.

7.2 - Gain

The gain is settable and it's related with the braking distance (parameters available via software). Lower is the braking distance, higher is the gain.

7.3 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be deactivate.

7.4 - Adaptation of the braking characteristic to the valve type (CTRL).

The command CTRL controls the braking characteristic curve of the hydraulic axis. The deceleration can be set with linear or nearly square root characteristic.

With positive overlapped proportional valves one of the SQRT characteristics should be used, because of the linearization of the non-linear flow curve typical of these valves; if zero overlapped proportional valves (control valves) are used, you can choose between LIN and SQRT1 according to the application.

The progressive gain characteristic of SQRT1 has the better positioning accuracy.

According to the application there is maybe a longer braking distance, so that the total stroke time will be longer.

LIN: Linear characteristic (control gain corresponds to: 10000 / d:i).

SQRT1: Root function with small control error. (corresponds to 30000 / d:i);

SQRT2: Root function with higher gain corresponds to 50000 / d:i

7.5 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

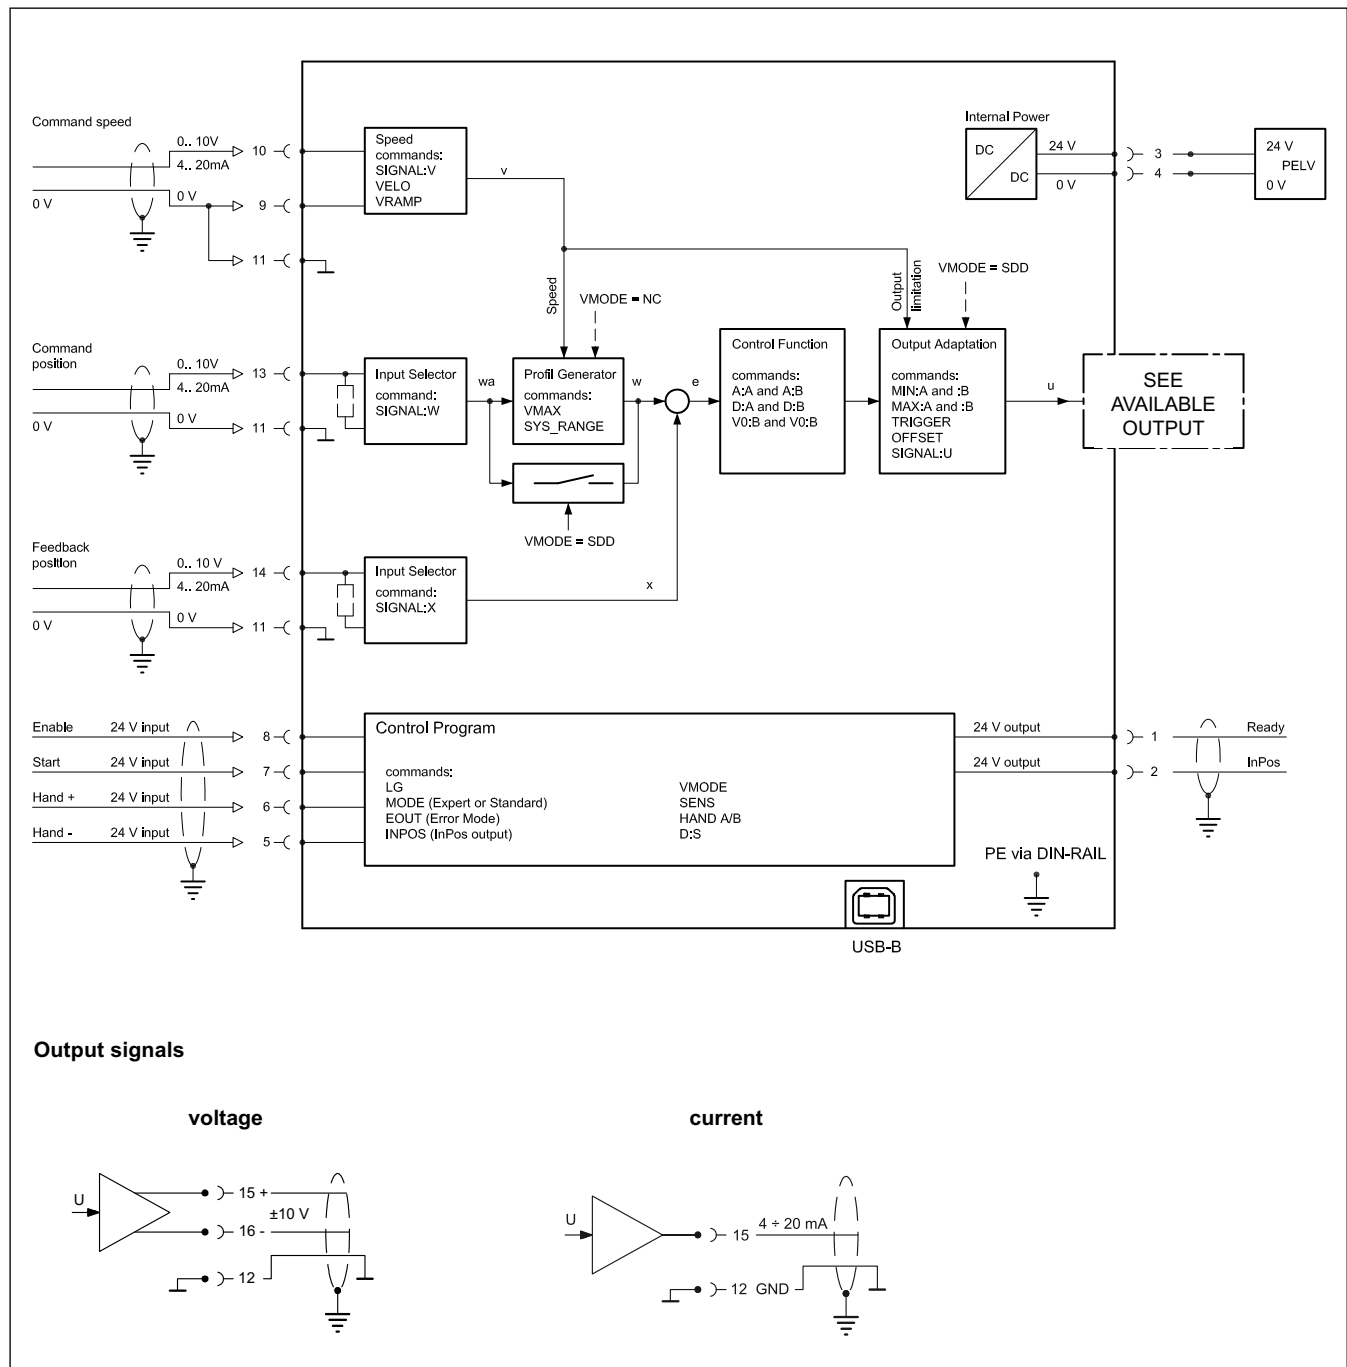

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out at the power amplifier or at the positioning module.

If the deadband compensation value (MIN) is set too high, it influences the minimal velocity which cannot be adjusted any longer.

In extreme cases this causes to an oscillating around the closed loop controlled position.

ANALOGUE POSITIONING CARD FOR STROKE CONTROL IN CLOSED LOOP SYSTEMS WITH ANALOGUE FEEDBACK AND DIGITAL SET-UP

SERIES 21

**RAIL MOUNTING TYPE:
DIN EN 50022**

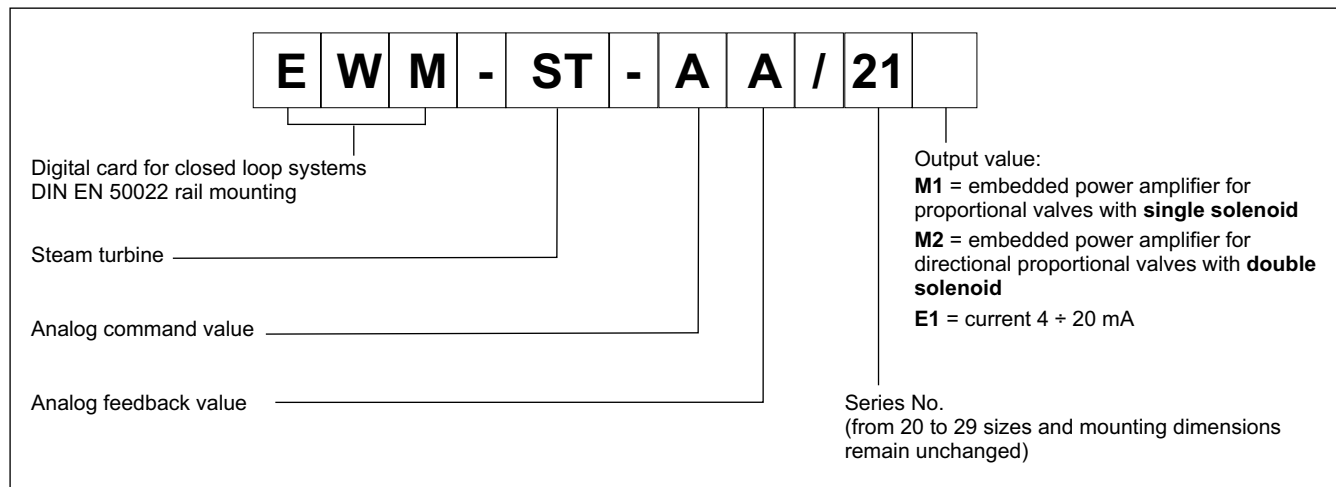

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	12 ÷ 30 ripple included
Fuse, external: M1 and M2 E1		3A medium time lag 1A medium time lag
Current consumption: M1 and M2 E1	A mA	3 < 100
Command position	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Position accuracy	%	0,01
Command speed	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 90 kΩ)
Feedback value	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Output value M1 and M2 E1	mA	500 ÷ 2600 4 ÷ 20
Sample time	ms	1
Interface		USB-B (2.0)
Electromagnetic compatibility (EMC) 2014/30/EU		Immunity EN 61000-6-2 Emissions EN 61000-6-4
Housing material		thermoplastic polyamide PA6.6 - combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 46(w)
Connections		USB - 7x4 poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Stroke positioning control in closed loop system
- Fine positioning - an accuracy of approx. 0.01% of the sensor stroke can be achieved
- Control mode: SDD – Stroke Depending Deceleration time-optimal positioning structure with very high stability
- Gain adjustment made via software
- PT1 filter to stabilize the control behaviour
- Special functions for steam turbines control (CUTOFF)
- Emergency function (EOUT)
- Analog signal command
- Analog feedback input
- Velocity limited internally or by analog input
- Simple and intuitive scaling of the sensor

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics
- Drift compensation

Monitoring functions

- In-position error
- Cable break for feedback sensor and command signal
- Solenoids monitored for M versions
- 2 Digital output to read the status
- Monitor output to DCS

Other characteristics

- Available with current output or integrated power amplifier
- Card configuration is made via software, through on-board USB

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 12 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

NOTE: the value of the power supply voltage on the card must not be lower than the rated working voltage of the solenoid to be controlled.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - External command position

The card accepts an analogue input signal. The command value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.5 - External command speed

The card accepts an analogue input signal. The command speed can be 0 ÷ 10 V (RI = 90 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.6 - Feedback value

The card accepts analogue feedback input. The feedback value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.7 - Analog output values

E1 version: analog signal 4 ÷ 20 mA (Rmax = 390 Ω).

M1 and M2 versions: embedded power stage configurable via software with values between 500 and 2600 mA.

All analogue output have to be wired with screened cables.

3.8 - Digital Output

Two digital output are available, INPOS and READY, that are displayed via LEDs on the front panel.

Low level < 2 V High Level > 12 V (50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- | | |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PIN | READY output |
| 1 | ENABLE is active and there is no sensor errors. This output corresponds with the 'Ready' LED. |
| PIN | STATUS output |
| 2 | Monitoring of the control error (INPOS). Depending on the INPOS command, the status output will be deactivated, if the position difference is greater than the adjusted window.
The output is only active if START = ON. |
| PIN | HAND- input |
| 5 | Hand mode (START = OFF), driving with the programmed velocity. After deactivation the actual value is taken over as command position. |
| PIN | HAND+ input |
| 6 | Hand mode (START = OFF), driving with the programmed velocity. After deactivation the actual value is taken over as command position. |
| PIN | START (RUN) input |
| 7 | The positioning controller is active; the external analogue command position is taken over as command value. If the input is switched off during movement, the system stops within the set emergency stopping distance. |
| PIN | ENABLE input: |
| 8 | This digital input initializes the application and clear the errors. The analogue output is active and the READY signal indicates that all components are working correctly. Target position is set to actual position and the drive is closed loop controlled. |

ANALOGUE INPUT

- | | |
|-------|------------------------------------------------------|
| PIN | External command speed (V) |
| 9/10 | range 0 ÷ 100 % corresponds to 0 ÷ 10 V or 4 ÷ 20 mA |
| PIN | Command position (W) |
| 11/13 | range 0 ÷ 100% corresponds to 0 ÷ 10 V or 4 ÷ 20 mA |
| PIN | Actual (feedback) value (X) |
| 11/14 | range 0 ÷ 100% corresponds to 0 ÷ 10 V or 4 ÷ 20 mA |

ANALOGUE OUTPUT

- | | |
|-------|-----------------------------------------------------------------|
| PIN | Monitor output to DCS |
| 12/15 | current output $\pm 100\%$ corresponds to 0 ÷ 10 V or 4 ÷ 20 mA |
| PIN | For E1 version only: |
| 12/16 | current output $\pm 100\%$ corresponds to 4 ÷ 20 mA |

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

WARNING! Plugs with free-wheeling diodes and LED indicators cannot be used with current controlled power outputs. They interfere with the current control and can destroy the output stage.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

The system can be controlled in open loop, moving up and down the servo-cylinder with commands HAND+ and HAND- to facilitate the adjustment of the card and its calibration. With these functions the setting-up and the adjustments become easy.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Duplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7, 8 and 10.

WARNING! For card series 20, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameter setting can be done at standard level, easier, or expert, where a greater number of parameters is displayed and can be customized.

For a complete list of the parameters and their settings please refer to the Technical Manual 89411 ETM for series 21.

7 - MAIN FEATURES

7.1 - Sequence of the positioning

The positioning process will be controlled by switching inputs. After enabling (ENABLE input), the command position is set to the actual position of the sensor and the axis is in closed loop position control mode.

The READY output indicates a general ready to operate.

The axis can be driven in manual mode with the digital inputs HAND+ or HAND- , at programmed velocity.

When the manual mode are switched off, the command position is set to the actual position and the system is in closed loop position control mode.

With START input, the analogue command input is active and new command positions will be taken over. The axis is immediately driving to this new position and indicates on the Inpos Output when the axis reaches the position. This output is active as long as the axis is within the InPos window or the START input is active.

The operating mode is SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

The actuator position is measured by an analog transducer and compared with a specified target position. The target position is adjusted with an external potentiometer or preset by an analog input from an external controller (PLC). It's possible to define the axis speed also by an external command speed.

The positioning accuracy will almost be limited by the resolution of the transducer, and by the right size of the hydraulic valve. Therefore, the correct valve selection is the most important point. Additionally, two clashing requirements (short positioning time and high accuracy) have to be considered in the system design.

7.2 - Gain

The gain is settable and it's related with the braking distance (parameters available via software). Lower is the braking distance, higher is the gain.

7.3 - Forced closure/opening of the cylinder (CUTOFF)

This function handles the forced closure/opening of the cylinder, allowing you to set speed, direction and working area of the function.

7.4 - Emergency Output (EOUT and EOUTMODE)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The EOUTMODE parameter selects events which generate the EOUT output.

7.5 - Adaptation of the braking characteristic to the valve type (CTRL).

The deceleration characteristic is set with this parameter. In case of positively overlapped proportional valves the SQRT function should be used. The non-linear flow function of these valves is linearized by the SQRT function.

In case of zero lapped valves (control valves and servo valves) the LIN or SQRT1 function should be used regardless of the application. The progressive characteristic of the SQRT1 function has better positioning accuracy but can also lead to longer positioning times in individual cases.

LIN: Linear deceleration characteristic (gain is increased by a factor of 1).

SQRT1: Root function for braking curve calculation. The gain is increased by a factor of 3 (in the target position). This is the default setting.

SQRT2: Root function for braking curve calculation. The gain is increased by a factor of 5 (in the target position). This setting should only be used with a significantly progressive flow through the valve.

7.6 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out at the power amplifier or at the positioning module.

If the deadband compensation value (MIN) is set too high, it influences the minimal velocity which cannot be adjusted any longer.

In extreme cases this causes to an oscillating around the closed loop controlled position.

ANALOGUE POSITIONING CARD FOR STROKE CONTROL IN CLOSED LOOP SYSTEMS WITH DIGITAL FEEDBACK SERIES 20

**RAIL MOUNTING TYPE:
DIN EN 50022**

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	24 ÷ 30 ripple included
Fuse, external	A	1A medium time lag
Current consumption	mA	350 (technical data of the sensor have to be considered)
Command position	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Max position accuracy	µm	1
Command speed	V	0 ÷ 10 (RI = 90 kΩ) 4 ÷ 20 (RI = 240 Ω)
Feedback value		Digital sensor with SSI interface RS-422, 150kBaud
Output value	V mA	differential, ±10 (max load 10 mA 2 kΩ) 4 ÷ 20 (max load 390 Ω)
Interface		USB - B 2.0
Electromagnetic compatibility (EMC) 2014/30/EU		Immunity EN 61000-6-2: 8/2005 Emissions EN 61000-6-4: 6/2007; A1:2011
Housing material		thermoplastic polyamide PA6.6 - combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 46(w)
Connections		USB-B (2.0) - 7x4 poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Stroke positioning control in closed loop system
- Fine positioning - 1µm resolution
- 2 different operating mode:
 - SDD – Stroke Depending Deceleration - time-optimal positioning structure with very high stability
 - NC – Numerically Controlled - To follow the position profile
- Gain adjustment made via software
- PT1 filter to stabilize the control behaviour
- Emergency function (EOUT)
- Analog signal command
- Digital feedback input
- Velocity limited internally or by analog input
- Safe and error-free data transmission
- As an alternative, the card can be set via software for operate with analogue sensors.
- Simple and intuitive scaling for analogue sensors

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics
- Drift compensation

Monitoring functions

- In-position error
- Cable break for command signal and fault of feedback sensor
- 2 Digital output to read the status
- Monitor output to DCS

Other characteristics

- Output value in voltage or current, to be configured via software.
- Card configuration is made via software, through on-board USB

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 24 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - External command position

The card accepts an analogue input signal. The command value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.5 - External command speed

The card accepts an analogue input signal. The command speed can be 0 ÷ 10 V (RI = 90 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.6 - Feedback value

The card accepts a digital feedback input from a sensor with any SSI interface with RS422 specifications. Bit, code and resolution are settable via software.

The max sensor resolution is 0,001 mm.

Eventually an analog input could be used as feedback. The card accepts a 0 ÷ 10 V (Ri 25 kΩ) or 4 ÷ 20 mA (Ri = 240 Ω)

3.7 - Analog output values

Output values can be in voltage or current, to be configured via software (parameter SIGNAL:U). The same parameter defines the polarity also.

Voltage: ± 10 V Differential output

(0 ÷ 10 V at PIN 15 and 0 ÷ 10 V at PIN 16).

Current: 4 ÷ 20 mA (PIN 15 to PIN 12).

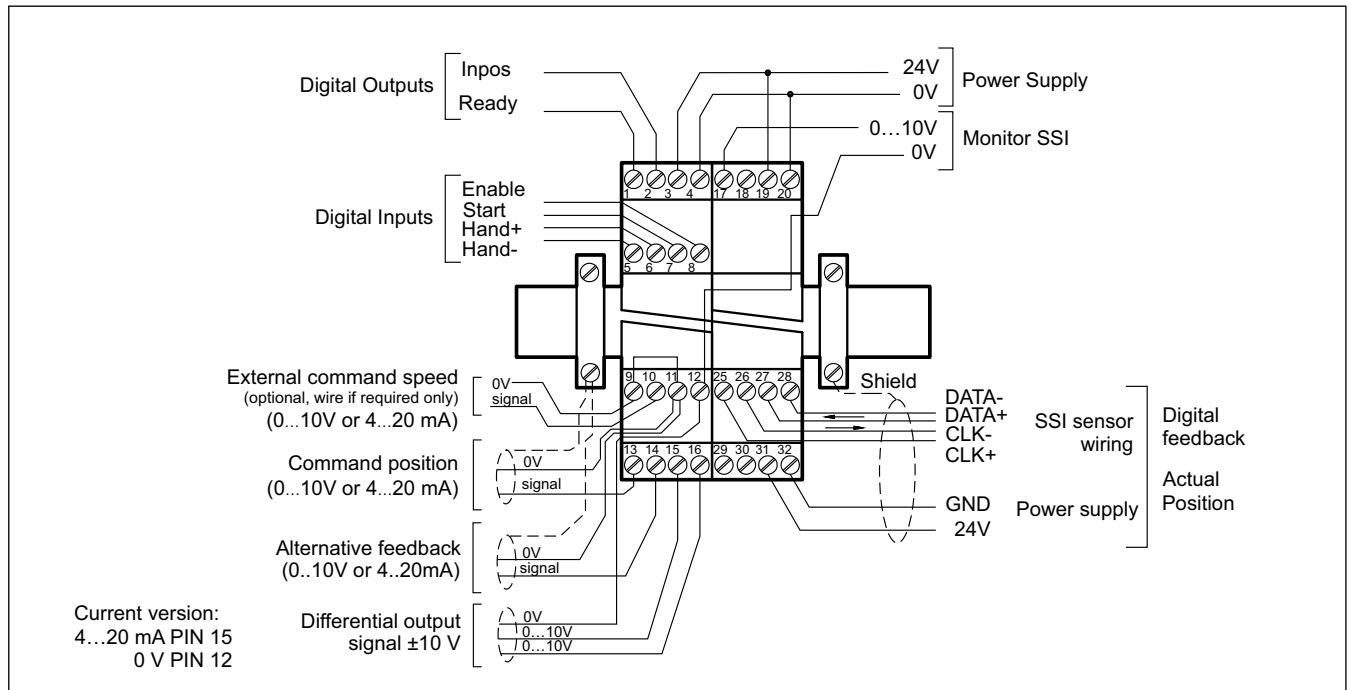

An analogue position value 0 ÷ 10 V (max load 10mA) is available at PIN 17 as sensor monitor reference.

3.9 - Digital Output

Two digital output are available, INPOS and READY, that are displayed by LED on the front panel.

Low level < 2 V High Level > 12 V (50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output.
General operability, ENABLE is active and there is no sensor error. This output corresponds with the green led.
- PIN 2** STATUS output.
Monitoring of the control error (INPOS). Depending on the INPOS command, the status output will be deactivated, if the position difference is greater than the adjusted window.
The output is only active if START = ON.
- PIN 5** HAND- input
Hand mode (START = OFF), driving with the programmed velocity. After deactivation the actual value is taken over as command position.
- PIN 6** HAND+ input:
Hand mode (START = OFF), driving with the programmed velocity. After deactivation the actual value is taken over as command position.
- PIN 7** START input:
The positioning controller is active; the external analogue command position is taken over as command value. If the input is switched off during movement, the command position is set to the actual position plus a defined emergency deceleration stroke.
- PIN 8** Enable input:
This digital input signal initializes the application. The analogue output is active and the READY signal indicates that all components are working correctly. Target position is set to actual position and the drive is closed loop controlled.

ANALOGUE INPUT

- PIN 9/10** External command speed (V)
range 0 ÷ 100 %
corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 13/11** Command position (WA)
range 0 ÷ 100%
corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 11/14** Alternative: analogue feedback value (X)
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

ANALOGUE OUTPUT voltage

- PIN 16/15** Differential output (U)
± 100% corresponds to ± 10V differential voltage

current

- PIN 12/15** ±100% corresponds to 4 ÷ 20 mA
- PIN 12/17** Monitor of the SSI sensor position
0 ÷ 10V

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

The system can be controlled in open loop, moving up and down the servo-cylinder with commands HAND+ and HAND- to facilitate the adjustment of the card and its calibration. With these functions the setting-up and the adjustments become easy.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Duplomatic MSA website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7 and 8.

WARNING! For card series 20, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameter setting can be done at standard level, easier, or expert, where a greater number of parameters is displayed and can be customized.

For a complete list of the parameters and their settings please refer to the Technical Manual 89420-115 ETM.

7 - MAIN FEATURES

7.1 - Sequence of the positioning

The positioning process will be controlled by switching inputs. After enabling (ENABLE input), the command position is set to the actual position of the sensor and the axis is in closed loop position control mode.

The READY output indicates a general ready to operate.

The axis can be driven in manual mode with the digital inputs HAND+ or HAND- , at programmed velocity.

When the manual mode are switched off, the command position is set to the actual position and the system is in closed loop position control mode.

With START input, the analogue command input is active and new command positions will be taken over. The axis is immediately driving to this new position and indicates on the Inpos Output when the axis reaches the position. This output is active as long as the axis is within the InPos window or the START input is active.

Two operating modes can be selected:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error.

The actuator position is measured by a transducer and compared with a specified target position. The target position is adjusted with an external potentiometer or preset by an analog input from an external controller (PLC). It's possible to define the axis speed also by an external command speed.

The positioning accuracy will almost be limited by the resolution of the transducer, and by the right size of the hydraulic valve. Therefore, the correct valve selection is the most important point. Additionally, two clashing requirements (short positioning time and high accuracy) have to be considered in the system design.

7.2 - Gain

The gain is settable and it's related with the braking distance (parameters available via software). Lower is the braking distance, higher is the gain.

7.3 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be deactivate.

7.4 - Adaptation of the braking characteristic to the valve type (CTRL).

The deceleration characteristic is set with this parameter. In case of positively overlapped proportional valves the SQRT function should be used. The non-linear flow function of these valves is linearized by the SQRT function.

In case of zero lapped valves (control valves and servo valves) the LIN or SQRT1 function should be used regardless of the application. The progressive characteristic of the SQRT1 function has better positioning accuracy but can also lead to longer positioning times in individual cases.

LIN: Linear deceleration characteristic (gain is increased by a factor of 1).

SQRT1: Root function for braking curve calculation.

The gain is increased by a factor of 3 (in the target position). This is the default setting.

SQRT2: Root function for braking curve calculation.

The gain is increased by a factor of 5 (in the target position). This setting should only be used with a significantly progressive flow through the valve.

7.5 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

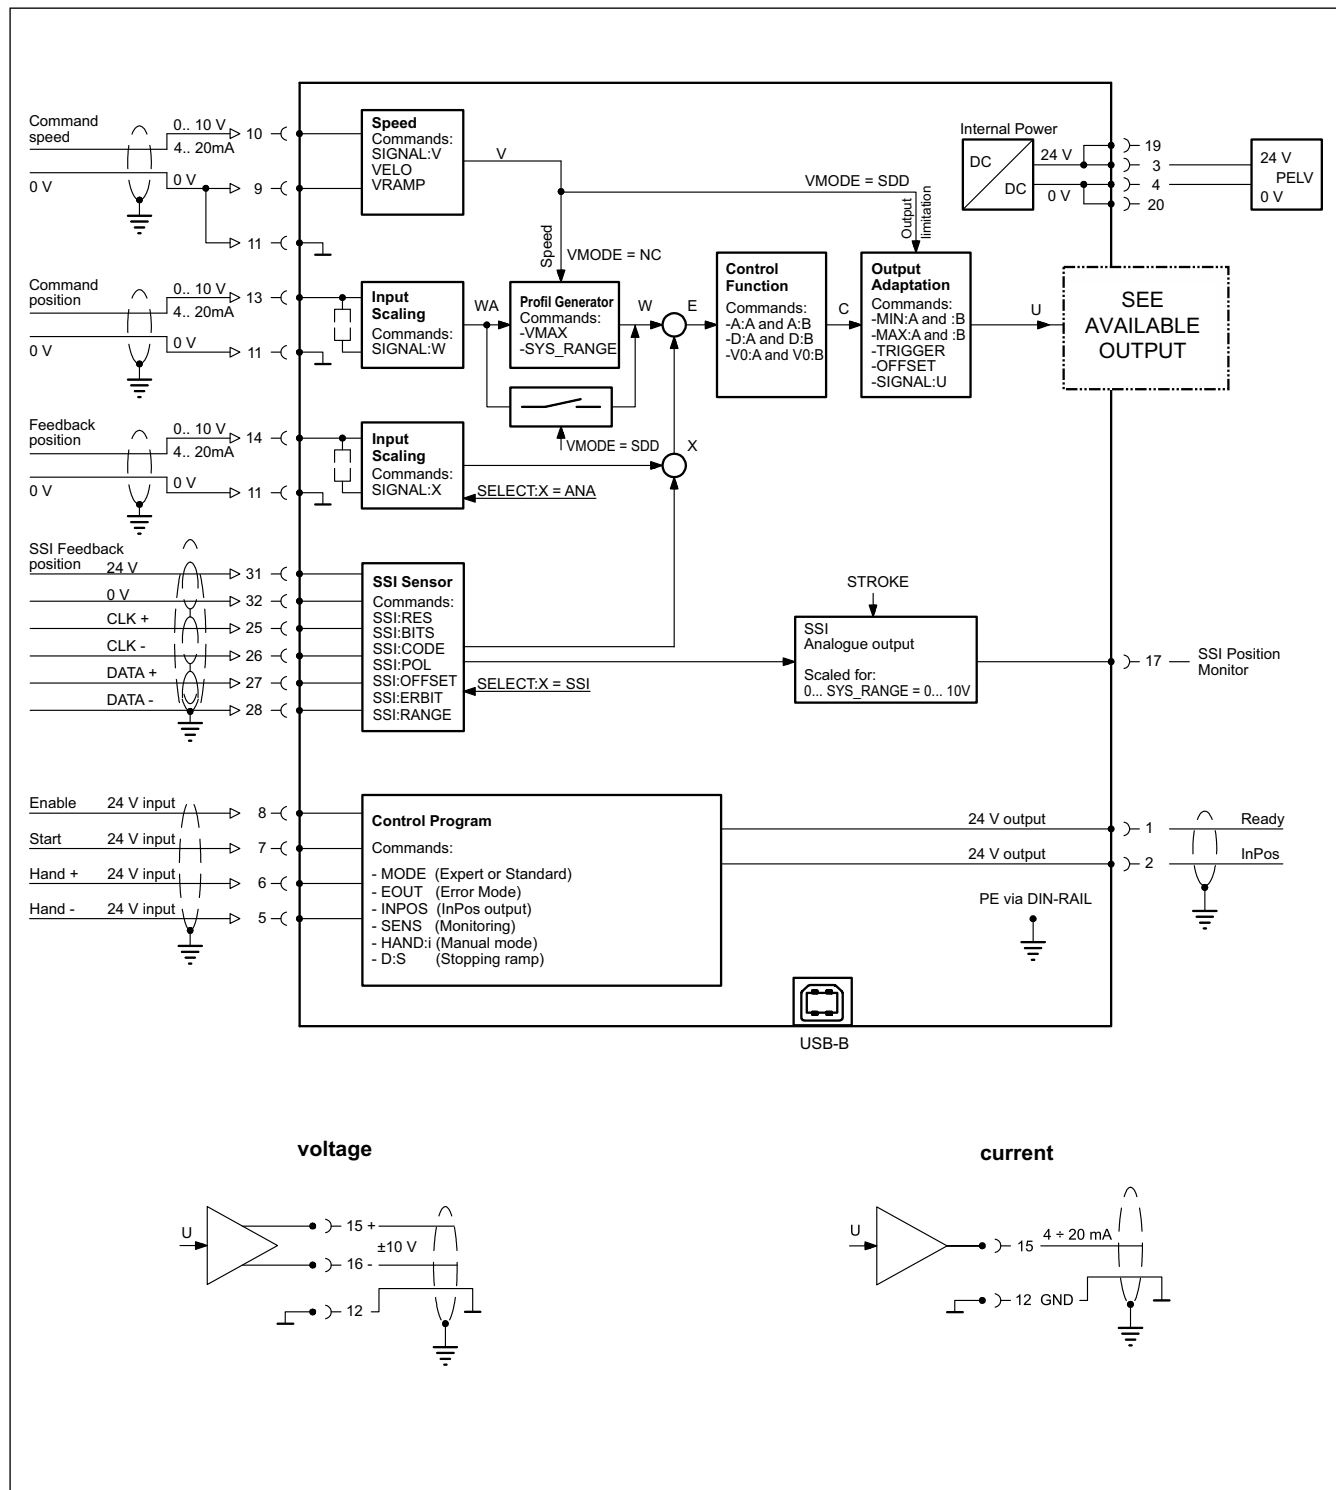

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out at the power amplifier or at the positioning module.

If the deadband compensation value (MIN) is set too high, it influences the minimal velocity which cannot be adjusted any longer.

In extreme cases this causes to an oscillating around the closed loop controlled position.

EWM-SP-DAD

CARD FOR AXIS CONTROL WITH PRESSURE LIMITATION IN CLOSED LOOP. PROFIBUS INTERFACE SERIES 21

**RAIL MOUNTING TYPE:
DIN EN 50022**

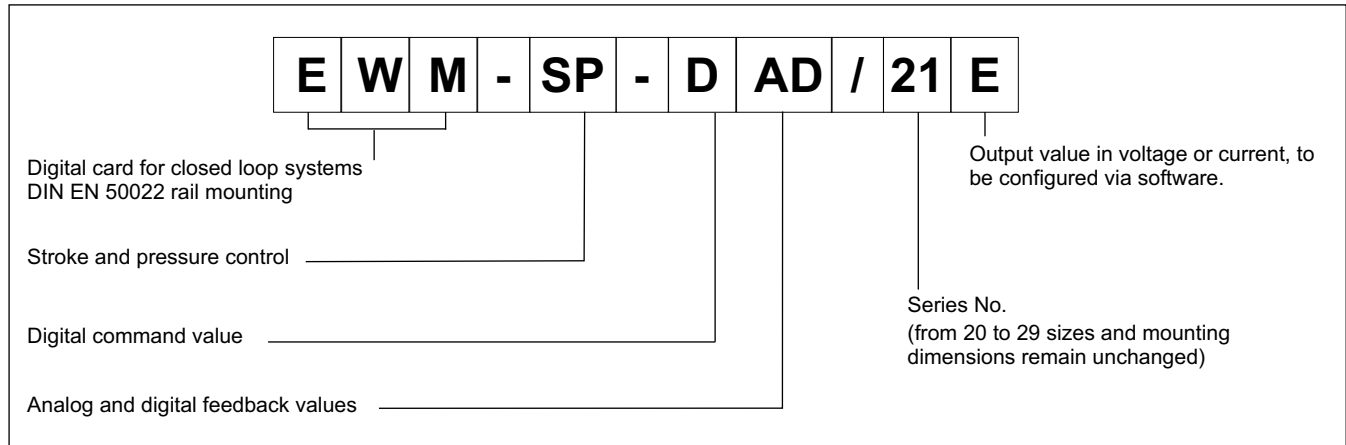

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	24 ÷ 30 ripple included
Fuse, external	A	1A medium time lag
Current consumption	mA	<350 (technical data of the sensors have to be considered)
Command position		via Profibus DP
Profibus DP data rate	kbit/s	9.6, 19.2, 93.75, 187.5, 500, 1500, 3000, 6000, 12000 - ID number 1810h
Max position accuracy	µm	1
Position feedback values	SSI V mA	digital sensor with any interface SSI - 150 kbit/s 4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Pressure feedback values	V mA	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Output value	V mA	differential, ±10 (max load 10 mA) 4 ÷ 20 (max load 390 Ω)
Interface		USB - B 2.0 / Profibus
Electromagnetic compatibility (EMC)		Immunity EN 61000-6-2: 8/2005 Emissions EN 61000-6-4: 6/2007; A1:2011
Housing material		thermoplastic polyamide PA6.6 - combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 46(w)
Connections		USB-B (2.0) - 7x4 poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Stroke or stroke + pressure limitation control in closed loop system
- Fine positioning - 1 µm resolution
- 2 method for positioning control:
 - SDD – Stroke Depending Deceleration - time-optimal positioning structure with very high stability
 - NC – Numerically Controlled - To follow the position profile
- Second position and second speed commands available for fast approach / test speed
- Data for lengths and pressures in mm and bar / % respectively
- Gain adjustment made via software
- PT1 filter to stabilize the control behaviour
- Emergency function (EOUT)
- Safe and error-free data transmission
- For digital position sensors
- Internal limitation of velocity for position sensors
- As an alternative, the card can be set via software for operate with analogue position sensors.
- Two analogue feedback for differential pressure measurement
- Two sets of PID and ramp parameters for pressure control
- Simple and intuitive scaling for analogue sensors

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics
- Drift compensation

Monitoring functions

- In-position error
- Cable break, in-pressure error and fault of feedback sensors
- 2 Digital output to read the status

Other characteristics

- Output value in voltage or current, to be configured via software.
- Card configuration is made via software, through on-board USB
- Defined parameters can also be set via the Profibus interface.

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 24 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - Reference signals

The reference signals run via Profibus, ID number 1810h.

3.5 - Position feedback values

The card accepts a digital feedback input from a sensor with any SSI interface with RS422 specifications. Bit, code and resolution are settable via software.

The max sensor resolution is 0,001 mm.

Eventually an analog input could be used as feedback. The card accepts a 0 ÷ 10 V (Ri 25 kΩ) or 4 ÷ 20 mA (Ri = 240 Ω).

The analogue resolution is of 0,003 incl. oversampling for a max res. of 1 µm.

Using analog sensors, the SSI parameters in the software assume default preset values that the user must not change.

3.6 - Pressure feedback values

Pressure feedback can be analogue only, 0 ÷ 10 V (Ri 25 kΩ) or 4 ÷ 20 mA (Ri = 240 Ω).

3.7 - Analog output values

Output values can be in voltage or current, to be configured via software (parameter SIGNAL:U). The same parameter defines the polarity also.

Voltage: ± 10 V Differential output PIN 15 and 16

Current: 4 ÷ 20 mA (PIN 15 to PIN 12).

3.8 - Digital Output

Two digital output are available, STATUS and READY, that are displayed by LED on the front panel.

Low level < 2 V High Level > max U_b (max 50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output.
General operationality, ENABLE (PIN 8 and profibus bit) is active and there are no sensor errors.
This output corresponds with the green led.
- PIN 2** STATUS output.
Monitoring of the control error (POSWIN). Depending on the POSWIN command, the status output will be deactivated, if the position difference is greater than the adjusted window.
The output is only active if START bit (Profibus) = ON.
- PIN 8** ENABLE input:
This digital input signal initializes the application.
The controller and the READY signal are activated.
The output signal to the control element is enabled.
Target position is set to actual position and the drive stays stationary, in closed loop.
The Enable bit via profibus must be active, too.

ANALOGUE INPUT

- PIN 6** Analogue pressure feedback value (X2),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 13** Analogue pressure feedback value (X1),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 14** Analogue position feedback value ,
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

ANALOGUE OUTPUT voltage

- PIN 16/15** Differential output (U)
± 100% corresponds to ± 10V differential voltage

current

- PIN 12/15** ±100% corresponds to 4 ÷ 20 mA

SSI SENSOR INTERFACE

- PIN 25** CLK+ output
PIN 26 CLK- output
PIN 27 DATA+ input
PIN 28 DATA- input
PIN 31 24V Power supply of the SSI sensor
PIN 32 0V Power supply of the SSI sensor

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

The system can be controlled in open loop, moving up and down the servo-cylinder with commands HAND:x, via Profibus only, to facilitate the adjustment of the card and its calibration. With these functions the setting-up and the adjustments become easy.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Diplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7, 8. and 10.

WARNING! In cards from series 20 onwards, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in **OPTION / SETTINGS / INTERFACE**.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameter setting can be done at *standard* level, easier, or *expert*, where a greater number of parameters is displayed and can be customized.

For a complete list of the parameters and their settings please refer to the Technical Manual 89440-120 ETM.

7 - MAIN FEATURES

The EWM-SP-DAD is a card for positioning control loop (POS), that can operate also with a pressure limitation control (POS_PQ).

With only few parameters the controller can be optimized and the movement profile is preset via Profibus (position and velocity).

Here below an example of profile with a switch speed:

- the target position is command value 2 (P2) combined with velocity 2 (V2).
- the switch over position is command value 1 (P1), combined with velocity 1 (V1).

The switchpoint from high to low velocity is calculated depending on the speed V2 and the braking.

The switchpoint from low to high speed is made in the P1 position with the ramp acceleration, as shown below.

If the command position P2 is between the current position and the position value of P1, the positioning in P2 can only be driven with V1 velocity.

7.1 - Sequence of the positioning

You can switch from the positioning in closed loop to the manual movement in open loop and back via Profibus.

With READY active the system is ready. The open loop control is achieved by using the HAND bits and the speed parameter. When the bit HAND goes low the card assumes the current position as the request and the card is ready to work in closed loop.

With also START bit enabled, the command position parameter (profibus) become active and the new command position will be taken over as a new target.

The axis moves immediately to this new position and indicates on the Inpos Output when it reaches the position. This output is active as long as the axis is within the InPos window or the START bit is active.

Two methods for positioning are available:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error. The actuator position is measured by a transducer and compared with a specified target position. The target position and speed are set by Profibus.

The positioning accuracy will almost be limited by the resolution of the transducer, and by the right size of the hydraulic valve. Therefore, the correct valve selection is the most important point. Additionally, two clashing requirements (short positioning time and high accuracy) have to be considered in the system design.

7.2 - Pressure limitation control function:

The pressure limitation control requires a dynamic zero-overlapped control valve.

The pressure loop is managed according to the value of pressure measured just in one or in both the two chambers of the cylinder.

The control value for the pressure loop is set via profibus. If the pressure (or force) exceeds, the controller reduces the output signal to the valve (only in a negative scale) until it reaches the preset pressure value.

The switch from 'positioning mode' to 'pressure limitation' is handled automatically.

7.3 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be deactivate.

7.4 - Adaptation of the braking characteristic to the valve type (CTRL).

The deceleration characteristic is set with this parameter. In case of positively overlapped proportional valves the SQRT function should be used. The non-linear flow function of these valves is linearized by the SQRT function.

In case of zero lapped valves (control valves and servo valves) the LIN or SQRT1 function should be used regardless of the application. The progressive characteristic of the SQRT1 function has better positioning accuracy but can also lead to longer positioning times in individual cases.

LIN: Linear deceleration characteristic (gain is increased by a factor of 1).

SQRT1: Root function for braking curve calculation. The gain is increased by a factor of 3 (in the target position). This is the default setting.

SQRT2: Root function for braking curve calculation. The gain is increased by a factor of 5 (in the target position). This setting should only be used with a significantly progressive flow through the valve.

7.5 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out either at the power amplifier or at the positioning module.

If the deadband compensation value (MIN) is set too high, it influences the minimal velocity which cannot be adjusted any longer.

In extreme cases this causes to an oscillating around the closed loop controlled position.

8 - CARD BLOCK DIAGRAM

NOTE: If the card is configured as simple positioning control without pressure limitation then the output value is calculated just from the output of the position controller (CS) instead of apply MIN and MAX parameters. MIN/MAX are selected by the PQ_INVERSE bit (Profibus).

9 - OVERALL AND MOUNTING DIMENSIONS

- Alternatively, the card can be set via software for operate with an analogue position sensor.
- Two analogue feedback for differential pressure measurement
- Two sets of PID and ramp parameters for pressure control
- Simple and intuitive scaling for analogue sensors
- Feed forward control for NC mode, to reduce following error
- Acceleration feedback obtained from the differential pressure (NC mode)

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics
- Drift compensation

Monitoring functions

- In-position error
- Cable break, in-pressure error and fault of feedback sensors
- 1 digital output to read the status

Other characteristics

- Output value in voltage or current, to be configured via software.
- Card configuration is made via software, through on-board USB
- Parametrization via fieldbus

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 24 VDC power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an overvoltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - Reference signals

Reference signals run via fieldbus, with Profinet interface.

3.5 - Position feedback values

The card accepts a digital feedback input from a sensor with any SSI interface with RS-422 specifications. Bit, code and resolution are settable via software.

The max sensor resolution is 1 µm.

Eventually, an analogue input could be used with feedback sensor. The card accepts a 0 ÷ 10 V (Ri 25 kohm) or 4 ÷ 20 mA (Ri = 250 ohm).

Using analogue sensors, the SSI parameters in the software assume default preset values that the user must not change.

3.6 - Pressure feedback values

Pressure feedback can be analogue only, 0 ÷ 10 V (Ri 25 kohm) or 4 ÷ 20 mA (Ri = 250 ohm).

3.7 - Analogue output values

Output values can be in voltage or current, to be configured via software (parameter SIGNAL:U). The same parameter defines the polarity also.

Voltage: ± 10 V Differential output

(0 ÷ 10 V PIN 15 and 0 ÷ 10 V at PIN 16).

Current: 4 ÷ 20 mA (PIN 15 to PIN 12).

3.8 - Digital Output

A READY digital output is available and is also displayed by the LED on the front panel.

Low level < 2 V High Level > Max voltage supply (50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output.
General operability, ENABLE (PIN 8 and fieldbus bit) is active and there are no sensor errors. This output corresponds with the green led.
- PIN 8** ENABLE input:
This digital input signal initializes the application. The controller and the READY signal are activated. The output signal to the control element is enabled. Target position is set to actual position and the drive stays stationary, in closed loop. The Enable bit via fieldbus must be active too, to activate the module.

ANALOGUE INPUT

- PIN 6** Analogue pressure feedback value (X2), range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

± 100% corresponds to ± 10V differential voltage

current

- PIN 12/15** ±100% corresponds to 4 ÷ 20 mA

SSI SENSOR INTERFACE

- PIN 25** CLK+ output
PIN 26 CLK- output
PIN 27 DATA+ input
PIN 28 DATA- input
PIN 31 24V Power supply of the SSI sensor
PIN 32 0V Power supply of the SSI sensor

5 - INSTALLATION

For power supply and solenoid connections are recommended cable cross sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40 m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

5.2 - PROFINET IO RT interface

PROFINET is the standard for Industrial Ethernet based on IEEE 802.3. PROFINET IO is designed for the fast data exchange between Ethernet-based controllers (master functionality) and field devices (slave functionality) with cycle times up to 10 ms.

5.3 - ProfiNet Installation guideline

The ProfiNet IO field devices are connected exclusively via switches as network components. A ProfiNet IO network can be set up in star, tree, line or ring topology. ProfiNet IO is based on the Fast Ethernet standard transmission with 100 Mbit/s. The transmission media are copper cables CAT5.

The RJ45 connector CAT5 according to EN 50173 or ISO / IEC 11801 is used for the IP20 environment in the control cabinet.

The connection between ProfiNet participants is called ProfiNet channel. In most cases, ProfiNet channels are built with copper cables to IEC 61784-5-3 and IEC 24702. The maximum length of a ProfiNet channel, which is constructed with copper cables is 100 m.

Diagnostic LEDs are embedded on each port.

The characteristics of an IO Device are described in the General Station Description (GSDML) file. This file describes the structure of the cyclic input and output data transferred between the Programmable Controller and the fieldbus IO device.

Any mismatch between the size or structure of the input and output data and the actual internal device structure generates an alarm to the controller.

In the configuration of transmission data select 32 bytes for input and 32 bytes for output.

The .GSDML configuration file is available for download from our website (software download page).

6 - DEVICE SETUP

Card set-up is possible via software only, via USB port.

The system can be controlled in open loop, moving up and down the axis via Fieldbus with commands HAND:B and HAND:A at the velocity set in parameter HAND, to facilitate the commissioning of the card and its calibration.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Diplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7, 8 and 10.

6.2 - Parameters table

The parameters table is available in English or German. The language is settable with LG parameter.

Parameters are grouped together according to their function (e.g. IO signals, position controller, pressure controller, etc..) in order to make the setting process easier, but they can also be displayed all together (MODE parameter).

For a complete list of parameters and their settings please refer to the Technical Manual 89445 ETM.

7 - MAIN FEATURES

The EWM-SP-DAD is a card for positioning control loop, that can operate also with a pressure limitation control.

With only few parameters the controller can be optimized and the movement profile is preset via Fieldbus (position and velocity).

Here below an example of profile with a switch speed:

- the target position is command value 2 (P2) combined with velocity 2 (V2).
- the switch over position is command value 1 (P1), combined with velocity 1 (V1).

The switch point from high to low velocity is calculated depending on the speed V2 and the braking.

The switchpoint from low to high speed is made in the P1 position with the ramp acceleration, as shown below.

If the command position P2 is between the current position and the position value of P1, the positioning in P2 can only be driven with V1 velocity.

7.1 - Sequence of the positioning

The positioning is controlled via fieldbus.

You can switch from the positioning in closed loop to the manual movement in open loop and vice versa.

With READY active the system is ready. The open loop control is achieved by the HAND bits and the speed parameter. When the HAND bit goes low the card read the current position and keep it until next request. The card is ready to work in closed loop.

Enabling the START bit also, the command position parameter (fieldbus) become active and the new command position will be taken over as a new target.

The axis moves immediately to this new position and indicates on POSWIN status bit when it reaches it. This output is active as long as the axis is within the 'In position' window and the START bit is active.

Two methods for positioning are available:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error.

The actuator position is measured by a transducer and compared with a specified target position. The target position and speed are set by Fieldbus.

The positioning accuracy will almost be limited by the resolution of the transducer, and by the right size of the hydraulic valve. Therefore, the correct valve selection is the most important point.

Additionally, two clashing requirements (short positioning time and high accuracy) have to be considered in the system design.

7.2 - Pressure limitation control function

The pressure limitation control requires a dynamic zero-overlapped control valve.

The pressure loop is managed according to the value of pressure measured just in one or in both the two chambers of the cylinder.

The control value for the pressure loop is set via fieldbus. If the pressure (or force) exceeds, the controller reduces the output signal to the valve (only in a negative scale) until it reaches the preset pressure value.

The switch from 'positioning mode' to 'pressure limitation' is handled automatically.

7.3 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or READY disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be disabled.

7.4 - Adaptation of the braking characteristic to the valve type (CTRL).

The deceleration characteristic is set with this parameter. In case of positively overlapped proportional valves the SQRT function should be used. The non-linear flow function of these valves is linearized by the SQRT function.

In case of zero lapped valves (control valves and servo valves) the LIN or SQRT1 function should be used regardless of the application. The progressive characteristic of the SQRT1 function has better positioning accuracy but can also lead to longer positioning times in individual cases.

LIN: Linear deceleration characteristic (gain is increased by a factor of 1).

SQRT1: Root function for braking curve calculation. The gain is increased by a factor of 3 (in the target position). This is the default setting.

SQRT2: Root function for braking curve calculation. The gain is increased by a factor of 5 (in the target position). This setting should only be used with a significantly progressive flow through the valve.

7.5 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

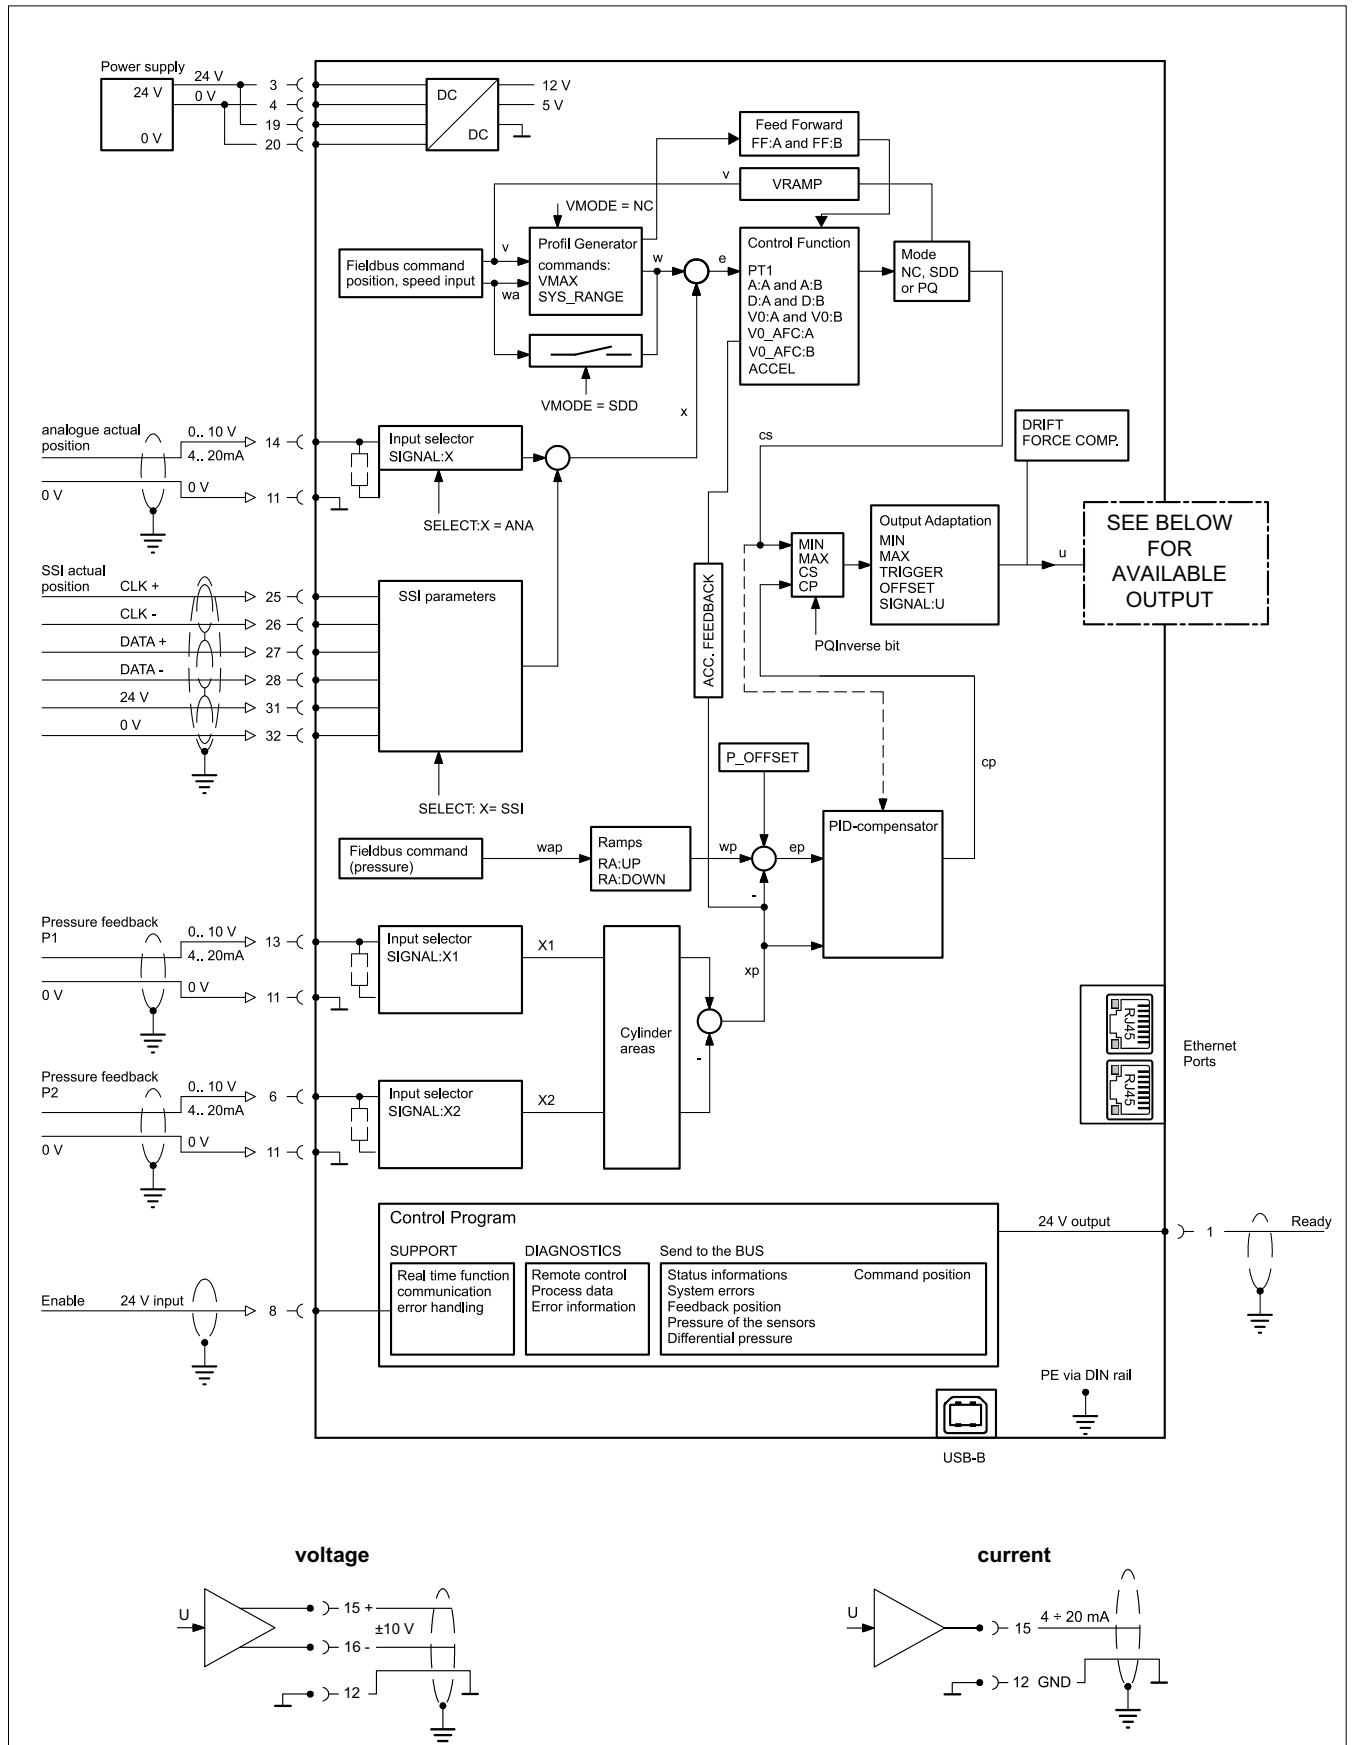

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out either at the power amplifier or at the positioning module.

If the deadband compensation value (MIN parameter) is set too high, it influences the minimal velocity that cannot be adjusted any longer.

In extreme cases this causes to an oscillating around the closed loop controlled position.

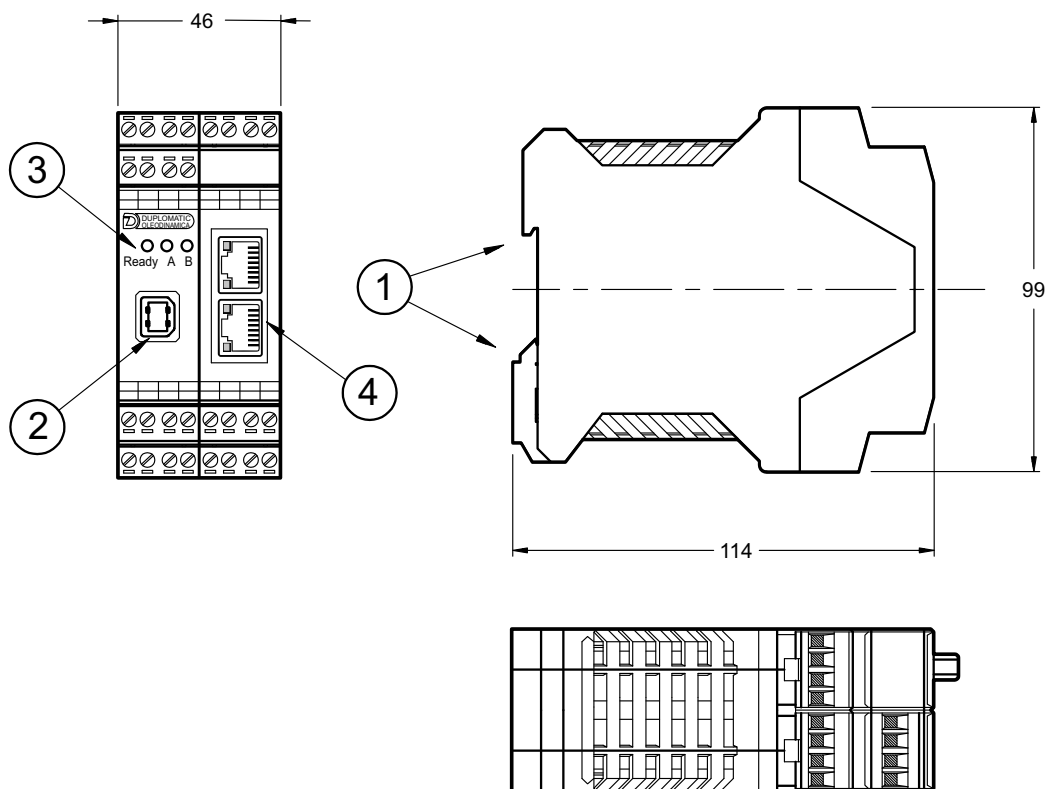

8 - CARD BLOCK DIAGRAM

NOTE: If the card is configured as simple positioning control without pressure limitation then the output value is calculated just from the output of the position controller (CS) instead of apply MIN and MAX parameters. MIN/MAX are selected by the PQInverse bit (Fieldbus).

9 - OVERALL AND MOUNTING DIMENSIONS

1	DIN EN 50022 type rail fastening
2	USB port for PC connection
3	LED for output signals
4	Fieldbus ports RJ45

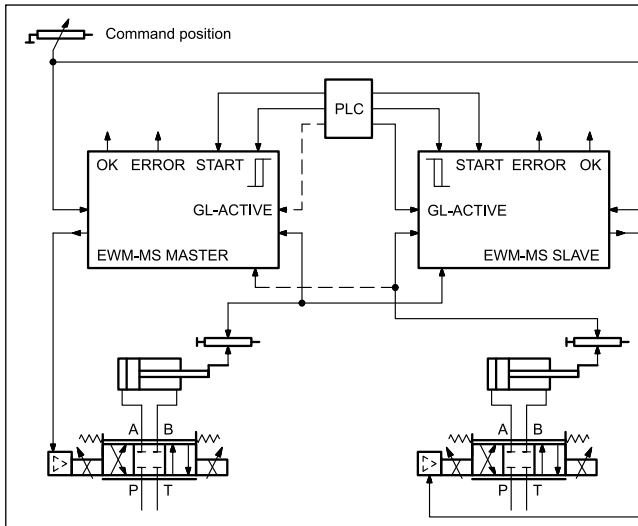

EWM-MS-AA

CARD FOR SYNCHRONIZATION CONTROL WITH ANALOGUE SIGNALS SERIES 21

**RAIL MOUNTING TYPE:
DIN EN 50022**

OPERATING PRINCIPLE

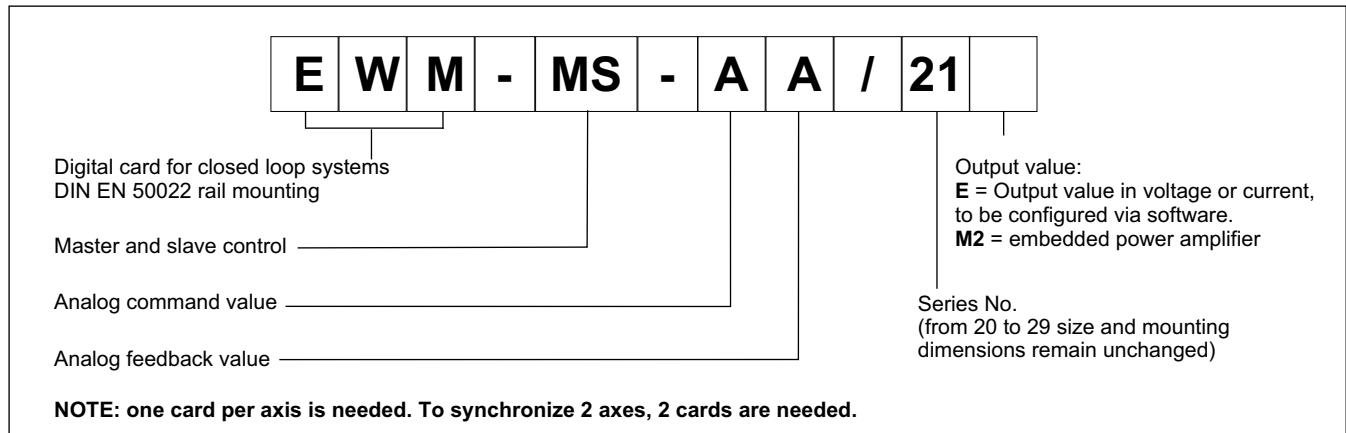

- This card has been developed for an easy synchronization of two actuators (up to 6 axes in master-slave mode) with an overriding synchronization controller.
- The card can drive only an axis; one card per axis is needed.
- Proportional valves with integrated electronics can be driven by the differential output. A version with amplifier is also available.
- Analogue feedback sensors (scalable via software)
- Analogue position input. The axes speed can be limited by an external analogue speed input.
- 2 control mode: SDD and NC
- Card setup via software only, through an on-board USB-B port.

TECHNICAL CHARACTERISTICS

Power supply	V DC	12 ÷ 30 ripple included external fuse 1,0 A (3A for M2 version)
Current consumption: - E versions - M2 version	mA W	<100 60 depending on the solenoid
Command value	V mA	0 ÷ 10 ($R_I = 25 \text{ k}\Omega$) 4 ÷ 20 ($R_I = 240 \Omega$)
Position input value resolution	%	0,003, 1µm max
Speed input value	V mA	0 ÷ 10 ($R = 90 \text{ k}\Omega$) 4 ÷ 20 ($R_I = 240 \Omega$)
Feedback value	V mA	0 ÷ 10 ($R_I = 25 \text{ k}\Omega$) 4 ÷ 20 ($R_I = 240 \Omega$)
Output value: - E version, voltage - E version, current - M2 version	V mA A	±10 (max load 10 mA) 4 ÷ 20 (max load 390 Ω) 0,5 - 2,6 stepless
Interface		USB B type 2.0
Electromagnetic compatibility (EMC)		Immunity EN 61000-6-2: 8/2005 Emissions EN 61000-6-4: 6/2007; A1:2011
Housing material		thermoplastic polyamide PA6.6 - combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 23(w) (M2 version: w = 46)
Connector		4x4 (4x7 M2 version) poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES

Controller functions

- stroke control and synchronization of axes
- 2 different working mode for synchronization:
 - master-master (2 axis maximum)
 - master-slave (up to 6 axis)
- 2 method for positioning control:
 - SDD – Stroke Depending Deceleration - time-optimal positioning structure with very high stability
 - NC – Numerically Controlled - To follow the position profile
- Different gain parameters available via software for SDD and NC control modes
- Command position signal can be single or separate for each card.
- PT1 filter to stabilize the control behaviour
- Command, feedback and speed in mm and mm/s respectively
- Analogue feedback scalable via software
- Analogue command position scalable via software
- Speed limit managed by analogue input or internally
- Emergency function (EOUT)

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics

Monitoring functions

- In-position error
- Cable break, in-position error and fault of feedback sensors
- Solenoids monitored for M2 version
- 2 Digital output to read the status

Other characteristics

- Output value in voltage or current, to be configured via software.
- Card configuration is made via software, through on-board USB

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 12 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

NOTE: in the M2 version the value of the power supply voltage on the card must not be lower than the rated working voltage of the solenoids to be controlled.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - External command position

The card accepts an analogue input signal. The command value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.5 - External command speed

The card accepts an analogue input signal. The command speed can be 0 ÷ 10 V (RI = 90 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.6 - Feedback value

The card accepts analogue feedback input. The feedback value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.7 - Analogue output values

Output values can be in voltage or current, to be configured via software (parameter SIGNAL:U). The same parameter defines the polarity also.

E Voltage: ± 10 V Differential output (PIN 15 to PIN 16).

E Current: 4 ÷ 20 mA (PIN 15 to PIN 12).

M2: embedded power stage configurable via software. Value range 0,5 ÷ 2.6 A stepless.

All analogue output have to be wired with screened cables.

3.8 - Digital output

Two digital output are available, STATUS and READY, that are displayed via LEDs on the front panel.

Low level < 2 V High Level > 12 V (max 50 mA).

4 - WIRING DIAGRAMS

4.1 - Basic wiring

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output.
General operability, ENABLE is active and there is no sensor error (by use of 4 ÷ 20 mA sensors). This output corresponds with the green LED.
- PIN 2** STATUS output.
Monitoring of the control error (INPOS). Depending on the INPOS command, the status output will be deactivated, if the position difference is greater than the adjusted window. If SC-ACTIVE (pin 5) is on, this output is used to monitor the synchronization error. The output is only active if START = ON.
- PIN 5** GL-ACTIVE:
Synchronisation controller. If this input is not active, the module works as normal positioning controller.
- PIN 7** START input:
The positioning controller is active; the external analogue command position is taken over as command value. If the input is switched off during movement, the command position is set to the actual position plus a defined emergency deceleration stroke.
- PIN 8** ENABLE input:
This digital input signal initializes the application. The analogue output is active and the READY signal indicates that all components are working correctly. Target position is set to actual position and the drive is closed loop controlled.

for M2 version only:

- PIN 16** Feedback monitor (scaled)
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

ANALOGUE INPUT

- PIN 6** Feedback value (K) of the master axis
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 9/10** External command speed (V),
range 0 ÷ 100 % corresponds to 0 ÷ 10 V
- PIN 13** Command position (W),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 14** Feedback value (X),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

E version - ANALOGUE OUTPUT voltage

- PIN 16/15** Differential output (U)
± 100% corresponds to ± 10V differential voltage

current

- PIN 12/15** ±100% corresponds to 4 ÷ 20 mA

M2 version - ANALOGUE OUTPUT current

- PIN 17+19** Solenoid output A
- PIN 18+20** Solenoid output B

4.2 - Wiring example for MASTER / SLAVE configuration, output value type E*, up to 6 axes

4.3 - Wiring example for MASTER / MASTER configuration, output value type E, 2 axes only.

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

WARNING! Plugs with free-wheeling diodes and LED indicators cannot be used with current controlled power outputs.

They interfere with the current control and can destroy the output stage.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Duplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7, 8 and 10.

WARNING! For card series 20, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameter setting can be done at *standard* level, easier, or *expert*, where a greater number of parameters is displayed and can be customized.

For a complete list of the parameters and their settings please refer to the Technical Manual 89450 ETM.

7 - MAIN FEATURES

This module can be configured for:

- MASTER/MASTER positioning control for 2 axes (both GL input are active) where the positions information will be linked crosswise.
- MASTER/SLAVE positioning control, for up 6 axes, with selectable master function by deactivating of the GL input. If the synchronisation controller is active, it overrides the position control process. When the actual position of the master axis is given to the slave axis all slave axes will follow the master axis.
- INDEPENDENT POSITIONING by deactivation of both GL input and separate command positions at PIN 13.

The function of the STATUS output is - depending on GL input - in position signal or synchronisation error signal

For a reliable function of the synchronisation control the speed of the master axis should be limited to app. 70/80% of maximum speed. The slave axis must be able to increase the speed against the master axis to compensate position failures.

The card sample time is 1 ms.

7.1 - Sequence of the positioning

After the pre-parameterization and a successfully electrical verification of the control signals the system can be switched on. The positioning process will be controlled by switching the digital inputs.

After enabling (ENABLE input) the drive stays in the current position (i.e. the actual position is accepted as the required position). If the drive moves to an end position, the polarity is probably wrong.

The READY output indicates a general ready to operate.

The speed can be limited by means of the VELO parameter or the external speed demand (SIGNAL:V).

With the RUN signal the demand value of the analogue input is accepted and the axis moves to the predefined target position. STATUS output indicates if the axis is inside the "in position window".

GL-ACTIVE input has to be activated when a synchronized control is requested.

If each axis can be started-up individually this input has to be activated after the optimisation of the axes.

The operating mode can be:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error.

The actuator position is measured by an analogue transducer and compared with a specified target position. The target position is adjusted with an external potentiometer or preset by an analogue input from an external controller (PLC). It's possible to define the axis speed also by an external command speed.

The positioning accuracy will almost be limited by the resolution of the transducer, and by the right size of the hydraulic valve. Therefore, the correct valve selection is the most important point. Additionally, two clashing requirements (short positioning time and high accuracy) have to be considered in the system design.

7.2 - Gain

The gain is settable and it's related with the braking distance (parameters available via software). Lower is the braking distance, higher is the gain.

7.3 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be deactivate.

7.4 - Adaptation of the braking characteristic to the valve type (CTRL).

The command CTRL controls the braking characteristic curve of the hydraulic axis. The deceleration can be set with linear or nearly square root characteristic.

With positive overlapped proportional valves one of the SQRT characteristics should be used, because of the linearization of the non-linear flow curve typical of these valves; if zero overlapped proportional valves (control valves) are used, you can choose between LIN and SQRT1 according to the application.

The progressive gain characteristic of SQRT1 has the better positioning accuracy.

According to the application there is maybe a longer braking distance, so that the total stroke time will be longer.

LIN: Linear characteristic (control gain corresponds to: 10000 / d:i).

SQRT1: Root function with small control error. (corresponds to 30000 / d:i);

SQRT2: Root function with higher gain corresponds to 50000 / d:i

7.5 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out at the power amplifier or at the positioning module.

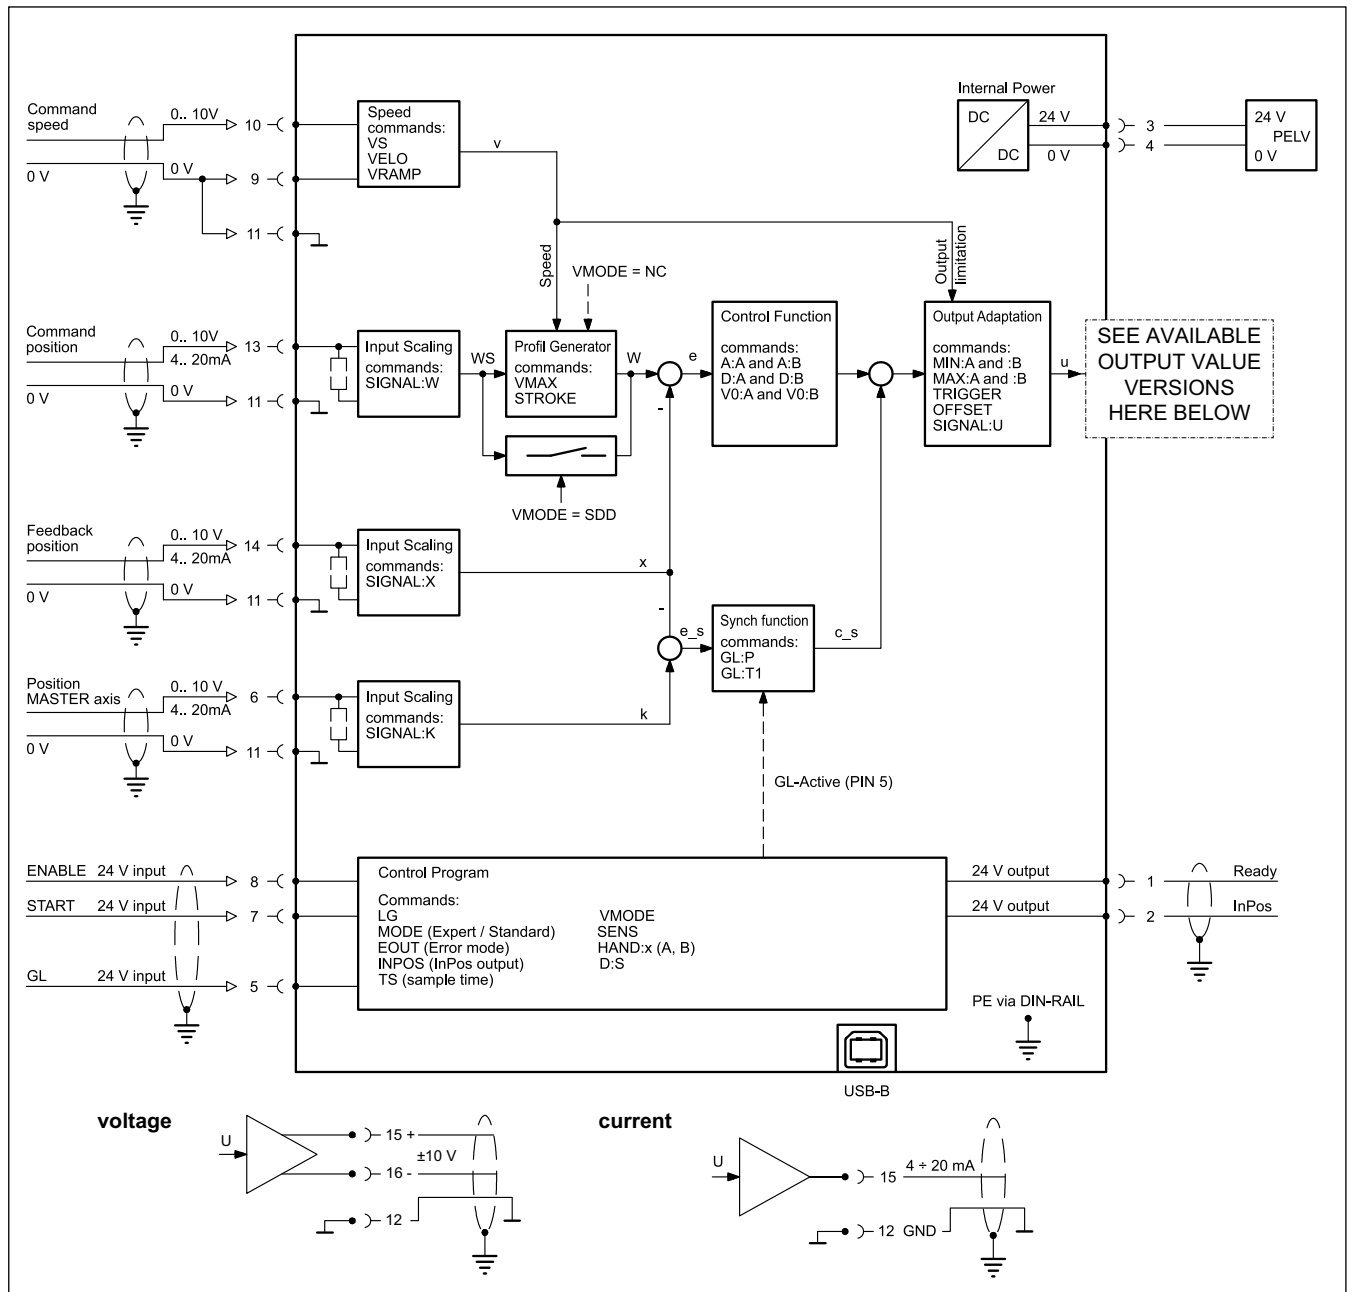

If the deadband compensation value is set too high, it influences the minimal velocity which cannot be adjusted any longer.

In extreme cases this causes to an oscillating around the closed loop controlled position.

EWM-SS-DAD

CARD FOR SYNCHRONIZATION CONTROL IN SYSTEMS WITH UP TO 9 AXES WITH CAN COMMUNICATION SERIES 20

**RAIL MOUNTING TYPE:
DIN EN 50022**

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	24 ÷ 30 ripple included - external fuse 1,0 A
Current consumption	mA	< 350 + sensor power consumption
Command value and speed input value		via BUS (via CAN to the cards or via Profibus-CAN interface module)
Feedback value	SSI V mA	digital sensor with SSI interface 0 ÷ 10 ($R_I = 25 \text{ k}\Omega$) 4 ÷ 20 ($R_I = 240 \Omega$)
Output value - E0 version - E1 version	V mA	± 10 differential (max load 5 mA) 4 ÷ 20 (max load 390 Ω)
Position accuracy		± 2 bits of digital sensor resolution
Sample time	ms	2 ÷ 5
Serial interface		USB-B 2.0 - CANBus
Electromagnetic compatibility (EMC)		Emissions EN 61000-6-3:2005 Immunity EN 61000-6-2:2002
Housing material		thermoplastic polyamide PA6.6; combustibility class V0 (UL94)
Housing dimensions	mm	114 x 99(h) x 46(w)
Connectors		8x4 poles screw terminals - PE direct via DIN rail - USB
Operating temperature range	°C	-10 / +50
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Synchronized or independent positioning control in closed loop, within a synchronous system with up to 9 axes
- 32 bit command position, 16 bit speed parameter, on loop control byte and status byte via fieldbus
- Fine positioning - $1\mu\text{m}$ resolution
- 2 methods for positioning control:
 - SDD – Stroke Depending Deceleration - time-optimal positioning structure with very high stability
 - NC – Numerically Controlled - To follow the position profile
- 2 synchronization methods:
 - Master-slave
 - Average value controller
- Data for lengths in mm
- For digital SSI sensor
- As alternative, the card can be set via software for operate with analogue position sensor.
- Analogue sensor scalable via software
- Gain adjustment made via software with independent parameters for SDD and NC modes
- PT1 compensator for optimized control of hydraulic drives
- Safe and error-free data transmission
- Manual mode available via fieldbus.

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics

Monitoring functions

- In-position error
- Cable break, in-pressure error and fault of feedback sensors
- 2 Digital output to read the status

Other characteristics

- Output in voltage or current, to be set via software
- Card setup is made via software, USB-B socket on the module.

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 24 V DC of a power supply. This power supply must correspond to the existing EMC standards. All inductiveness at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input (ENABLE)

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: $< 2\text{V}$, high level $> 10\text{V}$. Input resistance $25\text{ k}\Omega$. See the block diagram at paragraph 4 for the electric connections.

3.4 - Reference signal

The reference signals run via fieldbus, through a Profibus interface module.

3.5 - Position feedback values

The card accepts a digital feedback input from a sensor with any SSI interface with RS422 specifications. Bit, code and resolution are settable via software.

Use SSI sensors with the same resolution (max $1\mu\text{m}$)

Eventually, an analogue input could be used as feedback. The card accepts a $0 \div 10\text{ V}$ ($R_i = 33\text{ kohm}$) or $4 \div 20\text{ mA}$ ($R_i = 240\text{ ohm}$).

The analogue signal resolution is of 0,01 % oversampling included.

Using analogue sensors, the SSI parameters in the software assume default preset values that the user must do not change.

3.6 - Output values

E0 version: output voltage $0 \pm 10\text{ V}$ (max load 5 mA).

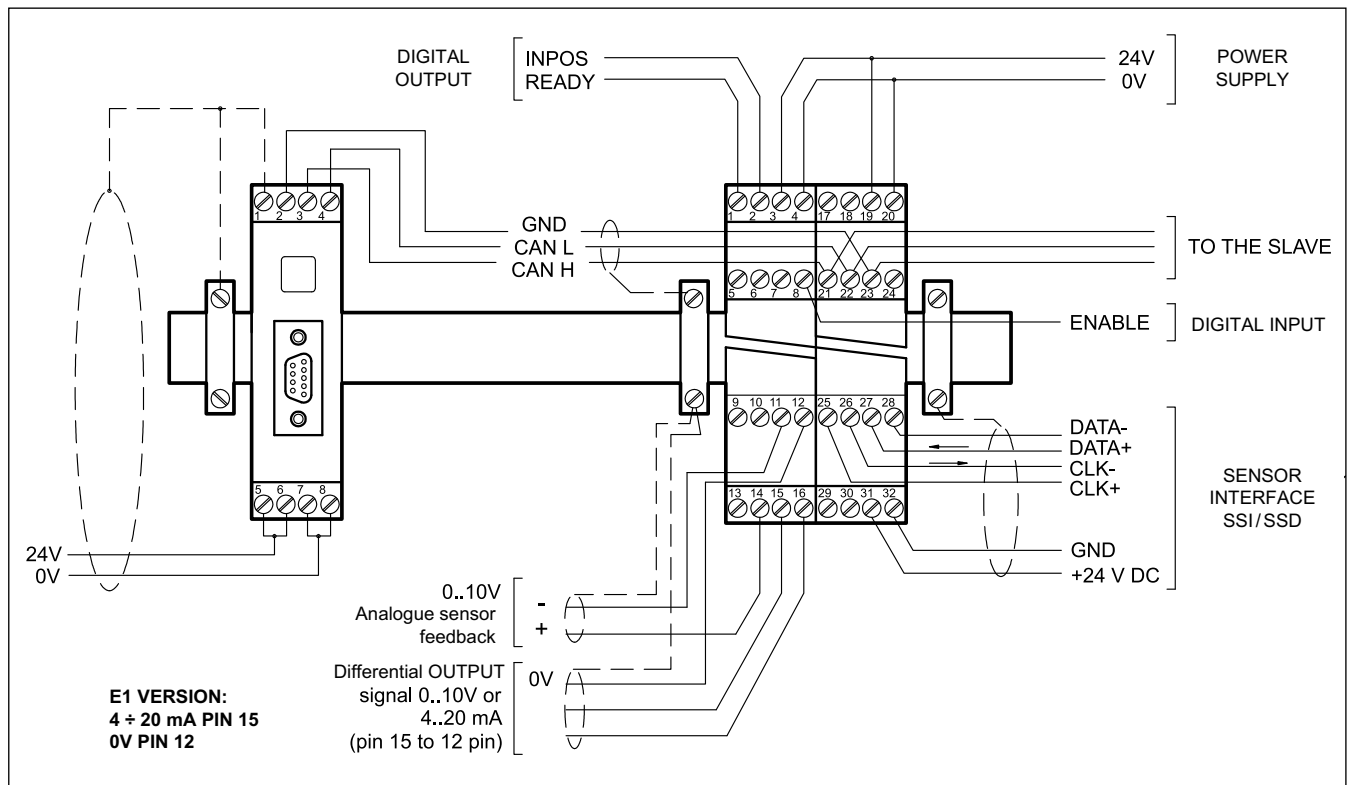

E1 version: output current $4 \div 20\text{ mA}$. (max load 390Ω)

3.7 - Digital output signals

Two digital output signals are available (INPOS and Ready) which are also displayed via the LEDs on the front panel.

Low level $< 2\text{V}$, High level $> 10\text{V}$, max power supply 50 mA with 250 ohm load.

4 - WIRING DIAGRAM FOR EWM-SS-DAD AND FIELDBUS MODULE

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output - green LED
General operativeness. ENABLE command (is active and there is no sensor error (by use of 4 ÷ 20 mA sensors). It's on when ENABLE (PIN 8 and enable via fieldbus) is active and there are no sensor errors.
- PIN 2** STATUS output - yellow LED
STATUS is active when the axis is within the values range defined by INPOS set, for positioning or for synchronisation.
- PIN 8** ENABLE input
This digital input signal enables the application. If no errors are detected the READY signal is active. With no command the target position is set to actual position. With command, the axis is ready to operate and the analogue output is powered to the actuator, whose movement is closed loop controlled.

ANALOGUE SIGNALS

- PIN 14** Analogue feedback value (X), range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 15/16** Differential output (U)
E0 : ±100% corresponds to ± 10V differential voltage, E1 : current output ±100% corresponds to 4 ÷ 20 mA (PIN 15 to PIN 12)

LOCAL CANBUS

- PIN 21..23** CAN LO, CAN HI, and GND
- PIN 24** CANbus termination
a bridge to pin 22 is required inside the master module and inside the last module of the chain.

5 - INSTALLATION

It is recommended to use cable sections of 0.75 mm², up to 20 m length and of 1.00 mm² up to 40 m length, for power and solenoid supply.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 - Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

5.2 - ProfiBUS / CANbus interface

Pins 21 to 23 are reserved to the CAN connection between the EWM-SS-DAD cards. As option, it is possible to connect a Profibus / CAN interface module connected to terminals 21-22-23 of the EWM-SS-DAD module set as 'master'.

Please refer to the fieldbus documentation for further details.

5.3 - EWM-SS-DAD - CAN connection

The CAN connection is wired on all modules in parallel. The terminating resistors have to be activated in the EWM-SS-DAD at the first and last module. Termination is enabled by a bridge between pin 22 and pin 24.

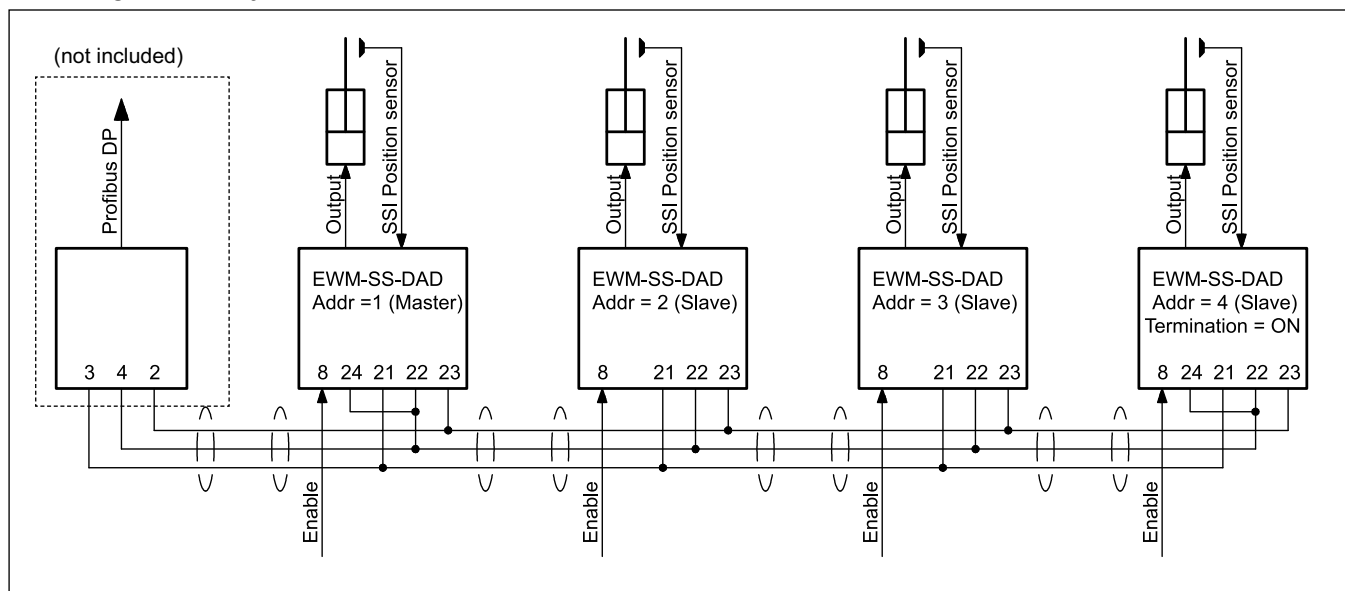

Start the addressing of the EWM-SS-DAD from the number 1, that set the card as MASTER, using the rotary switch on the front panel of the card (use a screwdriver or a small knob of appropriate size).

The MASTER module drives the main axis and takes over the communication with the fieldbus interface module.

The other addresses (2 to 9) set the card as SLAVE.

Upon delivery, the rotary switch is set to zero (no address); you must configure the addressing on each card in the series, depending on the number of axes to be synchronized (see example below).

5.4 - Wiring for 4-axes synchronization

6 - DEVICE SETUP

Card set-up is possible via software only.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Duplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable), not included in the supply.

The software is compliant with Microsoft OS Windows 7, 8 and 10.

6.2 - Parameters table

The parameters table is available in English language.

Once connected, the software recognises the card model automatically, then it shows a table with all the available commands, their parameters, default settings, measuring units and a brief explanation for correct set-up.

The hardware setup must be identical for all the axes. Design with symmetrical structures is strongly recommended.

For a complete list of parameters and their settings please refer to the Technical Manual 89460 ETM.

7 - MAIN FEATURES

The EWM-SS-DAD is a card for position control of two axes in synchronous mode. Communication with the PLC takes place via an interface bus not covered by this documentation.

We recommend checking the input signals and the pre-parameterization of the cards before switch on the entire system.

Two methods for positioning are available:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error.

The actuator position is measured by a transducer and compared with a specified target position. The target position and speed are set by fieldbus.

The positioning accuracy will almost be limited by the resolution of the transducer and by the size of the hydraulic valve. Therefore, the correct valve selection is the most important point to be evaluated during the planning stage, being careful on how to balance positioning time and system accuracy.

7.1 - Sequence of the positioning

The positioning process is controlled by switching the digital inputs.

Once enabled (ENABLE input changeover), the axis must remain in the current position (ie the current position is accepted as the target position). Instead, if the axis moves to one of the final positions, the polarity setting (POL parameter) is probably wrong.

The READY output indicates that the unit is ready to operate. The VEL parameter [variable from 1 to 20000 and expressed in mm/sec] limits the value of the movement speed sent via the fieldbus.

A active START signal causes the requested position sent via the fieldbus to be accepted and the axis moves to the target position.

The digital INPOS output shows when the axis reaches the target position: the difference between the position requested by the control signal and the actual position detected by the position transducer must be lower than the INPOS value parameterized in the EWM card (range 0...5000, expressed in 0.01 mm).

Axes synchronization is achieved by activating the GB ACTIVE input. If the application allows to start the axis once, it is advisable to optimize the axes individually and to activate the synchronous control only afterwards.

7.2 - Adaptation of the braking characteristic to the valve type (CTRL).

The deceleration characteristic is set with this parameter. The SQRT function should be applied to positive overlapped proportional valves. The non-linear flow characteristic of these valves is linearized by the SQRT function.

The LIN or SQRT1 function should be applied to zero-lapped valves (control valves and servo valves) regardless of the application. The progressive characteristic of the SQRT1 function has better positioning accuracy but can also lead to longer positioning times in individual cases.

Different parameters available for each axes.

LIN: Linear deceleration characteristic (gain is increased by a factor of 1).

SQRT1: Root function for braking curve calculation. The gain is increased by a factor of 3 (in the target position). This is the default setting.

SQRT2: Root function for braking curve calculation. The gain is increased by a factor of 5 (in the target position). This setting should only be used with a significantly progressive flow through the valve.

7.3 - Adaptation of the output signal to the valve characteristic (TRIGGER)

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out either at the power amplifier or at the positioning module.

If the deadband compensation value (MIN) is set too high, it influences the minimal velocity which cannot be adjusted any longer.

In extreme cases this can cause oscillations around the closed loop controlled position.

7.4 - Fieldbus interface communication

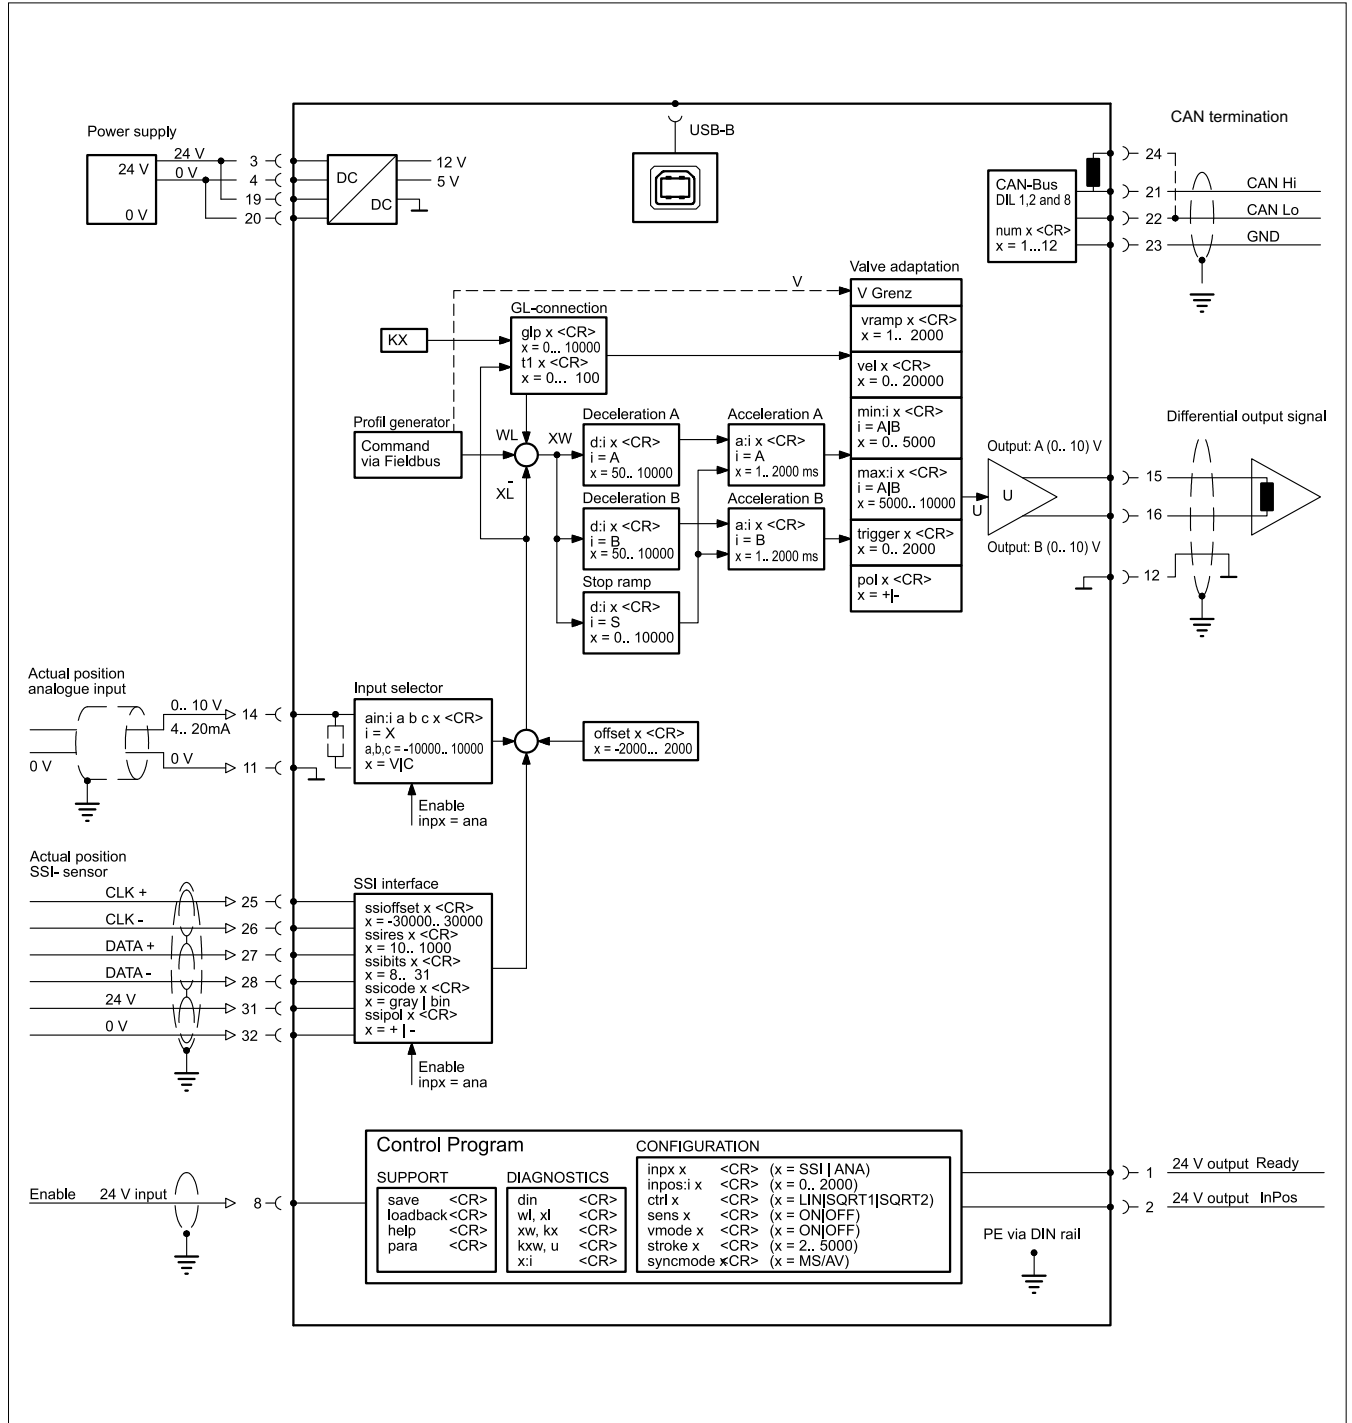

The fieldbus module controls the EWM-SS-DAD card by sending 24 bytes of data, which contain also control command data (two 16-bit control words, unsigned), command position data (a 32-bit double word, unsigned) and the speed control data (a 16-bit word unsigned).

By connecting to the terminals of the Master card only, the EWM-SS-DADs return to the fieldbus interface a further 24 bytes of data that contain also the card status data (two 16-bit status words unsigned each), the current nominal position data (a double word 32-bit unsigned) and the current real position of the axes.

These data can be examined by connecting the EWMPC software to the USB-B port of the master card, and typing the ST command.

Please refer to 89460 ETM technical manual for further information.

8 - EWM-SS-DAD - CARD BLOCK DIAGRAM (E0 VERSION)

8.1 - Output Signal - E1 Version

9 - OVERALL AND MOUNTING DIMENSIONS

10 - ELECTRONIC ACCESSORY UNITS

10.1 - EWM-BUS-DD - Profibus/CAN interface

This coupler allows the data exchange between a CAN network and PROFIBUS PLC, through a built-in interface inside one housing.

The EWM-BUS-DD, combined with EWM-SS-DAD cards, allows to design synchronization systems with CAN communication on the axes network side, and with PROFIBUS communication on PLC side.

The EWM-BUS-DD can be ordered with code: **3809460001**

EWM-2SS-DAD

WITH PROFIBUS INTERFACE

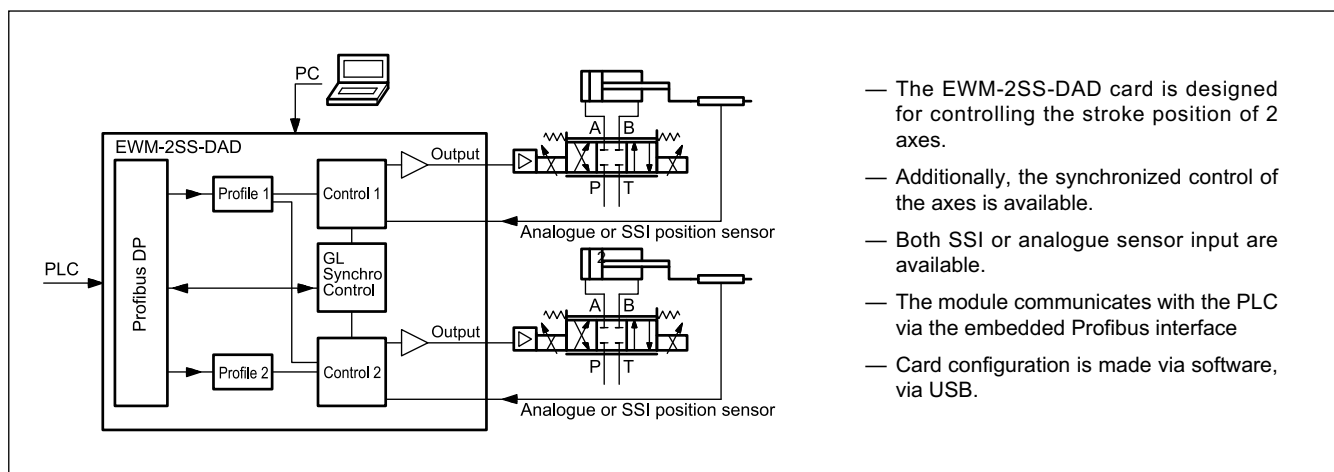

CARD FOR 2 AXES POSITIONING AND SYNCHRONIZATION

IN CLOSED LOOP CONTROL

SERIES 20

RAIL MOUNTING TYPE:
DIN EN 50022

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	24 (±10%)
Fuse, external	A	1A medium time lag
Current consumption	mA	< 500
Command position value		via Profibus DP
Profibus DP data rate	kbit/s	9.6, 19.2, 93.75, 187.5, 500, 1500, 3000, 6000, 12000 - ID number 1810h
Max position accuracy	µm	1
Feedback values	SSI V mA	digital sensor with any interface SSI - 150 kbit/s 4 ÷ 20 (RI = 250 Ω) 0 ÷ 10 (RI = 33 kΩ)
Output value - voltage - current	V mA	±10 differential (max load 5 mA) 4 ÷ 20 (max load 390 Ω)
Resolution of output value	%	0.024
Interface		USB B type 2.0 , Profibus
Electromagnetic compatibility (EMC):		Immunity EN 61000-6-2: 8/2002 - Emissions EN 61000-6-4: 6/2005
Housing material		thermoplastic polyamide PA6.6 combustibility class V0 (UL94)
Housing dimensions	mm	121(d) x 99(h) x 68(w)
Connectors		11x4 poles screw terminals PE direct via DIN rail USB-B 2.0 - Profibus D-Sub 9 poles
Operating temperature range	°C	-10 / +50
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Synchronized or independent positioning control of two axes in closed loop
- Command position, speed parameters and actual value response via Profibus DP
- Fine positioning - 1 μ m resolution
- 2 methods for positioning control:
 - SDD – Stroke Depending Deceleration - time-optimal positioning structure with very high stability
 - NC – Numerically Controlled - To follow the position profile
- 2 methods for synchronized control:
 - Master-slave
 - Average value controller
- Data for lengths in mm
- Digital SSI sensor
- As an alternative, the card can be set via software for operate with analogue position sensors
- Analogue sensors scalable via software
- Gain adjustment made via software with independent parameters for SDD and NC modes
- PT1 compensator for optimized control of hydraulic drives
- Emergency function (EOUT)
- Safe and error-free data transmission
- Manual mode available via Profibus.

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics

Monitoring functions

- In-position error
- Cable break, in-pressure error and fault of feedback sensors
- 2 Digital output to read the status

Other characteristics

- Card configuration is made via software, USB-B socket on the module

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 24 VDC of a power supply. This power supply must correspond to the existing EMC standards.

All inductivity at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - Reference signal

The reference signals run via Profibus. ID number 1810h.

3.5 - Position feedback values

The card accepts a digital feedback input from a sensor with any SSI interface with RS422 specifications. Bit, code and resolution are settable via software.

Use SSI sensors with the same resolution (max 1 μm)

Eventually an analogue input could be used as feedback. The card accepts a $0 \div 10 \text{ V}$ ($R_i = 33 \text{ k}\Omega$) or $4 \div 20 \text{ mA}$ ($R_i = 250 \text{ }\Omega$).

The analogue resolution is of 0,01 % incl. oversampling.

Using analog sensors, the SSI parameters in the software assume default preset values that the user must do not change.

3.6 - Output values

Output values can be in voltage or current and need to be configured via software (SIGNAL parameter).

voltage : ± 10 V Differential output PIN 15 and 16
PIN 19 and 20

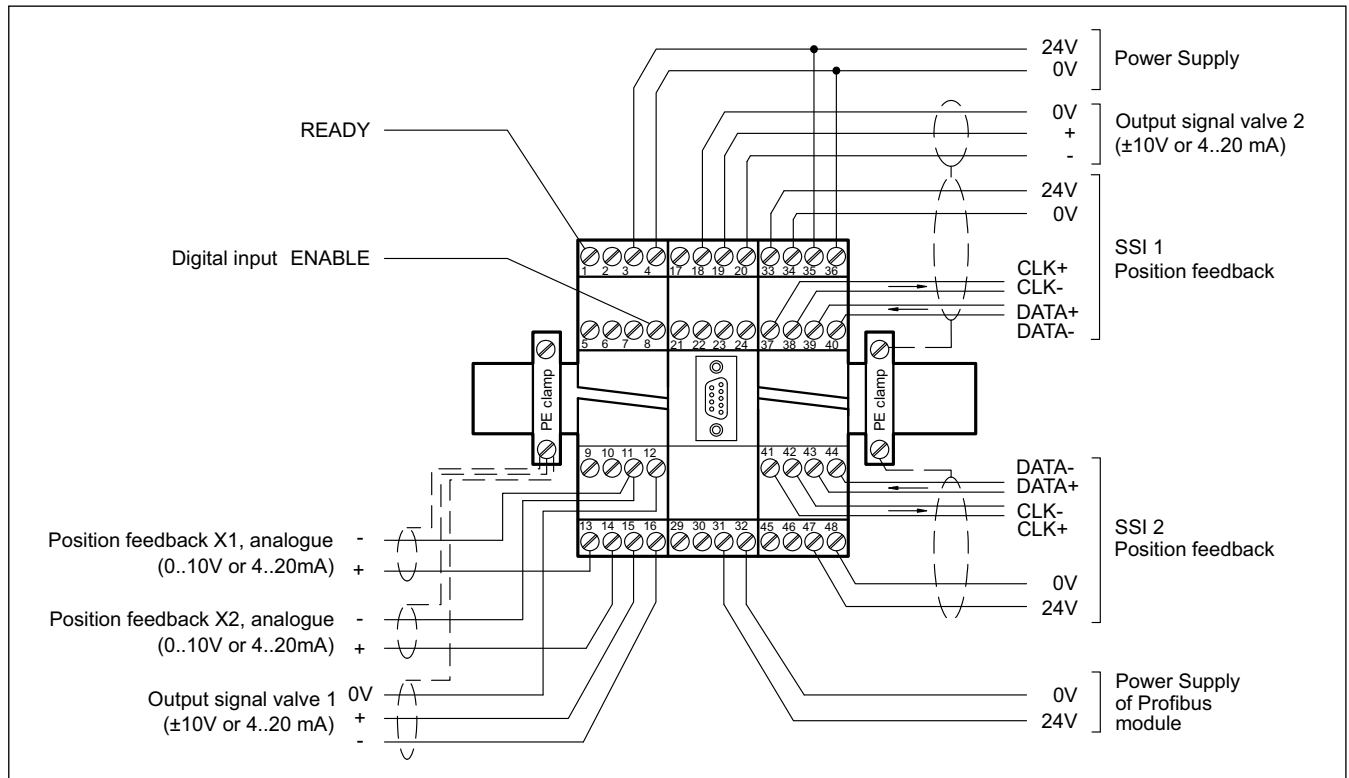

current: 4 ÷ 20 mA PIN 15 to PIN 12
PIN 19 to PIN 18.

3.7 - Digital Output

Two digital output are available, STATUS and READY, that are displayed by LED on the front panel.

Low level < 2 V High Level > = Vsupply (max current 50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output.
General operationality, It's on when ENABLE (PIN 8 and profibus bit) is active and there are no sensor errors. This output corresponds with the green led.
- PIN 8** ENABLE input:
This digital input signal initializes the application. The controller and the READY signal are activated. The output signal to the control element is enabled. Target position is set to actual position and the drive stays stationary, in closed loop. The Enable bit via profibus must be active, too.

ANALOGUE INPUT

- PIN 13** Analogue position feedback value (X1),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 14** Analogue position feedback value (X2),
range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

ANALOGUE OUTPUT

- voltage**
- PIN 16/15** Differential output (U1)
± 100% corresponds to ± 10V differential voltage
- PIN 19/20** Differential output (U2)
± 100% corresponds to ± 10V differential voltage
- current**
- PIN 12/15** current output U1:
±100% corresponds to 4 ÷ 20 mA
- PIN 18/19** current output U2:
±100% corresponds to 4 ÷ 20 mA

SSI SENSOR INTERFACE

- | position 1 | | position 2 | |
|------------|------------------------------------|------------|------------------------------------|
| PIN 37 | CLK+ output | PIN 41 | CLK+ output |
| PIN 38 | CLK- output | PIN 42 | CLK- output |
| PIN 39 | DATA+ input | PIN 43 | DATA+ output |
| PIN 40 | DATA- input | PIN 44 | DATA- output |
| PIN 33 | 24V Power supply of the SSI sensor | PIN 47 | 24V Power supply of the SSI sensor |
| PIN 34 | 0V Power supply of the SSI sensor | PIN 48 | 0V Power supply of the SSI sensor |

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

5.2 - Profibus DP interface

Profibus has to be used to control the axis and can also be utilized to set the parameters.

The module supports all baud rates from 9,6 kbit/s up to 12000 kbit/s with auto detection of the baud rate.

The functionality is defined in IEC 61158. The Profibus address can be programmed using the EWMPC/20 or online via the Profibus.

A diagnostic LED indicates the online status.

5.2.1 - Installation and setting

A typical screened Profibus plug (D-Sub 9pol with switchable termination) is mandatory. Every Profibus segment must be provided with an active bus termination at the beginning and at the end. The termination is already integrated in all common Profibus plugs and can be activated by DIL switches.

The Profibus cable must be screened at determined contact clips in the Profibus plug.

The GSD data configuration files are available for download on our website. The communication parameters are 16 bytes (8 words) for IN/OUT variables.

6 - DEVICE SETUP

Card set-up is possible via software only.

The system can be controlled in open loop, moving up and down the servo-cylinder with commands HAND:x, via Profibus only, to facilitate the adjustment of the card and its calibration.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Diplomatic Oleodinamica website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7, 8 and 10.

WARNING! For card series 20, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German.

The language is settable by LG parameter.

Parameters are grouped together according to their function (e.g. sensor interface, position controller, etc..) in order to make the setting process easier, but they can be displayed also all together (MODE parameter).

For a complete list of parameters and their settings please refer to the Technical Manual 89470_117 ETM.

7 - MAIN FEATURES

The EWM-2SS-DAD is a card for positioning control loop

With only few parameters the controller can be optimized and the movement profile is preset via Profibus (position and velocity).

7.1 - Sequence of the positioning

The positioning is controlled via Profibus.

You can switch from the positioning in closed loop to the manual movement in open loop and back via Profibus.

With READY active the system is ready. The open loop control is achieved by using the HAND bits and the speed parameter. When the bit HAND goes low the card assumes the current position as the request and the card is ready to work in closed loop.

With also START bit enabled, the command position parameter (profibus) become active and the new command position will be taken over as a new target.

The axis moves immediately to this new position and indicates on the POSWIN status bit when it reaches the position. This output is active as long as the axis is within the InPos window or the START bit is active.

Setting the synchronous bit (SC) will synchronize both axes and the synchronization controller will work according with the FUNCTION mode selected (Master-slave, Average or Multiplicative Recursive Controller). Axis 2 is now following axis 1 according to the master-slave-principle.

Two methods for positioning are available:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error.

The actuator position is measured by a transducer and compared with a specified target position. The target position and speed are set by Profibus.

The positioning accuracy will almost be limited by the resolution of the transducer, and by the right size of the hydraulic valve. Therefore, the correct valve selection is the most important point. Additionally, two clashing requirements (short positioning time and high accuracy) have to be considered in the system design.

7.2 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be deactivate. Different parameters available for each axes.

7.3 - Adaptation of the braking characteristic to the valve type (CTRL).

The deceleration characteristic is set with this parameter. In case of positively overlapped proportional valves the SQRT function should be used. The non-linear flow function of these valves is linearized by the SQRT function.

In case of zero lapped valves (control valves and servo valves) the LIN or SQRT1 function should be used regardless of the application. The progressive characteristic of the SQRT1 function has better positioning accuracy but can also lead to longer positioning times in individual cases.

Different parameters available for each axes.

LIN: Linear deceleration characteristic (gain is increased by a factor of 1).

SQRT1: Root function for braking curve calculation. The gain is increased by a factor of 3 (in the target position). This is the default setting.

SQRT2: Root function for braking curve calculation. The gain is increased by a factor of 5 (in the target position). This setting should only be used with a significantly progressive flow through the valve.

7.4 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out either at the power amplifier or at the positioning module.

If the deadband compensation value (MIN) is set too high, it influences the minimal velocity which cannot be adjusted any longer.

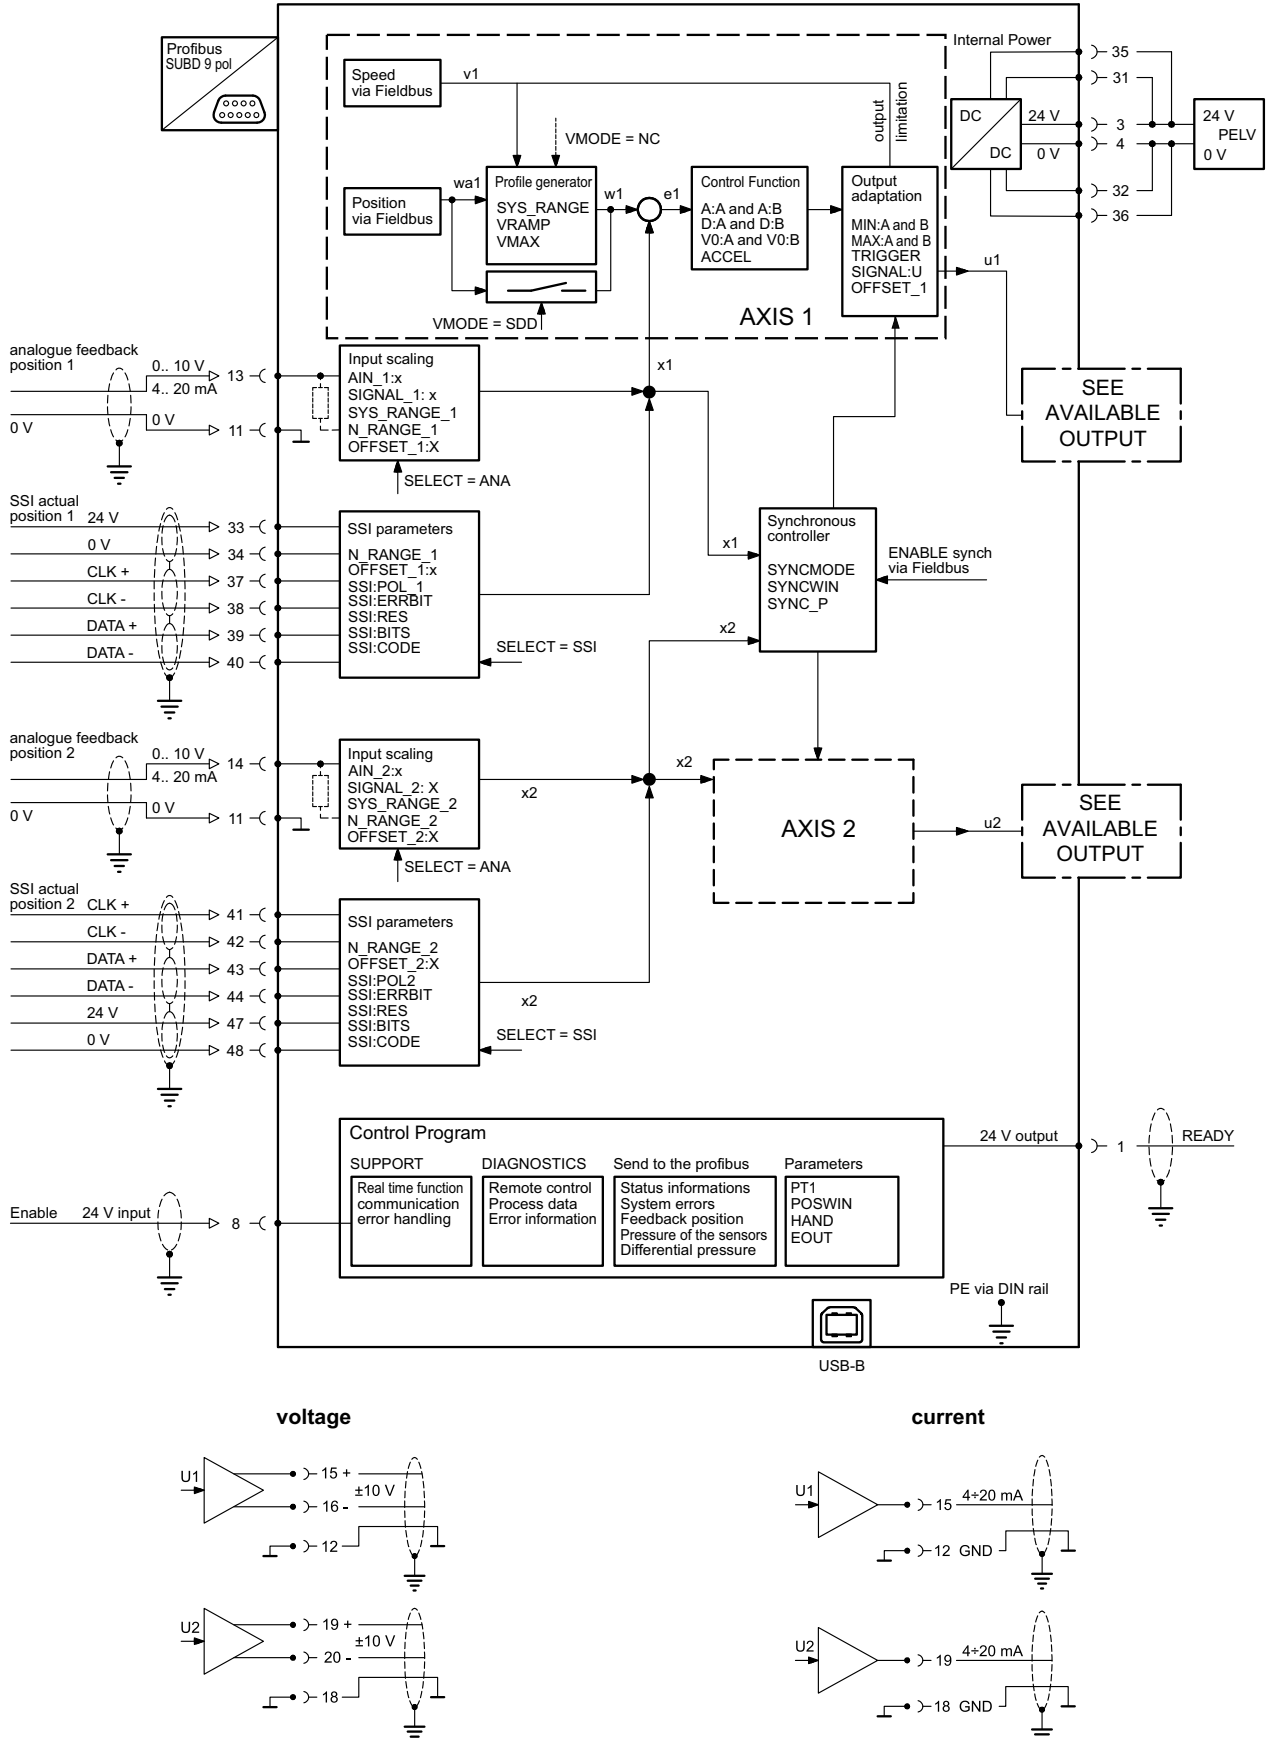

In extreme cases this causes to an oscillating around the closed loop controlled position.

Different parameters available for each axes.

8 - CARD BLOCK DIAGRAM

Caution!, PIN 4 is connected internally to PIN 11 (and also possibly to PIN 12 depending on the model). These connections serve as a reference potential for the analogue sensor or demand value signals.

- PT1 compensator for optimized control of hydraulic drives
- Emergency function (EOUT)
- Safe and error-free data transmission
- Manual mode available via fieldbus.

Adaptation of the valve characteristic curve

- CTRL function to adapt the braking characteristics to positive and zero overlapped proportional valves
- Advanced deadband compensation: non-linearity compensation by a double-gain characteristics

Monitoring functions

- In-position error
- Cable break, in-pressure error and fault of feedback sensors
- 2 Digital output to read the status

Other characteristics

- Output in voltage or current, to be set via software
- Card configuration is made via software, USB-B socket on the module
- Parameterization available also via Profinet interface

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 24 V DC of a power supply. This power supply must correspond to the existing EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - Reference signal

The reference signals run via fieldbus, with Profinet or EtherCAT interface.

3.5 - Position feedback values

The card accepts a digital feedback input from a sensor with any SSI interface with RS422 specifications. Bit, code and resolution are settable via software.

Use SSI sensors with the same resolution (max 1 µm)

Eventually, an analogue input could be used as feedback. The card accepts a 0 ÷ 10 V (Ri 33 kohm) or 4 ÷ 20 mA (Ri = 250 ohm).

The analogue signal resolution is of 0,01 % incl. oversampling.

Using analogue sensors, the SSI parameters in the software assume default preset values that the user must do not change.

3.6 - Output values

Output values can be in voltage or current and they need to be configured via software (SIGNAL_x:U parameters).

voltage : ± 10 V differential output	PIN 15 and 16 PIN 19 and 20
current: 4 ÷ 20 mA	PIN 15 to PIN 12 PIN 19 to PIN 18.

3.7 - Digital output

The READY digital output is available and displayed by a LED on the front panel.

Low level < 2 V High Level > = V supply (max current 50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output.
General operability. It's on when ENABLE (PIN 8 and fieldbus bit) is active and there are no sensor errors. This output corresponds with the green led in the USB module.
- PIN 8** ENABLE input:
This digital input signal initializes the application. The controller and the READY signal are activated. The output signal to the control element is enabled. Target position is set to actual position and the drive stays stationary, in closed loop. The ENABLE bit via fieldbus must be active, too.

ANALOGUE INPUT

- PIN 13** Analogue position feedback value (X1), range 0 ÷ 100% corresponds to 0 ÷ 10V or 4 ÷ 20 mA

| PIN 40 | DATA- input | PIN 44 | DATA- output |
| PIN 33 | 24V Power supply of the SSI sensor | PIN 47 | 24V Power supply of the SSI sensor |
| PIN 34 | 0V Power supply of the SSI sensor | PIN 48 | 0V Power supply of the SSI sensor |

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40 m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

5.2 - PROFINET IO RT interface

PROFINET is the standard for Industrial Ethernet based on IEEE 802.3. PROFINET IO is designed for the fast data exchange between Ethernet-based controllers (master functionality) and field devices (slave functionality).

5.3 - ProfiNet Installation guideline

The ProfiNet IO field devices are connected exclusively via switches as network components. A ProfiNet IO network can be set up in star, tree, line or ring topology. ProfiNet IO is based on the Fast Ethernet standard transmission with 100 Mbit/s. The transmission media are copper cables CAT5.

The RJ45 connector CAT5 according to EN 50173 or ISO / IEC 11801 is used for the IP20 environment in the control cabinet.

The connection between ProfiNet participants is called ProfiNet channel. In most cases, ProfiNet channels are built with copper cables to IEC 61784-5-3 and IEC 24702. The maximum length of a ProfiNet channel, which is constructed with copper cables is 100 m.

Diagnostic LEDs are embedded on each port.

The characteristics of an IO Device are described in the General Station Description (GSDML) file. This file describes the structure of the cyclic input and output data transferred between the Programmable Controller and the fieldbus IO device.

Any mismatch between the size or structure of the input and output data and the actual internal device structure generates an alarm to the controller.

In the configuration of transmission data select 32 bytes for input and 32 bytes for output.

The .GSDML configuration file is available for download from our website (software download page).

6 - DEVICE SETUP

Card set-up is possible via software only, via USB port.

The system can be controlled in open loop, moving up and down the axis via Fieldbus with commands HAND:B and HAND:A at the velocity set in parameter HAND, to facilitate the commissioning of the card and its calibration.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Diplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable), not included in the supply.

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7, 8 and 10.

6.2 - Parameters table

The parameters table is available in English or German. The language is settable with LG parameter.

Parameters are grouped together according to their function (e.g. system parameters, position controller, etc..) in order to make the setting process easier, but they can be displayed also all together (MODE parameter).

For a complete list of parameters and their settings please refer to the Technical Manual 89475 ETM.

7 - MAIN FEATURES

The EWM-2SS-DAD-*.PN is a card for positioning control loop

The controller can be optimized by few parameters only and the movement profile is preset via fieldbus (position and velocity).

7.1 - Sequence of the positioning

The positioning is controlled via fieldbus.

You can switch from the positioning in closed loop to the manual movement in open loop and vice versa.

With READY active the system is ready. The open loop control is achieved by using the HAND bits and the speed parameter. When the bit HAND goes low the card assumes the current position as the requested one and the card is ready to work in closed loop.

Enabling the START bit also, the command position parameter (fieldbus) become active and the new command position will be taken over as a new target.

The axis moves immediately to the new position and indicates on the POSWIN status bit when it reaches it. This output is active as long as the axis is within the InPos window or within the START bit is active.

Setting the synchronous bit (SC) will synchronize both axes and the synchronization controller will work according to the function mode selected (Master-slave, Average). The axis 2 is now following the axis 1 according to the master-slave-principle.

Two methods for positioning are available:

SDD - stroke depending deceleration - means the control gain will be adjusted. This is a time-optimal positioning structure with very high stability.

NC mode - the position value is generated from the following error.

The actuator position is measured by a transducer and compared with a specified target position. The target position and speed are set by Profibus.

The positioning accuracy will almost be limited by the resolution of the transducer and by the size of the hydraulic valve. Therefore, the correct valve selection is the most important point to be evaluated during the planning stage, being careful on how to balance positioning time and system accuracy.

7.2 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be switched off and provides differentiated parameters for each axis.

7.3 - Adaptation of the braking characteristic to the valve type (CTRL).

The deceleration characteristic is set with this parameter. The SQRT function should be applied to positive overlapped proportional valves. The non-linear flow characteristic of these valves is linearized by the SQRT function.

The LIN or SQRT1 function should be applied to zero-lapped valves (control valves and servo valves) regardless of the application. The progressive characteristic of the SQRT1 function has better positioning accuracy but can also lead to longer positioning times in individual cases.

Different parameters available for each axes.

LIN: Linear deceleration characteristic (gain is increased by a factor of 1).

SQRT1: Root function for braking curve calculation. The gain is increased by a factor of 3 (in the target position). This is the default setting.

SQRT2: Root function for braking curve calculation. The gain is increased by a factor of 5 (in the target position). This setting should only be used with a significantly progressive flow through the valve.

7.4 - Adaptation of the output signal to the valve characteristic (TRIGGER).

With TRIGGER command, the output signal is adapted to the valve characteristics.

The positioning controllers have a double-gain characteristic curve instead of a typical overlapped jump. The advantage is a better and more stable positioning behaviour. With this compensation, non-linear volume flow characteristic curves can be adjusted too.

If there exist also possibilities for adjustments at the valve or at the valve electronics, it has to be guaranteed, that the adjustment has to be carried out either at the power amplifier or at the positioning module.

If the deadband compensation value (MIN) is set too high, it influences the minimal velocity which cannot be adjusted any longer.

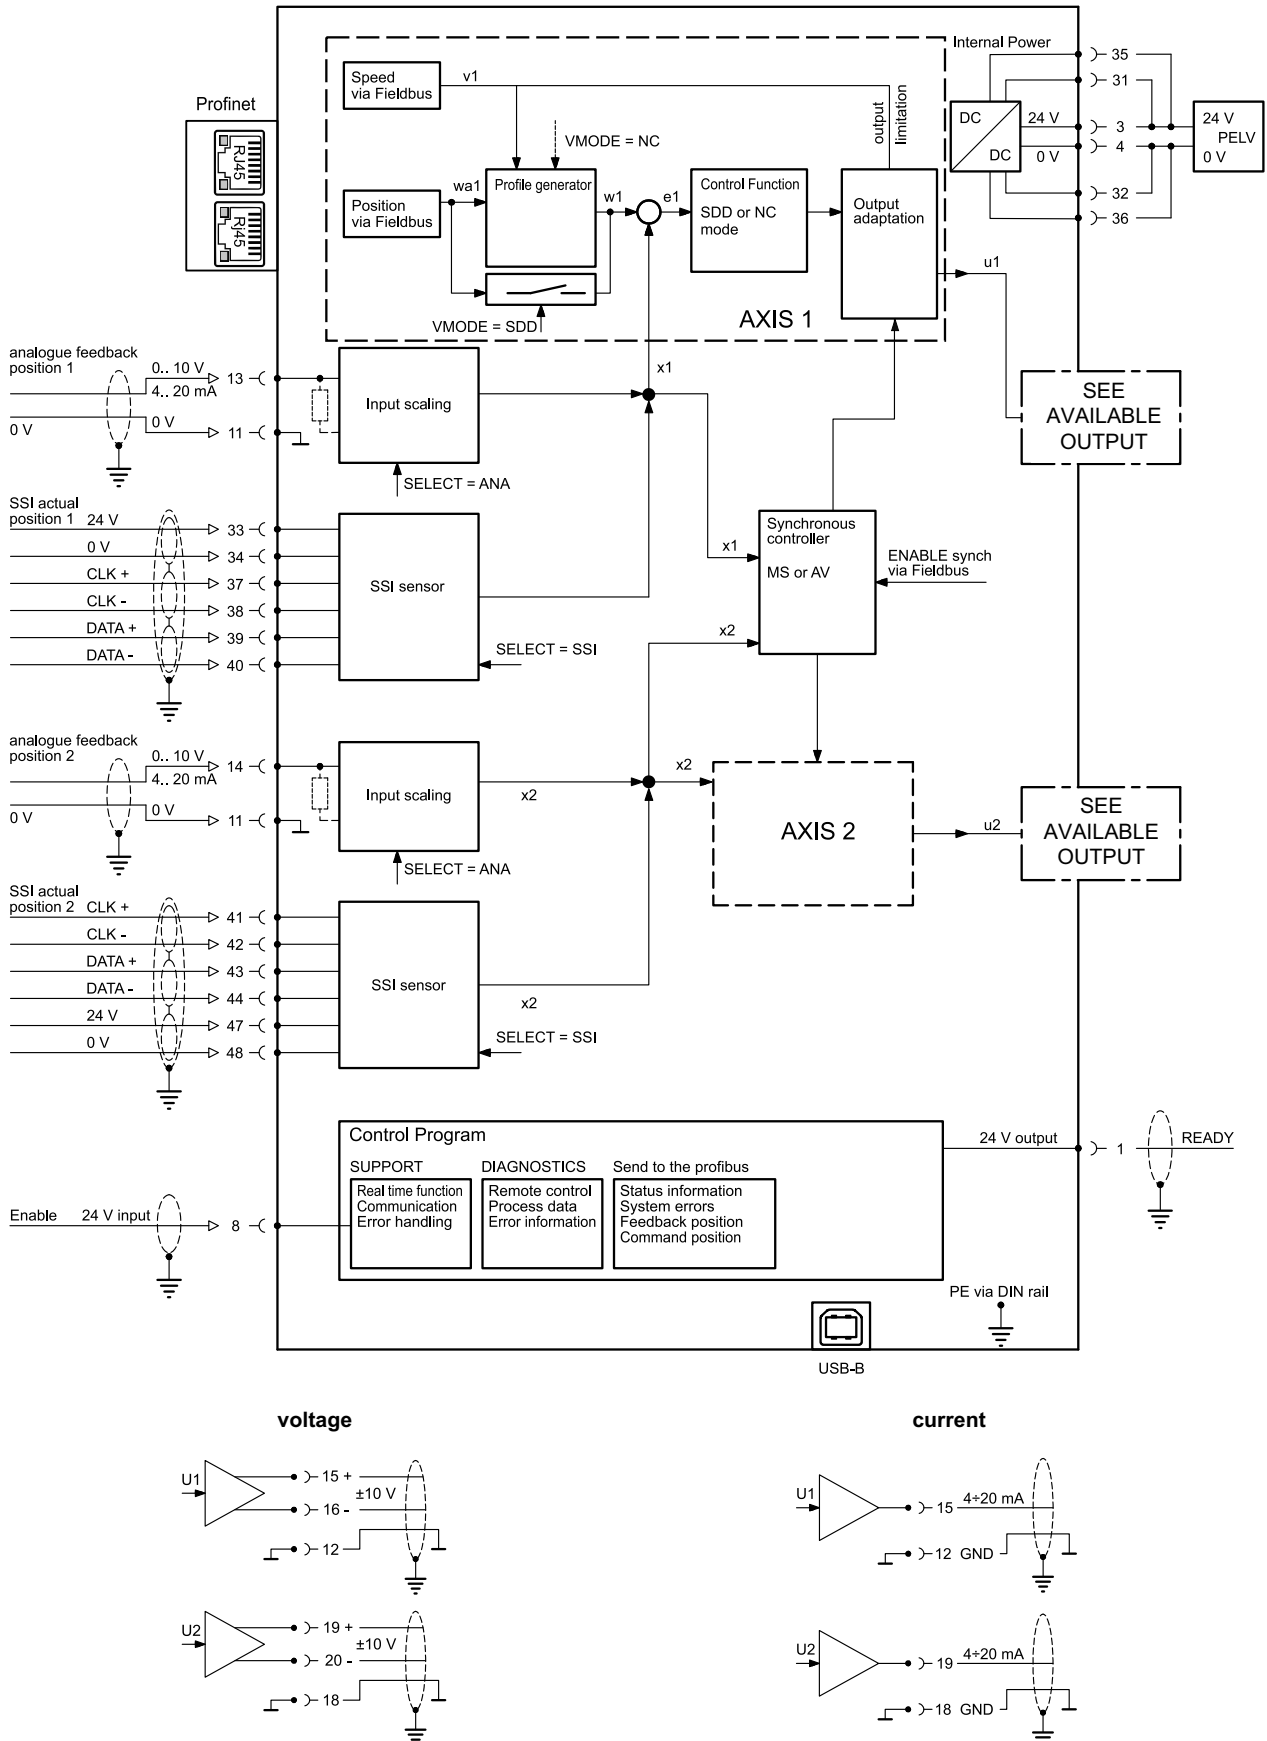

In extreme cases this can cause oscillations around the closed loop controlled position.

Different parameters are available for each axis.

8 - CARD BLOCK DIAGRAM

Caution!, PIN 4 is connected internally to PIN 11 and PIN 12. These connections serve as a reference potential for the analogue sensor or demand value signals.

EWM-P-AA

DIGITAL CARD FOR PRESSURE (FORCE) CONTROL IN CLOSED LOOP SYSTEMS SERIES 20

**RAIL MOUNTING TYPE:
DIN EN 50022**

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	12 ÷ 30 ripple included
External fuse	A	3,0 (medium time lag)
Current consumption	A	60 + current for solenoid
Command (pressure) value	V mA	0 ÷ 10 ($R_I = 150 \text{ k } \Omega$) 4 ÷ 20 ($R_I = 390 \text{ } \Omega$)
Pressure signals accuracy	%	0,006 oversampling included
Feedback value	V mA	0 ÷ 10 ($R_I = 90 \text{ k } \Omega$) 4 ÷ 20 ($R_I = 390 \text{ } \Omega$)
Output current	A	0.5 ÷ 2.6 stepless
Sample time (pressure)	ms	1
Interface		USB-B (2.0)
Electromagnetic compatibility (EMC)		Immunity EN 61000-6-2 Emissions EN 61000-6-4
Housing material		thermoplastic polyamide PA6.6 combustibility class V0 (UL94)
Housing dimensions	mm	120 (d) x 99(h) x 23 (w)
Connector		4x4 poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Pressure control in closed loop system
- Fine regulation – capable of accuracy not achievable with open loop set-up
- Highly dynamic control loop
- Adjustable PID controller
- Ability to modify command signal ramp times
- Emergency function (EOUT)
- Analog signal command
- Analog feedback input
- Simple and intuitive scaling of the input

Adaptation to the valve characteristics

- Advanced dead-band compensation – able to define output range and position
- Adjustable sampling time, PWM, dither
- Adjustable command signal response time

Power amplifier

- Embedded power amplifier
- Fine control of output signal
- PWM current output of up to 2.6A

Other characteristics

- Card configuration is made via software, through on-board USB

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 12 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

NOTE: the value of the power supply voltage on the card must not be lower than the rated working voltage of the solenoid to be controlled.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - Command input (pressure)

The card accepts analogue command input, with voltage 0÷10V ($R_i = 150 \Omega$) and current 4 ÷ 20 mA ($R_i = 390 \Omega$).

3.5 - Feedback value

The card accepts analogue feedback input. The feedback value must be 0 ÷ 10V ($R_i = 90 \text{ k}\Omega$) or 4 ÷ 20 mA ($R_i = 390 \Omega$).

The parameters are settable via software (see the parameter table)

3.6 - Output values

The output current value for this card is settable via software. The value range is 0.5 ÷ 2.6 stepless. Broken wire and short circuit monitored. PWM frequency 61 ÷ 2604 Hz.

3.7 - Digital Output

A digital output is available (READY) and its signal is displayed from the green led. Low level: <2V, high level >10V (50 mA)

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 5** READY output:
If the ENABLE is active and there are no discernable errors then the output is on. Otherwise it is off. This output corresponds with the 'Ready' LED. If the 4+ 20 mA sensor is open an error is generated.
- PIN 6** START Input:
The controller is active; the external analogue command value is taken over.
- PIN 15** ENABLE Input:
If the signal is applied (>10V) then the module is active and the power stage is active in closed loop.

ANALOGUE INPUT

- PIN 9/10** Pressure command (W)
range 0 ÷ 100%
corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 13/14** Pressure feedback (X)
range 0 ÷ 100%
corresponds to 0 ÷ 10V or 4 ÷ 20 mA

ANALOGUE OUTPUT

- PIN 12** 8V reference output (max. 25mA)
- PIN 3/4** PWM output for valve control.

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

WARNING! Plugs with freewheeling diodes and LED cannot be used with current controlled power outputs.

They interfere with the current control and they can destroy the output stage.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and the signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN rail should be provided. Transient interference voltages at the terminals are discharged via DIN rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

The system is controlled in closed loop. The integrated power stage makes it easy to set up the system quickly as it can be connected directly to a pressure valve.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Diplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving

of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7, 8 and 10.

WARNING! In card series 20, the default baud rate to be selected in the software has changed from 9600 baud to 57600 baud.

This can be set in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameters setting can be done at *standard* level, easier, or *expert*, where a greater number of parameters is displayed and can be customized.

For a complete list of parameters and their settings please refer to the Technical Manual 89500 ETM.

7 - MAIN FEATURES

7.1 - Applications

This module is useful for a variety of pressure control applications. The control is accomplished by a PID controller carefully optimized for this application. Because of the high stability of this controller, the module is recommended for closed loop applications where an open loop control structure is incapable of achieving the desired accuracy.

The output signal (of up to 2.6A) can control a variety of pressure valves, such as pressure relieve valves and pressure control valves and as such no On-Board Electronics are needed.

Examples of such applications can be pressure control with constant pumps, remote controllable servo pumps and/or force & torque control with cylinders and motor drives.

7.2 - Emergency Output (EOUT)

This function is able to set the output at a specific value (degree of valve opening) when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with the programmed ramp. The function can be deactivated.

The output value defined here is stored permanently (independently of the parameter set). The use of this feature should be carefully evaluated according to safety procedures in the system.

7.3 - Command Signal Ramp time (RA)

The parameters for ramp up and ramp down can be set in milliseconds. These values are the amount of time that the command signal will take to follow a step change in the reference signal.

7.4 - PID Controller

The PID controller can be parameterized by modifying the relevant parameters, in order to suppress high-frequency noise and a value is also present in order to control the output by the input signal directly.

7.5 - Adaption of the output signal to the valve characteristics (TRIGGER)

With the MAX value, the maximum output can be easily defined. With the MIN value, the overlap (dead band of the valve) can be compensated. Via the TRIGGER the activation point of the MIN function is set and so a non-sensitive range around the zero-point can be specified.

If the MIN value is set too high, it influences the minimal pressure, which cannot be adjusted any longer. In extreme case this causes to an oscillating at small input values.

7.6 - Sample Time (TS)

The control dynamics can be influenced with the sample time. Changes should only be made by persons who have sufficient knowledge of dynamic systems behavior.

Note that after changing this value all time-dependent parameters must be checked and reset if necessary.

7.7 - Power Amplifier

The module comes with an embedded power amplifier that is capable to generate a PWM current signal of up to 2.6A in order to control a pressure valve.

As such the nominal current, dither, frequency and the various parameters of the current loop can be accessed and modified.

8 - CARD BLOCK DIAGRAM

9 - OVERALL AND MOUNTING DIMENSIONS

EWM-PQ-AA

DIGITAL CARD

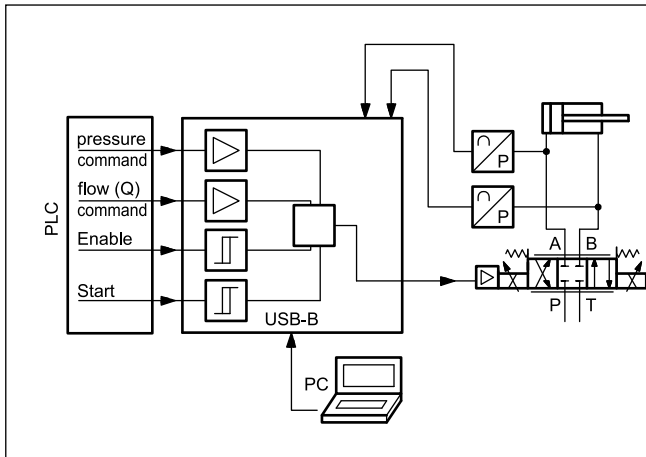

FOR PRESSURE/FLOW CONTROL

IN CLOSED LOOP SYSTEMS

SERIES 20

RAIL MOUNTING TYPE:
DIN EN 50022

OPERATING PRINCIPLE

- The EWM-PQ-AA has been developed as a classic p/Q controller but it work well also with high response valves (zero overlap) via analogue command inputs for pressure and flow.
- The p/Q controller automatically switches over between Q and p control modes to assure that the set point limits for pressures has not to exceed.
- The pressure feedback are analogue type.
- The output value, voltage or current type, is configurable via software.
- Card setup via software only, through an on-board USB-B port.

TECHNICAL CHARACTERISTICS

Power supply	V DC	12 ÷ 30 ripple included
Fuse, external:		1A medium time lag
Current consumption:	mA	<100
Pressure command (p)	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Flow command (Q)	mA V	4 ÷ 20 (RI = 240 Ω) ± 10 (RI = 90 kΩ)
Pressure feedback values	mA V	4 ÷ 20 (RI = 240 Ω) 0 ÷ 10 (RI = 25 kΩ)
Sensor resolution	%	0,003 incl. oversampling
Output values	V mA	± 10 (max load 10 mA 2 kΩ) differential 4 ÷ 20 (max load 390 Ω)
Sample time	ms	1
Interface		USB-B 2.0
Electromagnetic compatibility (EMC) 2014/30/EU		Immunity EN 61000-6-2: 8/2005 Emissions EN 61000-6-4: 6/2007; A1:2011
Housing material		thermoplastic polyamide PA6.6 - combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 23(w)
Connections		USB-B (2.0) - 4x poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES OVERVIEW

Controller Functions

- Analogue Q- and p-command signals
- Classical p/Q controller with pressure limitation (automatic switch over)
- PID-controller with 2 sets of parameters switchable by digital input
- Data for pressure set in bar
- Ramps for pressure up and down optionally activated by a digital input
- Force / pressure controller with one sensor
- Differential pressure control with two pressure sensors
- D - gain filter to stabilize the control behaviour
- Emergency function for output signal (EOUT)
- Analogue feedback input
- Flow value (Q) alternative to the analogue input as parameter to be entered via software
- Simple and intuitive scaling and offset of the sensors.

Monitoring functions

- Monitoring error
- Cable break for feedback sensor and current command signal
- 2 digital outputs to read the status

Other characteristics

- Current or voltage output to be set via software
- Card configuration via software, through on-board USB port

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 12 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; Low level: <2V, high level >10V. Input resistance 25 kΩ. See the block diagram at paragraph 4 for the electric connections.

3.4 - Pressure command (p)

The card accepts an analogue input signal. The command value can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.5 - Flow command (Q)

The card accepts an analogue input signal. The command speed can be ±10 V (RI = 90 kΩ) or 4...12...20 mA (RI = 240 Ω).

3.6 - Feedback values

The card accepts up to two analogue feedback inputs, values can be 0 ÷ 10 V (RI = 25 kΩ) or 4 ÷ 20 mA (RI = 240 Ω).

3.7 - Analogue output values

Output values can be in voltage or current, to be configured via software (parameter SIGNAL:U). The same parameter defines the polarity also.

Voltage: ± 10 V Differential output (PIN 15 / PIN 16).

Current: 4 ÷ 20 mA (PIN 15 to PIN 12).

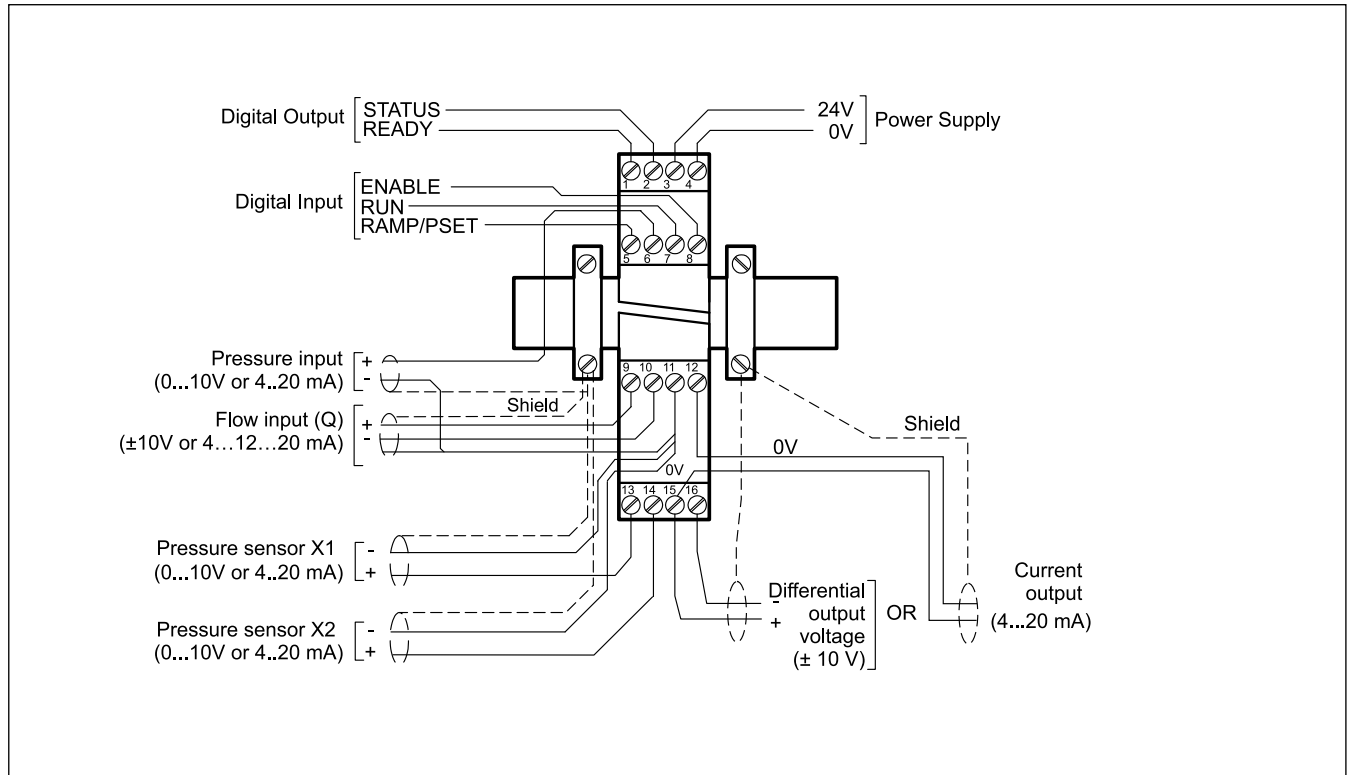

All analogue output have to be wired with screened cables.

3.8 - Digital output

Two digital output are available, STATUS and READY, that are displayed by the READY and A leds on the front panel.

Low level < 2 V High Level > 12 V (max 50 mA).

4 - WIRING DIAGRAM

DIGITAL INPUT AND OUTPUT

- PIN 1** READY output:
General operability, ENABLE is active and there are no sensor / command errors (by use of 4... 20 mA sensors). This output corresponds with the LED READY.
- PIN 2** STATUS output:
Error monitoring. The status output will be deactivated if the error is greater than the acceptability range. This output corresponds with the LED A.
- PIN 5** RAMP/PSET input:
According to the setup of the parameter PIN:5, it can be configured as:
- ramp activation / deactivation
- switching between the 2 available sets of parameters
- PIN 7** RUN input:
Controller activation; if the input is OFF and ENABLE is active, the flow command (PIN 9 / 10) is taken over as valve command value.
- PIN 8** ENABLE input:
This digital input signal initializes the application. The analogue output is active and the READY signal indicates that all components are working correctly. The Q command signal is controlling the output.

ANALOGUE INPUT

- PIN 6** Pressure / force command value (p)
range 0 ÷ 100% of system nominal pressure corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 9/10** Flow command value (Q)
range ±100 % corresponds to ±10V or 4...12...20 mA
- PIN 13** Pressure sensor (feedback) value (X1)
range 0 ÷ 100% of nominal pressure of sensor corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 14** Pressure sensor (feedback) value (X2)
range 0 ÷ 100% of nominal pressure of sensor corresponds to 0 ÷ 10V or 4 ÷ 20 mA

ANALOGUE OUTPUT

voltage

- PIN 16/15** Differential output (U)
± 100% corresponds to ± 10V differential voltage

current

- PIN 12/15** ±100% corresponds to 4 ÷ 20 mA

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

The system can be controlled in open loop with the control signal Q, moving the servo cylinder forward and backward, for easy programming of the card and of the system calibration.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Diplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up. Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7 and 8.

WARNING! For card series 20, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameter setting can be done at *standard* level, easier, or *expert*, where a greater number of parameters is displayed and can be customized.

For a complete list of the parameters and their settings please refer to the Technical Manual 89550 ETM.

7 - MAIN FEATURES

This module serves to control pressures and forces on hydraulic actuators.

7.1 - Sequence of the positioning

The ENABLE signal initializes the application and error messages are deleted. The READY signal gets activated. The output signal to the control element is enabled. The drive can be controlled by the Q value or input. Setting RUN will start the PID controller.

A dynamic zero-overlap control valve is necessary for p/Q control. If the B-side of the cylinder can not be relieved, pressure in both cylinder sides has to be measured.

The cylinder can be driven in both directions (flow control in open loop) with the analogue Q command input value and limits the max velocity.

The pressure limitation control function is only active with a positive Q signal with a closed loop function.

The p command value pre-sets the max differential pressure. If this pressure (or force) exceeds the controller reduces the output signal to the valve (also in the negative range), so that the preset pressure will be kept. To go backwards for keeping the force is possible.

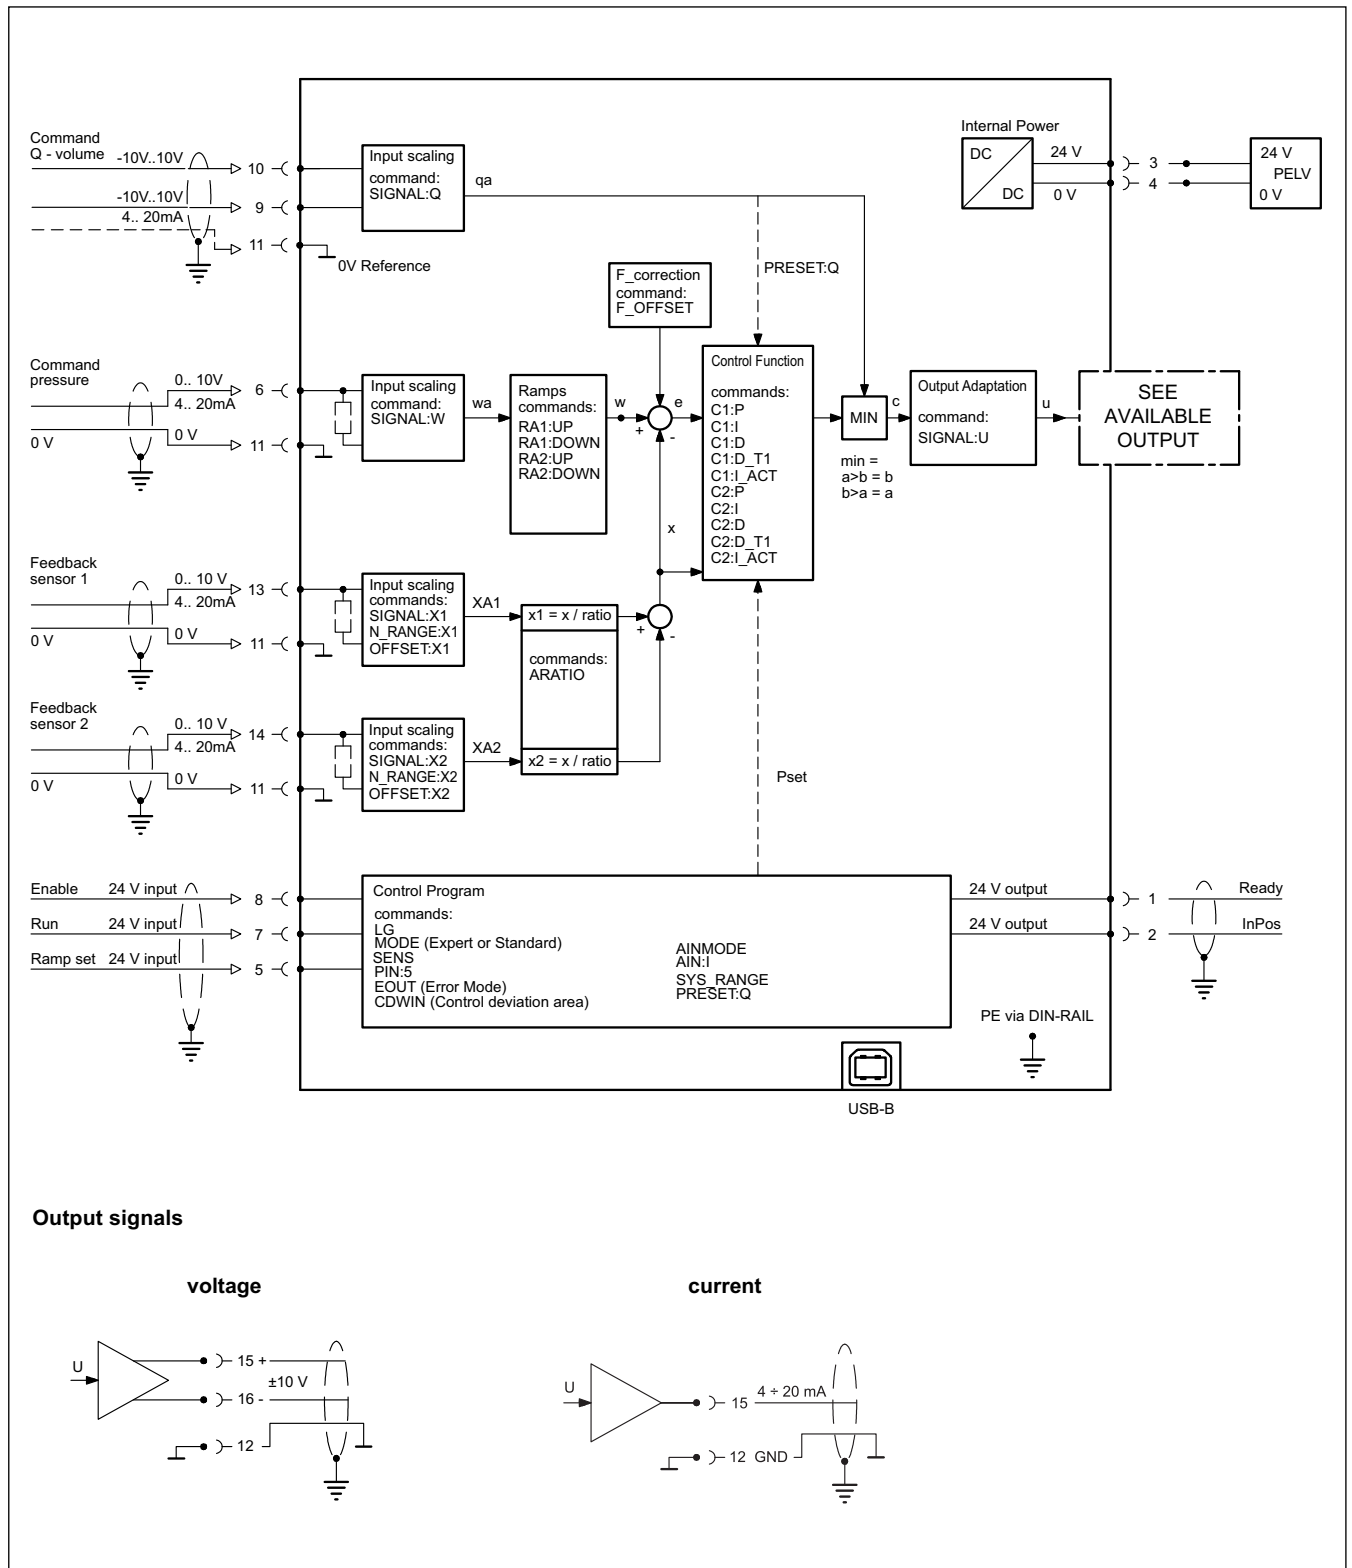

The pressure/force control is determined via the analogue inputs X1 and X2. For differential pressure control the actual value is calculated as X1 – X2.

The output signal is available as a differential output for connection of control valves with integrated electronics.

7.2 - Emergency Output (EOUT)

This function is able to set the output at a specific value when a failure occurs (e.g. sensor error or ENABLE disabled). It can be used to move the axis to one of the two end positions with a programmed velocity. The function can be deactivate.

EWM-A-SV

ANALOGUE AMPLIFIER CARD SERVOVALVE CONTROL SERIES 10

**RAIL MOUNTING TYPE:
DIN EN 50022**

OPERATING PRINCIPLE

- This card is designed for a dynamic control of servovalves with the current output controlled in closed loop.
- This card is an analogue amplifier that receive an analogue input $\pm 10V$ to move servovalves via different values of current, adjustable by the DIL switches on board with steps of 10 mA.
- This card has an embedded auxiliary supply positive and negative to power an external potentiometer.

TECHNICAL CHARACTERISTICS

Power supply	V DC	18 ÷ 30 ripple included
Current consumption	mA	100 + solenoid current consumption (max 300 mA)
Command position value	V	± 10 ($R_l = 100 \text{ k}\Omega$)
Output current	mA	10 to 200 (DIL switches internal selection) ($R_l = 33 \text{ }\Omega$ for max I)
Dither Amplitude	Hz %	250 / 100 (DIL switch internal selection S6) 0...15 (5% pre-adjusted) of current
Offset	%	± 10
Auxiliary supply	V mA	± 10 10
Electromagnetic compatibility (EMC): according to 2014/30/EU standards		Emissions EN 61000-6-4 Immunity EN 61000-6-2
Housing material		thermoplastic polyamide PA6.6 -combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 23(w)
Connector		4x4 poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	0 / 50
Protection degree		IP 20

1 - IDENTIFICATION CODE

The power amplifier is controlled by an analogue input ± 10 Volt.

The output current is closed loop controlled and therefore independent from the supply voltage and the solenoid resistance.

The diagram below shows as resistance changes in function of output to keep constant current ($I = 200$ mA)

2 - FUNCTIONAL SPECIFICATIONS

2.1 - Power supply

This card is designed for 12 to 30 V DC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards.

All inductivity at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode).

2.2 - Electrical protections

All inputs and outputs are protected against overvoltage and have filters.

2.3 - Reference signal

The card accepts an analogue input signal. The command value can be ± 10 V ($R_I = 100$ k Ω).

2.4 - Output values

The card has different output values in current between 10 mA to 200 mA. It is necessary to open the case and inside the card there are internal DIL switches (S1...S5) for the adjustments:

	Current	S1	S2	S3	S4	S5
E	0 mA	OFF	OFF	OFF	OFF	OFF
E10	10 mA	ON	OFF	OFF	OFF	OFF
E20	20 mA	OFF	ON	OFF	OFF	OFF
E30	30 mA	ON	ON	OFF	OFF	OFF
E40	40 mA	OFF	OFF	ON	OFF	OFF
E50	50 mA	ON	OFF	ON	OFF	OFF
E60	60 mA	OFF	ON	ON	OFF	OFF
E70	70 mA	ON	ON	ON	OFF	OFF
E80	80 mA	OFF	OFF	OFF	ON	OFF
E90	90 mA	ON	OFF	OFF	ON	OFF

2.5 - Digital Output

The digital output is the POWER ON signal, displayed from the green led.

3 - LED FUNCTIONS

There is only one green led.

GREEN: Shows if the card is ready.

- ON - The card is supplied
- OFF - No power supply

4 - ADJUSTMENTS

For these cards it is possible the regulation of offset and dither amplitude. It is necessary to open the case and inside the card there are offset and dither potentiometers for the adjustments.

4.1 - Offset

With this potentiometer it is possible to adjust the zero point. This module is pre-adjusted, often no further adjustment is necessary.

4.2 - Dither

With this potentiometer it is possible to adjust the dither amplitude. The dither amplitude have to be optimised to get best valve or drive performance. Dither adjustment will reduce hysteresis.

The frequency range has to be selected by internal DIL switch S6:

S6	Dither
ON	250 Hz
OFF	100 Hz

5 - INSTALLATION

The card is designed for rail mounting type DIN EN 50022.

The wiring connections are on the terminal strip located on the bottom of the electronic control unit. It is recommended to use cable sections of 0.75 mm², up to 20 m length and of 1.00 mm² up to 40m length, for power supply and solenoid connections on versions it is recommended to use cables with a screened sheath connected to earth only on the card side.

NOTE: To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

A complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

EWM-A-PV

UNIVERSAL AMPLIFIER FOR PROPORTIONAL VALVES

SERIES 20

**RAIL MOUNTING TYPE:
DIN EN 50022**

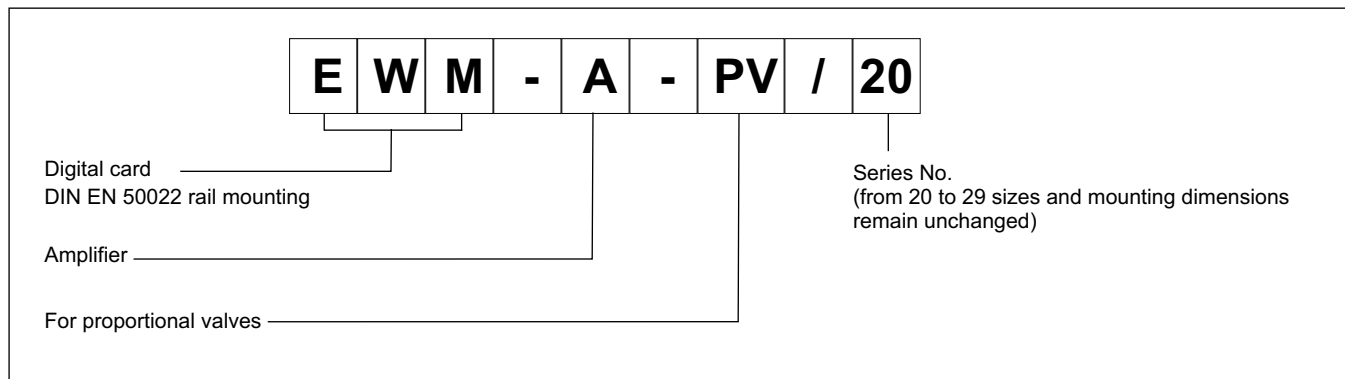

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	12 \div 30 ripple included
Fuse, external	A	3 medium time lag
Current consumption	W	60 depending on type of solenoid, number of operating solenoids
Analogue command values	V mA	± 10 , $0 \div 10$ ($R_I = \min 90$ k Ω) $4 \div 20$ ($R_I = 390$ Ω)
Analogue inputs value resolution	%	< 0,01
Digital command values	V	OFF: <2V, ON >10V ($R_I = 25$ k Ω)
Sample time of solenoid current control	ms	0.125
Sample time	ms	1
Output current	mA	500 \div 2600
PWM frequency	Hz	61 \div 2604 adjustable in prearranged steps
Interface		USB B type 2.0
Electromagnetic compatibility (EMC) 2014/30/EU		Immunity EN 61000-6-2: 8/2005 Emissions EN 61000-6-4: 6/2007; A1:2011
Housing material		thermoplastic polyamide PA6.6 - combustibility class V0 (UL94)
Housing dimensions	mm	120(d) x 99(h) x 23(w)
Connector		4x4 poles screw terminals - PE direct via DIN rail
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

2 - FEATURES

Controller functions

General power amplifier for 3 different applications:

- control of one proportional directional valve (2 solenoids) with current controlled by analog input signal
- control of one or two single solenoid proportional valves (throttle, pressure, directional..) with output current controlled by analog input signal
- control of proportional valves (with single or double solenoids either) by three digital input signals to select up to eight pre-programmed command and ramp values
- The output current is closed loop controlled: the current to solenoid is closed loop controlled, so is independent from supply and solenoid resistance.
- Parameters programmable via software: Ramps, Dither frequency and amplitude, PWM frequency and PWM gains
- Free scaling of analogue inputs
- Nominal current selectable stepless via software
- The power stage is controlled by an enable input (ENABLE)

Adaptation of the valve characteristic curve

- Characteristics linearization of current output via 10 XY-points per direction
- Deadband compensation

Monitoring functions

- The output stage is monitored for cable breakdown, is short circuit proof and disables the power stage in case of an error
- Failure monitoring for current analog inputs
- Range monitoring of the input signals (e. g. detecting failures of joystick)

Other characteristics

- GL-certification
- Output value in voltage or current, to be configured via software
- Card configuration is made via software, through on-board USB

3 - FUNCTIONAL SPECIFICATIONS

3.1 - Power supply

This card is designed for 12 to 30 VDC (typical 24 V) of a power supply. This power supply must correspond to the actual EMC standards. All inductivities at the same power supply (relays, valves) must be provided with an over voltage protection (varistors, freewheeling diodes).

It is recommended to use a regulated power supply (linear or switching mode) for the card supply and for the sensors.

NOTE: The value of the power supply voltage on the card must not be lower than the rated working voltage of the solenoids to be controlled.

3.2 - Electrical protections

All inputs and outputs are protected with suppressor diodes and RC-filters against transient overshoots.

3.3 - Digital Input

The card accepts digital input. The digital input must have a voltage from 12 to 24 V; OFF: <2V, ON >10V. Input resistance 25 kΩ. See the block diagrams for the electric connections.

3.4 - Reference signals

This card is broadly customizable and the command value depends on the function mode selected. (FUNCTION parameter). Once the function has been set and the data saved, the input will be configured automatically

3.4.1 - A-PV function, analogue:

± 10V or 4 ÷ 20 mA (one channel, 2 solenoids)

3.4.2 - 2A-PV function, analogue:

0 ÷ 10V or 4 ÷ 20 mA (two independent channels)

3.4.3 -D-RL digital, to be pre-parameterized by parameter

8 pre-programmed values (units %), selectable by 3 digital inputs (8 binary targets).

For both single or dual solenoids proportional valve either.

3.5 - Output value

Output value is in current, value range 500 ÷ 2600 mA.

All cables which lead outside must be screened.

3.6 - Digital outputs

The digital output is READY signal, displayed by the green LED on the front panel.

Low level < 2 V High Level > max V+, where V+ = power supply (max 50 V).

4 - WIRING DIAGRAMS

4.1 - FUNCTION A-PV: analogue signal for dual solenoids directional valve

DIGITAL INPUT AND OUTPUT

PIN	READY output.
5	ON: No internal or external errors are detected OFF: ENABLE (PIN 15) is deactivated or an error is detected
PIN	S1 input:
6	Function dependent on parameter PIN:6 (USCALE/RAMP). OFF: Output current depends on parameter USCALE / ramp function is deactivated. ON: Output current is not scaled by USCALE / ramp function is activated.
PIN	ENABLE input
15	This digital input signal initializes the application. The analogue output is active and the READY signal indicates that all components are working correctly. By deactivating this input the errors signals are reset.

ANALOGUE INPUT

PIN	0V reference for the signal inputs.
11	Warning! PIN 11 and PIN 8 are connected internally
PIN	Command input signal (w)
10/9	range -100...+100% corresponds to $\pm 10V$ or 4 ± 20 mA

POWER OUTPUT

PIN	PWM outputs for solenoid control. Solenoid B
1/2	
PIN	PWM output for valve control.
3/4	
PIN	8V reference output (max. 25mA)
12	

4.2 - FUNCTION 2A-PV: analogue signal, two independent channels, for up to two single solenoid valves

DIGITAL INPUT AND OUTPUT

- PIN 5** READY output.
ON: No internal or external errors are detected.
OFF: Both power stages are deactivated or an error is detected.
This output is visible on the green LED
- PIN 6** ENABLE Input Channel B (dependent on ENABLE_B parameter):
This digital input signal initializes the application.
The output and the READY signal will be activated.
By deactivating error signals are reset.
- PIN 15** ENABLE Input channels A/B or channel A either (dependent on ENABLE_B parameter: if set to OFF, digital input PIN 15 enables both output channels. if ON, the two enable are independent)
This digital input signal initializes the application.
The output and the READY signal will be activated.
By deactivating this input the errors signals are reset.

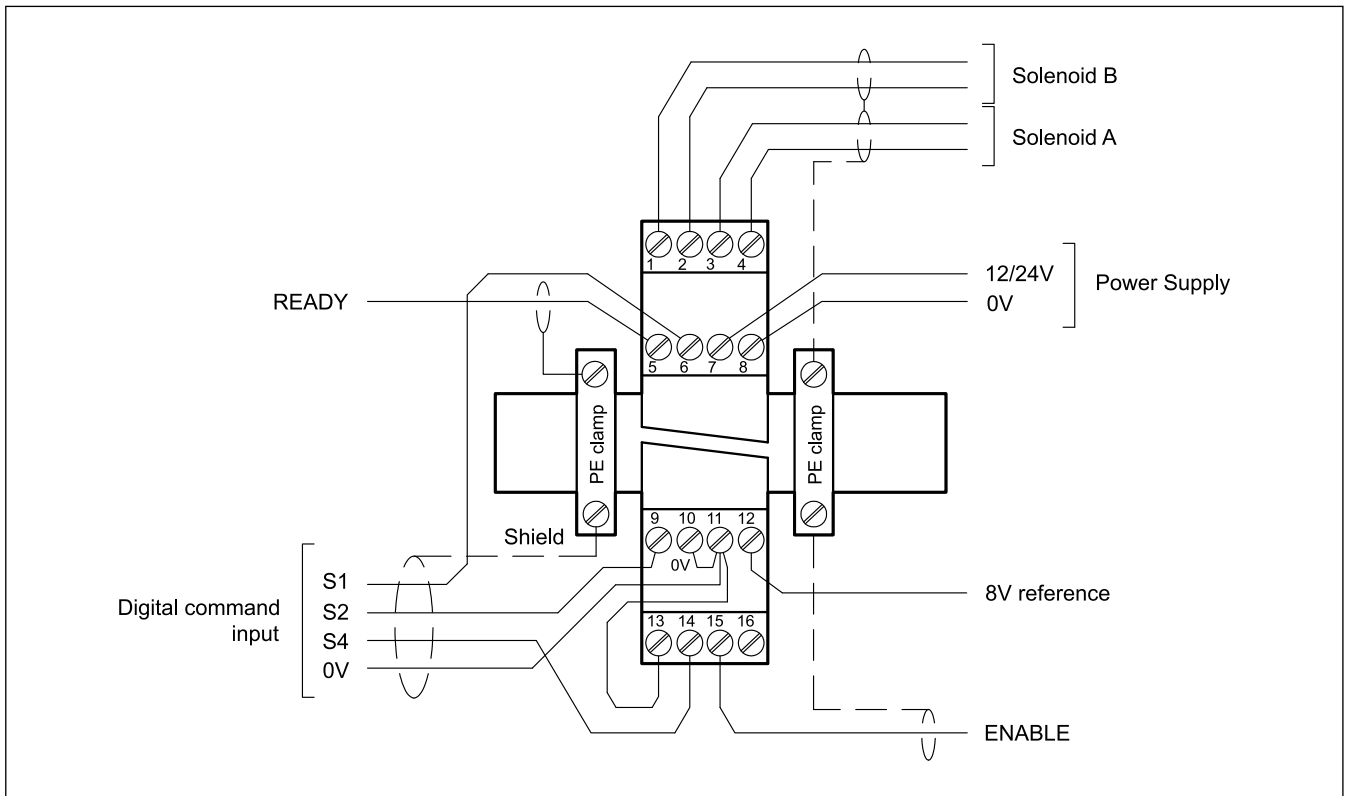

ANALOGUE INPUT

- PIN 11** 0V reference for the signal inputs.
Warning! PIN 11 and PIN 8 are connected internally
- PIN 10/9** Command input signal A (wa)
range 0 ÷ 100%
corresponds to 0 ÷ 10V or 4 ÷ 20 mA
- PIN 13/14** Command input signal B (wb)
range 0 ÷ 100%
corresponds to 0 ÷ 10V or 4 ÷ 20 mA

POWER OUTPUT

- PIN 1/2** PWM outputs for solenoid control. Solenoid B
- PIN 3/4** PWM outputs for solenoid control. Solenoid A
- PIN 12** 8V reference output (max. 25 mA)

4.3 - FUNCTION D-RL: preset digital inputs

DIGITAL INPUT AND OUTPUT

- PIN 5** READY output.
 ON: No internal or external errors are detected
 OFF: ENABLE (PIN 15) is deactivated or an error is detected
- PIN 6** Digital gate inputs for selecting the command value:
PIN 9: S1 **PIN 14:** S2 **PIN 15:** S4
 The whole range of set points can be chosen by binary coding of these inputs. see the table below.

Address	0	1	2	3	4	5	6	7
S1	0	1	0	1	0	1	0	1
S2	0	0	1	1	0	0	1	1
S4	0	0	0	0	1	1	1	1

- PIN 15** ENABLE input
 This digital input signal initializes the application.
 The output and the READY signal will be activated.
 By deactivating this input the errors signals are reset.

POWER OUTPUT

- PIN 1/2** PWM outputs for solenoid control. Solenoid B
- PIN 3/4** PWM output for valve control.
- PIN 12** 8V reference output (max. 25 mA)

5 - INSTALLATION

For power supply and solenoid connections are recommended cable sections of 0.75 mm² up to 20 m length, and of 1.00 mm² up to 40m length.

For other connections use cables with a shielded jacket, connected to GND only on the card side.

NOTE : To observe EMC requirements it is important that the control unit electrical connection is in strict compliance with the wiring diagram.

As a general rule, the valve and the electronic unit connection wires must be kept as far as possible from interference sources (e.g. power wires, electric motors, inverters and electrical switches).

Complete protection of the connection wires can be requested in environments with critical electromagnetic interferences.

5.1 Start-up

The module must be mounted and wired with attentions to EMC requirements. A star orientated ground connection should be used when other power consumers are sharing the same power supply. Following points have to be taken in account for wiring:

- Signal cable and power cable have to be wired separately.
- Analogue signal cables must be shielded.
- Other cables should be shielded in case of strong electrical disturbance (power relays, frequency controlled power driver) or at cable lengths > 3m.

WARNING! Plugs with free-wheeling diodes and LED indicators cannot be used with current controlled power outputs. They interfere with the current control and can destroy the output stage.

With high frequency EMI inexpensive ferrite elements can be used.

Take in account a separation between the power part (and power cables) and signal part when arrange the areas inside the electrical cabinet. Experience shows us that the area next to the PLC (24 V area) is suitable.

Low impedance between PE "protected earth" and DIN-Rail should be used. Transient interference voltages at the terminals are discharged via DIN-Rail to the local PE. The screens have to be connected directly next to the module via PE terminals.

The power supply should be carried out voltage regulated (i. e. PWM controlled). The low impedance of controlled power supplies facilitates improved interference damping, therefore the signal resolution will be increased.

Switched inductance (relays and solenoids) operating from the same power supply has to be damped by surge protection elements directly by the inductance.

6 - DEVICE SETUP

Card set-up is possible via software only.

6.1 - Software EWMPC/20

The software EWMPC/20 can be easily downloaded from the Diplomatic MS website in the section SOFTWARE DOWNLOAD.

To connect the card to a PC or notebook is necessary a standard USB 2.0 cable A – B (standard USB printer cable).

Once connected, the software automatically recognises the card model and shows a table with all the available commands, their parameters, the default setting, the measuring unit and a brief explanation for correct set-up.

Some functions like baud rate setting, remote control mode, saving of process data for later evaluation are used to speed up the installation procedure.

The software is compliant with Microsoft OS Windows 7 and 8.

WARNING! For card series 20, the default baud rate to select in the software has changed from 9600 baud to 57600 baud. This is adaptable in OPTION / SETTINGS / INTERFACE.

6.2 - Parameters table

The parameters table is available in English or German. The language is set in the parameters.

The parameter setting can be done at standard level, easier, or expert, where a greater number of parameters is displayed and can be customized.

For a complete list of the parameters and their settings please refer to the *Technical Manual 89620 ETM*.

7 - MAIN FEATURES

7.1 - Applications

The power amplifier (D-RL function) is controlled by an enable input and three switch signals. Therefore 8 demand values can be activated binary.

In the event of analogue control (A-PV function) it's possible to preset the directions with two inputs and switch over between rapid and slow speed with the third input.

The output current is closed loop controlled and therefore independent from the supply voltage and the solenoid resistance.

The output signal (of up to 2.6A) can control a variety of valves which need a flexible adaptation of the solenoid control, such as pressure relieve valves and pressure control valves, directional and throttle valves as such no on-board electronics are needed.

7.2 - Ramp function /acceleration time

The parameters for ramp up and ramp down can be set in milliseconds. These values are the amount of time that the command signal will take to follow a step change in the reference signal.

for 2A-PV

Two quadrant ramp function.

for A-PV

Four quadrants ramp function.

for D-RL

This configuration can take advantage either of the same four quadrant ramp function of A-PV or assign a ramp time for every command value (parameter RMODE)

7.3 - Adaption of the output signal to the valve characteristics (TRIGGER)

With the MAX value, the maximum output can be easily defined. With the MIN value, the overlap (dead band of the valve) can be compensated. Via the TRIGGER the activation point of the MIN function is set and so a non-sensitive range around the zero-point can be specified.

If the MIN value is set too high, it influences the minimal pressure, which cannot be adjusted any longer. In extreme case this causes to an oscillating at small input values.

The diagram below is valid for A-PV and D-RL configuration. For 2A-PV please consider just the 1st quadrant.

7.4 - Linearization (CCA, CCB, CC)

A user defined signal characteristic can be set by switching on the CCMODE parameter.

The influence of the user defined linearization can be estimated via the process data on the monitor or on the oscilloscope on EWMPC/20 software.

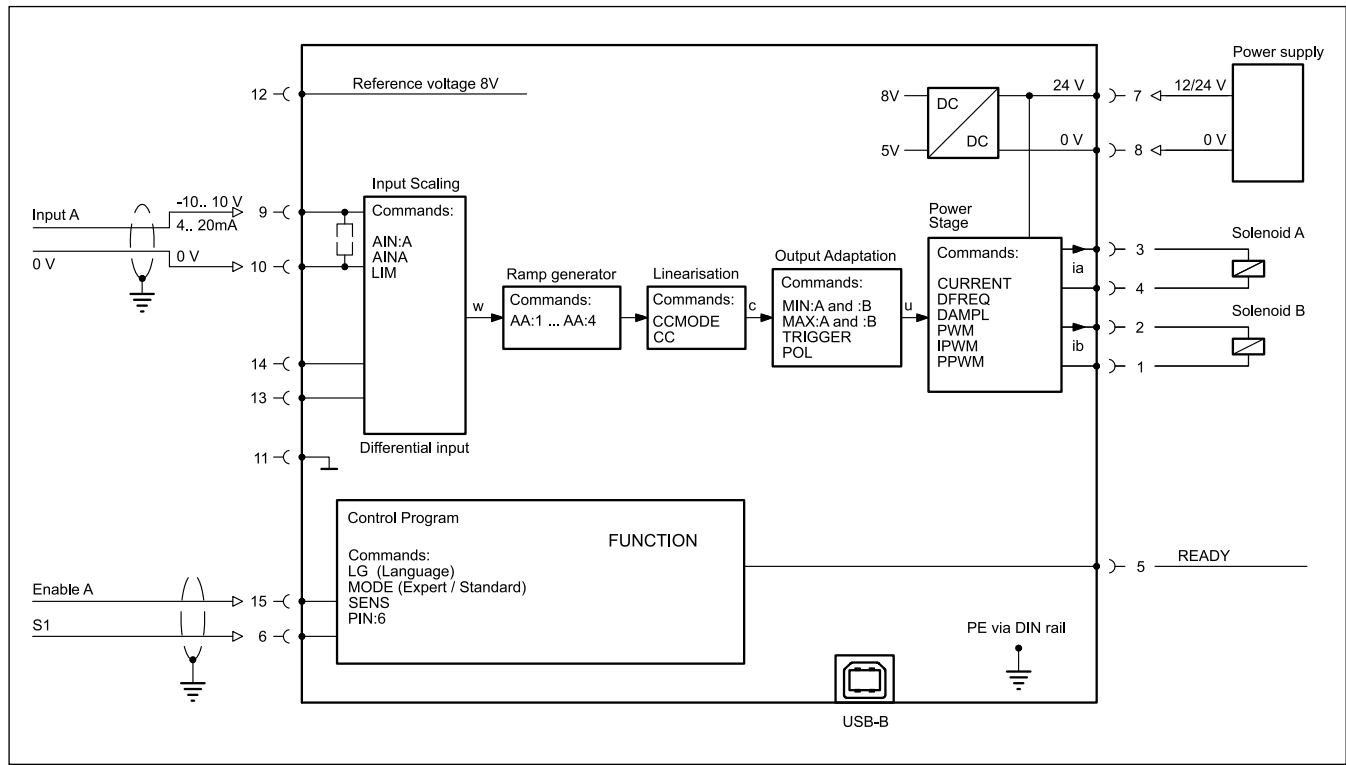

By deactivating CCMODE a simple and quick estimation of the linearization is possible

7.5 - Power Amplifier

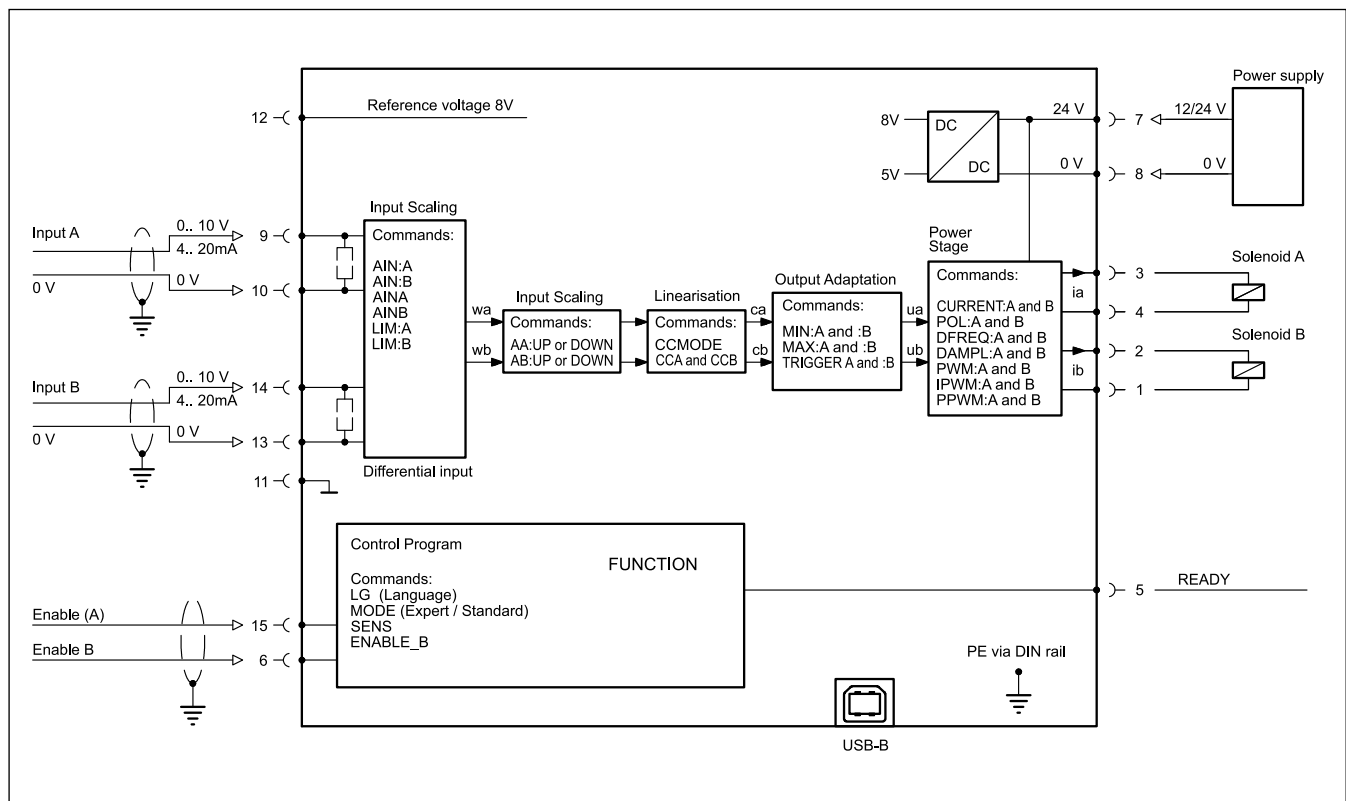

The module comes with an embedded power amplifier that is capable to generating a PWM current signal of up to 2.6A. As such the nominal current, dither, frequency and the various parameters of the current loop can be accessed and modified.

EDMPC

CONFIGURATION KIT FOR DIGITAL AMPLIFIERS EDM-M*/30 SERIES 30

OPERATING PRINCIPLE

DESCRIPTION

This kit contains the communication cable and the software needed for the configuration and diagnostic of electronic cards EDM-M* series 30. The kit also includes two types of adapter cable to connect the communication cable to Android portable devices, for diagnostics through the App. Anyway, cable connection with the card is always required.

The EBC software allows to load and save configurations via file, to view the set parameters and to modify them; it also offers monitor windows, diagnostics, oscilloscope tool and EBC configurator User Manual.

The EBC software is constantly updated and can be easily downloaded from the Duplomatic MS website in the SOFTWARE DOWNLOAD page. The software is compliant with Microsoft OS Windows 7, 8 and 10.

The app requires Android devices that support OTG function (Usb On-The-Go), and can be downloaded from the Play Store.

On-line registration is required at first access. Once registered the app can even work off-line. The EBC app allows diagnostic and configuration activities of parameters in USER level.

Please refer to the Technical Manual of the EDM-M card (89251 ETM) for a complete list of parameters and their settings.

LINPC-USB*

TEST DEVICES FOR PROPORTIONAL VALVES WITH INTEGRATED ELECTRONICS

SERIES 30

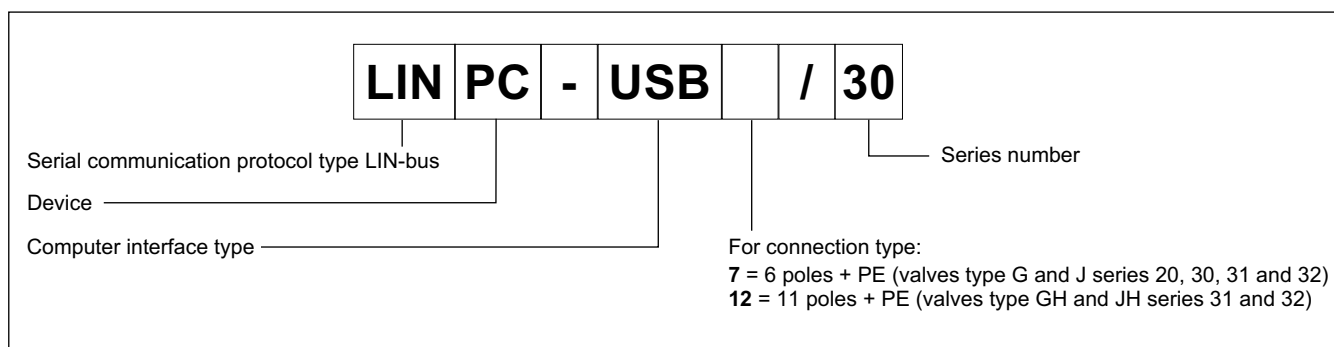

OPERATING PRINCIPLE

TECHNICAL CHARACTERISTICS

Power supply	V DC	24 (19 ÷ 30)
Current consumption	mA	50
Valve side connection:	LINPC-USB7 LINPC-USB12	6 poles + PE type MIL-C-5015-G (DIN 43563) 11 poles + PE (DIN 43651)
PC side connection		USB 2.0 cable
Electromagnetic compatibility (EMC)		according to 2014/30/EU EN 61000-6-4 (emissions) EN 61000-6-2 (immunity)
Housing dimensions	mm	104x63x38 + 2000 outgoing cable
Operating temperature range	°C	-20 / +60
Protection degree		IP 20

1 - IDENTIFICATION CODE

LINPC-USB*

SERIES 30

2 - DESCRIPTION

The device acts as interface between the PC and the valve on-board electronics. It allows the customization of the parameters via software and diagnostics and troubleshooting, by means of the internal monitors available in the software (EBC for series 30, 31 and 32, EWMPD for series 20).

The kit contains:

- test device with embedded cable to be connected to the valve
- USB Cable 2.0 A - Male to Micro B (3 m).

The USB cable cannot be longer than 3 m, in order to maintain the communication quality.

Software and customization Guide are available for download at www.duplomatic.com, 'Documents & downloads' page.

The EBC software is compliant with Windows OS 7, 8 and 10.

More details on device operation are available in the Software Guide.

3 - LED

function	description
24V PWR (24V powered)	Main power supply 24V green indicates the device is powered by 24 V source coming from the system.
USB COM	USB communication red = [TX] transmission green = [RX] receiving
USB PWR (USB powered)	USB supply yellow indicates that the USB section is powered.

WARNING! Connecting the device will cut off the monitor signal from the valve (pin F in LINPC-USB7, pin 6 in LINPC-USB12) in order to allow the Linbus communication. This behaviour can be managed via software.

WARNING! Please note that the USB port is not galvanically isolated.

PSC

CARD HOLDERS FOR ELECTRONIC CONTROL UNITS IN EUROCARD FORMAT SERIES 20

IEC 60603-2 (DIN 41612)

TECHNICAL CHARACTERISTICS

CARD HOLDER TYPE		32D	48F
Connector type		IEC 603 / DIN 41612 female	
Number of poles		32	48
Connector shape		D	F
Nominal voltage	V	250	
Nominal current	A	4	
Flexible conductors max section	mm ²	2.5	
Stiff conductors max section	mm ²	4	
Conductors wiring		terminal block with fastening bolts	

DESCRIPTION

- The card holders type PSC are accessories suitable to be installed on electronic control units type UEIK.
- They are available with a IEC 603 / DIN 41612 connector, with a female fitting, either D shape 32 poles, or F shape 48 poles.
- They are supplied with a special safety locking, which blocks the electronic control unit and prevents any accidental contact loss between the two used connectors.
- The conductor wiring is carried out via a terminal block with fastening bolts.
- They can be installed inside a switchboard and be fixed directly on a plate.

Display	transparent plastic	
Filling liquid	glycerin 85% + distilled water 15%	
CE Marking	in compliance with PED 2014/68/EU	
Working temperature range	°C	-20 / +60
Mass	kg	0,24

DESCRIPTION

- The pressure gauges M63 are pressure indicators used on hydraulic systems.
- They guarantee a correct pressure measurement also with pulsations and vibrations.
- They are available in 9 different pressure scales and with 2 connection types for mounting with radial port or rear port with flange connector.
- The case is made of stainless steel and the connection is made of copper alloy.
- The filling in liquid is made of 85% glycerin and 15% distilled water.
- The pressure gauges with a end scale of 250 bar and 400 bar are equipped with the CE mark on the dial for the fluid group 1 according to Annex II, scheme 1 of the PED directive 2014/68/EU. All the others do not need the CE marking, as per art. 4, sec. 3 of the same directive.
- The construction and the realisation have been done according to EN 837-1.

SYMBOLS

1 - IDENTIFICATION CODE

<div> <div>P</div> <div>S</div> <div></div> <div></div> <div>/</div> <div>21</div> <div></div> <div>-</div> <div>K1</div> <div>/</div> <div>K</div> </div>									
Piston type pressure switch				Adjustment knob					
Mounting type:				Electrical connection:					
P = subplate mounting				for EN 175301-803 (ex DIN 43650) connector					
T = threaded port 1/4" BSP				(included in the supply)					
Pressure adjustment range:				Seals: N = standard NBR seals for mineral oils (standard)					
2 = 3 ÷ 35 bar				V = FPM seals for special fluids					
6 = 10 ÷ 350 bar				Series N.					
4 = 6 ÷ 140 bar				(the overall and mounting dimensions remain unchanged from 20 to 29)					
8 = 20 ÷ 630 bar									

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - ELECTRICAL CHARACTERISTICS

		AC		DC	
Power supply	V	125	250	30	250
Max load on contacts	A	7	5	5	0,2
- resistive		4	2	3	0,02
Electrical insulation (according to CEI EN 60204)		> 1 M Ω at 500 Vdc			
Max switching rate	switches/min	120			
Protection class (according to CEI EN 60529)		IP 65			

4 - INSTALLATION

The pressure switches can be installed in any position without impairing its correct operation. Ensure that there is no air in the hydraulic circuit.

The subplate mounting pressure switch PSP type is fixed by means of screws on a flat surface with planarity and roughness values equal to or better than those indicated in the relative symbols. If the minimum values are not observed, the fluid can easily leak between the valve and the mounting surface.

5 - HYSTERESIS CHARACTERISTICS

(values measured with viscosity of 36 cSt at 50°C)

6 - SUBPLATES FOR STACK MOUNTING

The PSP pressure switches can be stack mounted by means of ISO 4401-03 (CETOP 03 subplates), code 1950611 and 1950621.

The subplate code 1950611 permits the connection between the pressure switch and A and/or B ports, depending on where the bolt (1) is installed. The subplate code 1950621 permits the connection between the pressure switch and the P port.

SUBPLATE CODE 1950611 (A and B ports connection)

PTH

PRESSURE TRANSMITTERS

p nom 40 - 100 - 250 - 400 bar

DESCRIPTION

This series of pressure transmitters has been designed in order to be used for the main industrial applications and on moving machines.

The main feature of this transmitter is to ensure its functioning also in harsh environments, especially for what concerns the fluid temperature range which can go from a minimum of - 40 °C up to a maximum of + 120 °C

The basis of this transmitter is the strain-gauge, which is powered by an electric circuit developed according to the SMT technology which ensures a high reliability and maximum resistance to vibrations and mechanical stress.

Every component into contact with the fluid is made of stainless steel and the pressure sensor is completely fluid-proof.

It's available with current output signal $4 \div 20$ mA or with voltage output signal $0 \div 10$ V. Versions also available upon request are $0 \div 5$ V and $0.5 \div 4.5$ V, ratiometric. They all are reverse polarity protected.

The protection class of the electrical connection for the version with DIN connector is IP65, while the version with the M12 connector has a protection class IP67.

These transmitters are available in 4 different pressure ranges, from 40 to 400 bar.

TECHNICAL SPECIFICATIONS

Nominal pressure P_N	bar	40	100	250	400
Overpressure - max working pressure	x P_N	x 3	x 3	x 3	x 2.5
Burst pressure	x P_N	x 7	x 5	x 4	x 5

Accuracy typical at 25 °C	% P_N	$\pm 0,5$
Output signal : current voltage	mA V	$4 \div 20$ $0 \div 10, 0 \div 5, 0.5 \div 4.5$
Sensor temperature range:	°C	-40 / +120

Vibrations		50 G / 11 ms
Class protection according to EN 60529 with connector properly installed.	K10 K12	IP65 IP67

4 - TRANSMITTERS SUPPLY

4.1 - Versions in voltage (E0, E2, E5 ratiometric)

These transmitters are equipped with voltage stabilizer which supplies the electric circuit with constant voltage, independently from power supply voltage.

We recommend a stabilized power supply voltage, within proper ranges as in table at par. 3 .

4.2 - Version in current 4 ÷ 20 mA (E1)

The transmitter works properly within an operating area (see diagram) that depends on both the voltage supply value and the external load resistance used to convert the signal.

Is recommended to choose values close to the limit R_{max}, in order to have a wide signal easier to read.

We suggest supply voltage of 24 VDC and a load resistance of 700 Ohm

min./max resistor vs. supply voltage E1 version
with P_{max} = 100%

5 - ELECTRIC CONNECTIONS

K10

Connection DIN 43650 reduced

FSI

SUCTION FILTER FOR SUBMERGED MOUNTING

SERIES 10

Q max (see performance ratings table)

OPERATING PRINCIPLE

TECHNICAL SPECIFICATIONS

Filter code	BSP port dimensions	Rated flow (NOTE 1) [l/min]	Rated filtration degree [µm]
FSI-TB038	3/8"	9	90
FSI-TB012	1/2"	14	
FSI-TB034	3/4"	25	
FSI-TB100	1"	45	
FSI-TB114	1 1/4"	75	
FSI-TB112	1 1/2"	100	
FSI-TB200	2"	160	
FSI-TB212	2 1/2"	250	
FSI-TB300	3"	350	

NOTE 1: The flow rates stated in the table correspond to a 0.02 bar pressure drop measured with mineral oil of viscosity 36 cSt at 50°C.

As for fluids whose viscosity degree at a specific operating pressure is different from 36 cSt, the real pressure drop has to be changed according to the following ratio:

$$\text{real } \Delta p \text{ value} = 0.02 \cdot \frac{\text{real } Q}{\text{table } Q} \cdot \frac{\text{real viscosity degree (cSt)}}{36}$$

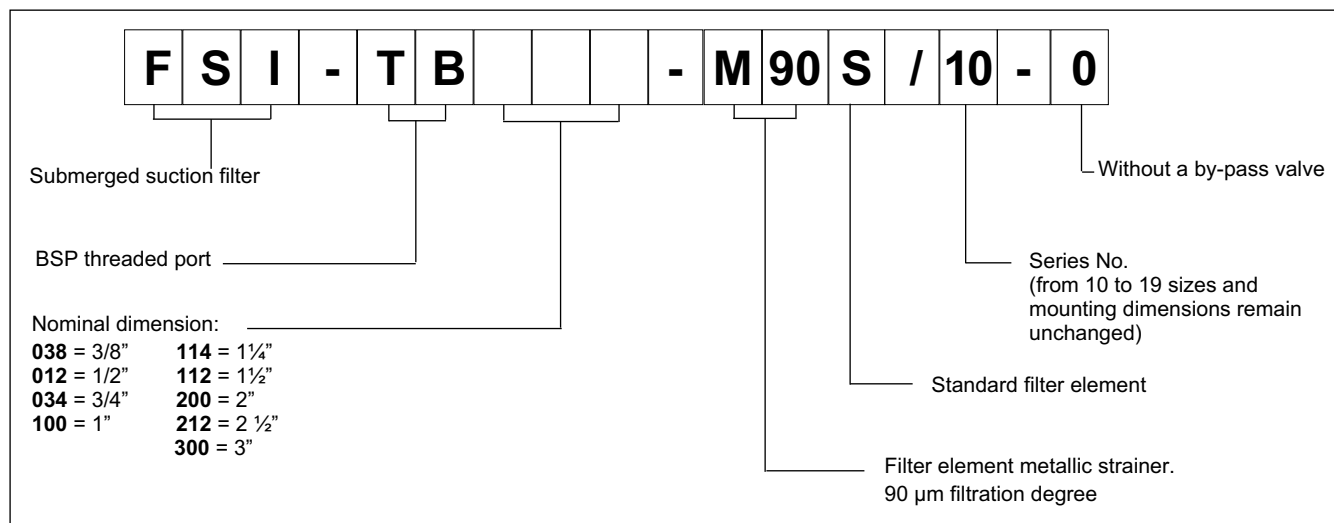

The filter size has to be selected so that with the nominal flow rate the pressure drop is lower than 0.02 bar.

Collapsing differential pressure of the filter element	bar	1,0
Ambient temperature range	°C	-25 / +50
Fluid temperature range	°C	-25 / +110
Fluid viscosity range	cSt	10 ÷ 400

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals. For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - OVERALL AND MOUNTING DIMENSIONS

FST

SUCTION FILTER WITH SEALED FLANGE MOUNTING

SERIES 10

Q max (see performances table)

OPERATING PRINCIPLE

Hexagonal head tie rod starting the exclusion valve

Filter element

Check valve to allow replacement of the filter element without emptying the tank

- FST filters are designed for sealed flange mounting. They are assembled directly on to the hydraulic power unit.
- They are aimed at protecting the pump from any possible gross contamination present inside the tank.
- The filter element is made of a metallic strainer with a 90 µm filtration degree, which grants a good pump protection without compromising the correct fluid flow. It can be easily replaced without emptying the tank. See paragraph 6 for its identification code.
- The filters are designed with a SAE flange port with the exception of the smallest size, which uses a BSP threaded port.
- All the FST filters are designed to incorporate an electric or visual clogging indicator, to be ordered separately (see paragraph 5).

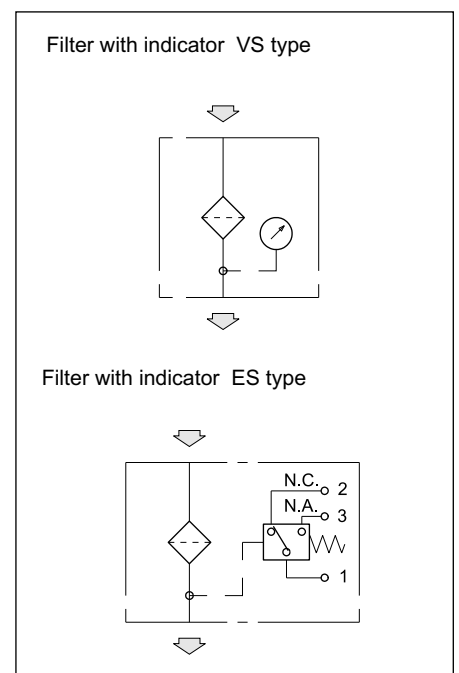

PERFORMANCES

Filter code	port dimensions		Mass [kg]	Rated flow (indicative) [l/min]	Rated filtration degree [µm]
	BSP	SAE flange			
FST-TB114	1 1/4"	-	1,6	70	90
FST-FS212	-	2 1/2"	3,0	100	
FST-FS300	-	3"	13,0	200	
FST-FS400	-	4"	16,0	300	

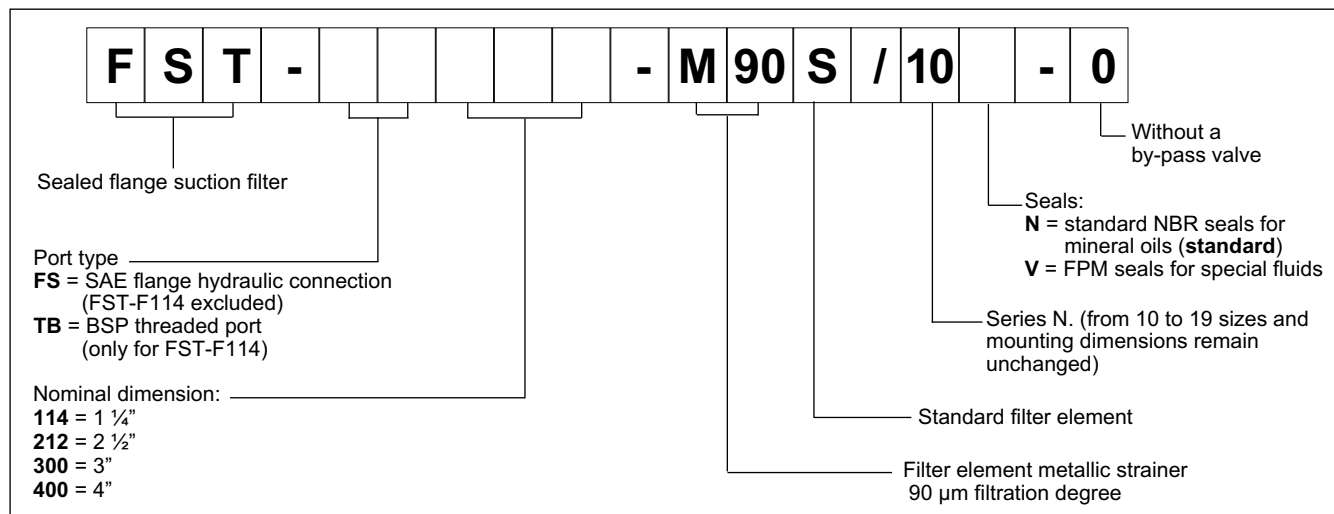

NOTE 1: the flow rates stated in the table correspond to a 0.02 bar pressure drop measured with mineral oil of viscosity 36 cSt at 50°C.
As for a different viscosity range, see NOTE 2 - paragraph 2.2.

Collapsing differential pressure of the filter element	bar	1,0
Ambient temperature range	°C	-25 / +50
Fluid temperature range	°C	-25 / +110
Fluid viscosity range	cSt	10 ÷ 400

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(values measured with viscosity of 36 cSt at 50°C)

2.1 - Pressure drops through the filter body

2.2 - Pressure drops through the FSTE filter element

NOTE 2: the filter size has to be selected so that with the nominal flow rate the pressure drop is lower than 0,02 bar.

The total pressure drop through the filter is given by adding the body pressure drop values to those of the filter element.

As for fluids whose viscosity degree at a specific operating pressure is different from 36 cSt, the filter total pressure drop has to be changed according to the following ratio:

total Δp value = body Δp value + (real Δp value of the filter element x real viscosity value (cSt) / 36)

real Δp value of the filter element = value obtainable through the diagrams in paragraph 2.2

Such ratio is valid for a viscosity value up to 200 cSt.

For a higher viscosity please consult our technical department.

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

4 - OVERALL AND MOUNTING DIMENSIONS

5 - CLOGGING INDICATORS

The filters are designed to incorporate clogging indicators, which have to be ordered separately.

5.1 - Visual indicator for suction filters

Identification code: **VS/10**

This indicator is a vacuum gauge sensitive to the suction depression.

The indicator is supplied with a 0 ÷ -1 relative bar graduated scale and with a three-colour reading scale, which informs you about the clogging condition of

the filter element:

GREEN: efficient filter element (0 / -0.15 bar)

YELLOW: the filter element is wearing out (-0.15 / -0.25 bar)

RED: the filter element has to be replaced (> -0.25 bar)

5.2 - Electric indicator for suction filters

Identification code: **ES/10**

This indicator is a vacuum gauge sensitive to the suction depression, which operates by switching an electric contact when the filter element has reached the clogging limit.

The contact can be wired in an open or closed condition (see the hydraulic symbol).

2 - CHARACTERISTIC CURVES

(values measured with viscosity of 36 cSt at 50°C)

2.1 - Pressure drops through the filter body

2.2 - Pressure drops through the FRCE filter element

NOTE 2: The filter size has to be selected so that with the nominal flow rate the pressure drop is lower than 0.5 bar.

The total pressure drop through the filter is given by adding the body pressure drop values to those of the filter element.

As for fluids whose viscosity degree at a specific operating pressure is different from 36 cSt, the filter total pressure drop has to be changed according to the following ratio:

$$\text{total } \Delta p \text{ value} = \text{body } \Delta p \text{ value} + (\text{real } \Delta p \text{ value of the filter element} \times \text{real viscosity value (cSt)} / 36)$$

$$\text{real } \Delta p \text{ value of the filter element} = \text{value obtainable through the diagrams in paragraph 2.2}$$

Such ratio is valid for a viscosity value up to 200 cSt. For a higher viscosity please consult our technical department.

2.3 - Pressure drops through the by-pass valve

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - OVERALL AND MOUNTING DIMENSIONS

5 - CLOGGING INDICATORS

The filters are designed to incorporate clogging indicators, which have to be ordered separately.

5.1 - Visual indicator for return filters

Identification code: VR/10

This type of indicator is a pressure gauge sensitive to the filter inlet pressure.

The indicator is preset with a $0 \div 6$ bar relative scale and with a two-colour reading scale, which provide an indication of the clogging status of the filter element:

GREEN: efficient filter element ($0 \div 1.7$ bar)

RED: the filter element has to be replaced (> 1.7 bar)

5.2 - Electric indicator for return filters

Identification code: ER/11

This type of indicator is an SPDT pressure switch, sensitive to the filter inlet pressure, which intervenes by modifying the state of the electrical contact when the filter element has reached the clogging limit.

The contact can be wired normally open or closed (see diagram).

FPH

PRESSURE FILTER FOR LINE MOUNTING

SERIES 11

p max **420 bar**
Q max (see table of performances)

OPERATING PRINCIPLE

- FPH filters are designed to be line-mounted with BSP threaded ports for hydraulic connections. Threaded holes are machined on the head for possible filter bracket fixing.
- The replacement of the filter element can be easily carried out by using a hexagon spanner to unscrew the bowl of the filter, which has a suitably shaped end.
- FPH filters are designed to be installed on pressure lines up to 420 bar; the filter elements are made of high efficiency filtering materials and are capable of holding high quantities of contamination particles. They are available with three different filtration degrees:
 - H05 = 5 μm : absolute ($\beta_{10} > 100$ - ISO 4406:1999 class 17/15/12) cartridge with a collapsing differential pressure = 210 bar to be used without a by-pass valve.
 - F10 = 10 μm : absolute ($\beta_{10} > 100$ - ISO 4406:1999 class 18/16/13)
 - F25 = 25 μm : absolute ($\beta_{25} > 100$ - ISO 4406:1999 class 19/17/14)
- Filters with F10 and F25 filtration degree can be supplied with or without a by-pass valve and they need cartridges with a collapsing differential pressure = 20 bar.
- All the FPH filters are designed to incorporate a visual-differential or a visual-electric clogging indicator, to be ordered separately (see par. 5).

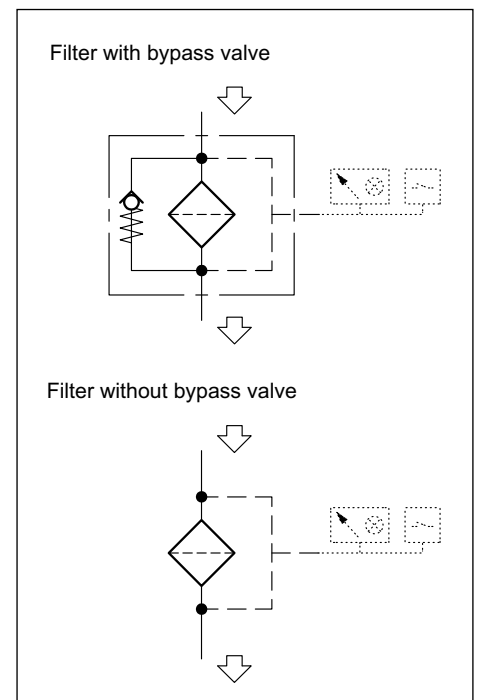

PERFORMANCES

Filter code	BSP port dimensions	Mass [Kg]	Rated flow (indicative) [l/min]		
			H05	F10	F25
FPH-TB012	1/2"	4.6	10	27	33
FPH-TB034	3/4"	5.7	19	42	65
FPH-TB100	1"	8.8	40	95	105
FPH-TB114	1 1/4"	15.2	88	190	230
FPH-TB112	1 1/2"	18.8	120	260	320

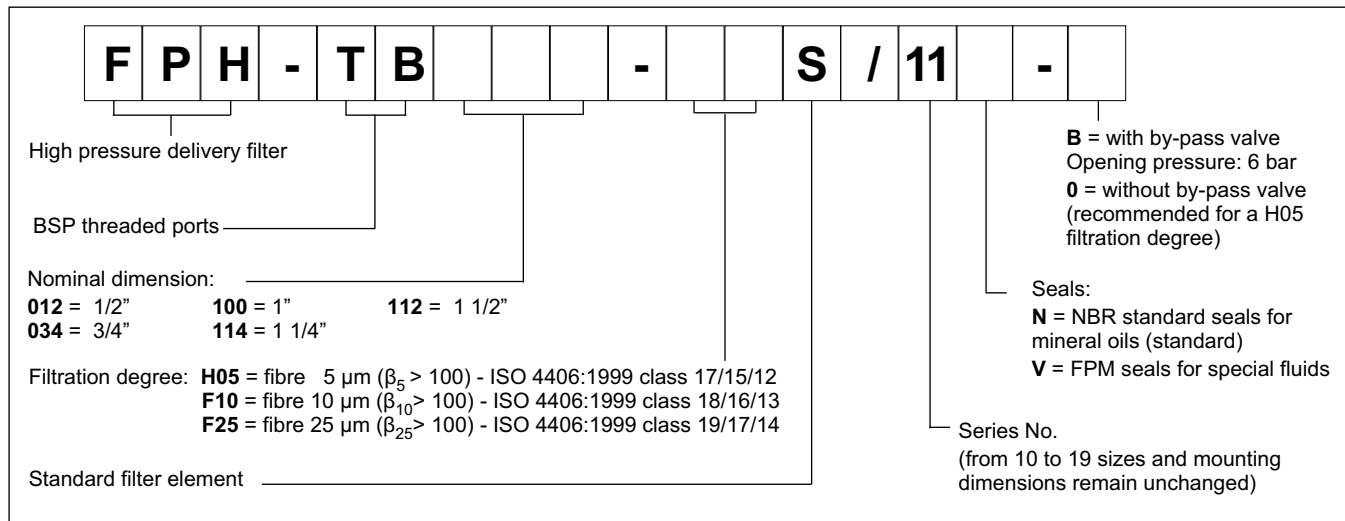

NOTE 1: The flow rates stated in the table correspond to a 0.8 bar pressure drop, measured with mineral oil of viscosity 36 cSt at 50°C.
Please refer to the **NOTE 2 - par. 2.2** for different viscosity ranges.

Maximum operating pressure	bar	420
Collapsing differential pressure of the filter element: H05 F10 - F25	bar	210 20
Differential pressure for the opening of the by-pass valve ($\pm 10\%$)	bar	6
Ambient temperature range	°C	-25 / +50
Fluid temperature range	°C	-25 / +110
Fluid viscosity range	cSt	10 ÷ 400

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

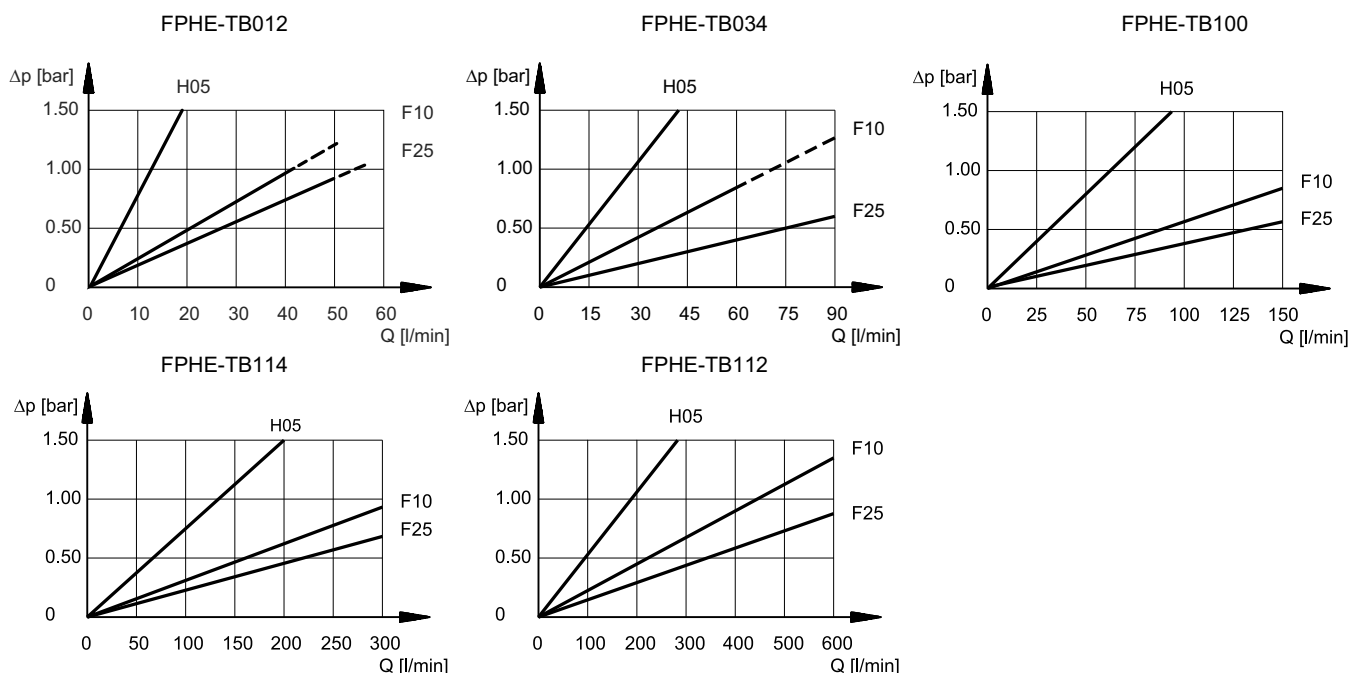

2 - CHARACTERISTIC CURVES

(values measured with viscosity of 36 cSt at 50°C)

2.1 - Pressure drops through the filter body

2.2 - Pressure drops through the FPHE filter element

NOTE 2: The size of the filter must be sized so that, at nominal flow rate, the total pressure drop is less than 1.2 bar.

The total pressure drop through the filter is given by adding the body pressure drop values to those of the filter element. As for fluids whose viscosity degree at a specific operating pressure is different from 36 cSt, the filter total pressure drop has to be changed according to the following ratio:

$$\text{total } \Delta p \text{ value} = \text{body } \Delta p \text{ value} + (\text{real } \Delta p \text{ value of the filter element} \times \text{real viscosity value (cSt)} / 36)$$

$$\text{real } \Delta p \text{ value of the filter element} = \text{value obtainable through the diagrams in par. 2.2}$$

Such ratio is valid for a viscosity value up to 200 cSt. For a higher viscosity please consult our technical department.

2.3 - Pressure drops through the by-pass valve

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

4 - OVERALL AND MOUNTING DIMENSIONS

5 - CLOGGING INDICATORS

The filters are all designed to incorporate clogging indicators, which have to be ordered separately. Tightening torque 90 Nm.

5.1 - Visual indicator for delivery filters

Identification code: VPM/10

This indicator measures the differential pressure between filter input and filter output.

The indicator is supplied with coloured bands, which inform you about the clogging condition of the filter element:

WHITE: efficient filter element
 $\Delta p < 5 \text{ bar } (\pm 10\%)$

RED: the filter element has to be replaced
 $\Delta p > 5 \text{ bar } (\pm 10\%)$

5.2 - Electric-visual indicator for delivery filters

Identification code: EPM/10

This type of indicator, in addition to giving a visual indication as the VPM model, operates by switching an electric contact when the filter element has reached the clogging limit.

The contact can be wired in open or closed condition (see scheme).

2 - CHARACTERISTIC CURVES

(values measured with viscosity of 36 cSt at 50°C)

2.1 - Pressure drops through the filter body

2.2 - Pressure drops through FPME filter element

NOTE 2: The filter size has to be selected so that with the nominal flow rate the pressure drop is lower than 0.8 bar.

The total pressure drop through the filter is given by adding the body pressure drop values to those of the filter element. As for fluids whose viscosity degree at a specific operating pressure is different from 36 cSt, the filter total pressure drop has to be changed according to the following ratio:

total Δp value = body Δp value + (real Δp value of the filter element x real viscosity value (cSt) / 36)

real Δp value of the filter element = value obtainable through the diagrams in paragraph 2.2

Such ratio is valid for a viscosity value up to 200 cSt. For a higher viscosity please consult our technical department.

2.3 - Pressure drops through by-pass valve

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - OVERALL AND MOUNTING DIMENSIONS

5 - CLOGGING INDICATORS

The filters are all designed to incorporate clogging indicators, which have to be ordered separately

5.1 - Visual indicator for medium pressure delivery filters

Identification code: **VPM/10**

This indicator measures the differential pressure between the filter input and output.

The indicator is supplied with coloured bands, which informs you about the clogging condition of the filter element:

WHITE: efficient filter element

$\Delta p < 5 \text{ bar } (\pm 10\%)$

RED: the filter element has to be replaced $\Delta p > 5 \text{ bar } (\pm 10\%)$

5.2 - Electric-visual indicator for delivery filters

Identification code: **EPM/10**

This indicator, apart from giving a visual indication, for example the VPM model, operates by switching an electric contact when the filter element has reached the clogging limit.

The contact can be wired in an open or closed condition (see the hydraulic symbol).

FPHM

PRESSURE FILTER

SERIES 10

MODULAR VERSION

p max **320** bar

Q max (see table of performances)

OPERATING PRINCIPLE

- The FPHM filters are designed for modular mounting, directly under proportional valves or servovalves with ISO 4401 mounting interfaces.
- They are available in two nominal dimensions with mounting surface ISO 4401-03 and ISO 4401-05.
- These filters are designed for working pressures up to 320 bar. Filter elements are made of high efficiency filtering materials and they are available with three different filtration degrees, with a collapsing differential pressure of 210 bar:

F05 = 5 μ m absolute

($\beta_{0.5} > 100$ - ISO 4406:1999 class 17/15/12)

F10 = 10 μ m absolute

($\beta_{1.0} > 100$ - ISO 4406:1999 class 18/16/13)

F25 = 25 μ m absolute

($\beta_{2.5} > 100$ - ISO 4406:1999 class 19/17/14)

- All the FPHM filters are supplied without by-pass valve.
- Filters are arranged for clogging indicator, which must be always ordered separately and mandatorily installed by the customer (see paragraph 5).

PERFORMANCES

Filter	Dimensions	Mass [kg]	Rated flow (indicative) [l/min]		
			F05	F10	F25
FPHM3	ISO 4401-03	2,6	12	13,5	16
FPHM5	ISO 4401-05	4,7	22	25	28

NOTE 1: Flow rates stated in the table correspond to a 3 bar pressure drop, measured with mineral oil of viscosity 36 cSt at 50°C.

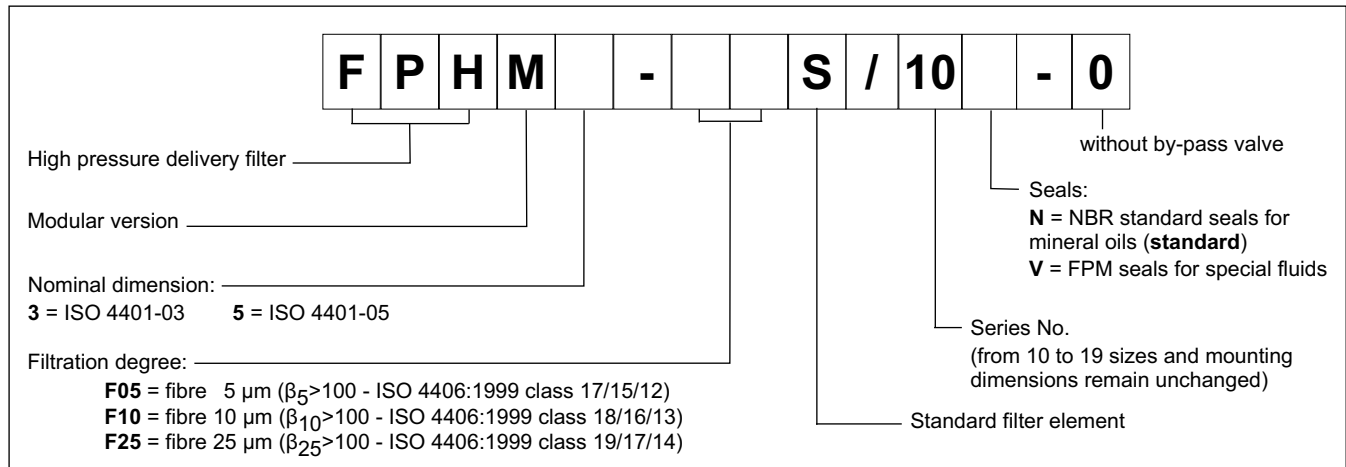

As for a different viscosity range, see **NOTE 2 - par. 2.2.**

Maximum operating pressure	bar	320
Collapsing differential pressure of the filter element	bar	210
Ambient temperature range	°C	-25 / +50
Fluid temperature range	°C	-25 / +110
Fluid viscosity range	cSt	10 ÷ 400

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES

(values measured with viscosity of 36 cSt at 50°C)

2.1 - Pressure drops through the filter body

2.2 - Pressure drops through FPHME filter element

NOTE 2: The filter size has to be selected so that with nominal flow rate, the total pressure drop is less than 1.2 bar.

The total pressure drop through the filter is given by adding the body pressure drop values to those of the filter element. As for fluids whose viscosity degree at a specific operating pressure is different from 36 cSt, the filter total pressure drop has to be changed according to the following ratio:

$$\text{total } \Delta p \text{ value} = \text{body } \Delta p \text{ value} + (\text{real } \Delta p \text{ value of the filter element} \times \text{real viscosity value (cSt)} / 36)$$

$$\text{real } \Delta p \text{ value of the filter element} = \text{value obtainable through the diagrams in par. 2.2}$$

Such ratio is valid for a viscosity value up to 200 cSt. For a higher viscosity please consult our technical department.

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - OVERALL AND MOUNTING DIMENSIONS

5 - CLOGGING INDICATORS

The filters are all designed to incorporate clogging indicators, which have to be ordered separately. Tightening torque 90 Nm

5.1 - Visual indicator for modular filters

Identification code: VM/10

This indicator measures the differential pressure between the filter input and output.

The indicator is supplied with coloured bands, which informs you about the clogging condition of the filter element:

WHITE: efficient filter element
 $\Delta p < 8 \text{ bar } (\pm 10\%)$

RED: the filter element has to be replaced
 $\Delta p > 8 \text{ bar } (\pm 10\%)$

5.2 - Electric-visual indicator for modular filters

Identification code: EM/10

This type of indicator, in addition to giving a visual indication as the VM model, operates by switching an electric contact when the filter element has reached the clogging limit.

The contact can be wired in an open or closed condition (see scheme).

CTR*

HYDRAULIC POWER UNITS

TANK CAPACITY
from 8 lt to 150 lt

PUMP FLOW RATE
from 1,6 lt to 41 lt

DESCRIPTION

The CTR* power units, are realised with a soaked gear pump and a vertically mounted electric motor.

The tank cover can be rotated of 180° without disassembling the installed components.

Standard components are intake filter, gear pump, motor-pump connection group, arrangement for the electric motor, pressure relief valve, a position for one electro-valve (not included in the supplying), manometer with the shut-off cock, oil charge cover and oil visual indicator.

The electric motor supplied is a eurotension 4-poles three-phase asynchronous motor with shape B5 according to UNEL-MEC standards.

The available paintings are dull black RAL 9005 (**standard**), Grey RAL 7037 and Green RAL 6011.

The power units works with mineral oil (not included in the supplying).

To work with other hydraulic fluids, please consult our Technical Department.

OPTIONALS

The standard power unit can be equipped with the following components:

CTR 0 - 1 - 2

- other settings for electro-valves ISO 4401-03 with P2D modular subplates
- thermostat
- level gauge
- return filter for line mounting
- other colour paintings under request

CTR 3 - 4

- high pressure pumps H version
- other settings for electrovalves ISO 4401-03 with P2D modular subplates.
- thermostat
- level gauge
- a return filter for line mounting
- an heat exchanger air/oil or water/oil
- other colour paintings under request

The standard power unit is delivered without the functional diagram.

STANDARD COMPONENTS

- 1) Electric motor
- 2) Manometer with shut-off selector
- 3) Pressure relief valve
- 4) Charge cover
- 5) Level gauge
- 6) Oil reservoir
- 7) intake filter
- 8) Gear pumps
- 9) Motor - pump connection group

power unit with soaked pump

Cover size _____

Tank capacity _____
035 = 35 dm³
050 = 50 dm³
075 = 75 dm³

Electric motor B5 shape _____
P = Predisposition for motor assembly
M = Mounted electric motor

4-poles power electric motor: _____
0.55 = 0.55 kW **2.2** = 2.2 kW
0.75 = 0.75 kW **3** = 3 kW
1.1 = 1.1 kW **4** = 4 kW
1.5 = 1.5 kW

Electric motor voltage _____
 (omit for P version)
A = 380-420V / 50Hz-440-480V/60Hz for motors from 2.2 kW to 7.5 kW
B = 230-400V/50-60 Hz for motors from 0.55 kW to 1.5 kW

Pump type : _____
GP1 **GP2**
 (see cat. 11 100 for the pumps technical characteristics)

Flow rate pump (l/min) at 1500 rpm _____
 (see flow rate / pressure table)

Series No. (from 40 to 49 sizes and mounting dimensions does not change)

N = Dull black RAL 9005 **standard**
G = Grey RAL 7037
V = Green RAL 6011

Heat exchanger:
0 = without exchanger
1 = oil/water exchanger 2010K
2 = oil/water exchanger 2020K

Return filter:
0 = without filter
1 = filter with visual indicator
2 = filter with electric indicator

0 = without thermostat
1 = with thermostat

0 = without level gauge
1 = with level gauge

Standard panel with rear ports G 3/8"
A = P2D-M* with 1 pos. ISO 4401-03
B = P2T-M* with 2 pos. ISO 4401-03

5.4 - Overall and mounting dimensions for CTR4-P2X*M

6 - ACCESSORIES

6.1 - Level gauge LV/E1-127-M12-SC cod. 0770764

Maximum pressure	bar	1
Working temperature	°C	-20 / +70
Transparent tube material	/	Nylon + glass 35%
Seals material	/	NBR
Reed in exchange	/	1A, 20W, 20VA, 200V

ELECTRIC DIAGRAM
(WITH FLUID)

ELECTRIC DIAGRAM
(WITHOUT FLUID)

CONNECTOR CE DIN 40050
IP65 PG7

6.2 - Thermostat TC2 cod. 0630285

External sensor temperature range	°C	0/90
Degree of protection	/	IP40
Contacts	A	10
Max. voltage	V AC	250
Max. working temperature	°C	50
Cable guide	/	PG9
Housing material	/	Plastic
Contacts material	/	Silver
Capillary material	/	Copper
Pocket material	/	Brass
Mass	kg	0.3

6.2.1 - Overall dimensions

6.3 - FRC return line filter for tank top or line mounting cod. 3951600004

6.3.1 - Technical data

Filter code	BSP port dimensions	Mass [kg]	Rated flow (indicative) [l/min] P25L
FRC-TB034	3/4"	1,6	75

NOTE 1: The flow rate stated in the table correspond to a 0.5 bar pressure drop measured with mineral oil of viscosity 36 cSt at 50°C.

As for a different viscosity range, see the catalogue 95160.

Maximum pressure	bar	7
Collapsing differential pressure of the filter element	bar	3.0
Differential pressure for the opening of the by-pass valve ($\pm 10\%$)	bar	1,7
Ambient temperature range	°C	-25 / +50
Fluid temperature range	°C	-25 / +110
Fluid viscosity range	cSt	10 ÷ 400

For further detailed informations and overall dimensions please consult the catalogue 95160.

6.3.2 - Clogging indicators

The filters are all designed to incorporate clogging indicators, which have to be ordered separately.

VR/10 Visual indicator for return filters Identification code: 3959000003

This indicator is a pressure gauge sensitive to the filter input pressure.

The indicator is supplied with a 0 ÷ 6 bar graduated scale and with a two-colour reading scale, which informs you about the clogging condition of the filter element:

GREEN: efficient filter element (0 ÷ 1.7 bar)

RED: the filter element has to be replaced (> 1.7 bar)

ER/11 Electric indicator for return filters Identification code: 3959000016

This indicator is a pressure switch sensitive to the filter input pressure, which switches an electric contact when the filter element has reached the clogging limit.

The contact can be wired in an open or closed condition (see the hydraulic symbol).

TECHNICAL SPECIFICATIONS

Operating pressure	bar	1,5
AC power supply		
Max. operating voltage	VAC	250 50/60 Hz
Max. load on the contacts (inductive or resistive) with V at 125 VAC with V at 250 VAC	A	3 0,5
DC power supply		
Max. operating voltage	VDC	30
Max. load on the contacts resistive inductive	A	3 1
Electric connector	EN 175301-803 (ex DIN 43650)	
Class of protection according to CEI EN 60529 (atmospheric agents)	IP65	
Atex classification	3 GD EEx e T6	

6.4 - Heat Exchanger oil/water with fixed blowing air flow .

6.4.1 - Technical data

		2010K	2020K
Code		0713268	0712078
Operating pressure	bar	20	
Test pressure	bar	35	
Maximum operating pressure	°C	120	
Air Flow	m³/h	190	645
Capacity	litre	0,3	0,7
Three-phase supply voltage	V	230 - 400	
Frequency	Hz	50 / 60	
Rpm	kW	0,045	0,068
Thermostat regulation field	°C	40 - 28	50 - 38
Oil threaded inlet / outlet connections	-	1/2" BSP	1" BSP
Mass	kg	6	8
IP protection degree		IP54	IP44

CLEANING AND MAINTENANCE

As a general rule verify that the voltage supply correspond to those shown on the plate.

Cleaning oil side: The exchanger must be dismantled. Dirt can be removed by a detergent product as perchloride, in the opposite direction to normal. At the end it must be washed out with hot water.

Cleaning air side: This can be done means of compressed air or water. The direction of the jet must be parallel to the fins, to avoid damaging them. If the dirt is oil or greasy it must be cleaned by a jet of steam or hot water.

The electric motor must be protected during the cleaning operation.
